"New York girls are making for Christmas presents this year fascinating little rooster heads in flannel of two colors," reports the Woman's Home Companion for December. "Each head is cut double and wadded on the inside with cotton batting. The roosters are invariably white, with a comb and wattles of scarlet. When completed, Sir Chanticleer makes a novel egg cozy to slip over the breakfast egg in the egg cup when cereal or some other breakfast preliminary is to be eaten first."

DON'T BUY GASOLINE ENGINES UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engines; revolutionizing power. Its weight and bulk are half that of single cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. THE TEMPLE PUMP CO., Mfrs., Meagher and 15th Sts., Chicago. THIS IS OUR FIFTY-FIFTH YEAR.

SELECTED POETRY.

OH, LITTLE TOWN OF BETHLEHEM.

Oh, little town of Bethlehem,
How still we see thee lie!
Above thy deep and dreamless sleep
The silent stars go by;
Yet in thy dark streets shineth
The everlasting light;
The hopes and fears of all the years
Are met in thee to-night.

For Christ is born of Mary,
And gathered all above,
While mortal sleep the angels keep
Their watch of wondrous love!
Oh, morning stars, together
Proclaim thy holy birth,
And praises sing to God, the King,
And peace to men on earth.

How silently, how silently,
The wondrous gift is given!
So God imparts to human hearts
The blessing of His heaven.
No ear may hear His coming,
But in this world of sin,
Where meek souls will receive Him still,
The dear Christ enters in.

Oh, holy child of Bethlehem!
Descend to us, we pray,
Cast out our sin, and enter in,
Be born to us to-day.
We hear the Christian angels
The great glad tidings tell;
Oh, come to us, abide with us,
Our Lord Emmanuel!

—Phillips Brooks.

THE WONDERFUL STAR.

In heaven afar there shown a star
Of clear and beautiful light,
And sent its gleam o'er land and stream,
With radiance fair and bright.

Chorus—
It was the star of Bethlehem,
The star, the star!
It shone, it shone on Christmas Day,
To guide the wise men from afar,
To where the Christ-child lay.

Led by its light on that glad night,
Their toilsome journey they made;
And frankincense, and gold, and myrrh,
At Jesus' feet they laid.

The star divine it still doth shine
With bright and luminous ray,
To cheer the sad, and make them glad,
On this, the Christmas Day.

THE OPEN ROAD.

A footpath journeyer here am I,
Bearing my little load;
But on beyond the bend of the lane
Spreads out the Open Road.
I whistle and loiter along the path,
Make use of an idle day,
To mend the lane, lest some groping foot
Should stumble on its way.

A worker in small and trivial things,
With neither creed nor code,
Save to love and to work and to sing the while,
And dream of the Open Road.
Useless you think my gypsy songs?
Perhaps, but who shall say
How useless the transient song of a bird
That makes musical one glad day?

Year followed by casual year,
Filled with its pleasure and pain,
Shall find me at last with feeble step,
Down at the bend of the lane.
May I not fear to leave behind
My narrow, earthly abode!
May I be strong to keep pace with those
Who have reached the Open Road!

—Frances Chapman.

THE HEN AS A HUSTLER.

The hen is a mighty fine hustler,
I like how she works at her trade;
Not a word does she say,
Though she's busy all day,
'Cept when eggs in the nest she has laid.

I'd feel a lot better, I tell you,
If some people I know would keep still
And have nothing to say
Till they'd worked a full day—
Then I'd holler for them with a will.

—E. Ph. Brown, in Egg Reporter.

THE IRISH BIRD CHARMER.

Wid more or less o' tuneful grace,
As fits a Celtic singer,
I've praised the "great bird of our race,"
The stork, the blessin' bringer.
When first to my poor roof he came,
How sweetly he was sung to!
I called him every dacint name
That I could lay my tongue to;
But, glory be! that praise from me
So pleased the simple crayture
His visits have come to be
A sort o' second nature.
I'm glad to see him now an' then,
But, glory be to heaven!
If here he isn't back again,
An' this is number seven!

Och, though this gift o' song may be
In many ways a blessin',
It brings some popularity
That gets to be distressin'.
Now, mind, I love this Irish bird—
We couldn't live widout him—
An', sure, I'll not take back a word
I ever said about him.
But now, when all these mouths to feed
Ate up our little savin's,
The birds whose visits most we need
Are ould Elisha's ravens.
Begor'! if they were 'round these days
An' I could make them hear me,
I'd sing them such a song o' praise
'Twould keep them always near me.

—T. A. Dale, in Globe-Democrat.

Send No Money

Until you use it for 30 days

We mean that exactly; please take us at our word.

Simply ask us to show you the "1900" Gravity Washer. We will send it to you, freight prepaid. You pay no deposit, give no security; you are under no obligation.

Use it for 30 days; do four washings with it. Learn how it saves your labor, and how it saves your clothes.

Then, if you want it, pay a little each week, or a little each month. No hurry; just suit yourself. If you don't want it, simply send it back.

The above offer—just as we state it—is open to anyone who is responsible.

Don't you want to see a washing machine that will stand such a test as that?

The "1900" Gravity Washer

is a machine that every woman will have when she knows it. That's why we want you to see it. It does washing solely by forcing soap and water through the meshes of the clothes. No rubbing, no stirring, no paddling; no wear of any sort on the clothes. They are simply held still, while the soapy water is forced back and forth, up and down, through the meshes.

Clothes are washed perfectly clean in this way in six minutes. It does away with the tub and washboard. Makes washing almost fun. Saves all the wear of washing, which means nine-tenths of all the wear on clothes. Cuts wash bills in half.

We control this machine by patents which have cost us $50,000. So no other washer does what this does. It has built for us the largest washer business in the world.

The "1900" saves so much, and costs so little, that it is far cheaper to have it than to go without it. So send now for our New Washer Book, showing the different styles. Then tell us which you want to see, and we'll send it. Do this in justice to yourself.

A post-card with your name and address sent to us *today* brings you the book *by return mail, postpaid.*

Address—The 1900 Washer Co. 1266 Henry St., Binghamton, N. Y.

Or—if you live in Canada, write to the Canadian 1900 Washer Co., 355 Yonge St., Toronto, Ontario.

NEARLY LOST HIM.

We're feelin' kind o' lucky, down to Pohick on the crick;
We thought that Uncle Jim had learned the politician trick,
And got himself elected so he'd be compelled to roam
Amid the halls of greatness, 'stid o' stayin' here at home.
We put him on the ticket, as we've done in years gone by,
To show our 'preciation of his qualities so high.
We knew the opposition chances couldn't well be spoiled;
Uncle Jim could have the honor while the other feller toiled.
He's a wonder as a speaker; he's a giant in debate;
His talents have their finest chance when he's a candidate.
An' so we nominate him. But, of course, we never meant
To doom him to an office, with its silent discontent.
But when they counted up the votes 'twas mighty near a tie.
But now we're feelin' better. The returns are quite complete,
An' we're all a-jollifyin' over Uncle Jim's defeat!

—Washington Star.

THE CHAP THAT HUMPS.

The chap who humps and never stops
To register complaints,
May lack the wisdom of the wise,
The perfectness of saints;
And what is more, mayn't know what 'tis
To bear a famous name,
But, spite o' what the neighbors say,
He gets there just the same!

—Birmingham Age-Herald.

THE DAY AFTER.

"Licked to a frazzle!" But, say,
What is the use of repining?
Home at the close of the day—
Arms of our loved ones entwining.
Out of the fret and the worry,
Out of the din and the strife;
Out of the battle and worry—
Home and the joytime of life.

Downed in the battle! But, say,
What is the profit in sorrow?
Love is still lighting the way
On to a glorious morrow.
Out of the turmoil and fuming,
Out of the worry and wiles,
Love with its welcome is looming,
Beckoning on with its smiles.

Whipped to a standstill! But, say,
Still there is joy in the losing
If love binds the wounds of the fray
After the battle's confusing.
Out of the smoke and the battle,
After the heat of the fray;
After the din of the battle,
Love lights the close of the day.

—The Commoner.

WATER POWER HELPS BUILD RAILROAD.

Electricity Generated From Mountain Streams Bores Tunnel Through Mountains.

Will Also Drive Trains Through Tunnels.

Never before in the history of railroads was a greater building project carried out so quietly as the Pacific coast extension of the St. Paul road. In this great undertaking, which means so much to the Pacific Northwest, more than $100,000,000 is being expended with as little fuss as an ordinary business enterprise would make in expending a few thousand dollars. The St. Paul road is not coming into a country that needs the aid of the promoter or the land agent. In timber alone there is almost a competency for the new line, for the St. Paul management has been given assurance that not fewer than 50,000 car-loads will be given it the first year after the work has been completed.

One of the wonderful facts regarding the construction of this new transcontinental line, which will stretch from Chicago and the Twin Cities by the way of Butte, Montana, to Seattle, and Tacoma, Washington, is the thoroughness with which it is being constructed. It is not generally known, for example, that over the 800 miles of mountain stretches electricity is to be used as the motive power, and the engines will be 200-ton electric motors. Down the sides of the Bitter Root mountains are pouring a sufficient number of streams to furnish abundant power for all of the electric motors which the St. Paul will need to handle its trains over the mountain division. These streams are to be harnessed at the cost of millions. The boldness of conception and the unobtrusive way in which the work is being executed challenge admiration. Through the fastnesses of the Bitter Root range a tunnel 8,750 feet long is being constructed by electrical power and through it will be operated trains hauled by motors. One end of this tunnel will open in the state of Montana and the other will land the traveler in Idaho, and its grade will not exceed .02 of 1 per cent.

In general, the work on the west end of the road between Butte and Seattle is nearly finished on some of the divisions, but the long tunnels and the heavy fills will take some time to complete. Rails are now laid in five different sections, but the track is not continuous for more than 120 miles. On the Seattle-Tacoma line the track has been finished from Black River Junction to Summer, Wash. East of Seattle the road is completed for a distance of seventy-five miles, and work over the Snoqualmie Pass of the Cascades is being rapidly pushed. On one division there are at least sixty fills to be made of an average depth of seventy feet, and the road between Black river and the tunnel will cost probably $75,000 a mile.

Through the St. Paul Pass, in the Bitter Root mountains, work is further along; the grading is completed and the bridges are built. In Seattle the terminal work is scarcely begun. In view of the fact, however, that the greater part of the extension has been done during a time of financial depression, the work in general is a marvel in the annals of railway construction.—Exchange.

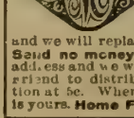
CANCER CAN BE CURED

My Mild Combination Treatment is used by the patient at home. Years of success. Hundreds of testimonials. Endorsed by physicians, ministers, etc. The local application destroys Cancerous growth, and the constitutional treatment eliminates the disease from the system, preventing its return. Write for Free Book, "Cancer and Its Cure." No matter how serious your case, no matter how many operations you have had, no matter what treatment you have tried, do not give up hope, but write at once. DR. JOHNSON REMEDY CO., 1238 Grand Ave., Suite 103, Kansas City, Mo.

Gold Watch AND RING FREE

We positively give both a Famous Alteo Watch, Stem Wind, beautifully engraved Solid Gold Laid case, American movement, factory tested, guaranteed five years; also a Solid Gold Laid Ring, set with a $50 Gem, sparkling like a $50 diamond, for selling 20 pieces of handsome jewelry at 10c each. Order 20 pieces and when sold send us $2.00 and we will positively send you the watch, ring and chain. ALTON WATCH CO. Dept. 538 Chicago.

Signet Ring FREE



This ring is an extremely fancy one with beautiful engraving. It is similar in appearance to a ring that would cost $25 at any jewelry store. Home-made Rugs.

There is material found in every household that can be made into pretty and serviceable rugs, and nothing repays one so well for the time spent upon it as a pretty, substantial rug. Serviceable rugs and mats can be made from burlap, and plenty of burlap sacks are found in nearly every farmer's barn.

First make a foundation of the burlap of the size and shape you want the rug to be. Draw out a thread every six inches in a piece of burlap and cut apart where the threads are drawn, then draw out the threads two and a half inches on each side, leaving one inch not raveled in the center. When you have a quantity of strips fringed, double them in the middle and sew them to the foundation by the unraveled center one inch apart. One of these makes an excellent carriage mat, or it may be made as large as wanted, then lined with nice cloth and be used as a lap robe, and if they are neatly made they resemble the handsome woolen robes, and they can be made in a very short time and at very small cost. The braided rugs can be made at almost no expense and they are pretty and serviceable if the work is neatly done.

Some light-colored and faded woolen pieces were colored a rich dark red with Diamond dye for wool, then they were cut into strips and braided and made into a rug of the desired size, but the dyes for cotton are used for coloring the burlap for making into rugs. For a square-braided rug, take five strands for the braid and leave three or four inches at the end before commencing, and the braid should be fastened firmly to board or table with strong tacks. Sometimes the braid runs crosswise instead of lengthwise, and when the rug is finished the strips left at each end are cut into fringe, and they must cut very fine.

For a square rug take five strands, and each strand can be of a different color, or the outside can be solid and the center mingled, and one can use their own taste in selecting and arranging the colors.—M. H.

Good and Bad by Turns.

At a banquet recently given by the business men of this city, the Rev. Dr. C. R. Hudson told the following story, which made a big hit. He said two men, who had not met for many years, but who had been warm friends, were talking about how things had been with them. Each said he had the usual ups and downs, some good and some bad.

"Well, I was married," said one.

"That's good," said the other.

"Well, it wasn't so good. The woman was awfully mean."

"That's bad," commented his friend.

"Well, it wasn't so bad, either, She had a lot of money."

"That was good," again remarked his friend.

"Well, it wasn't so good, either. I invested the money in sheep and they all lay down and died."

"That was bad."

"Well, it wasn't so bad, either. I pulled off the wool and sold it for more than the sheep were worth."

"That was good."

"Well, it wasn't so good, either. I put the money in a house and one night the house burned down."

"That's bad."

'Well, it wasn't so bad, either. The woman burned to death in it."—Louisville Courier-Journal.

Dress Economy

Simpson-Eddystone calico prints are fine long-wearing cotton goods. The patterns are stylish and beautiful, and the colors are absolutely fast. Some designs in a new silk finish. They solve the problem of stylish dressing at little cost.

Standard for over 65 years.

Ask your dealer for Simpson-Eddystone Prints. If he hasn't them write us his name. We'll help him supply you. Don't accept substitutes and imitations.

To Make It Even Forty Years.

Garge—"Ef t' missus doan' get better by next Tewsday fortnight I'll sen fer t' doctor."

Farmer—"Why not before, Garge?"

Garge—"Wull, it'll be fowrty year, nex' Tewsday fortnight since we 'ad t' doctor, an' I'd like t' make it even fowrty."—The Tattler.

The Cow's Signal.

Railway men — conductors, engineers and brakemen—are so accustomed to communicate with each other by means of gestures that the habit of looking for such dumb signals becomes a kind of second nature. A complaint was received at headquarters that a valuable cow had been killed on a certain day and by a certain engine. The case was referred to the proper department, but reference to the files showed that the engineer had failed to report such an accident. Accordingly he was sent for and asked why he had omitted to report the matter.

"I didn't know I hurt the cow," he said.

"Then you remember hitting her?"

"Yes, and I slowed up as she rolled over on her back; but she waved her feet for me to go ahead and so I concluded she was all right."—Harper's Weekly.

TWO HUNDRED RECIPES FOR ENTERPRISING HOUSEKEEPERS.

Every woman who prides herself upon the variety and tastiness of her "table" will be interested in the new of recipes by Helen Louise Johnson.

The important point about Miss Johnson's recipe book, which is called the "Enterprising Housekeeper," is that it contains over two hundred tested recipes calling for the use of meats, fowl and other things left over from previous meals. This book will be sent free to any woman sending her name and address to The Enterprise Mfg. Company of Pennsylvania, 220 Dauphin street, Philadelphia.

The primary reason for distributing the cook book "Enterprising Housekeeper" is to demonstrate the possibilities of the "Enterprise" Meat and Food Chopper in the preparation of deliciously appetizing dishes that contribute both to the pleasure of the table and to economy in household maintenance.

The "Enterprise" is the only true Meat and Food Chopper that actually **cuts** meat so that each minute piece retains its goodness and flavor. The "Enterprise" cuts by means of a four-bladed steel knife and perforated steel-cutting plate that does the work thoroughly.

With the "Enterprise" Chopper and the "Enterprising Housekeeper" the housewife is ready for guests expected or unexpected, knowing that her table will be a credit to her ability as a versatile cook and housekeeper.

By the Way.

Don't trade your Jerseys for Holsteins at a sacrifice, simply because Jones is making money from his black-and-white stock, while you are losing on the yellows. Find out just how he manages. Think what would happen if the methods of care were exchanged. Any good breed will do with proper care. With improper care none will give pleasing results.

Keep the cattle out of the orchard if you would avoid choking. It takes good fences to do this, for a cow will scent an apple a long way.

The great danger of stock choking is caused by chasing the cow when she is in the act of swallowing. This may be through the owner, a dog, or another cow. In either case, the animal hurries to get the apple down lest she lose it, and the mischief is done. If a choked animal commences to bloat, force a large stick between her jaws, securing it at both ends with straps, and it will give relief until a veterinarian can be summoned. Severe mechanical measures should not be attempted by an unskilled hand. Lard or oil forced down the throat will sometimes loosen the apple, or it may be felt and carefully forced up or down, as seems most practicable.

C. C. Carroll, a New York doctor, claims to have perfected a method of killing the germs of tuberculosis by electricity. If his claims materialize the dairyman will speedily avail himself of the new treatment, which is said to be a sure cure for man and beast.—Bessie L. Putnam.

RUPTURE CURED

Stuart's Plaster-Pads are self adhesive, and hold the rupture in place without straps, buckles, or springs—cannot slip, so cannot chafe or compress against the pelvic bone. The pads contain a medicine which is kept constantly in contact and is gradually absorbed, thereby quickly curing the most obstinate cases. Hundreds have successfully treated themselves at home without hindrance from work. Guaranteed under National Pure Food & Drugs Law. Write to-day and "Trial of Treatment," with interesting book, will be sent **FREE**
Address STUART PLASTER-PAD CO., Bloc 57, St. Louis, Mo.

Farmers' Sons Wanted with knowledge of farm stock and fair education to work in an office, $60 a month with advancement, steady employment, must be honest and reliable. Branch offices of the association are being established in each state. Apply at once, giving full particulars. **The Veterinary Science Association, Dept. 12, London, Canada.**

FOR THE FRUIT GROWER.

Someone in the family ought to be a fruit grower; and yet it is very hard to interest the stockman in fruits. We will do our best, however, by placing a good fruit book in the hands of our readers. The book entitled Amateur Fruit Growing was written by Samuel B. Green, a practical man and one of the best authorities on the subject. There are 134 pages, written with special reference to the growing of fruits for the home and the market. We will send the book entitled Amateur Fruit Growing and The National Farmer and Stock Grower one year for 35 cents. Send a money order to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

A MAGNIFICENT PREMIUM.

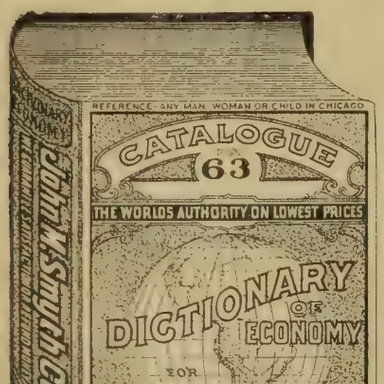
The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is one dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us one dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color. A million and a half of these hats have been sold.

Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

YOU CAN SAVE AT LEAST $25.00

On every hundred dollars' worth of goods you buy from this book. It is the great Fall and Winter Catalogue. Contains all the 1909 styles of goods at wonder cut prices.



Don't pay retail prices for anything to anyone. This catalogue represents enormous stocks of merchandise. There are 1,200 pages. It costs 21 cents to pay postage upon it. It costs us $1.00 to print it. Free to you if you send 15 cents towards paying postage, and we give you a coupon so as to refund the money on first purchase.

National Horticultural Exposition and Meeting.

The National Horticultural Congress will be held at Council Bluffs, Iowa, December 14th to 19th. Practically every state and territory is to be represented. The list of cash and merchandise premiums is very large, and the citizens of Council Bluffs subscribed $30,000 towards the construction of the Exposition buildings. Special rates have been granted by all the railroads. The National Corn Show, which is to held at Omaha, December 9th to 19th, is just across the river, and the two great events are by no means rivals. Mr. J. P. Hess is President of the National Agricultural Congress; W. S. Keeline, Vice-President; and G. W. Reye, Secretary. The office is in the Day & Hess building, Council Bluffs, and Mr. Freeman L. Reed is General Superintendent. A great Horticultural Exposition and a National Corn Show coming together ought to double the interest on the part of the farmers.

CEMENT ON THE FARM.

The Most Valuable Help That Farmers Ever Had in a Book.

The Cement Workers' Handbook is the name of it. This book is designed to teach anyone how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls. floors, ceilings, walks, posts, cistern, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

The National Farmer and Stock Grower is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook.

For $1.00 we will send The National Farmer and Stock Grower for three years and a copy of the Cement Workers' Handbook. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

THE LANGUAGE OF FLOWERS.

This is a beautiful study, and it is elegantly explained by the most satisfactory methods. There are twenty-four post cards, and each post card shows a different flower, grouped in such a way that the sentiment that each flower represents is spelled out by the flowers. For example, the violets of the violet card spell "Faithfulness;" the roses "Love;" clover, "Be Mine," etc. Each post card is different, finished in many colors and glossed.

THE UNIVERSAL MAGAZINE

is a nice, bright, cheerful, illustrated monthly magazine, published at 25 cents a year, and the post cards can be selected as a free premium by anyone who sends in cash in advance. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

How the Russian Throne Got Its Heir.

A curious light on superstition in high places is related in the Woman's Home Companion for November. In this issue Kellogg Durland, writing of the Tsaritsa of All the Russias, tells the following:

"When three children had been born, and no heir, the Tsaritsa turned an open ear to various men who claimed supernatural power and control. Before the birth of Anastasic the aid of eminent medical and scientific men had been sought to influence the sex of the child, but all to no avail. And so, when science failed, religion was appealed to.

"The example of their trust in miracle working which history has been called upon to remember, is that of the dead and buried priest who was supposed to have finally brought them a son, and who was canonized by the Emperor! The day of St. Seraphim is now one of the holiest of days in Russia and is celebrated throughout the empire.

"Seraphim was an old priest of Saroff, in the interior of Russia, who according to local tradition was a kind of soothsayer and local medicine man. His particular power is said to have been in endowing barren women and children.

"Seraphim had been dead seventy years, but the Tsar was so anxious to leave no stone unturned to procure a son, and, encouraged by the Tsaritsa, Seraphim was canonized!

"When the remains of the old priest were unearthed it was found that the body was badly decomposed, and to canonize a man whose body yields to the influence of decomposition is contrary to the traditions and customs of the church. The Orthodox Bishop Dmitry of Tambof ventured to call attention to this and protest the canonization to the Tsar, but for his temerity he was deprived of his see and exiled to Viatka. Nicholas held that the preservation of bones, hair and teeth sufficient qualification for saintship.

"So Seraphim was canonized with great pomp and ritualistic solemnity, and the next child born to the Tsaritsa was a son! If anything were needed to fasten the belief of the Tsar and Tsaritsa in these extreme forms of religion, it was an answer to their prayers at this time. The boy was called Alexis, and he was born on July 30, 1904, according to the Russian calendar, and ever since the Tsar and Tsaritsa have been given more and more to the pursuit of spiritualistic religion."

BUSINESS INCREASING! RAILROADS WANT MEN!

The election is past; industries are renewing operations on a gigantic scale. The United States Steel Corporation is re-employing hundreds and thousands of its old men. Other large companies are doing the same. The railroads are doubling their orders for steel and equipment. People everywhere are preparing for an enormous business during the coming year. When business is good in other lines the railroad business increases proportionately, and railroad officials are expecting a vast increase in the next few months. They will then need hundreds of young men for firemen and brakemen, and an excellent opportunity will be offered those who are employed to make fine wages at regular and pleasant employment.

In our judgment, the average young man of the farm and small town can find no better or more satisfactory work than that of fireman or brakeman, considering the very short preparation which is necessary for one of these positions.

The National Railway Training Association of Omaha and Kansas City prepares young men for these positions and assists them in securing employment. Our representatives are personally acquainted with the officers of this institution, and we take pleasure in recommending them and suggest that you reply to their advertisment on page 3.

The household freight-payer doesn't need a calendar to tell him when the first day of the month has arrived.

THE UNIVERSAL MAGAZINE.

This is a nice, thirty-two-page, three-column magazine, issued monthly. It contains illustrated reading matter of interest to all the family. There are nice stories, historical sketches, selected poetry, a splendid line of patterns and a number of original household articles. MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Girl's Dress.

No. 6124.—One-piece dresses are being much worn this autumn by the younger girls and they unquestionably possess a great many practical advantages. This one includes a little yoke that can be of lace or embroidery or contrasting silk and which is trimmed to give the Princesse idea. In the illustration it is made from one of the pretty plaid materials with trimming of plain cloth in matching color, while the chemisette is of lace. Plainer dresses, however, can be made by using tucked taffeta for the chemisette and the material of the dress for the bands with some finish of soutache or other braid. For school and occasions of the sort chiffon Panama cloths and materials of similar weight are much to be commended, and the plaids of the season are unusually handsome, while they are always becoming to the younger girls and always satisfactory.

The dress is made with blouse and skirt joined to a belt. The blouse is tucked and made over a fitted lining, while it is closed at the back, and the sleeves are trimmed after a pretty and novel manner. The skirt is cut in seven gores with the trimming extended over the left front seam. This feature could be omitted, however, if something very simple is wanted, and the trimming be allowed to finish at the belt. The closing is made invisibly at the back.

The quantity of material required for the medium size (ten years) is 7⅝ yards 24, 6⅛ yards 32, or 4¾ yards 44 inches wide, with ⅛ yard 18 inches wide for the chemisette, ¾ yard 27 inches wide for trimming.

The Pattern 6124 is cut in sizes for girls of eight, ten, twelve and fourteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Loose-fitting Coat.

No. 6120.—Long, loose-fitting coats will be extensively worn throughout the autumn and winter for a variety of occasions. This one can be made adapted to general use, to travel or to evening wear, as it is made of one material or another. In the illustration, black broadcloth is trimmed with wide braid and with soutache and handsome buttons, and the coat is designed to be the generally useful one that can be slipped on over any gown. Were it made from white or light-colored broadcloth and with the open sleeves, however, and with the neck trimming of some handsome banding flannel with long cord and tassels, it would become adapted to evening wear, while if it were made from rain-proof material it would become suited to motoring and to harder usage. However treated, it remains graceful in all the lines, and the sleeves can be gathered and finished with cuffs or the open ones can be used, as found more satisfactory.

The coat is made with fronts and backs. The seam at the center back means shapeliness, and there are extensions on the under-arm seams that are lapped over onto the backs and attached by means of handsome buttons. A shaped collar finishes the neck. The sleeves are of moderate width and can be gathered into bands and finished with rolled overcuffs or left loose and finished with banding as liked.

The quantity of material required for the medium size is 7½ yards 27, 4½ yards 44, or 4 yards 52 inches wide, with 4 yards of wide braid, soutache according to design.

The Pattern 6120 is cut in sizes of 34, 36, 38, 40, 42 and 44 inches bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Tucked Dress.

No. 6114.—Tucked dresses are always becoming to young girls. The effect is a youthful one and the result certain to give satisfaction. This model is as pretty as well could be and is adapted to the cashmere, Henrietta cloth, to challis, to veiling, to all materials that can be tucked successfully. As illustrated, however, it is made of Henrietta cloth in one of the beautiful new rose shades known by the name of Tangara, which is indescribable as to color but exceedingly lovely, and is trimmed with heavy oriental banding and combined with a chemisette with a simple all-over lace. If something more sturdy is wanted or a frock for school is in demand, one of the pretty plaid or striped materials would be charming, with the chemisette of tucked taffeta and bands of plain taffeta as trimming.

The dress is made with blouse and skirt. The blouse consists of the front and the backs and is made over a fitted lining, and this lining is faced to form the yoke. The moderately full sleeves are tucked to give the effect of deep cuffs and they and the neck edge are finished with bands. The skirt is straight, laid in rather wide tucks above the hem and in plaits over the hips that are stitched flat.

The quantity of material required for the medium size (twelve years) is 6⅝ yards 24, 5¼ yards 32, or 3½ yards 44 inches wide, with 3 yards of banding, ⅜ yard of all-over lace.

The Pattern 6114 is cut in sizes for girls of six, eight, ten, twelve and fourteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Plain Blouse or Shirt Waist.

No. 6134.—Plain blouses, such as this one, are to be extensively worn this season. They will be made from washable material, from the pretty washable flannels, from taffeta and from various other materials. They will be utilized both for entire gowns and for odd blouses, and this model is an exceptionally desirable one, for it affords opportunity for embroidery, for braiding with soutache, or with fancy braids, or for any trimming of the sort. If a slightly more dressy effect is wanted, the sleeves can be cut off in three-quarter length.

The waist is made with front and backs, and the sleeves that are cut in one piece each. There are wide tucks over the shoulders which conceal the armhole seams, and whether the sleeves are made in full or three-quarter length, they are finished with straight cuffs.

The quantity of material required for the medium size is 3 yards 24, 2¾ yards 32, or 2 yards 44 inches wide, with 2 yards of banding to trim as illustrated.

The Pattern 6134 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Nine Gored Skirt.

No. 6135.—Such variations of the plain-gored skirt as this one are exceedingly fashionable this season, while they can be utilized both for one material throughout and for combinations with equal success. This one is made with narrow straps, that are laid under the gores at their edges and glimpses of which are caught as the wearer walks, so that when contrasting material is used the effect is an exceedingly desirable one, although it is by no means obligatory. The skirt can be trimmed as illustrated with strips of the material or with buttons or with braid used in the same or in some similar fashion, or it can be trimmed with buttons only, or it can be left quite plain, all these styles being equally in vogue. All suiting and all skirting materials are appropriate. Broadcloth in one of the new peacock shades is the material illustrated and the buttons are covered with the material embroidered in a simple design.

The skirt is cut in nine gores. The edges of these gores are turned under and arranged over straight strips, to which they are stitched. The fullness at the back is laid in inverted plaits.

The quantity of material required for the medium size is 7½ yards 27, 4⅛ yards 44, or 3¾ yards 52 inches wide when material has figure or nap; 6½ yards 27, 3¾ yards either 44 or 52 inches wide when material has neither figure nor nap.

The Pattern 6135 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Apron.

No. 6123.—With the coming of school time attractive aprons always are in demand, and this pretty one can be made either with or without a sash. Plain and cross-barred lawns, linens and all materials of the sort are used for the white ones, and, if something very sturdy is wanted, chambray or checked ginghams will be found satisfactory, while for the neck and the armholes frills of the same or of embroidery or simply the stitched bands can be utilized. The pockets are sure to be welcomed, and the apron is so pretty that it is to be commended from that point of view as well as from the one of usefulness.

The apron is made with front and backs and can be cut to form either the square or round neck. The armholes are large and ample and the patch pockets are arranged over the front. When the sash is used it is attached to the underarm seams and bowed at the back.

The quantity of material required for the medium size (ten years) is 2¾ yards 24, 2⅛ yards 32, or 1⅝ yards 44 inches wide, with 3½ yards of ruffling, 1 yard of any width for the sash.

The Pattern 6123 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's Tucked Coat.

No. 6116.—Such a pretty little coat as this one cannot fail to find its welcome. In the illustration it is made of cadet blue broadcloth and is embroidered with silk of matching color. White broadcloth is more dainty, however, and much in vogue; wine red and brown, too, are favorite colors, while if the embroidery means too great an amount of labor, some pretty braid or banding can be substituted. Again, the collar can be used to finish the neck, if liked, and if a very useful coat is wanted, the fancy yoke and panel can be omitted altogether. Also there can be used rolled-over cuffs or plain, straight ones, so that practically there are two coats in one. For the plain coat, dark blue serge or cheviot will be found satisfactory, and there are many pretty novelty weaves offered this season in addition to the familiar ones.

The coat is made with tucked fronts and back which are joined to a plain yoke. When used, the fancy yoke with panel is arranged over it and the neck can be finished as illustrated or with the rolled-over collar. The sleeves are gathered into bands, and the cuffs, which are optional, are joined to their lower edges.

The quantity of material required for the medium size (four years) is 3⅜ yards 27, 2 yards 44, or 1⅞ yards 52 inches wide.

The Pattern 6116 is cut in sizes for children of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Please address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

THE UNIVERSAL MAGAZINE A TREAT.

The **Universal Magazine** is published monthly, and is an elegant thirty-two-page, three-column publication. During this month we will issue to every new subscriber who selects no other premium a set of the famous colored 6x-inch pictures entitled the Sunbonnet Twins. There are also illustrated articles and interesting stories. The subscription price is 25 cents a year, including the twelve Sun-bonnet Twins picture supplements. Be sure you ask for the right supplements. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo. Club raisers' rate, five sets and five yearly subscriptions for one dollar.

Do You Hear Well?

The Stolz Electrophone—A New, Scientific and Practical Invention for Those Who Are Deaf or Partially Deaf—May Now be Tested in Your Own Home.

Deaf or partially deaf people may now make a month's trial of the Stolz Electrophone at home. This is unusually important news for the deaf, for by this plan the final selection of the **one completely satisfactory hearing aid is made easy and inexpensive for everyone.** This new invention (U. S. Patent No. 763,575) renders unnecessary such clumsy, unsightly and frequently harmful devices as trumpets, horns, tubes, ear drums, fans, etc. It is a tiny electric telephone that fits on the ear, and which, the instant it is applied, **magnifies** the sound waves in such manner as to cause an **astonishing increase** in the **clearness of all sounds.** It overcomes the buzzing and roaring ear noises, and also so **constantly** and **electrically exercises the vital parts of the ear that, usually, the natural, unaided hearing itself is gradually restored.**

Mrs. C. Lidecka, 238 12th Ave., Maywood, Ill., wears an Electrophone. Less conspicuous than eyeglasses.

Prominent Business Man's Opinion

STOLZ ELECTROPHONE CO., Chicago.—I am pleased to say that the Electrophone is very satisfactory. Being small in size and great in hearing qualities makes it PREFERABLE TO ANY I HAVE TRIED, and I believe I have tried all of them. I can recommend it to all persons who have defective hearing.—M. W. HOYT, Wholesale Grocer, Michigan Ave. and River St., Chicago.

Write or call at our Chicago office for particulars of our **personal home test** offer and list of prominent endorsers who will answer inquiries. Physicians cordially invited to investigate. Address or call (call if you can).

STOLZ ELECTROPHONE CO., 1460 Stewart Building, Chicago

Branch Offices: Philadelphia, Cincinnati, Indianapolis, Los Angeles, Seattle, Des Moines, Toronto.

Foreign Office: 82-85 Fleet St., London, Eng.

"Skeered."

Two typical Alabama negroes, a yaller girl and a mahogany-hued man, were strolling along the other night.

Said the girl:

"Ise show skeered mos' to def, Rastus."

"What am 'yo' skeered ob, woman?" returned Rastus.

"Ise skeered yo's gwine to kiss me."

"How kin I kiss yo' when Ise got a bucket on ma haid, a wash pot in one hand an' a turkey gobbler in de udder?"

"Oh, well, yo' fool, I wuz thinkin' yo' could set de bucket o' watah on de groun', put de turkey down and turn de wash pot ovah him, den set me on de wash pot, frow yo' ahms around me and des he'p yo'sef."—Montgomery Advertiser.

Your name in gilt letters like this, on six(6) handsome post cards for 10c. Write quick and get our plans to take orders for these postals. The newest thing out, and earn good cash income. **COLONIAL COMPANY, Dept. 69, Chicago, Ill.**

SALESMEN WANTED to introduce our **New Commercial and Statistical State Charts** for office and general use. The work is congenial and profitable, the earnings being according to your ability. **A thorough training is given** before the work is started. **Rand, McNally & Co., Chicago, Ill.**

PRACTICAL BARN PLANS.

A Great Book For the Farmer and Stockman Sent as a Subscription Premium.

This is the name of the best book out. Every farmer needs it. No matter what kind of buildings he may have on his property, he needs it anyway. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house. ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

A Practical Farm Barn.

Each and every plan in the book is accompanied by a lengthy written description explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "New $5,000 Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid,** including one-year's subscription to this paper.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Dear Sirs:—Enclosed please find $1.00, for which send to my address one copy **Book of Practical Barn Plans,** as described in your advertisement; also **The National Farmer and Stock Grower** for one year.

The Christmas Dinner Table.

A simple arrangement for the table is gained by using a thick holly wreath tied on two sides with broad red ribbons and placing in the center a crystal candelabra filled with tall candles.

Another plan is to have a centerpiece of wedge-shaped boxes holding slices of rich fruit cake or Christmas bonbons, with the points of the boxes holding rosebuds with candles. These boxes may serve as souvenirs. A vase of holly or mistletoe is placed in the center of the table. Little candles in star holders can be arranged about the outer edge of the boxes, which are tied with red and green ribbons. The place cards suitable for the season are laid on each plate, while in the napkins are placed crisp bread rolls.

For a family dinner, a glass punch bowl filled with polished fruit, may be used for the center of the table, making a mass of rich and glowing color. A wreath of grapes and holly may be placed about it and silver candlesticks can hold the tall red candles, which may have red shades, if one desires. The place cards represent poinsettias. On the napkins are placed Swedish soup crisps, rolled into cornucopia shape. Use the finest damask cloth and the best china and glass.

A star of brown and green pine cones makes another effective centerpiece, each point ending in a fan made of green pine needles. At each intersection may be arranged a small red electric-light bulb, the light being supplied by a battery hidden beneath the poinsettia that is arranged in the center. At each cover is placed a sprig of holly. Bonbons and menu carry out the Christmas colors as far as practicable. —Woman's Home Companion for December.

Dressing at Moderate Cost.

A Colorado ranchman's wife writes for information as follows:

"The magazines have lots of articles on 'Economy in Dressing,' 'Dressing on Dimes,' etc., etc. They describe the styles but none of them ever tells what materials to get, and it's the material that costs. Do you know any dress stuffs that are pretty, and really cost dimes, not dollars?"

In reply we desire to say that she can purchase as pretty designs and stylish-looking goods in Simpson-Eddystone Prints as any one can wish and their cost is extremely moderate when you consider their substantial quality and attractive appearance. Their greatest economy is in their non-fading colors and durable material which make them wear unusually long. All who purchase are delighted with these goods.

Western Canada as Seen by a Noted Writer.

Emerson Hough, the celebrated novelist, who made a somewhat extended trip through Western Canada, during the past summer, grows enthusiastic in his description of "The Last Best West," which comprises the Provinces of Manitoba, Saskatchewan and Alberta, as all other writers who have ever visited that great country. To extract from what he has said we find the following:

"That black strip across the landscape—it was not the shadow of a passing cloud, but the record of a plow! These yellow gray bands were the fields of stubble already reaped. These other bands of green, of pale yellow, of deep bright yellow —they were the fields of wheat, among which the binders were yet to do their work! The centuries-old soil was finding its first upturned exposure to the sun. Surely the plow had come! There is no more thrilling experience than this, of seeing the ancient wilderness just passing into the first loose fingers of civilized man's occupation.

"Here was the wheat, crowding up to the trail, high as the wagon seat as we drove through. At the edge of a grumbling cow man's unowned but long occupied range, we reached down and plucked off ripe wheat in handsful, crumpling out into the palm the full ears of triple-rowed kernels, magnificent grain, the food which the world must have—that grain upon which the whole civilization of the earth seems so stangely to depend; for, when the wheat has come, civilization has taken hold of the land never again to loose its grasp. One who loves the open air and the wild world cannot suppress a sigh of regret at first thought of the passing plains, at the thought of the dead romance of the rancher; but, none the less, there must come the soberer thought that the wilderness of this world, as well as the scant fields of the older world, belong to the world and the world's peoples.

"Extended personal inquiry in the course of a long journey failed to discover one farmer who was homesick or discontented, or who declared that he was going back to Old England or to the States. Without exception they declared that they were not only contented, but prosperous. In most cases their one or two crops had given them their lands and their first farmstead buildings of rude comfort, at least, fully paid for; and this land was their own. No basement life for these settlers, nor for their children, nor their children's children; no rack rents, no struggle with a worn, exhausted soil; no captouching to a so-called superior class. Here was a different field for humanity. Is there any difficulty in predicting the difference between the product of such fields and those of the 'pent and huddled East?'

"It was a fascinating sight, this middle land between the old and the new. Most fascinating of all was the air of hope and confidence. Something set the blood tingling in the veins. No one here spoke of despair or discouragement. These men made no repining at their lot as frontier farmers. Their sole and engrossing concern was the question of means of getting out their wheat to the markets—for even in Western Canada farming has run in advance of transportation.

"In such regions as this, one still travels as one likes across country, paying no attention to roads; although now and again one comes upon roads rudely plowed along the section lines, in some case, near the railroads, fairly well worked. The time of the 'main-traveled road' is passing rapidly, even in Canada. Soon the fences will come along the highways, and all travel will follow the lines bounding artificial rectangles. Exulting in our liberty, for the most part our party continued to travel direct toward a destination. We still held to the prairies; and still on every side of us was wheat, wheat, wheat!"

The 1900 Washer.

When you write for a free copy of the New Washer Book, which every housekeeper ought to have, use a postal card and address The 1900 Washer Co., 1266 Henry street, Binghampton, N. Y.

FREE DEAFNESS CURE.

A remarkable offer by one of the leading ear specialists in this country, who will send two-months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh. Address Dr. G. M. Branaman, 1264 Walnut street, Kansas City, Mo.

SHIRT WAIST EMBROIDERY PATTERN.

This embroidery pattern is No. 513, made by the Paris Modes Company. It is a wheat design in shadow and outline embroidery for shirt waist. It comes imprinted on light paper and is transferred to the cloth by pressing it with a hot iron. The pattern is good for two impressions.

We are sending out this pattern as a circulation premium in connection with the **Universal Magazine.** Anyone who will send 25 cents to pay for the **Universal Magazine** for one year can select Embroidery Pattern No. 513 as a free premium. The **Universal Magazine** is thirty-two pages, published monthly, and contains a large amount of interesting reading matter. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

CHILD'S LINGERIE HAT.

This embroidery pattern is No. 526, made by the Paris Modes Company. It is for eyelet embroidery and D. M. C. embroidery cotton. The pattern comes imprinted on light paper and is transferred to the cloth by pressing it with a hot iron. The pattern is good for two impressions. Anyone who will send us 25 cents to pay for one year's subscription to the **Universal Magazine** can select Embroidery Pattern No. 526 as a free premium. The **Universal Magazine** is a nice, clean, interesting, thirty-two-page, three-column monthly paper, and it will please everyone. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

A Christmas Blotter.

"With two large sheets of blotting paper of contrasting colors and an ordinary little calendar pad may be made an extremely useful gift," says Woman's Home Companion for December. "Out of the large blotters cut twelve small ones of uniform size, about ten by four inches. Paste a 'month' from the calendar, one on each small blotter, and with the colors alternating. Keep the twelve together by tying ribbon around them, with a pretty bow on top. Each month a fresh blotter may be slipped from under the ribbon and the month's calendar is right at hand. Red and green blotters tied with red ribbon are a Christmas combination."

The Home Garden.

If you would have your garden soil well pulverized, plow in autumn or winter and let the frost do the rest. This also winds up the cutworm.

Ground designed for melons, cucumbers, cabbage, tomatoes and onions should be well fertilized. Nothing is better than clearings from the hen house, and if applied in the fall and plowed in, they will be so thoroughly decomposed before spring that even the most fastidious could not object to their condensed form.

Cut out the old canes among the raspberries and blackberries if this was not done immediately after fruiting. Burn, and thus destroy any insect life which may be there. Apply a top dressing of manure or of bone dust; wood ashes are excellent for garden or fruit. If any varieties are not strictly hardy in your locality, bend down and cover with just enough soil to hold them in place.

A root or two of parsley makes a fine ornament for the kitchen window in winter and will be quite as useful in the preparation of soups or stuffing. Besides, it is never so pretty a garnish as in mid-winter.

Tie each head of winter cabbage in a stout paper covering, first removing all loose leaves. Hang up in a dry, frost-proof cellar.

Squashes, like potatoes, must be harvested without bruising to keep through the winter. If ripe, unbruised and sound, the Hubbard squash winters nicely in a dry, warm room with good circulation and a temperature not lower than fifty degrees. The stems should be left on in gathering and the skin unbroken, if they are expected to keep.

Mulching strawberries in early winter prevents the plants from being upheaved by frost. Swamp hay, straw, corn fodder and leaves are used successfully, but the best mulch is well-rotted horse manure. This not only protects from freezing in winter, but holds the plants back long enough in spring to guard against the late frosts. Do not be afraid to cover the plants during the winter, raking the mulch between the rows as warm weather comes.

The asparagus and rhubarb require a liberal dressing now if they are expected to be at their best next spring.

Cling to the best that you know, both in variety and culture; but give just a little space and time to experiment every year, remembering that improved methods of culture and better varieties are steadily marching on. Some of them may not be the best for you, soil, individual taste, etc., being considered, but others are likely to be.

Which garden crop paid best last season, and why? Are there any vegetables that are regularly failures with you? If so, why? May be it will pay you better to raise a surplus of some crop especially adapted to your soil and buy what you have so poorly grown.—Bessie L. Putnam.

Commission on Country Life.

Responses to the dozen questions recently sent to all parts of our land by this Commission in its interest of country life and its improvement did fair to create a consternation in all circles—none more forcibly than that of the farmer himself. Yet while in a few localilties the dire reports of "the poorest table in the world" may be in a measure true, it is to be remembered that to the farm homes are city people now flocking for their vacation, with an assurance of pure air and an abundance of fruit, vegetables, flesh and fowl of the very best quality.

Physiology, now taught in most of the public schools, has informed the present generation of the need of ventilation; and the conditions which prevailed a half or even a quarter of a century ago are now the exception. While the sleeping rooms may not be either large or elegant, the air that reaches them is pure, and the sanitary conditions quite as good as can be those in crowded city homes, where the folding-bed in the dining room is the only way to solve the sleeping problem, and with no chance to air it, unless it be the roof garden.

Possibly no greater good for the cause will be accomplished than that of a general awakening throughout rural districts of their advantages. They will more appreciate the fresh butter and fried chicken, the singing birds and the fragrant flowers, when a few are pitying them for their poverty and degradation. There is still room for improvement in even the best of farm homes; but the poorest have greater resources than the city slums, and in few localities are the middle class not well fed. In fact, city dwellers would gladly have the gleanings that go to the chickens and pigs.—Bessie L. Putnam.

A School Children's Fair.

In Boone county there was held, last week, a School Children's Fair. It was not the first held in Missouri, but it was one of the best. At this Fair, which was held in connection with the meeting of the Boone County Teachers' Association, there were more than thirty entries of corn and some fifty specimens of needlework, all the exhibitors being eighth-grade pupils in the country schools. J. Kelly Wright, the progressive County School Commissioner, was the moving spirit in the Fair, and in his effort to make it a success he had the co-operation not only of the teachers, but of many of the merchants of Columbia and other Boone county towns, who donated the more than fifty premiums. First, second and third premiums were given on both yellow and white corn. There was also a sweepstakes prize for the best ear, and a prize of $25 in gold for the best ten acres. The corn was judged by F. H. Demaree, of the Missouri Agricultural College, and the boys were given lessons in corn selection and judging. This year they were allowed to pick the corn from their fathers' cribs, but next year the exhibitors must grow their own corn, also write a 300-word composition, teling how it was cultivated, on what kind of soil grown, etc.

M. R. Helton, of Pettis county, is another teacher who has taken an active part in interesting his pupils in agriculture. He first set apart a period each Friday afternoon for agricultural instruction, talking to his pupils about plants and animals, the soil and its products, and those things with which they lived. He went further and took up some simple experiments and demonstrations with seeds. After this work had been carried on for several weeks a meeting was held at the school house, when the older people of the district were invited to come, enjoy a basket dinner and attend the School Fair. The boys made a fine display of corn, and the girls equally as creditable a showing of pantry and kitchen stores.

At Marshall there was held a school boys' corn exhibit arranged by W. C. Fisher, County School Superintendent of Saline county. Others, too, are manifesting great interest in the teaching of agriculture in the public schools. The meaning of it all is that there is being brought about a change in the ideals of the country schools. As has been pointed out by Prof. M. F. Miller, of the Missouri Agricultural College and Experiment Station, our country schools have too long trained their pupils for city life rather than the life of the country. F. B. Mumford, Professor of Animal Husbandry in the Missouri Agricultural College, is also enthusiastic in his suport of agriculture in the rural schools. One suggestion made by him is, that every rural school should have an agricultural library.

Mr. Orlando Harrison, a prominent American fruit grower, discovered that in Europe they do not eat fruit as freely as we do in America, and that the trade can be cultivated and enlarged by sending them fruit which can be sold at prices within reach of the laboring man. This view he obtained from the editor of the Gardeners' Chronicle, who said that by this means the English consumption of American fruits could be multiplied.

The Illinois State Horticultural Society will hold the Fifty-third Annual Convention in the Agricultural Building, University of Illinois, Champaign, Ill., commencing on December 8th and closing on the 18th. A very interesting meeting will be held. Fifty different addresses by eminent horticulturists will be delivered on the most practical and up to date subjects. Mr R O Graham, of Bloomington, Ill., is President, and W B Lloyd, of Kinmundy, Ill., is Secretary.

ENTERPRISE

Meat and Food Chopper

"Enterprise" Meat and Food Choppers *cut* the meat with a revolving steel knife against a perforated steel cutting plate without tearing or crushing. Easily cleaned. Practically unbreakable, and will last for years.

The No. 5 "Enterprise" Chopper costs only $1.75. No. 10, shown in cut, $2.50. They are standard family sizes, and not only save half the work at butchering time, but are useful in the kitchen every day in the year.

Made in 45 sizes and styles for Hand, Steam and Electric Power. We also make cheaper Food Choppers, but recommend the above for the reasons given. Illustrated catalog free. Sold at Hardware and General Stores, etc.

No. 10 Price $2.50 Large Family Size

ENTERPRISE

Sausage Stuffer and Lard Press

Lessens the labor at butchering time. Two machines in one. Well made and does its work quickly and surely. Cylinder is bored true and plate fits accurately. Pressure cannot cause meat to rise above the plate. The Patented Corrugated spout prevents air from entering casing, ensuring perfect filling and preservation of sausage.

Machine can be changed into a *Lard Press* in a minute's time. Can also be used as a Fruit Press.

Your dealer should be able to supply you with the "Enterprise" Sausage Stuffer and Lard Press. If not, order direct of makers.

No. 25—4 quart Japanned Price $5.50 4 sizes Tinned and Japanned

ENTERPRISE

Bone, Shell and Corn Mill

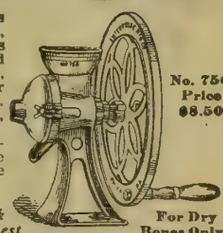
The **"Enterprise"** Bone, Shell and Corn Mill is a good, general mill for farmers, poultrymen, etc., and for compactness, strength and durability is unexcelled. Handy for grinding poultry food and making bone meal fertilizer. Mill shown in cut $8.50, weight 60 lbs., grinds 1¼ bu. corn per hour. Look for the name **"Enterprise"** on the machine you buy.

Grind up dry bones, oyster and other shells, corn, etc., for your hens and watch results.

Other famous **"Enterprise"** household specialties are: Coffee Mills; Raisin Seeders; Fruit, Wine and Jelly Presses; Cherry Stoners; Cold Handle Sad Irons, Etc., Etc.

Sold at Hardware and General Stores, etc.

Write for "The Enterprising Housekeeper," a book of 200 choice recipes and kitchen helps. Free on request.



No. 750 Price $8.50

For Dry Bones Only

THE ENTERPRISE MFG. CO. of PA., 220 Dauphin St., Philadelphia, Pa.

To Extract a Splinter.

When a splinter has been driven deep into the hand, it can be extracted without pain by steam. Nearly fill a wide-mouthed bottle with hot water, place the injured part over the mouth of the bottle, and press tightly. The suction will draw the flesh down, and in a minute or two the steam will extricate the splinter and the inflammation will disappear.—November Woman's Home Companion.

Flower Language Post Cards, a Set of 12 FREE.

Do you know the "Language of Flowers?" If you will send 10c. for a six-months' trial subscription to our large family paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower postcards. Each card is different and represents the natural colors of the flowers and every card has the language of the flowers portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write us to-day and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send to-day if you want them. Address,

THE EPITOMIST,
237 Barnes Block, Spencer, Ind.

This Grand Offer of Mine Positively Outdoes

the most liberal offer you ever read before. *Just think,* you get this grand big doll, this set of doll's furniture of 5 pieces and this fine china set of 27 pieces *all absolutely free.* Not merely your choice of one, remember, *but all three of them,* just for a few moments of your time. You can't afford to overlook this offer. It is the opportunity of a lifetime to get just what you have always wanted without costing you one cent. Read this grand offer *right now.* *WRITE ME ABOUT IT AT ONCE.*

3 BIG PRESENTS FREE

Doll's Furniture Set FREE

Doll's China Tea Set FREE

GIRLS don't miss this **chance of a lifetime** to get the biggest and finest doll you ever owned. **This is a great big doll** with expensive Bisque head, face and features just as natural as life, with pearly teeth, rosy lips, sparkling blue eyes, pink and white complexion, beautiful hair that looks like real. This **big, magnificent doll** is nearly two feet high, has jointed body, so that dolly can sit up or lie down, just as you want her to do. She is stylishly dressed in a **genuine satin dress** with lace trimming, has complete set of underwear, open work stockings, patent leather shoes and big Floradora hat. You can dress and undress dolly; and she also opens and closes her eyes, just like a real baby. You will be proud to own this doll and show it among your friends—it is the dearest and sweetest doll you could imagine. When you see her you will be astonished to think you could have such a fine, beautiful doll as this **all for your very own.**

I Want to Give every girl reader of this paper one of these **magnificent big dolls free** and also **the two other big presents,** and I want to do it right away. My object is to advertise our business and all I ask in return is a little simple effort on your part, that will take but a few moments of your time.

This is Absolutely and Positively the Most Generous Offer Ever Made You

I will include with each and every doll given away a set of beautiful **doll furniture** just as shown in illustration, consisting of 2 arm chairs, 2 plain chairs, and one square table. The table and chairs all match and make one of the handsomest little sets of doll's furniture ever offered. **AND IN ADDITION to this set of furniture,** and to make everything complete, I am also going to give the **Doll China Set of 27 Pieces,** consisting of 6 cups, 6 saucers, 6 plates, 6 teaspoons, teapot, sugar bowl and cream pitcher. It is beautifully decorated just like the large, expensive china costing many dollars. I also give six teaspoons, so that you can give a real tea party. With this furniture and china you can set dolly up in housekeeping and give doll tea parties and entertain your friends and their dolls just like grown up people.

***NOW GIRLS,* all I ask in return** for these three grand gifts, is for you to show and distribute 14 of my fine picture paintings and Flower Post Card Sets in your neighborhood. **You don't have to sell** these pictures and post Cards, just show them among the people in your locality and you can easily dispose of them in a few hours time as a receipt on my big 25c offer. These beautiful pictures are 16x20 inches in beautiful colors, with gold litho frames, all ready to hang on the wall in the parlor or sitting room. The set of Post Cards are beautiful glazed "Language of the Flowers', cards. **Just show these people** the grand offer I have made you and they will all take one of these elegant pictures and Post card sets from you. After you have disposed of these 14 pictures and Post Card Sets, which you can easily do in a few hours time, on my new plan, I will send you as a reward for your trouble this **big, magnificent doll,** just as described, **also, the furniture set and china set.** I don't charge you anything for the pictures and Post Cards, as I send them free, and you can try and see what you can do and if you can't distribute them on my plan, simply handing them out as a receipt, **they can be returned at my expense.** However, I know any bright woman or girl can earn these presents without any trouble whatever. As soon as you have distributed them I will send you the **Doll, Furniture Set and Tea Set** absolutely free. I arrange to cover all express charges, so they will not cost you a penny.

Remember, you get all 3 of these presents, the big, magnificent doll, the handsome set of doll furniture and the china set, all for the small amount of effort required in showing my picture paintings and new Flower Post Cards among the people in your neighborhood. **DO NOT MISS THIS OFFER.** It is positively the biggest and most liberal offer you ever saw. It is only made for introductory purposes. It means just what it says. It is not an offer for "your choice" of these presents, but you get **all of them**—the big 2-foot Bisque Doll, the 5-piece Bamboo Furniture Set and the 27-piece Doll's Tea Set, mentioned. Be the first in your town to get these grand presents.

SHOW THE GRAND OFFER TO YOUR PARENTS

They will be glad to help you if you do not understand it. Just write me anyway. It is not even necessary to write a letter, unless you want to. Just your name and address will do. I will know that it is in answer to this advertisement, and will have everything arranged for you to get these free presents. Remember, I arrange to pay all express charges—so they will not cost you a single cent. I will also include a **nice extra present for mama** if you will write me at once. Send today and address me plainly.

Write me while you have the opportunity.

THE WHITE SLAVE TRADE

By Hon. EDWIN W. SIMS, U. S. District-Attorney, Chicago.

In a series of thrilling articles now appearing in the WOMAN'S WORLD of Chicago, United States District-Attorney Edwin W. Sims, who so successfully prosecuted the famous $29,000,000 Standard Oil case, shows with merciless accuracy and by startling facts and figures the extent of the frightful white slave trade in Chicago and other cities. Mr. Sims says that the "white slave traders have reduced the art of ruining young girls to a national and international system." In order that all mothers may read and ponder the dangers that confront their daughters, the editor of the WOMAN'S WORLD, Desk 2, Chicago, Ill., will send this article to all who write for it.

National FARMER

Vol. XXI. St. Louis, Mo., January, 1909. No. 1.

GREAT RECORD OF THE YEAR 1908 AT THE ST. LOUIS NATIONAL STOCK YARDS: Cattle receipts, 1,145,465 head—a new record—the only market showing an increase of cattle. Hog receipts, 2,560,207 head—an increase of half a million over all previous records. Sheep receipts, 697,142 head—the largest yearly arrivals in five years. Horse and mule receipts, 109,393 head—the largest receipts at any market in the world. The buying facilities of the market are yet greatly in excess of the supplies. It is always safe to ship to the St. Louis market—the best market of all.

GRAND CHAMPION CAR-LOAD OF BEEF CATTLE AT THE NINTH INTERNATIONAL LIVE STOCK SHOW, DECEMBER, 1908. These cattle were two-year-old Aberdeen-Angus steers, averaging 1,406 pounds in market. In the show ring they won $625, and were sold at 11 cents a pound to the United Dressed Beef Company, of New York City. They were fed by Funk Bros. Seed Company, of Bloomington, Ill., and were sold by Messrs. Clay, Robinson & Co. This is the second time that Funk Bros. have won the Grand Car-load Championship, and Messrs. Clay, Robinson & Co., the salesmen of these champion cattle, will open a house at the St. Louis National Stock Yards during the present month. See their greeting on page 13. At St. Louis the live stock commission firms are energetic, upright and honorable, enterprising business men. All the principal firms in the live stock commission business have been represented here for many years, with one exception, and by the establishment at the St. Louis National Stock Yards of Clay, Robinson & Co. that exception is made up. This is a great, active, energetic firm, and will be of large benefit to the stockmen who are in good shipping distance of the St. Louis market. That a car-load of two-year-old steers, weighing 1,406 pounds, can win a grand championship, is an object lesson for all stockmen. Twenty years ago champions had to weigh 1,800 to 2,000 pounds and be four to five years old. Under conditions then existing, only the great corn states could produce top grades of marketable cattle. Under present conditions, with champions two years younger, three to five hundred pounds lighter, and raised on grass, clovers, corn and oil meal, it is possible for the Southwest to produce top-grade steers at a less cost than anywhere else.

and Stock GROWER

Look Out For Argentine.

Look out for Argentine and keep up the bars against Argentine meats, hides and skins. Let them in all right, as Mexican cattle come in, when they pay the duty, but don't reduce the duty. Argentine is a great pastoral country, and it is now cutting down the British demand for American dressed beef, and it will not be long before Argentine—having no market whatever at home—will be trying to unload the surplus on us. Look out for Argentine.

Ordering Nursery Stock.

Nursery stock must be ordered early in the winter if it is to be delivered in the early spring. Too many forget this fact and delay ordering till it is practically impossible for the nurseryman to satisfy the last rush orders. Also the time is then too short to correspond with the senders of the orders and find out their preferences when the things they have ordered have been sold out.

But there are other things than earliness that must be looked after. The securing of the variety is of prime importance. Now and then we hear of an orchardist that has made a thousand dollars per acre off his tree fruit. But in such cases it may be taken for granted that the money was made on select and choice varieties and not on the common or nondescript varieties.

The cases are numerous in which men have purchased fine varieties of fruits and found them other varieties when they have fruited. The cases are so numerous that it looks very much as if some of the men engaged in the selling of nursery stock had deliberately planned to work off poor varieties under the reputation of exceptional varieties. And the writer is sure that this is just what occurs oftentimes. And why should we not expect it to occur, when we find all kinds of similar deceptions in commercial life around us? Adulterated goods are everywhere present, and fraud in nursery stock is easier than in most other kinds of merchandise, on account of the length of time required to expose fraud.

The man that wishes to order the very best stock should avoid the round-about method of ordering. He should get into touch with the firm from which he is ordering the goods, and, if possible, send his order with the fullest possible instructions as to varieties. In many of the order blanks used by tree agents there is a clause permitting the nurseryman to substitute some other variety if he is out of the variety ordered.

This clause has been the pretext for much swindling. It makes it possible for a nursery firm to advertise varieties they do not possess and get orders on the strength of them. The palming off on the buyer of goods not ordered is not always accompanied by an explanation that the substitution has been made, and often the undesirable variety is planted by the purchaser under the firm impression that he has secured the variety ordered. Years after, when he complains that he did not get the variety he ordered, he is confronted with the order, showing his permission to substitute.

A man that is going to buy much nursery stock can well afford to make a trip to the nursery to which the order is given, for he is then more likely to secure the variety required, and there will be less danger of having the substitution scheme worked on him. He will be able also to gather much useful information regarding the care and handling of nursery stock after it comes into his hands.

The most important factor in the ordering of nursery stock is to know the men with whom dealings are being had. We cannot get away from this. The most important thing is to learn who can be trusted. On the correctness of our decision in this lies the success or failure of the fruit-tree planter's operations.

Land-poor Farmers.

It is best not to be too greedy in the acquisition of land. The temptation to add acre to acre is very great and the yielding to this temptation has made many a man land-poor.

One of the very poor men that the writer has known owned forty thousand acres of land in Michigan. It was mostly unproductive land that had been cut over, but he had to pay taxes on it, and as every tax-paying time came around he was in sore straits to get together the money with which to pay the taxes. He was literally land-poor. What happiness he found in hanging onto land he could not use it is hard to say.

Land is wealth only as it is productive of revenue. If it will not yield a profit to the man that owns it it possesses no value at all, and may easily become less than of no value. There are many farms that are making their owners land-poor for some reason connected with their size or their management. The writer was on a big farm in Iowa that covered an area of over ten square miles. The owner was making a desperate effort to make ends meet and to keep the farm in one piece. It was currently reported that the previous owner had not been able to make expenses out of the farm, though the soil was very fertile. The cause was its bigness, which had increased the cost of operation rather than decreased it.

Another big farm in the same state has been notoriously a money loser and has made several of its owners land-poor. The thrill of owning a farm of wonderful size has been the temptation that has induced man after man to sink money in it.

Any man that has more land than he can take care of is land-poor. This is due to the fact that the economic production of crops requires the expenditure of a large amount of labor at a low cash cost. The millions of farmers that do all their own work do individually much more than the man that is working for a wage, and this is what sets the pace for all.

The man whose farm is so large that his own labor counts for nothing must depend on labor that is paid for. This labor is sold to him at an even measure, and he is competing with the men whose labor is sold to themselves with a bonus of 50 per cent. increase thrown in. It gives the small farmer that owns his farm a vast advantage over the bonanza farmer. In the days of low prices for labor and farm products this did not count for much, but in this day of high-priced labor and high-priced materials it is a terrible factor.

In the great new agricultural states of the West we have a great many land-poor farmers, who have large mortgages on their farms. That fact accentuates their poverty. Many of them hold a very erroneous philosophy. One man said: "If I can't make a living on four hundred acres of land, how could I do it on two hundred acres?" The error lies in assuming that the more acres of land a man has the easier can he make a living.

The possibilities of intensive agriculture are so great that it is not necessary for us to have so many land-poor people as we do have, if they will give attention to farming downward rather than across their acres.

The Farmers' Home Journal of Louisville, Ky., reports that the famous Fairview Farm near Gallatin was sold at auction. The entire farm contained 2,000 acres. It was sold in tracts ranging from 50 to 500 acres and averaged a little over $60 per acre, the entire sale footing up $121,540. The farm was the property of Chas. Read, of New York, who placed many expensive improvements on it. While the sale did not yield as much as Mr. Reed had expended on it, prices were as high as was generally expected.

POTASH

in the bag is turned into money in the pocket. Success in farming demands at least two things:

(1) Thorough Tillage

(2) Fertile Soil to Till

The first applied to crops on exhausted soils is Waste of Time and Labor. Secure the second, then apply the same methods, and every stroke counts. Your bank account will prove it.

Our Literature on Potash covers every possible use for it, and how to get the most out of it. Sent Free on Request.

Winter Feeding of Our Live Stock.

This is the season of the year when the farmer is closely considering and figuring the cost of the feed eaten by his stock. During the summer and fall, when the pasture is plentiful, and all the owner has to do is to turn out his stock to grass, it seems that the stock are getting their own living, and we do not do much thinking; but when winter comes and we begin feeding high-priced feed and think possibly we will have to buy more in order to have enough to take our stock through the winter, it is then that we are counting the cost and figuring; and it is well that we are; but we should be figuring the cost and thinking all the time.

We should not try to carry any more stock through the winter than we can properly take care of, both in providing feed and giving comfortable quarters. It will not pay us to try to do it. We cannot make anything by starving a part of our stock in order to keep a few more head. Far better keep less in number and try to keep them right.

We want to keep our stock during the winter on a ration of feed that will make them hold their own and gain when they should. Work and breeding stock should be taken through the winter so that they come out in the spring in good, thrifty condition. Market stock should be pushed from the start at any season of the year.

For the winter feeding of horses that are idle or doing only light work, I know of no better feed for them than sheaf oats as the main part of the ration, and this is what I try to have to feed my horses each winter. It is well to have a little hay for a change, and also just a little corn, and you are keeping your horses as well as anybody. Horses that have been fed on sheaf oats during the winter are ready for the work season when spring opens. They are in condition to work and they feel like working. I feed the sheaf oats in the manger, and the horses eat the heads and the best of the straw, and the rest is used for bedding. All the late experiments show that all animals get more good from their feed if the grain is fed mixed with the roughness, and that is what the horse does when feeding on sheaf oats.

We should not starve our stock to keep from buying a little extra feed. It will not pay us to do so with our stock, and in buying the feed we are sure of getting one profit from it, if we take care of it, and that is the manure. I had rather buy than sell, for the farm's sake, and with judgment we can get the worth in feeding.

For the milch cows we may have to buy some mill feed, and it will pay us to do so if all we have is timothy hay and corn fodder; but if we have clover and cowpea hay we have nearer a balanced ration; and, by the way, every man who has not tried cowpea hay for the feeding of milch cows, try it next year, and think now about getting the seed. Those who have tried it need not be told.

Remember that the cow as well as all other stock must have plenty of good water each day if the season is winter, and the salt is only a little, cheap thing, yet it should be allowed all the stock. The sheep like to run out and graze when there is no snow on the ground, and it is better if they can do this. An old pasture, where the grass was not eaten down last fall, and the run on the wheat fields, all are good plans. When the weather does not permit them to be out, have some corn fodder and mixed hay for them, also a little grain of most any kind. The sheep must be kept out of the cold, wet weather. They can stand the cold if it is not wet.

The hogs which are to go to market should be pushed so as to not feed any longer during the winter than possible. The brood sow should have a ration to keep up herself and develop the unborn litter if you want good pigs. The sows should have exercise and a variety of feed, to run and pick some grass, and on the wheat fields at times is good. Feed a little corn, some middlings in the slop and some clover or cowpea hay. A little oil meal is good for a hog of any age, and we like to keep it on hand for all stock. Fine to give the horses a handful.

The poultry should be considered a part of the live stock. We should give the poultry yard more attention at this time of the year and try to feed for eggs, as now each dozen is worth something. See that the hen house is comfortable, and feed some extra; push for eggs and see if it does not count. All stock should be kept in comfortable buildings and none should be allowed to sleep in draft, as this is what cuts almost as much as being out of doors.

Take a few minutes and close up the cracks in the stables and provide for the animals' comfort and for yourself profit. Remember that an animal makes little or no gains when not comfortable.—E. J. Waterstripe.

THIS NEW PICTURE OF

DAN PATCH 1:55

In Six Brilliant Colors

MAILED FREE

This new picture of Dan Patch 1:55, is the Finest I have ever gotten out for framing. It is 21 inches by 28 inches, is printed in six brilliant colors and is free of advertising. It gives his age and a list of all the fast miles paced by Dan. Being made from a "Speed Photograph" it shows Dan as lifelike as if you stood on the track and saw him in one of his marvelous and thrilling speed exhibitions. You ought to have a fine picture of the King of all Harness Horse Creation and the Fastest Harness Horse the world has ever seen. I will mail you one of these Large, Beautiful, Colored Pictures of Dan Patch 1:55 free With Postage Prepaid and full particulars concerning my plan of Giving Away a $5,000.00 Dan Patch stallion if you will simply write me. ☞ You Must Give Me This Information. 1st. State paper in which you saw this offer. 2nd. Give number and kind of live stock you own.

Address M. W. SAVAGE, Owner, Minneapolis, Minn.
Also sole owner of---International Stock Food Co.
Also sole owner of---International Stock Food Farm

Give Roots Room to Grow.

The importance of giving plants ample feeding ground for their roots may be well illustrated by some garden work which I did a week or so ago. We have a fine specimen of lilac which thrived nicely for the first year or two after it was set out, but for the past two years I have noticed it has not been doing well. It had been mulched carefully, but still it lacked thriftiness. I determined to change it to another location in the garden. When I dug it up I found the roots had not extended ten inches in any direction, but had grown in a twisted mass directly beneath the shrub. The roots had been so effectively walled in that they could not get through the surrounding soil, and really the mulchings about the base of the bush were the only means of keeping it alive. I have now transplanted the lilac, setting it so that the roots will have all the feeding ground they need.

I also moved some peony roots, which for some cause had not been giving satisfactory results. These were set out three years ago and they have been heavily mulched every fall. I found here the same condition one finds with a contrary horse—one may lead the horse to the water tank, but, do your best, you can't compel him to drink. These peony roots were set in filled-in soil, and there was considerable coal cinders mixed with the dirt. Evidently the roots did not relish this kind of food, and practically starved themselves nearly to death. It is a well-known fact that plants select their food, and if proper food elements are not within reaching distance of their roots, they will not prosper. I have also moved the peonies to good soil, and will now expect them to make good.—L. C. Brown.

MANSON CAMPBELL, President, The Manson Campbell Company Ltd.

I'll Give You Plenty of Time to Prove that the CHATHAM Fanning Mill is the Best Seed Grader and Cleaner Made

—And Will Pay For Itself in a Year

You can prove this by simply taking my proposition and cleaning your grain—before you sell it—or before you sow it. $1,000,000 lost by Farmers in every state each season by selling and sowing dirty grain is a low estimate. You won't haul it to be cleaned before you sell your grain, so you are "docked" on the price because of dirt in every bushel. Just take me up on my offer—get a CHATHAM Fanning Mill and save its price easily by using on your place. Take 30 Days' Free Trial first.

WHAT IT DOES BESIDES GRADING

Cleans all such Texas Crops as Rice, Kaffir Corn, Maize, etc. Cleans and separates all kinds of grain—Separates Oats from Wheat better than any mill you can buy—Cleans Red Clover—Takes out Buckhorn Plantain. Cleans Alsike Clover and Alfalfa—Cleans Beans, Oats, Barley—Grades Corn—Cleans Timothy Seed—Takes all Chess and Cockle out of Wheat.

Chatham Free Book Tells You My Plan On 30 Days Free Trial

Freight Prepaid

This valuable book tells many other ways than those above that a Chatham Fanning Mill will make and save for you. As a practical man you know that all I've said above is true and you also know that in selling direct from our factory—prepaying freight to you—giving you 30 DAYS' FREE TRIAL—and our wholesale price—we have simply got to give you a CHATHAM Fanning Mill that does all we claim for it. Our business life depends on our mills making good. Remember that

I Prepay the Freight I'll send you a CHATHAM Fanning Mill on 30 Days' Trial without any advance payment, just to prove it will do all we say it will. 250,000 sold already in U. S. and Canada. Experiment stations indorse them, and Agricultural Papers recommend them to subscribers. So why take few prices for dirty, mixed grain, or sow seed that grows weeds and mixed crops? Write nearest office for full particulars, prices and New Catalog.

Management of Sows During Pregnancy.

It must be remembered that the brood sow has a strong demand on her for material for bone, muscle, nerve and hair. And she must be so fed that she can supply this demand without robbing her own system to do it, else there will be trouble next spring at farrowing time, and her owner will be disappointed.

It must also be remembered that corn alone will not supply these demands; she needs a great variety of feeds. Mill feeds, such as bran and wheat middlings, are most excellent. I prefer to feed bran dry, so it will be thoroughly masticated before being swallowed. In case wheat middlings are used, it is best to make it into swill. In the bill of fare a few roots should be added, or, where roots are not available, a few potatoes may be fed as farrowing time approaches.

I feed my brood sows no corn at all for at least two weeks before farrowing time. Wheat bran is a most excellent feed at this season of the year, as it furnishes plenty of bone-making material and also keeps the bowels in good condition.

I give my sows a warm, dry place in which to sleep and do not allow them to draw themselves over any obstructions, such as boards, bars and the like. I see that they have all they will drink, twice a day, of good, clean water. I watch them closely and give them the best care possible without overconfining or overfattening them.

Many farmers oftentimes have lame hogs and do not understand the cause of this undesirable condition. Either the hogs have been compelled to lie in a damp bed, or in a place so cold that they have been forced to pile up to keep warm. Either condition is more than likely to bring on rheumatism. I never could understand why a hog is not entitled to as good and clean a sleeping place as any other animal on the farm. A few pigs that are well fed and cared for are worth twice, yes ten times, the number that are half starved.

I always keep charcoal, ashes and salt in reach of my hogs at all times. They sweeten the stomach, stimulate digestion and keep the animals in a healthy condition.—Wm. H. Underwood.

Mulching Trees in Winter.

Winter is an excellent time to mulch the trees and hedges about the farmstead. When cultivation is discontinued mulching should begin and be continued until the ground about them is so shaded that a soil protection is not necessary. There is usually an abundance of waste material about the straw stacks and feeding yards for this purpose and also spare time which may be used to apply the same.

Many willow hedges have been planted throughout the country during the past few years, and in the event of a dry summer these hedges will suffer and possibly die out entirely, if they are not well protected with mulches to save the soil moisture. A sod is quite sure to form after cultivation is discontinued and the ground, as a result, will soon become very dry in the event of drouthy conditions. This has ruined many very promising hedges and other plantings of trees and shrubs.

There is not always time to devote to the care of the trees in summer, when other work is crowding on the farm and hired help is difficult to secure.

There are many of these little jobs which should be anticipated and given attention during the winter, when there is no work to be done in the fields. Mulches when applied in winter are most beneficial, because they will retain moisture which accumulates during the fall and winter months.

Many people have very little knowledge of the large quantities of water that thrifty, growing trees take from the soil during a hot, windy day in midsummer. It has been said, on good authority, that a large cottonwood will, in a single day, pump a barrel of water through its roots into the body of the tree and allow it to escape through the leaf surface. A large portion of this must be soil moisture which has been stored in the earth but finds its way toward the surface very rapidly during hot weather. The value of a mulch is that of retaining the supply in the soil near the surface, where the tiny feeding roots of the trees will drink it in with the plant food it contains in solution and thus convert the fertility into wood fiber as the water escapes through the leaves.

If all the growing trees and shrubbery about the farmstead are mulched during the winter, they will make a rapid growth during the summer, regardless of dry weather.—Wm. H. Underwood.

It is reported that several of the large ranches in Southern Texas, notably the King, Kennedy and Armstrong properties, are to be taken over by a syndicate and retailed to farmers. About 1,600,000 acres are to be cut up. It used to be said of the King ranch that it was thirty-five miles from the front gate to the front door.

Credit Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of the National Farmer and Stock Grower will be glad to furnish the paper three years for **One Dollar,** the same to be payable at the **end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

CORN COBS IMMENSELY VALUABLE!

A Great Discovery—Worth Millions of Dollars! The Perfect "Balanced Ration" Found at Last! Ground Ear Corn (Cob and All) Makes the Feed That Fattens in Quickest Time, at Lowest Cost.

Every Stock Owner can now Grind "Corn & Cob" Meal in a "Corn Belt" Feed Mill

"Corn & Cob" Meal, the feed that fattens at lowest cost—can now be ground as needed, **right on the farm.** We manufacture the mills that grind ear corn—**cob and all**—into a meal possessing remarkable fattening qualities. Nature's "balanced ration"—complete, in every ear of corn! The **corn cob** no longer a useless "by-product" but made to contribute to the profits of the owner of live stock! The grinding and feeding of "Corn & Cob" Meal opens up new avenues of profit to farmers everywhere. Experiments in cob feeding have been going on for a number of years. The results are astounding. Chemical analysis shows the cobs are similar in composition to the stalk and blades of corn. They have the same food elements as the **kernels,** but in different proportions. They are rich in flesh-forming matter. Equal to hay or other roughage in feeding value. Richer in nutriment than **potatoes** and many of our **grains.**

Think of the fortune lost to American farmers by **burning** thousands of tons of corn cobs every year or allowing them to **rot!**

For BEEF or MUTTON or MILK
Feed "Corn & Cob" Meal
The Perfect "Balanced Ration"

Here are the actual results of feeding tests of "Corn & Cob" Meal:

Experiments made by the "Drainage and Farm Journal" wherein "Corn & Cob" Meal was fed to milch cows, increased their flow of milk **one-half.**

It has been proved that every bushel of "Corn & Cob" Meal will produce **four pounds more beef** than the same quantity of ear corn (not ground.)

Large sheep owners report after experimenting with "Corn & Cob" Meal that every bushel of ear corn **ground for feed is worth one-third more.**

"Corn & Cob" Meal is very palatable to stock. They will not eat corn in the ear when they can get it **ground—cob and all.**

The feeding of "Corn & Cob" Meal prevents the waste—in undigested grain—that occurs when shelled corn is used. The fibrous material gives the necessary **bulk** to the feed, aids digestion and keeps stock in prime condition.

The nutritive value of the cob is 41 per cent of the entire ear of corn.

This is the only mill that grinds "Corn & Cob" Meal. No other mill **grinds the cobs evenly with the corn.**

No other mill has a Cutter Head that reduces the feed as fine as possible before the grinding begins. Our mill **combines** the "Cutting and Shearing" Process with a **grinding** mechansim that gives the **exact** degree of **fineness.**

The "Corn Belt" Mill has the largest capacity, lightest draft and greatest strength of any feed mill made. **It does not heat the ground feed.** Handles new, soft and spongy corn better and faster than any other mill. Requires **less power** than others because it **cuts** before it **grinds.** For easy grinding and rapid work, it has no equal.

We build several styles and sizes of "Corn Belt" Mills, both Sweep and Power (Gasoline or Steam.) Our Sweep Mill fills the bill for the average farmer. At comparatively small expense this splendid mill puts you in a position to grind "Corn & Cob" Meal as you need it—to have it fresh, palatable and free from must. The increased profits from the use of this cheap feed will pay for the mill in a very short time.

No "going to the mill." No "toll" to pay. You can grind ear corn or small grain singly or mixed. You can make extra money by doing grinding for your neighbors. We claim that your stock will thrive better, mature quicker and yield you a larger profit on "Corn & Cob" Meal than on any other feed. And just to show that what we tell you is the simple truth, we'll ship on one of these mills for a **20 Days' Trial, freight paid in advance,** to any responsible stock owner. Better take us up on this liberal offer.

"Grinding Feed Into Dollars" Free Book

Valuable information in condensed form for every owner of live stock. All about the new, cheap feed that is swelling the profits of stockmen and dairymen. Most important book on the subject that has been written. Also **FREE CATALOG** of our full line of "Corn Belt" Feed Mills, our **Free Trial Proposition** and a **Special Offer** that will save you considerable money.

Spartan Mfg. Co., 1144 Main St., **Pontiac, Illinois**

KING CUMBERLAND—Shorthorn bull. When this young bull started out to take prizes at the Fairs of 1908, we published his picture in our October number, and now that he has received the grand championship at the Chicago International of 1908 we think it proper to show what he looks like once more. He was only a yearling when he won the grand prize, being calved in January, 1907. During the season H. H. Powell & Son, of Linn Grove, Iowa, sold him to G. H. White, of Emerson, Iowa, and since winning the championship he has been again transferred to Elmendorf Farm, Lexington, Ky. KING CUMBERLAND is undoubtedly a wonderful yearling. At the age of eighteen months (549 days) he weighed 1,500 pounds. He won the American Royal championship in addition to the Chicago award. If he were not a bull he would be a perfect beef steer. Such can be raised in Texas, Arkansas, Oklahoma, Alabama, Louisiana, Mississippi, Kentucky and Tennessee; better and cheaper than they can be raised in Wisconsin, Iowa and Nebraska. All that is necessary is the blood and the feed—the climate is here.

STANDARD FAVORITE—Champion Galloway bull at many shows, the last and greatest prize being the championship of the breed at the Chicago International of 1908. His sire was Scottish Standard; his dam Mary Miller. Exhibited by C. S. Hechtner, of Princeton, Ill. The Galloway is the oldest breed of Scotch cattle. They were originally range-raised and are still considered splendid rustlers on short feed. They beat the buffalo on buffalo grass and produce a shaggy coat that doubly discounts the buffalo robe; and in hardiness the Galloway has a reputation that is second to none.

Dead-ripe Seed the Best.

A correspondent writes: "Is seed selected early in the fall, before the grain begins to dent, safe to plant? A neighbor of mine says that corn taken while the grain is in the milk, or earlier, will make safe seed."

It is not a good practice to use any kind of seed grain which has not fully matured. It has been proved by careful tests that when grain is in the milk stage it has very weak germinative power, and I question whether it would grow at all were it taken at any earlier stage. Dead-ripe seeds are the surest to grow, and they have the vigor to withstand any untoward weather conditions. Immature seeds are feebler and they lack the power to promote quick growth. This point is very essential, for it frequently happens that hurtful weather conditions occur about the time the seed starts growing, and unless the seed can withstand these backsets there is sure to be a handicap which no amount of favorable growing weather afterwards can overcome. We see a practical illustration of the strength of dead-ripe seeds in the kernels that shatter out of small grain when it is harvested, and in ears of corn which are missed in the husking. These grains or ears are subjected to the severest kind of weather conditions for several months, yet much of it will sprout and grow voluntarily with a vigor that is never found in unripe seeds. I will not say that the milk-stage seed mentioned by our correspondent will not grow. It probably will grow. But it must have ideal conditions to germinate quickly, and it must be planted in rich, strong ground to insure rapid enough growth to mature a crop. Rarely do we have just such favorable conditions, and for this reason I consider it safest to plant fully-matured seed.

Handling the Farm Manure.

For a number of years I have followed the practice of hauling manure directly to the field just as soon as it is made. I have found this to be the most practical way of handling it. I use a manure spreader, and from the standpoint of labor there is no other way that will compare with this in handling the manure economicallly. The manure spreader not only saves time and labor, but does two other very important things: It distributes the manure evenly and thinly over the field.

The larger part of the manure on my place is handled during the winter, when there is not much other farm work to be done, consequently the men and teams are at liberty to do the work. As every farmer knows, there is always more manure to handle during the winter than at any other time of the year, on account of the stock being confined in the stables and lots. If the manure is left in a shed or covered barn yard, the work of hauling it comes at a season of the year when all the labor is needed on the farm and extra labor must be hired to handle it.

Some may think that to haul manure out during the winter and spread it on frozen ground will subject the manure to heavy loss when the ground thaws out in the spring, but experience does not seem to warrant this opinion. When manure is applied to the fields during the winter season good results are always obtained. I do not believe there is any great amount of loss when it is thus handled. I am content that I get the benefit. The evidence is the growing crops where I apply the manure.

In my opinion, in order to get the greatest value of the manure, it should always be used as a top dressing. My practice has always been to top dress and in practically every instance I have put the manure on my meadows and pastures.

It is a good plan to top dress winter wheat during the winter with stable manure, especially where the land is to be seeded to clover. It practically assures a good catch of clover and a heavy growth of the same. It is also a good plan to put manure on clover sod that is intended to be plowed down for corn or potatoes the following spring. Sometimes, however, when the land thaws up in the winter time or during a very wet spell it is impossible to haul the manure directly to the field. I then draw it out to the edge of the field where I intend to use it and dump it in a large pile, and just as soon as the ground freezes or dries up so that it will hold up the team and spreader, I spread the manure. There were only a few days last winter that I had to pile up the manure in this way.

Some argue that a manure spreader cannot be used during the winter time, when there is snow on the ground, but I have used one for a good many years and I have had no difficulty yet in using it when there was snow on the ground.

Taking all things into consideration, I have found that the most satisfactory way to handle manure is to haul it directly to the field just as soon as it is made. None is lying around my barn. If it was, its most valuable fertilizing elements would be going to waste.—W. H. Underwood.

Don't Neglect This When You Buy a Grain Drill.

A very important point to be considered in the purchase of a grain drill is the foundation upon which the drill is built. That foundation is the frame. It must be strong, otherwise the drill will sag in the middle and consequently throw the driving mechanism out of order and seriously affect the even sowing of seeds. Look well to the frame and feeds when purchasing a grain drill. The furrow openers should have careful consideration. The frame on a Superior Grain Drill is made of the kind of steel that is used for railroad bridges—angle steel—in one piece, bent cold at the corners, thoroughly reinforced and braced, also having an I-beam steel bed rail, and it cannot sag or get out of proper alignment. The feeds are accurate in their handling of all kinds of seed—from the tiniest grass seeds to bush lima beans; no cracking of seed either. The purchaser can get any style furrow openers he may desire. The Superior Drill is manufactured by The American Seeding-Machine Co., Incorporated, Springfield, Ohio, and is so strongly guaranteed by them that the farmer runs no risk whatever in purchasing. Superior Grain Drills are used by the best farmers in every country in the world where grain is grown, and it makes no difference what a farmer's seeding conditions may be, he can get a Superior Drill that will meet his conditions to perfection. Write to the manufacturers for their Superior catalogue, and if you want special information, it will be freely given. Don't buy a Grain Drill until you have investigated the Superior. Go to your local dealer and tell him you want to see the Superior.

The San Jose Scale.

Now that the leaves are about to fall from the orchard trees, it is time to plan active work against the San Jose scale. This insect is certainly with us to such an extent, especially in St. Louis county, that there is no hope of ever exterminating the pest. We must now regard this insect in the same light as we do numerous other injurious insects that we have been fighting for a number of years. In other words, we must spray our orchards and other fruit trees every year, if necessary, in order to kill this insect and keep it down within reasonable bounds; otherwise we will lose not only our fruit, but also our trees.

This means, then, that in the badly infested regions systematic spraying for the San Jose scale must be done practically every year in every infested orchard. It is really a simple matter to keep this insect in check, and it only means additional labor and a little additional expense, which we did not have to contend with before the advent of this insect in such damaging quantities. The spraying for the San Jose scale is now in such a favorable shape that we do not lessen our chances of fruit, but rather increase them, and orchards sprayed against this insect appear in a much healthier condition than do those not so sprayed. There is no excuse whatever for our now losing any appreciable amount of fruit as the result of the presence of this insect in the orchard, and there is certainly no excuse for losing any of the trees. A tree that is badly infested can be saved and made a healthy tree by proper and simple means now at our command.

Where the San Jose scale is in an orchard or in any of our trees about the premises, they should be sprayed soon after the leaves fall, and, if the work is not too pressing, again in the spring, shortly before the buds swell. The spraying is more effectual if done in the spring, just before the buds begin to swell, but unfortunately this is the time of the year when we are more driven and pressed with work than in the fall or during the winter. Hence it is advisable not to put off the work until spring, but to spray early in the season soon after the leaves fall, and then, if possible, repeat again in the spring.

We now have on the market a number of patent or proprietary substances for use against the San Jose scale. To be sure, about nine-tenths of these are worthless, or nearly so, and will not pay one for the trouble of spraying, to say nothing of the cost of the material. But experiments have been carried on with a great many of these patent insecticides, and we have a few that we know from experiments are efficacious. If, therefore, one does not care to go to the trouble of making the home-made lime and sulphur wash, or if one has but a few trees, and therefore would not be repaid for the trouble of making this wash, the following proprietary washes can be used:

Scalecide, Target Brand Scale Destroyer, Kill-O-Scale. These three have in Missouri given better results than any of the others, and we can recommend these patent San Jose destroyers. In all cases they should be used at the rate of one gallon of the insecticide to fifteen gallons of water.

The best San Jose scale spray, however, is the home-made lime-sulphur wash, which you can make yourselves in the following way: Slake in the usual way fifteen pounds of the best fresh stone lime to a thin whitewash; mix with a little water fifteen pounds of powdered sulphur so as to make a paste; add this to the above. Stir them thoroughly together and boil for one hour, stirring every little while during the boiling process. When through boiling, add enough hot water to bring the whole up to fifty gallons. Stir again thoroughly and spray with this while hot. The only drawback to this substance is the trouble of making. When one has a large orchard, however, the money saved in making this mixture yourselves will more than repay the trouble; but when one has a few trees only, the other substances will not add up greatly in expense.

In all cases, no matter what substances one is using, it is absolutely necessary, in order to kill the San Jose scale, that each scale be touched with the spray. This means that very thorough work must be done, spraying all the sides of the tree, using as much force as possible and absolutely covering the entire tree from the tips of the twigs to the ground. If the trees have loose bark upon the trunks and main limbs, it is always better to first scrape this off, so as to expose what scale may be under it and which would not otherwise be reached by the spray.

Experiments go to show that a single spraying, either in the fall or in the spring, is not as effectual as two sprayings, one in the fall and one in the spring. But when the spraying is done every year, a single spraying will destroy practically all the insects, so that they will not multiply enough to do any serious damage; but this necessitates, of course, spraying every year against this insect.

It is always advisable to spray the entire orchard, unless the orchard be a very large one and the San Jose scale is only on a part of it. Let me caution you against using patent substances for the San Jose scale that have not been thoroughly tested by some Experiment Stations and recorded by them. Unfortunately St. Louis county has been for some time, and is still, flooded with a great many absolutely worthless patent San Jose scale insecticides, and I find many people using these substances, which is a waste of time and a waste of money, and not only that, but they are losing by the fact that in not killing the scale their orchards are continually being injured.

If the people in a neighborhood where the San Jose scale is troubling them a great deal will get together and have their orchards sprayed by someone with gasoline or other power sprayer, they will greatly lessen the expense and trouble in this respect. The time has certainly arrived when there is a good field opened in St. Louis county for some one with capital and energy enough to take the matter in hand and make a systematic spraying of the orchards in a neighborhood by the use of one of these power sprayers. But where one hires this work done, he should be with the outfit constantly, to see that thorough work is performed and that all parts of the tree are covered. —J. M. Stedman, Entomologist, Missouri Agricultural College and Experiment Station.

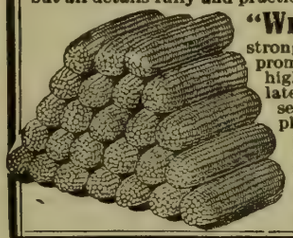
Hitch Up to a DEERE Disc

USING this spring pressure harrow, you get your soil pulverized thoroughly, and in condition to grow the biggest corn crop you ever raised. The extraordinary flexibility of the **Deere Model "B,"** due to spring pressure, insures thorough cultivation of every hard or uneven spot. It leaves small middles, and cuts out dead furrows.

This excellent harrow meets all demands. Built in all sizes, from four to nine feet width, with 16, 18, or 20-inch discs.

Our famous hardwood bearings, oil-soaked, straight oil tubes, with spring plugs to exclude dirt, steel shanks set edgewise for greater clearance.

One piece, heavy, high carbon, steel frame. Steel levers and racks for angling gangs. Double leaf, oil-tempered seat spring. Scrapers of swinging type, greatly improved over all others. Stub poles for set-over hitch and convenience in storing. **Nothing** slighted, but all details fully and practically worked out.



"Write a Postal to Deere" and keep posted. We have but briefly mentioned some of the strong features above. Just drop us a post card, and we will promptly send detailed **proofs** free. **Deere** goods are of the highest standard, and satisfy the most exacting. Ask for our latest **corn book.** The whole subject of gathering, selecting, curing and testing the seed, as well as planting, treated in a small space, **fully illustrated.** The book for the man who wants better corn. Useful and handsome pocket ledger free, if you will do us the favor of **mentioning this paper.** Address

Deere & Mansur Co. Moline, Ill.

DEERE & MANSUR COMPANY MOLINE, ILL.

Coaxing the Oat Crop.

A farmer in Iroquois county, Illinois, writes me that while their oats yielded well this season in grain, yet the straw was very short and some fields did not make enough growth so they could be cut by a binder. He says the yield was around 28 bushels per acre.

A crop of this size, with normal growth of straw, would require about 33 pounds of nitrogen, 12 pounds of phosphoric acid and 35 pounds of potash. I am inclined to think that the trouble here, as well as in many other sections, is that the oat ground is underfed. We will have to rid ourselves of the idea that oats will do well on ground too thin to produce corn crops. Put the oats on ground that is strong enough to make a good growth, and just keep in mind that a 60-bushel-per-acre oat crop will require about twice the above quantities of food elements.—L. C. Brown.

HORSE EYE TROUBLES.

It doesn't pay to let diseases or affections of the eye go unchecked, Mr. Horse owner. The most valuable animal on your place may be rendered next to worthless by letting a little eye trouble get to be a big trouble—and it's most always the best animal that's attacked. Blindness will knock all the profit off of an otherwise magnificent animal. Until the discovery of **"Visio,"** horse owners didn't know how to cure eye ailments. But there's no excuse now—this simple, safe remedy is a positive cure for all forms of eye troubles, no matter how long they may have existed. It is guaranteed—if it fails in any case every cent of the purchase price will be refunded. You take no risk. Write to-day to Visio Remedy Association, Dept. C, 1933 Wabash Ave., Chicago, Ill., for more particulars about this wonderful remedy.

Diamond Joe's Big White. Earliest Maturing Big Eared Corn in the world. Made 153 bushels per acre. It costs but 25 cents per acre for seed. Big illustrated catalog of Seed Corn and all kinds of Farm and Garden Seeds mailed **FREE** if you mention this paper.

RATEKIN'S SEED HOUSE, Shenandoah, Iowa. (Largest Seed Corn Growers in the World.)

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents per year, or three years for one dollar.

Office of Publication, 3550 Vista avenue, (corner of Vista avenue and Carr Lane avenue), St. Louis, Mo. Bell Telephone: Grand 400.

The Commission on Country Life, it is said, will recommend a parcels-post system. We hope it will not be a limited system, from one end of a rural route to the other, but that it will be from one end of the country to the other. We do not wish to see a parcels-post system inaugurated that will shut ourselves out from its benefits.

We believe that The National Farmer and Stock Grower was the first farm publication to offer grand champion seed corn as a subscription premium. We did it last year with great success, and we do so again. We are in the seed business simply to encourage experiment and have no corn for sale. We advertise several of the best seed corn firms and advise our readers to buy from them.

Concerning Alaska Wheat.

We are in receipt of a letter from the Adams-Hobe Seed Grain Company of Juliaetta, Idaho, furnishing Bulletin No. 65 of the Idaho Agricultural Experiment Station, which practically asserts that the milling and baking qualities of the Alaska wheat are very much the same as Little Club, a standard variety well known in Idaho and which is an average milling wheat.

So far as the milling qualities of Alaska wheat are concerned, the point was raised against it, but the notoriety of the Alaska wheat grew out of the extraordinary representations concerning the yield. Next time there is a wheat harvest The National Farmer and Stock Grower will be in a position to say what the yield is; and so far as we have been informed, the Alaska is now growing pretty good. There is a great difference, however, between a good average wheat yielding 35 bushels per acre from seed wheat that can be bought at $1.50 per bushel, and another wheat with no substantiated record above 35 bushels an acre, for which the price of $20.00 a bushel is claimed to be reasonable. More will be said about Alaska wheat when an extraordinary yield can be proven.

The GOLDEN ROD
CREAM SEPARATOR

Here is a fact that means dollars and cents to you.

Every sale we make is made on the guarantee that the Goldenrod will prove to be a **better** separator.

And all these sales stick, as we have said—none of the separators comes back.

In other words, we meet and **defeat** competition.

We prove that the Goldenrod gets **all** the cream—which means **more** cream than any other separator gets.

Give us a fair, square chance to prove that you ought to own the Goldenrod in preference to any other separator, and we'll prove it.

Write first for the booklet, in which thousands of enthusiastic owners tell what the Goldenrod has done for them, and we will tell you about our special free trial proposition—an arrangement whereby you can prove our claims on your own dairy floor.

Competent agents wanted.

Omaha warehouses promptly supply western trade.

MERIT SEPARATOR CO.,

OXFORD, PA. OMAHA, NEB.

The Larkin Coupon.

On page 27 will be found an advertisement of Larkin & Co., of Buffalo, N. Y., and of Peoria, Ill., and we distinctly advise all our friends and patrons to answer the advertisement. The Larkin proposition, as we understand it, is, that if you buy a box of their soap they present you with a table, chair or something else, according to the advertisement. This is offering a premium for direct sales. Larkin & Co. are doing what we do ourselves. We sell a subscription, and if we do not have to pay a canvasser or an agent out of the money we receive, we can afford to give up the profit to the customer.

If three or four housekeepers buy their supplies together from Larkin & Co. they can furnish their houses from top to bottom with Larkin furniture without a cent of cost. The writer of this article has been all over the immense factories of Larkin & Co. in Buffalo; has inspected every premium they offer; and they are all first-class. Sign the coupon, cut it out and mail it to Peoria, Ill., or Buffalo, N. Y., whichever is the nearest office.

Milk Producers' Notice.

The next meeting of the Milk Producers' Association of Missouri and Illinois will be held at St. Louis on January 25th, at 1 o'clock p. m. Members will assemble at the office of Mr. Wm. A. Fischer, Secretary, 409 Franklin avenue, St. Louis. No meeting was held in December.

The President, Hon. D. I. Furbeck, acting as the Milk Committee, visited the principal dairies during the month of December, and he was able to report that the principal dairies will pay 17 cents a gallon for uncontracted December milk delivered by members of the association. Mr. Furbeck reported that dairy distributors consider the present prices high and dangerous, and assert that consumption decreases as prices advance; nevertheless, considering the present situation that there is no milk without feed, and feed is high, and supply is not plentiful, the milk-selling situation is strong. The President will report January price at the next meeting.

In the meantime, representatives of milk shippers should make reports of all shipments and prices obtained, and ask all members to pay up annual dues, and get all others to join, and so strengthen the position of the association. In intervals between meetings the Secretary will be glad to receive applications for membership.

Take Your Choice of Calendars.

All International Harvester Company agents have calendars for distribution. There are six of them—the Champion, Deering, McCormick, Milwaukee, Osborne and Plano. Do not hesitate to call for these calendars. They are up-to-date in style and usefulness.

In wishing our friends and patrons a Happy New Year we desire to say that this is our tenth anniversary number. We congratulate ourselves that we are too busy to say much concerning the anniversary.

J. P. Rice is advertising smooth agricultural land at $8.00 an acre. This is in Southern Texas. The subject is well worth investigating.

FARM AND RANCH LANDS.

Arkansas.—Fine lands on the Cotton Belt Route. All very valuable but cheap at this time. See page 21 and read the advertisement of **E. W. LaBeaume,** G. P. & T. A., 1551 Pierce Bldg., St. Louis, Mo.

Kansas.—Catholic homeseekers will find what they want at Westphalia, Kansas. Big parish and parochial school; fine hay, corn and wheat land. Write **Hatton & Kohake,** Westphalia, Kas., for lists.

Michigan.—I sell Farms in Oceana, the best county in Michigan. Fruit, Grain, Poultry and Stock Farms. Write for list. **J. D. S. Hanson,** Hart, Mich.

Mississippi.—160 acres of land; four miles north of Iuka, Miss.; three miles from the Tennessee river. This can be made a good home. Has about 20 to 25 acres cleared; balance in small timber; also pretty good farm house. A quick buyer can get it for $500. What do you think of that? **J. W. Jourdan,** Iuka, Miss.

Mississippi.—320 acres, eight miles south from Iuka, Miss., and four miles from the I. C. Railroad. About half is fine bottom land and all has good growth of timber. Well adapted to corn and cotton and would make a good stock farm. Price, $1,600. It is worth $25 an acre. Address, **J. W. Jourdan,** Iuka, Miss.

CENTRAL MISSOURI FARMS. — For farms and homes that will prove both satisfactory and profitable, write for new illustrated list; 100 farms described and priced. **G. W. Hamilton & Son,** Fulton, Mo.

Missouri.—Eighty acres in Southwest Missouri, $250. Situated in Christian county, near town; timbered land; clear and perfect title. Terms, $10 monthly. **W. B. Williams,** Mount Vernon, Ill.

Missouri.—560-Acre Home, eight miles from this city and five miles to another railroad town. 350 acres in cultivation. Level land and mostly free from rock. Good fences. Good five-room house; two tenant houses. Barn, 36x50; three other barns. All necessary outbuildings. Wells and spring. 10 acres young bearing apple orchard. Various other fruit. 70 acres meadow. 100 acres pasture. Close to school, churches and store. Free mail. Phone. Covered stock scales. Price, $20.00 per acre. Have also larger and smaller tracts for sale. Write your wants. Send for lists and descriptions of the county. **Wright & Waterstripe,** Marshfield, Mo.

Tennessee.—Send for booklet on farming and full description and price of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

Texas.—Smooth agricultural lands in any sized tracts, along line of Orient R. R. Write me your wants. **J. P. Rice,** Alpine, Texas.

Texas.—1,107 acres in Jackson county, Southern Texas, four miles from town. A bargain at $10.00 per acre. Good for vegetables, fruits, cotton or live stock. Address, **Box 84,** National Stock Yards, Ill.

Texas.—Large and small farms for sale in the southern part of the state from $2.50 upwards. It will pay buyer of Texas land to address **Box 84,** National Stock Yards, Ill.

A HOME AND PROSPERITY

Where science has triumphed over nature. Where one sure crop at guaranteed prices nets $100 per acre. Another sure crop nets over $75 per acre. Where cotton is sure for one bale per acre and often makes two. Oranges, bananas, garden truck, often nets over $500 per acre. Let us tell you about this wonderful irrigated land that is sure of yield, low in price, easy to buy, easy to cultivate, grows everything, and gives robust health—climate never prevents outdoor work.

CEMENT ON THE FARM.

The Most Valuable Help That Farmers Ever Had in a Book.

The Cement Workers' Handbook is the name of it. This book is designed to teach anyone how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

The National Farmer and Stock Grower is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook.

For $1.00 we will send The National Farmer and Stock Grower for three years and a copy of the Cement Workers' Handbook. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Starting the Oat Crop.

A Boone county, Indiana, correspondent asks these questions about growing oats: (1) How many bushels of seed do you recommend sowing per acre? (2) How many bushels per acre would you sow with grass seed?

The proper rate of seeding depends largely upon the manner in which the work is done. That is to say, with a well-prepared seed-bed less seed is required than with a poorly-prepared bed. Then, the quality of the seed has much to do with the amount of seed required. Under ordinary farm conditions, eight or nine pecks of seed, testing thirty-six pounds per bushel, are ample, providing the seed is drilled in. If the seed is sown broadcast, then it is safer to sow from three to four bushels per acre. Experienced oat growers have different notions about this matter. English growers use about four bushels of seed per acre. They say that thick seeding induces stiffer straw, and that most of the heads are grown on the main stem instead of on the tillers thrown out from the main root. It appears certain that under our soil conditions such heavy seeding is not to be recommended. I have found that the thinner my oats were drilled in the heavier grain I got; and, inversely, the thicker seeding invariably produced weaker straw and undersize berries.

The best results when seeding grass seed with oats come when from six to eight pecks of clean, heavy oats per acre are drilled in. Many failures in getting a good grass stand come from using dirty seed oats. While all seed oats should be thoroughly recleaned and heavy, I would take particular pains with the cleaning of seed oats intended as a nurse crop to grass. If dirty seed is sown, the weeds come on vigorously as soon as the oats are harvested. I have seen fields literally choked to death with this rank growth of weeds. The young grass plants need all the moisture they can get during July and August, and the cleaner the ground is of weeds the more prosperous will be the grass plants. The early varieties of oats are the safest and best for nurse. These early sorts may be taken off the ground before all the moisture is exhausted, and they do not grow as dense, heavy straw as the big, later varieties. Two weeks in July means life or death to young grass plants. There is about that much difference in the ripening period of early and late varieties of oats. Another advantage of the early sorts is, they grow a rather short but stiff straw. Consequently they are not so apt to lodge, and they let in more sunlight to the young grass plants.

This oat question has been giving me considerable bother. We have not found the best methods of forcing the crop. Whenever we have attempted to grow oats on very rich ground it makes too rank a growth of straw and lodges and fills poorly. When we sow on moderately poor ground we get a corresponding growth of straw and light berries. After studying the practices of oat growers in Wisconsin, Illinois and Indiana, I am convinced that the two essentials for growing oats successfully are early seeding and well-balanced soil. Oats are grateful for a cool, moist seed-bed. They are the most comfortable in a seed-bed where three or four inches of frost have gone out. The conditions of soil which make corn are certain death to oats. Oats are the early spring crop. Whenever the ground is fit to drill, after February 1st, is the time to get in the oats. Oats need a stimulant in the early stages of growth. If the soil is very rich in nitrogen but lacking in phosphorus and potash, we get a rank growth of straw, of frail texture and poorly-filled heads. This is precisely the condition of thousands of fields in Illinois and Indiana where oats are grown. We are attempting to produce oats and corn under the same soil conditions. The sensible thing to do is to balance up the soil of the oat fields. Force the growth as rapidly as possible for the first two months after seeding. Supply the element necessary to produce stiff straw and well-developed heads. We must put aside the notion that the leanest field on the farm is the place for oats. The soil must be strong enough to keep the plant thrifty throughout its entire period of growth.—L. C. Brown.

Great Fences
AMERICAN FENCE
Made of wire that is all life and strength — wire that stretches true and tight and yields just enough under impact to give back every jolt and jam it receives.
Made of materials selected and tested in all the stages from our own mines, through our own blast furnaces and rolling and wire mills, to the finished product. Our employment of specially adapted metals is of great importance in fence wire; a wire that must be hard yet not brittle; stiff and springy yet flexible enough for splicing—best and most durable fence material on earth.
To obtain these and in addition apply a quality of galvanizing that will effectually protect against weather conditions, is a triumph of the wiremaker's art.
These are combined in the American and Ellwood fences—the product of the greatest mines, steel producing plants and wire mills in the world. And with these good facilities and the old and skilled employes back of them, we maintain the highest standard of excellence possible for human skill and ingenuity to produce.
Dealers everywhere, carrying styles adapted to every purpose. See them.

A Profitable Dairy Cow.

Readers of The National Farmer and Stock Grower will be interested in learning the details regarding the year's authenticated record of the Jersey cow, Bessie Bates, 155,373, which was completed last month. The following gives the summary of the records by months, beginning October 24, 1907:

1907.	Pounds Milk.	Pr.Ct. Fat.	Pounds Fat.
October 24-31	291.9	5.27	15.38
November	1,396.1	4.86	67.85
December	1,439.5	5.01	72.12
1908.			
January	1,283.1	4.60	59.02
February	1,161.3	4.50	52.33
March	1,226.3	4.93	60.46
April	1,110.2	5.16	57.29
May	1,165.0	4.72	54.99
June	1,144.1	4.79	54.80
July	1,077.0	4.39	47.28
August	1,072.7	5.20	55.78
September	872.8	5.60	48.88
October 1-23	655.5	5.27	34.54
Total	13,888.5		680.7

The average per cent. of fat for the year was 4.97. Estimating the yield of butter according to the rule of the American Jersey Cattle Club at 85 per cent. fat, the production of this cow was 801 pounds for the year. As far as the writer has been able to learn from reports published to date, this is the second test authenticated record for a year which has been made by a Jersey, both regarding milk and fat production. Our cow, Bessie Bates, stands second to the cow Peer's Surprise in amount of milk and to Financial Countess in amount of fat. This record was authenticated by State Dairy and Food Commissioner Washburn and Acting Commissioner Lamb.

Since 1892 complete records have been kept of every animal in the Agricultural College herd by weighing and recording each milking. In the middle of each month a composite test covering five-days' time has been made. We not only have complete records of the milk and butter produced by the cow Bessie Bates since she first came into milk, but also of her mother and grandmother, as well as of her sire's mother, all of which were bred and owned by the College. The following are the complete yearly records for Bessie Bates, the first four being our private records and the last authenticated according to the rules of the Jersey Cattle Club:

	Milk. Pounds.	Butter. Pounds
First record—two-year-old	5,942	345
Second record	7,592	412
Third record	8,737	469
Fourth record	10,273	541
Fifth record	13,885	801
Total	46,429	2,558

In some periods the cow was milked slightly over a year, but in that case the record given is for twelve months only. The total milk production during the five years was 46,429 pounds milk, an average of 9,285 pounds per year. The total butter produced during the five years was 2,558, an average of 511 pounds per year. The average price received for butter by the Dairy Department during the five years covered by these records has been 28 cents, or a total income from this cow for five years for butter alone of $716.24.

The 801 pounds of butter produced during the past year sold at an average price of 32 cents per pound, making an actual income for the twelve months of $256.32 for butter alone. In addition we had approximately 11,000 pounds of skim milk, which sold at 20 cents a hundred, or $22, making a total income of $278.32. Had the 13,885 pounds of milk produced been sold locally by the quart at the current price, the income for the year would have been $520.66.

Bessie Bates is the best specimen we have in the herd regarding type and conformation as well as regarding production. She is a large, vigorous animal, weighing 950 pounds, with an enormous capacity for feed. She has never been off feed nor had any trouble with her udder during her lifetime, and is a regular breeder and persistent milker. We feel that we have reason to be proud of the fact that this cow, and her mother and grandmother, as well as her sire, were bred by the College. The sire was Missouri Rioter, 3d, a double grandson of Bachelor of St. Lambert. Her mother is Daisy Bates, 4th, 404,933.

Bessie Bates was under the care of our efficient herdsman, Mr. I. T. Vannote, during the year and was milked by dairy students of the Agricultural College, no less than five different men having done the milking during the year.

Feeding.—She was fed much the same as we are accustomed to feed our high-producing cows. The ration for March is given below as an example of the year's feeding. During the summer months she was turned in a small pasture during the day and was fed green alfalfa or green corn in the barn as well. Silage was fed during the entire period when she was not on grass.

Daily Ration For March.

	Pounds.
Corn silage	15
Alfalfa hay	15
Corn	3.5
Bran	3.5
Oil meal	1.5
Oats	3.5

The production during this month was 1,226 pounds of milk and 60.4 pounds of fat, which shows she is an exceedingly economical animal.

BESSIE BATES—A Jersey. The best Missouri Agricultural College cow. This great cow now has a record of 13,888½ pounds of milk in a year, from which 801 pounds of butter was made. In the report of the test of BESSIE BATES is also shown her development as a milk and butter producer. The record is the most instructive of any ever published in this paper.

Holstein Cattle Records.

From October 13th to November 30th, records of 118 Holstein-Friesian cows were accepted by the association for admission to the Advanced Registry. The average by ages were as follows:

Thirty-six full aged cows averaged: Age, 7 years, 1 month, 0 days; days from calving, 23; milk, 453.1 pounds; per cent. fat, 3.39; fat, 15.360 pounds.

Five senior four-year-olds averaged: Age, 4 years, 8 months, 10 days; days from calving, 35; milk, 400.7 pounds; per cent. fat, 3.37; fat, 13.519 pounds.

Ten junior four-year-olds averaged: Age, 3 years, 2 months, 6 days; days from calving, 25; milk, 432.2 pounds; per cent. fat, 3.33; fat, 14.375 pounds.

Ten senior three-year-olds averaged: Age, 3 years, 8 months, 19 days; days from calving, 25; milk, 379.6 pounds; per cent. fat, 3.36; fat, 12.761 pounds.

Ten junior three-year-olds averaged: Age, 3 years, 3 months, 24 days; days from calving, 31; milk, 346.7 pounds; per cent. fat, 3.30; fat, 11.450 pounds.

Fourteen senior two-year-olds averaged: Age, 2 years, 8 months, 15 days; days from calving, 22; milk, 329.7 pounds; per cent. fat, 3.05; fat, 10.050 pounds.

Twenty-nine junior two-year-olds averaged: Age, 2 years, 2 months, 16 days; days from calving, 25; milk, 293.3 pounds; per cent. fat, 3.27; fat, 9.603 pounds.

This herd of 114 animals, of which one-half were heifers with first or second calves, produced in seven consecutive days an average of 43,020.1 pounds of milk containing 1,425.572 pounds of butter-fat; thus showing an average of 3.31 per cent. fat. The average production for each animal was 377.4 pounds of milk containing 12.505 pounds of butter-fat; equivalent to 54 pounds or 26 quarts of milk per day, and 14.59 pounds of the best commercial butter per week. These records were for the most part made just as the cows had gone into winter quarters, and the conditions at that time of the year are not the best to do justice to the cows, as they have not become fully accustomed to the changed conditions.

Pontiac Coronis leads the list and the aged cow class with 22.077 pounds of fat from 441.9 pounds of milk; while Lily Netherland DeKol, 2d, 19.379 pounds fat from 577.1 pounds milk, and Princess Johanna Rue, 19.01 pounds fat from 426 pounds milk, follow in order. Anna Silver Pauline DeKol and Pietertje Bloom each produce above 18 pounds fat and gain honorable mention. Among the senior four-year-olds Bonanza Netherland Johanna, 2d, 16.942 pounds fat from 485.6 pounds milk, is far in the lead.

By adding one-sixth to the quantity of butter-fat our readers will have

CREAM SEPARATOR

A SEPARATOR THAT EXCELS ANY SEPARATOR IN THE WORLD

DON'T HESITATE BECAUSE OUR PRICE IS LOW. The quality is high; we guarantee it. It is up to date, well built and well finished. It runs easier, skims closer and has a simpler bowl with fewer parts than any other cream separator. Don't accept our word for it. Judge for yourself. Our offer enables you to do this at our expense. Write us a postal card or a letter and receive by mail, postpaid, our 1909 catalogue. It is handsomely illustrated, showing the machine in detail, and fully explains all about the Low Down AMERICAN. It also describes the surprisingly liberal LONG TIME TRIAL proposition we can make you. Competition is defied by the quality and price we make. Our generous terms of purchase will astonish you. Remember, we are the oldest exclusive manufacturers of hand separators in America, and the first to sell direct to the user. You are not dealing with any agent, middleman or catalogue house when dealing with us. Not one single profit is paid anyone between ourselves and our customer. You save all agents', dealers', even catalogue house profits and get a superior machine by dealing with us. Our New Low Down AMERICAN Waist High Separator is the finest and highest quality machine on the market and our own (the manufacturer's) guarantee protects you on every AMERICAN Separator. We can ship immediately. Western orders filled from Western points. Write us and get our great offer and handsome free catalogue on our New Low Down AMERICAN Separator. Address

AMERICAN SEPARATOR CO., Box 1102, BAINBRIDGE, N. Y.

before them the amount of commercial salted butter that can be made out of said fat. These records are furnished us by Mr. Malcolm H. Gardner, of Delavan, Wis., Superintendent of Advanced Registry of Holstein cattle.

Feeding Cows Profitably.

A matter of prime importance is to make as much as possible out of the feed given cows. Some cows will make three times as much out of the same feed as other cows will make. In this the cow is a machine to take the food given her and either utilize it profitably or waste it. A pound of feed must be made to go as far as it is possible for it to go. At least one-fourth of the dairy cows in the United States are very inferior for profitably utilizing the feed that is given them.

There is no excuse for keeping a poor cow. The preachers of better things are to be found in every locality endeavoring to impress upon owners the absurdity of keeping cows so poor that they will take a dollar's worth of feed and make ninety cents' worth of product out of it. In this is illustrated the fact that in a few years feed of some kinds has doubled in cost. There was a time when the same amount of feed that costs a dollar now cost only fifty cents, and it was a problem of giving it to this same kind of a cow and having her return ninety cents' worth of product for it. The transaction showed a profit in those days; it shows a loss now.

The higher the price of feed the more necessary will it be to cut out the poorest cow and buy or raise a better one. The owner of a poor cow should not wait until he has a good cow to put in the place of the poor one before disposing of her.

Why should he keep a cow that cannot pay him a profit? The sooner he gets her beef value into his pocket the better. The sum of money realized will, if placed in a bank, at least bring him some income and it will not be consuming high-priced feed.

We cannot utilize our time more profitably than in making frequent and thorough examinations of our cows to find whether they are changing the feed we give them into a high-priced product. Cows differ greatly in this respect, as some from the same amount of feed will turn out a product containing two per cent. of butter-fat, while others will turn out a four-per-cent. product. The poor cows, therefore, are wasting half of the feed given them in comparison with the other cows.

If feed is supplied to cows of high quality, several times as much money will be made as if given to the poorer cows, because the additional yields secured from the feed are all profit.

A little figuring will convince anyone that the four-per-cent. cow is more than twice as valuable as the two-per-cent. cow. A year's feed may be put into a two-per-cent. cow and she may produce from it just enough to pay expenses, while the same feed may be put into the four-per-cent. cow and produce a profit of $50.—Wm. H. Underwood.

Managing Vicious Bulls.

As a rule, the wisest way of handling a bull that is inclined to be vicious is to hand him over to the butcher, as an animal of this class is never safe to trust. If he be one that has proven to be an extra good sire, and it is deemed desirable to retain him for service, the safest and simplest means of handling him is to blindfold him. He may be managed by means of ropes and pulleys, giving him room to move out of his stall when required and bringing him back to his place; but it is a cumbersome method.

Blindfolding quietly takes all the conceit out of a blusterer. A broad bandage of double sacking securely fastened over his eyes may serve the purpose ordinarily in the stable. The device may be used to good advantage in handling a nervous or excitable beast while being led to market or drawn in a wagon to be shipped on a train.

I remember a case of a heifer received on the train being so wildly excited that she would jump at a person approaching her to untie her halter, but by throwing a blanket over her head and afterwards tying a sack over her eyes, she was quietly unloaded and tied behind a wagon, which she followed as meekly as one could desire.

Mismanagement or lack of thought makes a great deal of trouble in the handling of stock. How often do we see men chasing pigs all over the place in the vain effort to get them into a pen, the porkers always going in the direction contrary to the one they are desired to go; while, by having a pair of low, light hurdles, hinged together, forming a V-shaped guide, the animals can be handled quickly and with the use of no unseemly words.

Vicious bulls are generally made so by unwise treatment when they are young, giving them too much liberty or using them cruelly. It is well to use them kindly, but they should be trusted no more than is necessary, for it sometimes happens that a bull that has been quiet suddenly and unexpectedly becomes vicious and maims a man for life or gores him to death. It is the part of wisdom to handle a bull with a strong staff and a safe connection with his nosering, no matter how quiet he may be.—Wm. H. Underwood.

National Dairy Exhibit.

The contest in the milk and cream classes at the National Dairy Show did not bring together a very strong representation. In each class there was a gold medal for the highest score, and a silver medal for the second highest. All those whose names are here given are entitled to honorable mention, and the first two received the medal awards:

Register of Merit of Jersey Cattle.

We are in receipt of the Register of Merit of Jersey Cattle, issued by the American Jersey Cattle Club. It contains the records of the animals entered to June 30, 1908, a list of their breeders and owners, and a list of sires having daughters in this Advanced Register. It is illustrated with 151 portraits of Jerseys.

The purpose of this Register of Merit is to raise to a still higher standard the average excellence of the Jersey cow, and to secure an additional authoritative and permanent record to which reference can be made in the selection of breeding animals. It is expected that it will be of great value to both present and prospective breeders and owners of Jersey cattle.

Copies will be sent free on application to the Secretary of the club. Ten cents in stamps for postage should accompany the application. Address, J. J. Hemingway, Secretary American Jersey Cattle Club, 8 West Seventeenth street, New York City, N. Y.

F. B. Dow, of Stockport, Iowa, is again with us. He has some choice Galloway bulls for sale, also some Buff Wyandotte cockerels. Mr. Dow will give our readers good satisfaction.

D. F. Beauchamp, of Meredosia, Ill., is making a special Poland-China offer in this paper which will be found in the breeders' columns. He has the finest bunch of pigs he ever offered for sale and some splendid bred gilts. They are in the finest of health and condition.

Mr. J. W. Kirby, of Marmaduke, Ark., has sent us a new cut of one of his Poland-Chinas. His customers write that the Kirby kind looks good to them. His advertisement starts off the breeders' cards.

Look up the change of advertisement of Charles Dorr, of Osage City, Kas. He is offering sixty big bred Duroc-Jersey gilts at farmers' prices. They are sired by sons of Kan't Be Beat, W. L. A.'s Choice Goods, and bred to sons of Oom Paul and other famous boars.

Walker Bros., of Glencoe, Okla., advertise draft horses, coach horses and jacks. Glencoe is on the Santa Fe Railway System, north of Stillwater—a good location to acclimate imported horses for service in the South, and Walker Bros. have first-class horse importing connections. The subject of horse breeding ought to be a very interesting one. At the St. Louis market there is always a good demand for horses weighing 1,200 to 1,300 pounds with style and power, and such horses can easily be raised, even when the mares are too small to produce heavy draft horses. Oklahoma always produced clean-limbed animals of great endurance, even when all the sires were scrubs.

D. F. Beauchamp, of Meredosia, Ill., is very reasonable in the price he charges for his Single Comb Brown Leghorn and Barred Plymouth Rock eggs. He has a good strain in both breeds. The Leghorns for the production of eggs and small frying chickens are at the top, and the Plymouth Rocks for meat and eggs are not behind any other breed. See his card on breeders' page.

Dairy Notes.

There was more Jersey-cattle competition at the National Dairy Show than in any other breed. There were seven herds represented by seventy-eight individuals. G. G. Council, of Vandalia, Ill., won a grand championship with his cow Royal Majesty, and another with his cow Jolly Lady of Beechwood. Others who carried off blue ribbons were Dixon & Deaner, Brandon, Wis.; Mrs. J. W. Henning, Shelbyville, Ky.; John F. Boyd, Rushville, Ind.; and F. H. Bates, Hamburg, Ala. Prizes were also won by J. E. Hatfield, Normal, Ill., and Ed Bruins, Fairwater, Wis.

Here is a cow's ration: The Jersey cow Financial Countess produced 943 pounds 13 ounces of butter in one year. She was fed 1,380 pounds of bran, 675 pounds of ground oats, 1,277 pounds of ground corn or chop, 649 pounds old process oil meal, 689 pounds cotton-seed meal, and 5,400 pounds of roots, and was about three months on pasture. She had all the hay she could eat. Her product was sold at $448.28, and she also had a calf to sell.

Four herds of Guernsey cattle competed for honors at the National Dairy Show. Chas. L. Hill of Rosendale, Wis., won eleven first prizes. Dr. T. W. Trophy, of Ingleside, Ill., won three. J. C. Hickcox, of Whitefish Bay, Wis., one; and E. R. Whitcomb, of White Fish Bay, Wis., one. The grand champion bull was Hill's Golden Lad of Rosendale; and the grand champion cow was Hill's Twilight Lonan.

One of the Chicago visitors took a long look at the champion milk-and-butter cow of the world, which was on exhibition at the National Dairy Show, and remarked to a friend: "That cow does pretty well on shavings." And that is exactly what she appeared to be eating. She was bedded up to her knees in shavings and surronded with them. She was politely chewing her cud.

At the National Dairy Show there were two herds and four single animals to represent the Holstein cattle. The exhibitors were Derrer Bros., Camp Chase, Ohio; Jno. B. Irwin, Minneapolis, Minn.; W. J. Gillett, Rosendale, Wis.; Wm. N. Osborne, Wanatah, Ind.; Mrs. W. P. Mussey, Lisle, Ill.; and J. R. Young, Buffalo Center, Iowa. The grand champion female was Dulcina, 2d, Clothilde, exhibited by Derrer Bros., and the grand champion bull was Kaan Jewel of Woodlake of the Irwin exhibit. Mr. Gillett's cow, Colanthe, 4th, Johanna, was on exhibit, but not in the ring contest. The Young entry was a first-prize bull calf. The Mussey entry won a junior calf first prize, and the Osborne entry received a third prize.

At the National Dairy Show the grand champion Brown Swiss bull was Junker, owned by E. M. Barton, Hillsdale, Ill.; and the grand champion cow was Cuma, owned by H. W. Ayers, of Honey Creek, Wis. There were only three herds competing, the third exhibitor being Samuel Insull, Libertyville, Ill., who carried off a number of ribbons.

At the National Dairy Show a very creditable herd of Jersey cattle was exhibited by Mr. F. H. Bates, of the Bates Farm herd of Hamburg, Ala. He carried away with him eight ribbons in all—one blue, two red, four white and one yellow. This beautiful herd was greatly admired.

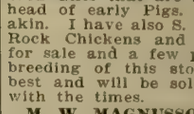
TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won seven out of nine first prizes at Lexington, Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907. **CHAS. FORD, Mortonsville, Woodford County, Kentucky.**

PLEASE REMEMBER THE BIG ANNUAL JACK and JENNET SALE at LIMESTONE VALLEY FARM, TUESDAY, MARCH 2d, 1909. Write for Catalogue. Address, L. M. MONSEES & SONS, SMITHTON, MO.

SAFE HERD OF LARGE ENGLISH BERKSHIRES. Herd is headed by an excellent son of the St. Louis World's Fair Grand Champion. I have bred Sows for sale, also bred and unbred Gilts that are hard to beat, and fifty head of early Pigs. Can furnish pairs not akin. I have also S. C. W. Leghorns, Barred Rock Chickens and M. B. Turkeys. Eggs for sale and a few pairs of Peafowls. The breeding of this stock and poultry is the best and will be sold at prices in keeping with the times.

M. W. MAGNUSSON, Owner, Safe, Mo.

FOR PURE-BRED BERKSHIRE HOGS, Shropshire Sheep and Fancy B. P. Rock Poultry, write or call on **E. L. JOHN,** owner of Broadway Herd, **Broadway, Maries Co., Mo.**



DRAFT and COACH STALLIONS, Also JACKS, for sale, from $300 up.

WALKER BROS., Glencoe, Okla.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write me for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop., (son and successor to the late H. C. Ezell), **Nashville, Tenn., Sta. B, R. F. D. No. 7.**

TROTTING-BRED HARNESS HORSES, SADDLE HORSES AND FINE JACKS. Three real nice, smooth, young Black Jacks, well broke; two Registered Saddle Stallions—Chester Dare blood; good ones; one Standard and Registered Trotting Stallion, three years old, by the great Gambetta Wilkes, 2:19¼ sire of 200 in the list, dam by Nuthurst, 2:12; also two High-class Combined Saddle and Harness Geldings. We also sell Cowpeas in small or car lots. Come to see us, or wire for description and pedigrees.

W. C. BARHAM & SON, MILAN, TENN.

What They Say About Us.

Below are a few extracts from letters received by CLAY, ROBINSON & CO. at our various houses, during the past week or two. We could, if space permitted, print hundreds of similar tenor:

J. C. Clearwater, Mitchell, S. D.: "Received your draft O. K., and am more than pleased wih the sale you made for me."

S. T. Dalgan, Garneill, Mont.: "Am well pleased with your sale of my cattle. It was better than I expected from the reports I have gotten from different commission houses."

W. S. Allen, Abingdon, Ill.: "Account of sales on hogs received. I am well pleased with the light shrink and the price you got for them. Thank you very much for your good and prompt service."

M. N. Michelson, Kanawha, Ia.: "I wish to inform you that the account sales for my hogs is received, and made me smile to think of the price you obtained, when there were such heavy receipts that day."

Geo. E. Gray, Appleton, Minn.: "My two loads of cattle were sold at South St. Paul instead of Chicago, as when we got there the market was to my entire satisfaction. One of my neighbors sold a car through your firm there with good results."

Jeff Shirk, Bricelyn, Minn.: "Received account sales of my cattle and was pleased with the price and light shrink, and the way they were handled. Everything was satisfactory. Will remember you when I have something to ship. I thank you for your good work."

Erick Nelson, Saronville, Neb.: "I was down with a car-load of hogs last Tuesday to you, and want to let you know the sale you made for me is satisfactory in every way."

James Brady, Clyde, Mo.: "Your account sales of the load of cattle received, for which I wish to thank you. Am well pleased with sale and with the way you handled these cattle."

J. R. Selb, East Liberty, Ohio: "Was well pleased with the load of lambs you handled for me."

Fred Perkins, Oswego, Kas.: "Yours to hand with report of sale and condition of market. Beg to say we are highly pleased with your sale. Mr. Beggerly, who was there, says you gave the shipment very close attention and thought you made better sales than other sales he saw made by other commission firms."

H. R. Steele, Tulia, Tex.: "Was very much pleased with returns, as this was our first car of cattle to ship from here. Will try to have next car in better shape." Peculiar interest is attached to this, as it is from the Panhandle country, which is just now undergoing a change of the passing of a range district to a feeding locality.

Mentzer & Terry, Convoy, Ohio: "We shipped you to-day a deck of hogs. Was well pleased with sale of load Saturday."

Shilling & Brown, Wapakoneta, Ohio: "Received your check for last car of hogs. Was very well pleased. Will have another car ready for you Wednesday."

Horne & Rood, Lansing, Mich.: "Our bill of sales received, and our lambs brought 25 cents per cwt. more than we looked for. The dock on our hogs was also very light, indeed, and, all in all, if a man was not satisfied with these sales he would be hard to suit."

Wm. M. Peake, Plainview, Minn.: "Sheep and lambs referred to were a neighborhood lot. Your firm sold them, and I think made a good sale. One car sold 25 to 35 cents per cwt. better than expected. Your firm also sold a car of hogs for us at $5.90, which we consider an A 1 sale."

Longley & Longley, Forsyth, Mont.: "Your statement of lump-jaw steer with check for $43.79 just to hand, and it reminds us to say that all parties interested in that shipment were well pleased with the prices received for their stock and small owners realize that they are entirely safe in your hands."

William Zimmerman, Conrad, Mont.: "In regard to the sale of my cattle, I am well pleased. My best returns for cattle up to the present was in 1902, when I received $6.20 for 18 head, netting me $1,127. But you beat your own record for 1902 this year, when you returned me $1,123.10 for 16 steers and one cow. Thank you for past favors."

J. H. Klinkermann, Canton, Kas.: "I am in receipt of bill for last load of hogs, and want to thank you for the good sale you made for me."

C. A. Horr, Cashier of the Texmo (Okla.) Cotton Exchange Bank: "J. A. Russell shipped you a car of cattle which you sold. He was in and reports that he was well pleased with the treatment received at your hands."

M. J. Robinson, Arnold, Neb.: "I received the returns and check all right for the hogs, and am well pleased with the sale."

"HERE'S TO OUR BETTER ACQUAINTANCE AND A PROSPEROUS NEW YEAR!"

WE OPEN A NEW BRANCH HOUSE AT

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILL.,

ON JANUARY 15th, 1909.

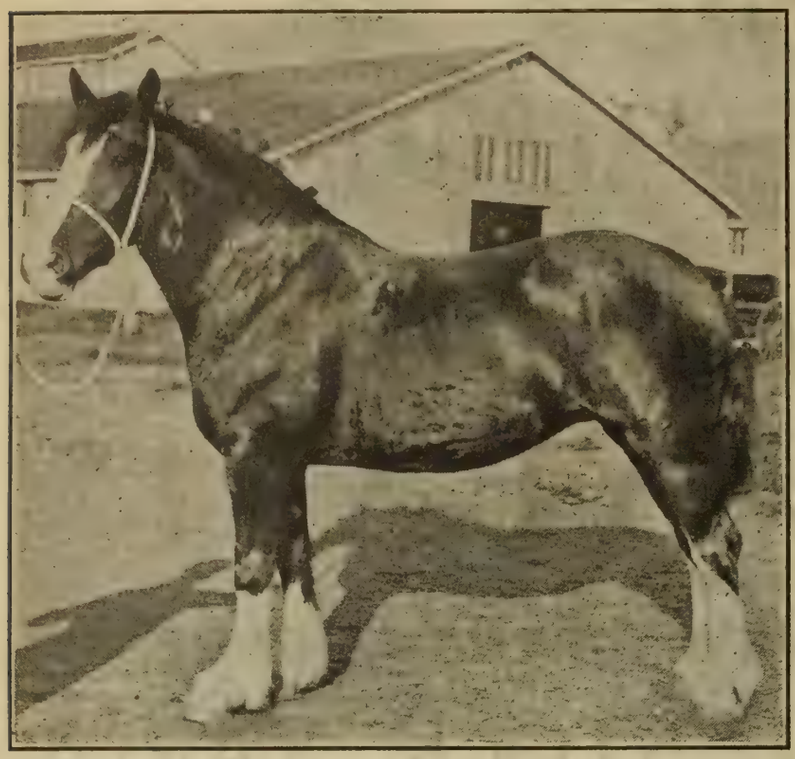
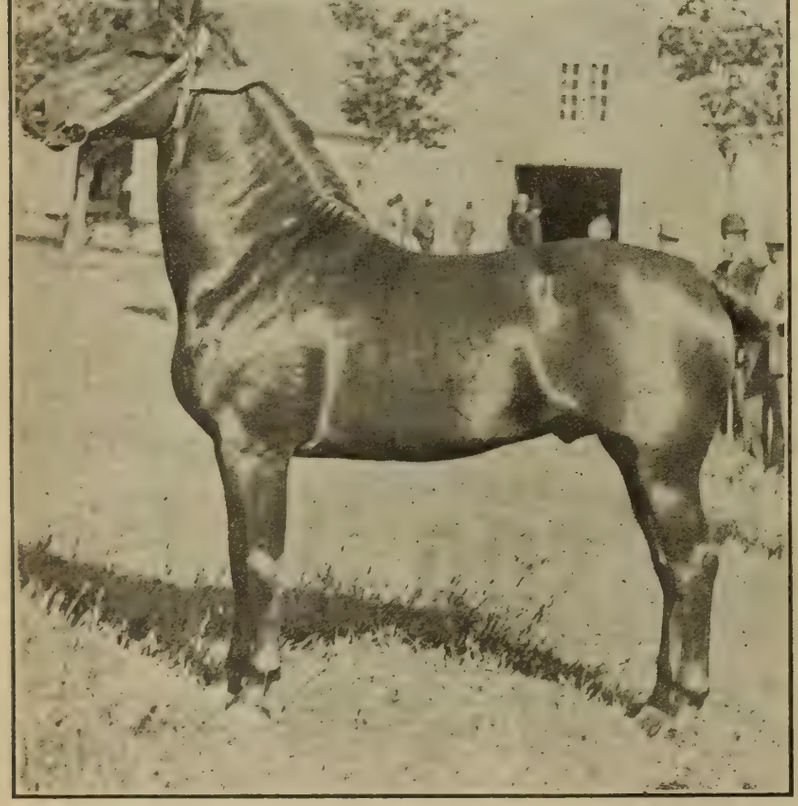
LIVE STOCK COMMISSION,

National Stock Yards, East St. Louis, Ill.

Chicago **Kansas City** **South St. Joseph** **South Omaha**
Denver **Sioux City** **South St. Paul** **East Buffalo**



PEACH BLOSSOM—American Clydesdale mare. First-prize winner in class for Clydesdales under two years old, bred by exhibitor. Owned by W. V. Hixson, of Marengo, Iowa. The picture was taken at the Iowa State Fair, where Mr. Hixson won first, second and third prizes in the same class. The Clydesdale is the Scotch draft horse, hardy and powerful to the last degree. The breed dates back to 1715. The Clydesdale is making its way in America. There is a fine showing of American-bred Clydesdales growing up and the draft-horse market has great need of them.



LUBBEN'S RINGLEADER—Champion German Coach stallion at the Nebraska State Fair of 1908. Exhibited by the Lincoln Horse Importing Company, of Lincoln, Neb. German Coach stallions weigh from 1,300 to 1,400 pounds, and when bred to small or middle-weight mares produce a strong and serviceable work horse that can do good work in the fields, can be used on the roads and take a strong place when shipped to market. It is the success of the German, French and English carriage horses in America that has caused the Department of Agriculture to attempt the formation of an American breed of carriage horses, a project which has every promise of success.

Care of the Driving Horse.

Most farmers know pretty well how to care for the driving horse, but this knowledge does not always extend to the boys and the hired men. Where the head of the house does not keep a close watch on what is going on, the driving horse is likely to be mistreated.

The humane man is careful not to drive the horse too fast and far. But the young man sometimes both drives too fast and too far and then leaves the sweaty animal to cool off, without the protection of a blanket. The writer has in mind one horse that contracted a very serious cold and from this kind of treatment, and as a result had a bad cough for months afterwards.

The feet of the driving horse are most frequently the weak point. It takes a good blacksmith to shoe a horse just right, and a great many blacksmiths have never learned how to properly shoe horses. Moreover, they are never likely to learn for the reason that they have no one to learn from. Horses that go lame frequently may well be suspected of being poorly shod. A doctor whose horse frequently had "hot feet" and then became lame became convinced that the horse had been improperly shod, and changed blacksmiths, after which he had no further trouble. The greatest amount of malpractice in the shoeing of horses comes when the young men are learning to shoe. It is argued that they must experiment on some one's horse, but no man should allow this. Let them get their experience in some other way, even if they have to shoe dead horses.

The driving horse should be fed in accordance with the amount of use to which he is put. If he is driven a great deal he should have a liberal ration of oats and timothy hay, as these make a good balanced ration for the horse that is on the road much. Timothy hay and corn are not a proper combination for a driving horse. The man that has been feeding corn to his horse as a grain ration and then changes to oats will quickly notice the difference in the improved style and the increased energy of the horse. Oats, though high in price, must be fed the driving horse that is hard worked.

The pace at which a horse is driven should always be moderate. The only time when the horse should be driven at an immoderate pace is when something of great moment hangs on the rapid work of the horse, like a sudden demand for the doctor. The horse that is repeatedly driven at his highest speed soon wears out. The horse that is driven moderately lives to a ripe old age and renders long service. The horses that are longest useful are the ones that are owned by humanitarians and are almost never "put through their best paces."

Drafty and wet stables are too often the abiding places of driving horses. The writer has in mind one horse that was always kept in a narrow, dark stable, and in a stall where the floor boards were worn into hollows. These sunken places were always filled with wet manure. The door to the outer world was not three feet behind the horse, and the door was a poorly-fitting affair, that allowed the wind to blow through and the snow to sift through. Every time the door was opened a blast of cold air enveloped the horse. The man that owned the horse was wealthy, and it was thoughtlessness that lay at the bottom of the bad treatment, but it was rough on the horse.

Shetland Ponies at Auction.

At Chicago, Ill., during the International Show, C. E. Bunn, of Peoria, Ill., marketed thirty-five Shetland ponies at auction at an average of $140.14 per head. His top price was $210. Geo. H. Simpson, of Wheaton, Ill., sold thirty-three head at an average of $120. His top price was $225. At Washington, Ill., on December 1st, Geo. A. Heyl sold fifty-three head at an average of $180. His top price was $450 for a stallion and $330 for a mare. The average for 121 Shetland ponies sold at auction was close to $150 per head.

Mr. R. J. Offutt, of R. F. D. No. 3, Gaithersburg, Maryland, was at the International Show. He has recently bought of Taylor & Jones the six-year-old Percheron stallion Putnam, 2d, weighing 2,050 pounds. Putnam was the first-prize, aged, American-bred Percheron stallion at several State Fairs. Mr. Offutt reports that in his section many fine express and draft horses are raised successfully. They have good, large, domestic mares in his county on which the cross gives every satisfaction.

DISTEMPER

Pinkeye, Epizootic, Catarrhal Fever, Influenza, Coughs, Colds, etc., are all positively prevented and quickly cured by Craft's Distemper and Cough Cure. Once used always used. Guaranteed to cure. 50c & $1 at druggists or direct prepaid. "Veterinary Pointers," new book, free.

HAUSSMANN & DUNN CO., 392 So. Clark St., Chicago.

Lump Jaw

The first remedy to cure Lump Jaw was

Fleming's Lump Jaw Cure

and it remains today the standard treatment, with years of success back of it, known to be a cure and guaranteed to cure. Don't experiment with substitutes or imitations. Use it, no matter how old or bad the case or what else you may have tried—your money back if Fleming's Lump Jaw Cure ever fails. Our fair plan of selling, together with full information on Lump Jaw and its treatment, is given in

Fleming's Vest-Pocket Veterinary Adviser

Most complete veterinary book ever printed to be given away. Contains 192 pages and 69 illustrations. Write us for a free copy.

GILLEN-HEIMAN-HARPER MULE COMPANY.

Dealers in

Mules

National Stock Yards, Ill.

(Directly opposite St. Louis.)

We guarantee all Mules to be exactly as represented.

We make a specialty of Logger Mules, Railroad Mules and Big Miners.

We have constantly on hand and for sale all grades of Mules from which purchasers can make selection. All orders promptly filled. Correspondence solicited.

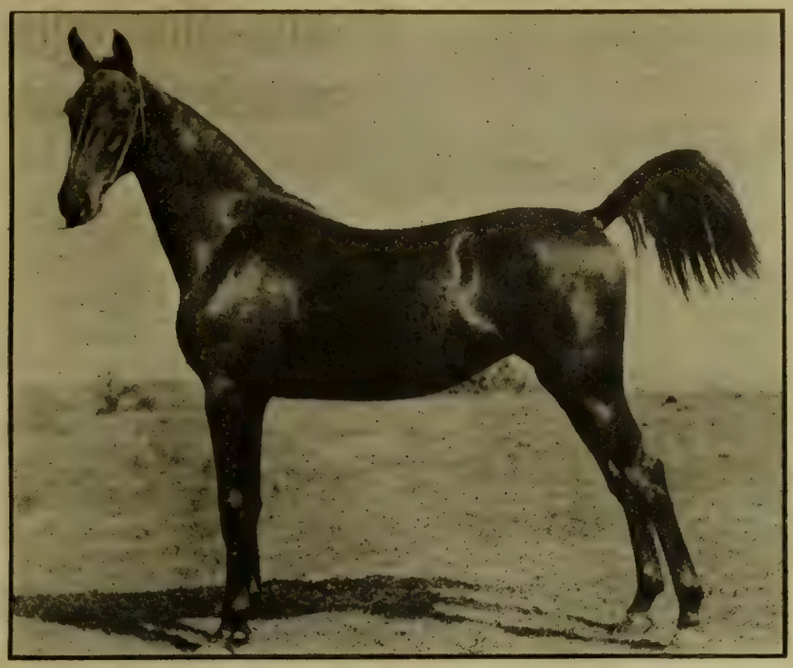
At the Chicago International Show, 165 sheep sold at an average of $44.23 per head at public auction. The top price at the sale was $425, paid by the United States government. The sale was of Rambouillet sheep, which are the mutton sheep of the Merino family. Uncle Sam is evidently going to establish a flock of range sheep that will combine mutton with wool production.

FIVE TO TEN THOUSAND
FULL AGE MULES

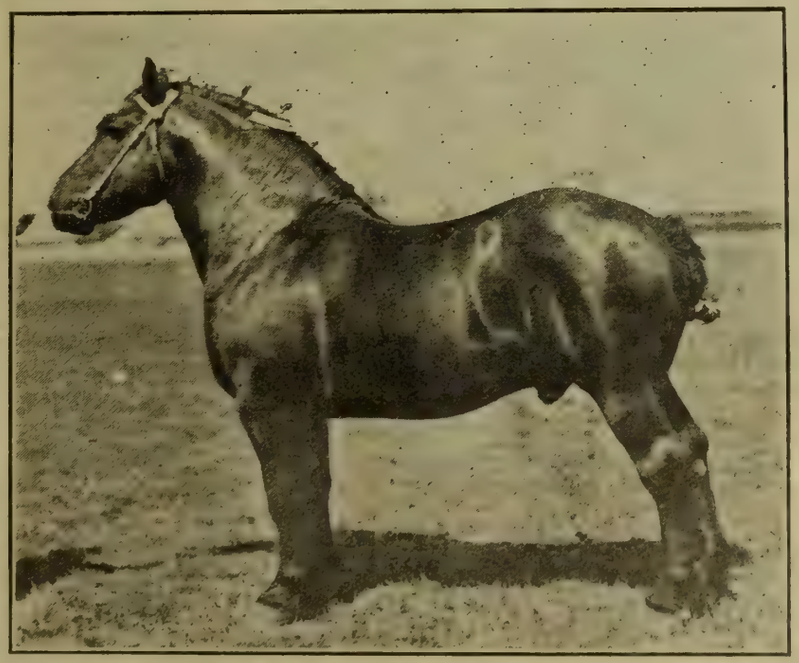
—can be purchased at the—
ST. LOUIS
NATIONAL STOCK YARDS
any business day in the year.

Many, immense, substantial, well ventilated barns contain every commercial or military grade of Mules, which can be purchased and shipped on short notice.

THE ST. LOUIS MARKET
WAS ALWAYS
FIRST
IN THE MULE TRADE
AND NOW
IT IS GREATER THAN EVER.



ROSA KING—Kentucky saddle filly, foaled April, 1907, and picture taken at twenty months of age. Bred and owned by J. F. Barbee, of Millersburg, Ky. In color she is a beautiful blood bay, with black points, heavy mane and tail; has fine ears, a well-shaped, intelligent head, set on a beautiful arched neck of great length. Shoulders almost perfect, a well-rounded body, the best of legs and feet. ROSA KING, with all her fineness, is a filly with plenty of size and substance, and will easily make a mare sixteen hands high. She was sired by Bourbon King, the world's champion $12,000 saddle stallion; first dam Rosalind by James Cromwell. Her prize winning record for two seasons is twenty-three first premiums in saddle, harness coach and model rings. This includes two silver $100 cups given by the American Saddle Horse Breeders' Association in competition with the best lot of youngsters in the land. This is presented as an ideal picture of a perfect saddle horse, according to the standards of the American Saddle Horse Breeders' Association.



GASCON—Percheron stallion, the champion of the Chicago International Show of 1908. Exhibited by Robert Burgess & Son, of Wenona, Ill. This magnificent stallion is less than three years old. He won the first prize in a class of the finest young Percherons ever shown in a ring, then defeated the pick of the other three stallion rings, being proclaimed champion over eighty-two of the best Percherons in America. Considering that he is the ideal draft horse, combining elegance with weight and power, GASCON moves with the light step of a spirited trotter and stands squarely upon well-set legs and good feet. Our readers can accept this picture as representing the ideal draft horse of France, and one of the best pictures ever shown in a farm paper.

SAVE YOUR HORSES
FRAZIER'S
DISTEMPER CURE

That Chronic Cough

May run into Heaves. Give FRAZIER'S DISTEMPER AND COUGH CURE and cure him in three to six days. FRAZIER'S destroys all germs and reaches the seat of the trouble in a few days. One dose will prevent Distemper, Pinkeye, Influenza, Catarrhal Fever, Shipping Fever and all Nose and Throat Diseases. Guarantee one 50c bottle to cure and prevent any of the above diseases. Sold by Druggists or prepaid from

BINKLEY MEDICAL CO., Nappanee, Ind., U. S. A.

[Please mention National Farmer and Stock Grower.]

THE NEW
Demi-Bloc System
of
Double-Gun Manufacture
adds new excellences
to the superiority of the

STEVENS
FIREARMS

One of these new features is the forging and compressing of the barrel and lug all in one piece. This gives the strongest breech mechanism possible to make.

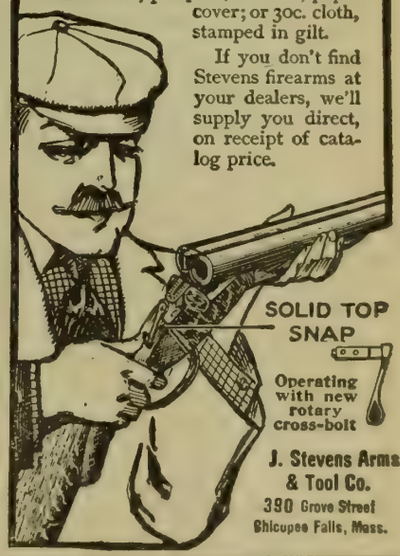
Then the barrels, loop and extension rib are brazed in one process. So the barrels are necessarily straight and true.

While the solid top-snap, illustrated below, operating with our new rotary cross-bolt, makes a fastening unequalled for strength. Thus Stevens Guns cannot shake loose.

If you'll send for the **Stevens Catalog,** you'll learn all about these new Demi-Bloc features, and all the many superiorities of Stevens firearms—shotguns, rifles, pistols. 5c. for postage brings it.

"Guns and Gunning," by Dan Beard—all about hunting and shooting, game, the care of a gun, etc., will be sent, postpaid, for 20c., paper cover; or 30c. cloth, stamped in gilt.

If you don't find Stevens firearms at your dealers, we'll supply you direct, on receipt of catalog price.



J. Stevens Arms & Tool Co.
390 Grove Street
Chicopee Falls, Mass.

Horse Weights at Buffalo.

In the Chicago Horseman, a dealer of horses in Buffalo is mentioned as reporting that 15 per cent. of the horses marketed there weigh less than 1,200 pounds; 70 per cent. weigh between 1,200 and 1,500 pounds, and 15 per cent. weigh upwards of 1,500 pounds.

Horse Depression Now Over.

A review of the Chicago horse market in the Horseman says that it is now the conviction of breeders and dealers that the low point of depression in the horse industry was reached in October, 1908, and that the average depreciation in horse prices in consequence of the panic was 15 to 20 per cent. from values prevailing early in 1907.

COMPETITION

Makes the Reliable Market.

ACTIVE COMPETITION FROM MANY AND DIVERSE PURCHASING INTERESTS.

The Superior Location and the Push and Energy of the Market Firms Have Made the

St. Louis National Stock Yards

THE GREAT CENTRAL LIVE STOCK MARKET OF THE UNITED STATES.

This Applies to Cattle, Hogs, Sheep, Horses and Mules.

During the Year 1908 the St. Louis National Stock Yards Made

A BETTER SHOWING

Compared With Former Records, Than Any Other Live Stock Market in the Country.

SHIP YOUR STOCK

To the Best Market, Where Business is on the Up-grade; Where There is the Greatest Competition.

Afflick, Starr & Co., of Audrain county, Missouri, marketed 712 head Western yearlings of their own feeding, which averaged 72 pounds and sold at $6.10 per 100 pounds. This on December 30th, 1908, at the St. Louis National Stock Yards.

Gamble Bros., of Page county, Iowa, marketed 228 head of lambs, 73 pounds average, which sold at $7.60 per 100 pounds. This on December 29th, 1908, at the St. Louis National Stock Yards.

On December 29th, at the St. Louis National Stock Yards, Joseph Stanton, of Nodaway county, Missouri, marketed 239 head of 72-pound lambs at $7.60 per 100 pounds.

Watch the St. Louis sheep and lamb market and you will wish that you were in the sheep and lamb business. It is a great and growing market for sheep and lambs.

The St. Louis hog market usually outclasses the Kansas City hog market, weight for weight and grade for grade, by 15 to 20 cents per 100 pounds; and many times the difference is 25 to 30 cents. A shipper who can get the railroad to haul his hogs to St. Louis is on the good road to fortune.

Horse Market Quotatoins.

At the St. Louis market dealers are very slow about putting up quotations. A better market by $7.50 to $10 per head than a month ago. Heavy drafters are quotable at $135 to $185, but choice pairs will run up to $400; Eastern chunks, $110 to $150; drivers, $165 to $200; Southern horses, common to fair, $40 to $65; medium to pretty good, $70 to $100; strictly good to extra, $110 to $140. Lots of plugs at $15 to $35.

St. Louis Mule Quotations.

For car lots from the country, quotations are very much as follows: Fourteen hands, $65 to $110; fourteen and a half hands, $80 to $125; fifteen hands, $100 to $155; fifteen and a half hands, $125 to $175; sixteen hands or better, $150 to $225. Special prices for matched teams. These are quotations for mules, and subject to change.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Native Beef Quotations.

At St. Louis, opening of January, 1909, the following were beef-steer quotations at the St. Louis National Stock Yards: Fancy beef steers, $7.50 to $7.75; good to choice steers, $6.50 to $7.50; medium to good steers, $5.50 to $6.50; common to medium steers, $4.50 to $5.50; choice to fancy yearlings, $7.00 to $7.50; good to choice yearlings, $6.00 to $7.00; common to good yearlings, $4.00 to $5.50—all quotations being at the price stated per 100 pounds.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,

Veteran Commission Salesman. General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Do not forget us when you wish to know anything about either the Sheep, Hog or Cattle Market or future prospect.

Don't hesitate to write or ship to

James H. Campbell,

National Stock Yards, Ill.

EQUALLY EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Try us once. We can keep you posted. We have a great and expanding Market at St. Louis.

Evans-Montague Commission Company

Box 68, NATIONAL STOCK YARDS, ILL. FORT WORTH, TEX., and at KANSAS CITY.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

The Great Central Market.

St. Louis to the front! The record of 1908 was the greatest of all. Other markets decreased in cattle, but St. Louis gained. St. Louis gained a half million in hog receipts. St. Louis gained in sheep receipts and sales over all previous years except one. In horses and mules St. Louis receipts were larger than at any other market. Great, active competition is what has made the St. Louis markt the best in the land.

The Great Butcher Cattle Market.

At the St. Louis National Stock Yards, strictly fancy fat native butcher heifers are quotable at $6.35 to $6.75 per 100 pounds; good to choice at $5.50 to $6.25; medium, $4.25 to $5.25; fair at $3.25 to $4.20. There never was a time before when such prices were paid for fat little heifer cattle. St. Louis is the market which has done this service for stockmen.

Valuable Market Information.

Messrs. Godair-Crowley Commission Company are wishing their friends the compliments of the season and soliciting consignments for the year 1909. This firm is enthusiastic in regard to the record of the St. Louis market, which is very satisfactory both in regard to increased receipts and selling activity. Messrs. Godair-Crowley Commission Company cordially invite all stock shippers to communicate with them for the purpose of getting on their list to receive their regular market circulars. Address, Godair-Crowley Commission Company, National Stock Yards, Ill.

On December 31st, at the St. Louis National Stock Yards, F. E. Scroggins, of Audrain county, Missouri, marketed sixty head of 688-pound butcher heifers at $5.65 per 100 pounds. These handy little fat cattle are great favorites on the market.

Hog Prices, Last of 1908.

On the last day of December, 1908, the St. Louis National Stock Yards sold top hogs, 284 pounds average, at $6.10. All the good hogs sold at $5.70 and above. The bulk of all the hogs sold at $5.65 to $5.90. Kansas City did not sell a hog above $5.92½, and sold the bulk at $5.40 to $5.80.

Stock Cattle Quotations.

At the St. Louis National Stock Yards, opening of 1909, inferior to fair stock cows are selling at $2.00 to $2.75 per 100 pounds; a fair grade of stock heifers at $2.50 to $2.70 per 100 pounds; good stock heifers at $2.75 to $3.00 per 100 pounds; common to fair stock steers at $3.00 to $3.75 per 100 pounds; fair to good stock steers at $3.80 to $4.00 per 100 pounds; feeding steers, fair, $3.85 to $4.40 per 100 pounds; good feeding steers, $4.50 to $4.75 per 100 pounds.

McFARLANE COMMISSION COMPANY,
NATIONAL STOCK YARDS, ILL.

Horse Market Situation.

The McFarlane Commission Company, holding the Monday horse auction at the St. Louis National Stock Yards, desire to express thanks to their patrons and friends for their consignments received during 1908. A good part of the year was dull, because the panic of 1907 had left a bad mark on horse values. The firm held auction as usual on December 29th and found conditions to be much better. Shippers were no longer losing money on all of the horses. Toppy Southerners were selling up to former prices; mares with style were outselling the geldings; drafters and chunks were again wanted. The farm demand was another indication of a "Happy New Year." Of mules, the firm said: "The reecipts were more liberal. We have a good market for mules 14.3 to 16 hands that are fat and have quality. Small, thin and bad-haired mules are not wanted and sell cheap. Good plugs are selling better. We expect a good market from now on for mules that are fat."

LENORE—Champion American-bred Percheron mare at the Nebraska State Fair, 1908. Exhibited by North & Robinson, of Grand Island, Nebraska.

On December 29th, at the St. Louis National Stock Yards, a 1,395-pound cow sold at 5 cents a pound.

F. B. Blackburn, of Callaway county, Missouri, marketed 267 lambs of his own raising that averaged 72 pounds and sold at $7.60 per 100 pounds. This at the St. Louis National Stock Yards, December 30th, 1908.

J. D. Tully, of Monroe county, Missouri, marketed eighteen steers, 1,342 pounds average, that sold at $6.50 per 100 pounds. This at the St. Louis National Stock Yards on December 30th, 1908.

H. Wente, of Shelby county, Illinois, marketed twenty-five beef steers that average only 1,182 pounds, but they sold at $6.50 per 100 pounds on the St. Louis market, December 29th, 1908.

William Auer, of Butler county, Kansas, marketed twenty-five steers, 1,271 pounds average. They were sold December 30th on the market at the St. Louis National Stock Yards at $6.45 per 100 pounds.

On December 29th, 1908, twenty-one head of Oklahoma steers, 1,312 pounds average, and twenty-one head, 1,231 pounds average, were sold at $6.60 per 100 pounds. They were fed near Chickasha, and sold at the St. Louis National Stock Yards.

Great St. Louis Horse Market.

The arrival of Messrs. Holland and Gilroy at the St. Louis National Stock Yards a few months ago appears to have been the forerunner of a regular Kansas City stampede. That St.Louis is the best location for the great National Clearing House of horses and mules is clearly demonstrated. Nearly all the influential horse and mule dealers appear to be coming to the St. Louis National Stock Yards to do business. It is very probable that during the year 1909 the horse and mule receipts of the St. Louis National Stock Yards will be doubled. All the programme is not yet developed, but for the present it looks like a consolidation of the horse and mule markets of St. Louis and Kansas City with permanent headquarters at the St. Louis National Stock Yards.

Kansas Steers at St. Louis.

Sold on the last day of 1908: For J. Sirs, Butler county, fifty-three steers, 1,305 pounds average, at $6.65; Henry & Hughes, Butler county, twenty-eight steers, 1,274 pounds average, at $6.65; B. Howe, Pottawatomie county, thirty-nine steers, 1,245 pounds average, at $6.50 per 100 pounds. St. Louis sells a good many Kansas cattle during the year and could sell them all to the advantage of the shippers.

Choice heavy hogs, 257 pounds average, sold at $6.25 per 100 pounds. This at the St. Louis National Stock Yards, December 29th, 1908. On the same day the top price at Kansas City was 35 cents less.

Pike county, in Illinois, has about 35,000 sheep, and there are 102 counties in the state. On such a basis there ought to be 3,570,000 sheep in Illinois, which is 2,600,000 more than there really are.

At the St. Louis National Stock Yards, December 29th, thirty head of 717-pound butcher heifers sold at $5.00 per 100 pounds.

The St. Louis market received 17,570 cars of quarantine cattle in the year 1908, including 376 cars from Old Mexico.

"At the Sign of the Golden Fleece."

An article on sheep history and sheep husbandry entitled as above appeared in the Christmas number of the Breeders' Gazette. It has attracted much favorable attention, and because of the great demand has been reprinted in the form of a booklet. The article was written by Mr. John Clay, of the firm of Clay, Robinson & Company, and he has promised us that he will send out a

free copy to any of our readers who may write for it. Mr. Clay is a great sheep-raising and market authority, and all he writes about sheep is practical as well as poetical. The booklet contains several of the most beautiful pastoral pictures we have ever seen. In writing for a copy of the "Golden Fleece," please address Clay, Robinson & Company, National Stock Yards, Ill.

ORPHAN BOY—Grand champion jack at Louisiana Purchase Exposition. Exhibited by L. M. Monsees & Sons, Smithton, Mo. This firm will hold their Thirty-second Auction Sale at Limestone Valley Farm, Smithton, Pettis county, Mo., on Tuesday, March 2d, 1909. Write at once for catalogue. They will have a fine lot of jacks and jennets on sale.

At the St. Louis National Stock Yards, December 29th, forty-five head of butcher heifers, 818 pounds average, sold at $5.65 per 100 pounds. They were from Audrain county, Missouri.

On December 29th, Wm. Binkley, of Saline county, Missouri, marketed sixteen head 1,454-pounds steers that sold at $6.90 per 100 pounds. This at the St. Louis National Stock Yards on December 29th, 1908.

Closing Sheep Sales of 1908.

At the St. Louis National Stock Yards, on the last day of the old year, W. P. Campbell, of Randolph county, Missouri, marketed 124 head Western yearlings, 84 pounds average, that sold at $6.70 per 100 pounds, which was the top of the market for the season. Forrest Covington, of Callaway county, sold 236 head, 73 pounds average, at $6.30. On the same day the best lambs sold up to $7.40; mutton sheep, $4.75, and stockers, $4.00. St. Louis is making a wonderful showing in the sheep trade, and is perfectly able to sell two and a half million sheep in a year.

HORSES. MULES.

Holland, Gilroy & Conway,

(Successors to John S. Bratton),
NATIONAL STOCK YARDS,

Write us for market information. Address,

Holland, Gilroy & Conway,
P. O., National Stock Yards, Ill.

The Thursday Horse Auction.

The firm of Holland, Gilroy & Conway hold the horse auction every Thursday at the St. Louis National Stock Yards, and sell mules and horses at private sale every business day in the week. Speaking of the market, Mr. Tim Holland said: "Yes, the conditions are better. This market is full of buyers for the first time since we came here, and I feel assured that we can hold these buyers, providing that a nice run of horses can be kept up. This market is in close touch with the East. When the horses are delivered here they are more than half-way to their destination—they go from here to the user. We wish all Western horsemen to communicate with us. We can keep them posted so that they will be able to buy horses that will pay out. This cannot be done unless they get regular reports. We are reorganizing this firm on a stronger and better basis commensurate with the great opportunities of this market. It seems as though our friends at Kansas City have concluded to abandon their effort of establishing a horse and mule market at that place and are preparing to advise their shippers to do the right thing and consign to St. Louis, where the great market is located.

LAURA DE ROTHINGHAM—Champion Belgian mare at the Nebraska State Show, 1908. Exhibited by Burress Bros., of Carroll, Nebraska.

SHEEP RAISING AS A BUSINESS.

A Very Interesting Subject and a Paying Proposition—Especially For Those Within Shipping Distance of the St. Louis Market.

Sheep raising as a business is and always will be a very interesting subject. It is more interesting now than it ever was before, for the reason that the time has come when every farmer must have a programme that he intends and hopes to follow. On free range in a wild country, or on very cheap land, the farmer used to be a horse raiser to-day and a cattleman to-morrow, a sheepman the next year, with several other different occupations to follow year after year. But there is no longer any free land, not much old-time cheap land, free commons are getting less and less, and the result is that the farming proposition is right down to "brass tacks." A farmer will always be able to change the class of stock he raises, but the nearer he comes to the necessity of having every inch of land pay a profit on its cost and taxes the more he will rely upon sheep. It is almost safe to say that on high-priced lands the chief reliance is in sheep. True, there are fruits, vegetables and dairying, but nothing that can take the place of the sheep. On all the farms of this continent a programme that does not include a few sheep is no programme at all.

The government commission which is trying to find out what a farmer needs will probably come to the conclusion that he first needs a programme from which he cannot get away, and that programme must include more or less sheep. The farmer is at sea without a rudder until he gets a programme to follow, and his programme is deficient and unprofitable unless sheep raising and feeding are parts of the performance.

The first necessity to a sheep raiser is a first-class market that is reasonably near by. Not much of any shrink in transit; not much cost for transportation; not much cost in selling, and ample competition between the buyers. The recently-awakened interest in sheep raising is very much due to the strength and vitality of the market at St. Louis; it is actually a sheep revival, and it is resulting in great benefits to all concerned. If a sheep raiser in Illinois or Missouri is asked how far he is from market he can answer in money instead of miles. He can safely say that 25 cents a head will transport his sheep to market, and that 10 cents more per head will cover the yardage and commission charges. These are very reasonable expenses, and it is doubtful if so good a showing can be made in the sale of dairy products, fruit, poultry, grain or vegetables.

The fact of the matter is that the sheep market is now pretty close and snug up to the sheep raiser. Formerly all good sheep had to be good enough for export to bring a fair price; next the Eastern coast began to call for a few muttons, but it was not until the Western packers filled up their loads with sheep and lambs and taught the people to eat them that we had any regular demand for sheep and lambs. The packers buy their mutton as cheap as they can get it, but they bring the markets right up to the door of the producer; and where the packer is not there is only a local market.

In previous issues of this paper we have mentioned St. Louis as a first-class sheep market. If there were more sheep coming regularly to St. Louis it would also become the largest market as it certainly is the best. There are Eastern buyers who buy hogs or cattle at St. Louis who would be glad to buy sheep also. The population is increasing and the people must be fed. A greater concentration of sheep at St. Louis would produce surprisingly good results.

The editor of The National Farmer and Stock Grower obtains considerable interesting information at the Stock Yards. We have been there looking for sheep sales and items. We find good sheep being marketed that were raised and fed in Illinois, in Iowa and Missouri. It is not the Texas season; it is not the season for Tennessee and Kentucky lambs; but the sheep market is there and sales are made every business day in the year, and we take note of a few of the sales.

In Illinois, we notice Greene county in the front. From there, during December, Jaynes Bros. shipped in 174 Western wethers, 109 pounds average, which sold at $6.50 per 100 pounds; another day in came from the same firm 116 head of 80-pound lambs sold at $7.50 per 100 pounds. Harry Stubblefield, also of Greene county, ships in 122 head 78-pound lambs, raised by Thomas T. Ford, and sold them for the Christmas trade at $7.65 per 100 pounds. G. W. Gilmore, also of Greene county, sold 59 head 86-pound lambs at $6.75 per 100 pounds, and 54 Western ewes, 118 pounds average, at $4.50 per 100 pounds. From Montgomery county arrives J. C. White, who markets 92 head 88-pound lambs at $7.50 per 100 pounds, and when they were sold it was the highest price since May. H. Chism, of Macoupin county, sold 84 lambs, 89 pounds average, at $6.75 per 100 pounds. C. L. Gay, from Pike county, marketed 95 head of 94-pound lambs at $7.00 per 100 pounds; and Wm. Redshow, of Scott county, sold 71 yearlings, 113 pounds average, at $5.50 per 100 pounds. There were others from Illinois during the few days in December, yet these are sufficient to show the strength of the market.

And Iowa also brings sheep to St. Louis because St. Louis is a first-class market. H. C. Farquar brings in 68 lambs, 90 pounds average, sold at $7.35 per 100 pounds. Joseph Stanton, of Page county, marketed 72-pound lambs at $6.75 per 100 pounds; and J. W. Walker, also of Page county, sent in two loads of Idaho lambs, 77 and 80 pounds average, which sold at the low period of the month at $6.75 per 100 pounds. F. A. Converse, of Marion county, Iowa, marketed 132 head 76-pound lambs at $6.85 per 100 pounds.

And Missouri finds her nearest and best sheep and lamb market at St. Louis. Starr & Afflick, of Audrain county, are pioneers in feeding Western sheep. They market sheep often. We saw 460 head of their 97-pound Western yearlings sold at $5.75 per 100 pounds; and later 463 head, 97 pounds, sold on a higher day at $6.25 per 100 pounds. F. L. Covington, of Callaway county, sold 302 Western yearlings, 74 pounds average, at $5.20 per 100 pounds. A. W. Ely, of Monroe county, Missouri, sold 122 lambs, 61 pounds average, at $6.50 per 100 pounds. Isaac McIntyre, of Monroe county, Missouri, sold 506 head fed Western yearlings, 72 pounds, at $5.25 per 100 pounds. O. E. Salle, of Nodaway county, sold 171 head. Western lambs, 71 pounds, at $7.00 per 100 pounds.

Missouri sheep sales are many at St. Louis, and we will mention a few more. H. J. McKinney, of Randolph county, sold 57 Western yearlings, 101 pounds average, at $5.50 per 100 pounds, and 58 head 104-pound Western ewes at $4.50 per 100 pounds. W. P. Campbell, of Randolph county, sold 116 head Western yearlings, 80 pounds average, at $5.75 per 100 pounds. Paul Walker, of Randolph county, sold 230 Western lambs, 70 pounds average, at $6.75 per 100 pounds. Lindsay Powell, of Randolph county, sold 51 Western yearlings, 99 pounds average, at $5.50 per 100 pounds, and grown sheep of the same weight at $4.50 per 100 pounds. H. H. Fuhrman, of Randolph county, marketed 75 Western yearlings, 84 pounds average, at $5.50 per 100 pounds. Hugh McKinney, of Randolph county, marketed 82-pound lambs at $7.00 per 100 pounds, and 89-pound yearlings at $5.50 per 100 pounds; and 80 head 87-pound Western wethers at $5.25 per 100 pounds. If every county in Missouri equaled Randolph there would be two and a half million sheep sold in St. Louis every year.

Binkley & Ray, of Saline county, Missouri, sold 88 head of lambs, 83 pounds average, at $6.60 per 100 pounds. J. W. Cochrane, also of Saline county, Missouri, marketed 55 head of 77-pound lambs raised by himself at $7.35 per 100 pounds, and Joseph Clyde, of Saline county, sold 50 head of 78-pound lambs at $7.35 per 100 pounds. We could mention many more sales, but these serve the purpose of showing that there are good sheep raised in St. Louis territory, and that there is an excellent sheep market at St. Louis.

All farmers in Missouri, Illinois, Oklahoma and Arkansas ought to keep their minds on this subject. It is not a bonanza business, but when it comes to cash results there is nothing like it for the amount invested. To obtain a few ewes in the early fall; to breed them to bring December and January lambs; to force the lambs by care and feed upon the early, high-priced market; to fatten up the ewes; to shear them and to send in the wool, and then send in the fattened ewes and market them—this is a programme hard to beat in any line of agricultural pursuit. Farmers, think it over.

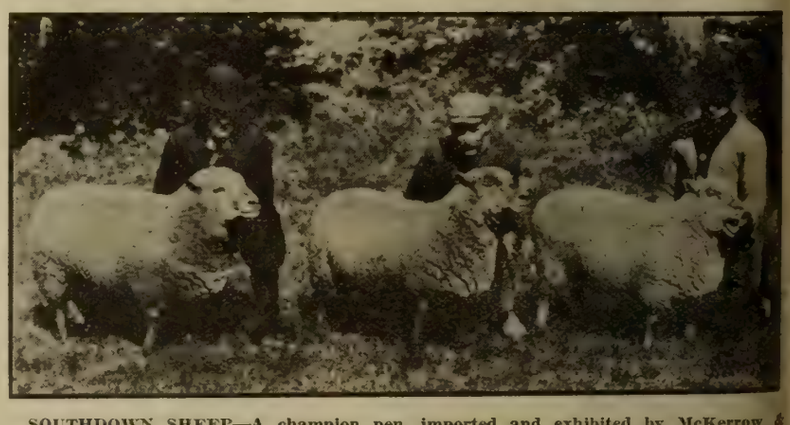
We sell direct from our factory, the highest grade ready mixed paint possible to make, at one-half what you must pay all others. Our paint is guaranteed ten years; smoothest, easiest working, covers double the surface, lasts twice as long as other paints.

WRITE TODAY for the free Paint Books and learn for how little money you can make your building look like new. Address

SEARS, ROEBUCK & CO., Chicago



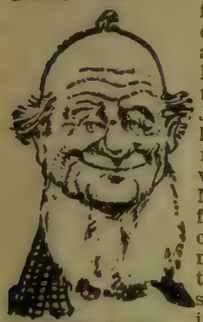
SOUTHDOWN SHEEP—A champion pen, imported and exhibited by McKerrow & Son, of Pewaukee, Wis. This flock won at several State Fairs, and the picture was taken at Des Moines. The Southdown is the original mutton breed. In England, where these sheep originated, John Ellman, a farmer, used to summer 1,450 head and winter 700 ewes and lambs on 500 acres, besides keeping 140 head of cattle. The Southdown is not a large sheep and is used to pasturing on short grass. Mature rams weigh 175 pounds and ewes 135 pounds. Much heavier weights are known. Southdown lambs marketed in England average 100 pounds on foot. At the Smithfield Show, ten-months Southdown lambs averaged 155 pounds. The Southdown sheep does well in all the country tributary to St. Louis as a live stock market. The headquarters of the breed in America is at Springfield, Ill. They thrive in Tennessee and Kentucky, where they are making farmers rich, and the states of Arkansas, Missouri and Oklahoma are especially suitable to this thrifty breed of sheep. They have been bred straight a hundred years, and a good Southdown buck bred to the common ewes of the country will produce surprisingly good lambs. There is a great market for sheep and lambs at St. Louis, and farmers will consult their own interest when they produce lambs that will sell high on the market.

UNCLE PIPER, SUBSCRIPTION EDITOR.

He Scores Two Great Victories—One by a Combination With the Hon. Wm. Jennings Bryan in Making a Club Rate With the "Commoner."

The Other by a Purchase of Grand Sweepstakes Corn From Hon. L. B. Clore, the Champion Seed Corn Grower of America.

Your Uncle Piper, subscription editor of The National Farmer and Stock Grower, being duly sworn according to law, deposes and says as follows, to-wit: That he has been a subscription editor, on and off, for twenty-seven years, and that he diligently reads the agricultural press from a sense of duty and not for any liking for it. In his time he has read many New Jersey dairy bulletins, and that he never read any wherein the poor New Jersey dairy farmer was not credited with the manurial value of the feeds as his sole and only profit in the business.



Uncle Piper.

The aforesaid Uncle Piper also deposes and says that in his time he has read many letters and condolences from the business manager and boss editor, but he has never yet heard any one of them say that they were as well off as the New Jersey dairy farmer. Not only are boss editors conceited to the last degree, but they show poor judgment in placing all kinds of doggerel in the paper, if it relates to the subscription end of the business.

Here is a sample which is going the rounds and has been credited to 4,000 papers. It is entitled "An Editor's Lament," and is as follows:

"Lives of editors oft remind us honest toil don't stand a chance; the more we work we leave behind us bigger patches on our pants. On our pants once new and glossy now are patches of different hue; all because subscribers linger and won't pay up what is due. Then let us all be up and doing; send in your mite, be it e'er so small, or now the blasts of winter strike us we shall have no pants at all."

Uncle Piper says that the editor's lament will catch no subscribers, for the reason that there is no hook, and, consequently, no bait. And it now needs a bait to obtain subscribers.

Here is another sketch attributed to the Warbler at Wilsey, Kansas. It also relates to the subscription end of the business, as follows:

"A man who was afraid of thunder crawled into a hollow log as a place of safety during a thunderstorm. The thunder rolled and the rain poured down in torrents, and the old log began to swell up till the poor fellow was wedged in so tight that he could not get out. All the sins he had committed and some that he had not committed began passing before him. Suddenly he remembered he hadn't paid his newspaper subscription, and he felt so small that he was able to crack right out."

Uncle Piper says that a funny story will get a subscription very much quicker than an editor's lament. Uncle Piper has a funny story which he has told four thousand times with good results.

Your Uncle Piper is getting into trouble again. This time for blocking the streets with loads of National Farmer hats. It was the second time Uncle Piper had been up before the Chief. The first time was when he was offering premiums of furs with such liberality that the Chief believed the rumor that they had been stolen. These National Farmer hats are given away as a premium to anyone who pays one dollar for a two-year subscription to The National Farmer and Stock Grower. The subscriber who gets the hat does not get anything else except the paper, and is lucky to get the hat, as it is practically a free gift.

The Chief of Police has had a suspicion that Uncle Piper stole the hats. He remembers the story of the two peddlers who were selling brooms. One said to the other: "I don't see how you can manage to sell brooms cheaper than I do. I steal the broom corn and have the brooms made at home." The other answered, saying: "That is easily explained; I steal the brooms." Uncle Piper had to show that he bought the hats before he could send out any more circulars.

Uncle Piper is not the only one who reports that subscription competition is getting fierce, and he expects to have to give away a chicken farm to get a subscription before he goes to heaven. Uncle Piper bought a supply of Hammond's Handy Atlas of the World. When these books arrived the cashier positively refused to pay for them until he obtained a great, big cash discount, and when he saw a three-years' subscription to The National Farmer and Stock Grower and a copy of the Atlas were given for one dollar, he exclaimed: "This is selling gold dollars for fifty cents." Uncle Piper sticks to it, however, that there is nothing too good for our subscribers, and if subscription competition is fierce, so is he.

Uncle Piper is said to be the only man who ever got the best of Hon. Wm. Jennings Bryan. You know Mr. Bryan ran for the Presidency a time or two, and he owns a mule and two farms, but his principal occupation is publishing a weekly paper called The Commoner. The Hon. Wm. Jennings Bryan and the Hon. Peter Piper were together one day, and the next thing we knew is that the announcement is made: "We will send The Commoner for one year and The National Farmer and Stock Grower for three years—both papers—for one dollar." This offer is almost too good to be true, yet it is good, and we have to keep it quiet, otherwise the other farm papers would get onto it. All our friends ought to read about the mystery of 1908.

By the way, Uncle Piper has scored another victory. All readers of The National Farmer and Stock Grower know that Mr. L. B. Clore, of Johnson county, Indiana, won the grand corn prize at the St. Louis World's Fair. They all know that Mr. L. B. Clore won the grand sweepstakes prize at the National Corn Show of 1907, but they have yet to be told that Mr. L. B. Clore went to Omaha and cleared the board with the best ten ears and won the grand sweepstakes again over all competitors. Before this grand prize was won Uncle Piper made the same trade with Mr. Clore that he did last year, and is therefore able to deliver to any and all our readers a pound of this great seed corn in connection with a subscription to the paper, a notice of which will be found elsewhere. Uncle Piper is certainly the great farm paper subscription editor, and all the others have to take off their hats to him.

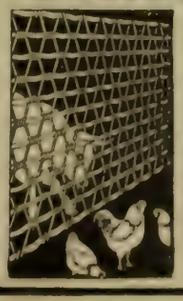
Dept. 255, East St. Louis, Ills.

GRAND CHAMPION CAR-LOAD OF LAMBS AT THE CHICAGO INTERNATIONAL SHOW OF 1908—Bred, fed and exhibited by D. W. Black, of Lyndon, Ohio. They were sold by Clay, Robinson & Company to the Pittsburg Provision Company. There were 55 head, 113 pounds average, at 11 cents a pound. There is a story concerning these lambs—D. W. Black had never owned a sheep before. The ewes were bought in the West—a good average of Western ewes. They were taken to the farm in Indiana. They were bred to pure-bred Oxford Down rams; the lambs were therefore only half-breeds; but they were good enough to be grand champions. The ewes were well kept, but the lambs were practically raised on grass. As the fall approached, owing to dry pastures, they were fed clover hay and finished on cracked shelled corn. Mr. Black says that the beauty of sheep raising is that they produce two dividends a year. All this is very simple. All through Missouri; all over Southern Illinois; on every hill in the Ozarks; on every farm in Arkansas and Oklahoma, they can—if they will—raise just as good lambs; they can sell the ewes for more than they cost, and they can shear the ewes before selling them. In this connection we desire to announce that by the 15th of January Messrs. Clay, Robinson & Company, the firm that sold these lambs, will open a house at the St. Louis National Stock Yards—the great and growing and most central market in the United States.

STRONGEST FENCE MADE



When you buy our **High Carbon Coiled Spring Fence** you buy strength, service and durability combined. Twenty years of experience—hard knocks, has taught us that the best fence is made from heavily galvanized **Coiled Spring Steel Wire**

CLOSELY WOVEN FROM TOP TO BOTTOM

Our Fence is so closely woven that small pigs cannot "wriggle" through it. So strong the vicious bull cannot "faze" it. We have no agents. We do not sell to dealers but sell direct to user

AT WHOLESALE PRICES FREIGHT PREPAID

Coiled Wire provides for expansion and contraction and prevents sagging between posts. Every pound of wire in our fence is made in our own wire mill from the best high carbon steel. We give **30 DAYS FREE TRIAL** That our customers may be sure they are satisfied. We have a full line of **FARM AND POULTRY FENCE.** Our **Wholesale Prices** will save you money. Write today for our 40 page free Catalogue.

COILED SPRING FENCE COMPANY,
Box 256 Winchester, Indiana.

Nitrate of Soda

Nitrate of Soda applied as a top dressing, produces not only more tons to the acre, but cleaner and higher grade

TIMOTHY

Test It for Yourself Entirely Free

Let us send sufficient Nitrate of Soda for you to try, asking only that you use according to our directions, and let us know the result. To the twenty-five farmers who get the best results, we offer, as a prize, Prof. Voorhees' most valuable book on fertilizers, their composition and how to use for different crops. Handsomely bound, 327 pages.

Apply at once for Nitrate of Soda by post card, as this offer is necessarily limited. "Grass Growing for Profit," another book of useful information, will be sent free to farmers while the present edition lasts, if paper is mentioned in which this advertisement is seen.

Send name and complete address on post card

WM. S. MYERS, Director, John Street and 71 Nassau, New York

Practical Farming and Gardening Is a book that weighs thirty ounces ready for mailing. It is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart, which is the frontispiece, is worth more to a stock farmer than any publication heretofore issued. It is worth a ten-dollar bill to any stock farmer. The book itself is a wonderful production. Soil fertility, irrigation, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, hog, sheep, horse raising gand feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. Eleven of the top-notch stock and agricultural experts compiled this book. They did the work so that farmers and farm boys could understand it. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. We buy large quantities at one time. We obtain this book for a very low price considering its value. Send One Dollar and we will send you **Practical Farming and Gardening,** postage paid, and The National Farmer and Stock Grower for one year. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Horticultural Notes.

A great deal has been said in the farm press of late as to the profitableness of planting large blocks of trees for wood and especially fence posts. There is no doubt that this advice to have a provident eye to the future requirements of the farm is sound and should be generally complied with. But beyond it all is the gain to the country in a general way, looking towards the effect of the renewals of the forests on the rainfall, in maintaining a more regular depth of water in the rivers and streams, and in preventing the washing away of hillsides. Every effort is being made by the Forestry Department of the government to awaken the people to a realization that our once grand and majestic area of forests has shrunk to small proportions, and that at the present rate of cutting and of waste the end of our timber supply is visible in one generation.

The government has done all it could under its powers to set aside forest reserves that clothe the mountain sides and nourish the springs of the headwaters of our rivers, but the individual farmer could render assistance of a most effective kind by replanting his own farm lands. This does not mean planting trees promiscuously over the farm, but rather by setting aside a certain number of acres and maintaining it as the wood supply of the farm.

As most of our farms are really too large for the best interests of the farmer, and as many of them, in addition to surplus acres, contain more or less land that by reason of various conditions is unfitted for profitable cultivation, there are few exceptions to the rule that the average farmer could well afford to devote a piece of the farm to the raising of trees. This will in a comparatively short time not only furnish fire wood and fence posts for the farm, but a surplus that can be sold as a cash crop. There are strong reasons, then, why almost every farmer should set aside, say, a tenth of his farm, ten acres out of every hundred, for the growing of trees. Of course, tree planting on a large scale presents a new and perplexing problem to the man who has never done more in that line than set a few fruit trees, perhaps; but this need not daunt anyone of determination nor cause him to hesitate to undertake the work with promptness and energy. Nor should there be any discouragement in the reflection that the returns are too far in the future to inspire a lively interest in the work, for it is untrue, if good management be exercised. A plantation of trees for timber will bring its pecuniary reward about as soon as an orchard of fruit trees. There is little or no difference. The growth of the best trees for farm planting, such as the locust and catalpa, must not be judged by the growth of hardwood trees that are growing in the forest. They are much more rapid growers, though the rate of growth will depend materially upon the nature of the soil and the attention bestowed. With intelligent attention there is no reason why ten or twenty acres of rapid-growing post timber should not be as gilt-edged an investment as could possibly be found for the same amount of labor and capital. In a few years it would become the source of a steady annual income that would be almost as sure as a government annuity. It would differ from the ordinary farm crop in being independent of the character of the seasons, while the demand for its produce promises to be everlasting and at advanced prices. It would almost compare with putting money in the bank for a "rainy day."

The trees most in favor for planting are the locust and the hardy catalpa (Speciosa), There are several varieties of these trees, and great care must be taken not to plant kinds that are unfitted for that particular soil, climate and market. I should advise any one contemplating this work to write his Experiment Station as well as the United States Department of Forestry at Washington, asking for advice and publications already issued. A Kansas man has planted 500 acres of good farm land to catalpas, regarding it as the superior in certainty and profit to any other crop he could raise. He estimates the cost of raising the seedlings from the seed per acre at 80 cents. The cost of planting per acre, $3.20. After that there will be the work of cutting back the trees when necessary to encourage the growing of straight sprouts and such miscellaneous work as may be called for. The value of the wood per acre was estimated to average $327.

It must not be supposed that the cutting of these trees means their death and the end of the plantation. Both the locust and the catalpa will sprout from the stump and send up new sprouts that will grow into post size in a remarkably short time. This renewal process can go on indefinitely if care in cutting is taken. Thus a plantation of these trees is much the same as a fruit orchard in respect to permanency and the crop is much surer, being in great measure independent of late spring frosts that so often blight the prospects of the fruit grower.—L. R. Johnson.

FREE BOOK ABOUT CANCER.

CANCEROL has proved its merits in the treatment of cancer. It is not in an experimental stage. Records of undisputed cures of cancer in nearly every part of the body are contained in Dr. Leach's new 100-page book. This book also tells the cause of cancer and instructs in the care of the patient; tells what to do in case of bleeding, pain, odor, etc. A valuable guide in the treatment of any case. A copy of this valuable book free to those interested. Address, Dr. L. T. LEACH, Box 91, Indianapolis, Ind.

REMOVE THE WORMS

In sheep, horses and hogs and you soon see the difference. Summer's Worm Powders never fail to remove and prevent further attacks. Sold by F. S. Burch & Co., Chicago.

Successful Rupture Curing.

Mr. Stuart, of Stuart Plaster-Pad Co., St. Louis, Mo., speaking of his Rupture Pad, says: "Our treatment has cured old men who had been suffering from rupture and the truss for years, in only a few days. As the Plaster-Pads have no buckles, straps or strings attached to them, it is easily seen that they must work on the correct principle. We base our statements upon facts and what the Plaster-Pads have already done. Write for "Trial of Treatment," Stuart Plaster Pad Co., Block 57, St. Louis, Mo.

On December 27th, from Oklahoma City, it was reported that Maggie Montgomery, of Pawnee county, had established a world's record by picking 348 pounds of cotton in one day.

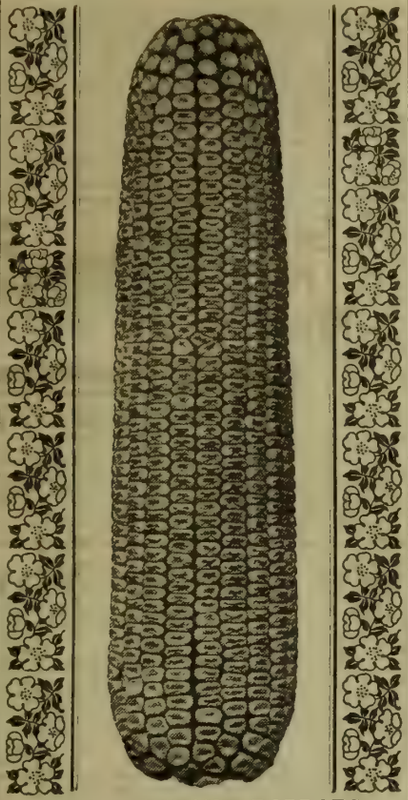
The BROWN Fence & Wire Co.
Dept. 45, Cleveland, Ohio.

SAMPLE FREE



TEN THOUSAND DOLLARS

In Corn Premiums Offered by The National Farmer and Stock Grower.

This picture represents the most perfect ear of yellow corn in existence to-day. It was grown two years ago by Mr. D. L. Pascal, of Iowa, and it won the Allee Trophy for the best ear of corn of any variety grown in Iowa. Since then it has been exhibited at two National Corn Shows and is yet the best ear of yellow corn shown.

Mr. Pascal has raised this Reid's Yellow Dent Corn from seed purchased of the originator. Mr. Pascal had but five acres of corn in 1908 of the family of this particular champion seed, and we have bought it for distribution to our subscribers. Therefore, anyone sending in one dollar to pay in advance for a two-years' subscription to The National Farmer and Stock Grower can select a pound of Pascal's Grand Champion Seed Corn as a free premium. Furthermore, this Reid's Yellow Dent Corn has been bred straight for sixty years. Anyone with a single pound of seed has a fair chance of producing champion ears of corn. Ten ears of first-class corn will win a first prize at any State Fair. We therefore agree to pay a premium of fifty dollars for every first prize won in the year 1909 at any State or National Show, providing the corn exhibited and winning the prize was grown from the seed corn furnished by us as a free premium, and providing that the premiums so won shall not exceed in amount over $10,000.00. Send in one dollar and we will credit you with two-years' subscription to The National Farmer and Stock Grower, and we will also mail the one pound of seed corn without delay. Address, Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.

A Phonograph on Every Farm.

We take special interest in the advertisement of the National Phonograph Company, which will be found on page 23. Farmers who have never had music on the farm do not have the slightest idea how much benefit it is. Mr. Edison is credited with other inventions which will keep his name prominently before the people for many centuries, but of all his inventions, the nearest his heart is the Edison Phonograph, which he is continually improving.

In the office of The National Farmer and Stock Grower is an Edison Phonograph with about 200 records. These have been in constant use two years. The records play as good or better than they ever did. There has been no expense for reparirs on the machine. Every day during the noon hour, those who do not go out to lunch usually start it up, and there are sufficient records for a different concert every day. Sometimes someone says: "That old thing is being worked to death;" but everybody objected when we proposed to send it out to the experimental farm.

We can take an Edison Phonograph on a farm and come very nearly revolutionizing it. We can change the mind of the hired man. He was determined that he would quit; and now there is music on the farm, he cannot be driven away. Young Tom, who never thought life was worth living, has a night or two a week at home—which is new for him—and if he cannot sing or play he can wind up the machine and change the records, and he can dance with Susan Gassayway who visits Sister Alice, now that there is music on the farm.

Much more can be said in favor of the new records that play twice as long; of the Grand Opera records; of the old favorites, that give so much pleasure to the old folks. Do not let the grass grow before you write to the National Phonograph Company, 168 Lakeside avenue, Orange, N. J., and ask for prices and list of records.

GREAT FREE BOOK ON GROUND FEED.

It is significant of the times that more and more manufacturers of special appliances are realizing that it is not enough to simply make a good machine, but that they must tell the purchaser and user how they can use it so as to get the most out of it.

Such a book has just been issued by the Spartan Mfg. Co., of Pontiac, Ill., makers of the famous **Corn Belt Feed Mills.** It is called "Grinding Feed Into Dollars," and it certainly makes its title good. It not only shows how the grinding of grain saves about 25 per cent. of the grain itself, but since the "Corn Belt" Mill grinds the cob as perfectly as it does the grain, a still further economy is effected.

These facts are both startling and true. The waste which farmers have suffered through feeding whole corn is almost appalling. It is not enough to say that the hogs which follow get the undigested grains. This is not consonant with the modern idea of sanitary, cleanly methods. The waste is a loss because the animal to which the grain is first fed loses its nutritive value. But when ground, every particle is assimilated and goes into meat or muscle.

The value of "Corn and Cob" Meal is just beginning to be recognized. Formerly cobs were a waste product, or were used with indifferent success for fuel. Now by grinding corn and cob together a superior feed mixture is obtained. It is the nearest approach to a perfectly balanced ration which nature has provided.

The cob contains valuable food elements, but it has been impossible for the animal to extract them, and ordinary mills make poor work of the cob, either breaking it into lumps or crushing it into tough fibrous masses, either of which contribute no food value or are positively dangerous to the animal.

But the "Corn Belt" Mill cuts and shears the cob before it reaches the grinding burrs, which reduce both grain and cob to an even granular product, which is eaten with greater relish and is perfectly digested and assimilated. The cob meal not only increases the nutritive value of the feed, but so lightens the mass that the digestive juices of the stomach get into quicker action.

The "Corn Belt" Mill does not heat the grain in grinding, although it is a very fast grinding mill. It is a remarkably light running mill considering its speed and capacity.

Every reader of this paper is urged to write for a copy of the book "Grinding Feed Into Dollars." It will be gladly sent to any address. It is handsomely illustrated, and, being written or original lines by one of the ablest agricultural men of the day, it is worthy a place in any farmer's working library.

Write to-day to Spartan Mfg. Co., 1144 Main street, Pontiac, Ill.

Do you want a fine farm for little money

—a farm that is bigger than you can afford to own where you live now?

—a farm that will grow bigger crops than you can grow on your present farm?

—a farm that will make you a good living and leave you some profit besides?

—a farm that will grow more valuable each year?

You can get such a farm

in the Southwest

along the Cotton Belt Route in Southeast Missouri, Arkansas, Louisiana and Texas.

Some of the finest land in the Southwest lies along this line. It can be bought on easy terms for $5 to $25 an acre.

The low rates offered by the Cotton Belt each month would make a trip of investigation very cheap and profitable.

General Farm Notes.

The average rainfall in Missouri in November, 1908, was 4.14 inches, or 1.66 inches above the normal. The greatest monthly precipitation was 9.41 inches, at Caruthersville; and the least, 1.50 inches, at Oregon. The greatest amount recorded in any twenty-four consecutive hours was 4.00 inches, at Caruthersville on the 29th.

At the Chicago International Show, 162 head of pure-bred Shropshire sheep were sold for breeding purposes at $20.76 per head. The highest price paid for a ewe was $75, and the best price for a ram was $96. These prices are very reasonable.

CANCER CAN BE CURED.

Scores of testimonials, from persons who gladly write to those now suffering, all tell of perfect cures. My Mild Combination Treatment destroys growth and eliminates the disease from the system. **Free book,** "Cancer and Its Cure," and 125-page book of testimonials from **cured** patients in every State in the Union. Midwinter Care of Poultry.

When the winter becomes cold the owner of poultry can let up some on the restriction in the feeding of corn. It must be said, however, that many farmers never restrict the feeding of corn, and so do not need to be advised in this matter. The cold causes the fowls to use up much of the fat on their bodies, which is a form of carbon, and is changed into heat through combinations made in the lungs. Winter is the one time when a ration that is high in carbohydrates may be fed.

The warmed poultry house is out of date. It is not advisable in regions where the winters are only moderate. It might be advisable in the far North, where temperatures reach fifty and sixty degrees below zero, and where the fresh air cannot be admitted in large quantities to the living places of people and animals without some means of quickly raising the temperature inside.

Even our barn-yard fowls have a covering that makes the cold agreeable to them after they have become used to it. Notice a lot of hens in a cold house on a bitterly cold morning. Their outer feathers are pushed far out from their bodies, and under them is a warm layer of air. They are experiencing the sensation of being covered with bed clothes, and it is probable that they enjoy the sensation. Therefore cold will not hurt the fowls, but drafts will.

Fresh air should be admitted to the poultry house even on the coldest days. Common cotton cloth or muslin will prove an excellelnt material through which to strain the air. It passes through such material slowly enough to not create a draft, and this is an ideal way of letting in the air. But the cloth must be protected from the rain, else it will coat over with ice and fail to render the service required.

In supplying water to fowls in cold weather, remember that if properly handled water may be kept warm for them for many hours. The first point is to expose but little surface of the water to the air. Water exposed to the air cools off with great rapidity, but where it is separated from the air by any substance it retains its heat for a long time. Call to mind the length of time the water in a hot-water bottle keeps hot. It will frequently remain almost scalding hot for six hours and will remain warm for twelve hours. The same laws hold good with the water being given the poultry. A large quantity exposed to the air will remain unfrozen sometimes for a whole day. If it is set in a dish of chaff or hay it will be all the slower in losing its heat. That is on the principle of the hay cooker.

On warm days in winter the poultry house should not be allowed to become damp. This can be accomplished by keeping the house cleaned out as carefully as in summer time. It is more important in the winter than in summer, because the droppings dry out less rapidly than in summer. Ammonia fumes rising from the droppings seem to be very injurious to the health of fowls, and they should not be compelled to breathe them during whole nights in the warmer portions of winter.

Don't let the winter rains drive into the poultry house and bring about conditions favorable to the development of roup.

MAZEMOOR HAROLD—Champion Shire stallion at the International Live Stock Show of 1908. Imported and exhibited by Trumans' Pioneer Stud Farm of Bushnell, Ill. Take a good look at this picture. You may then know a Shire draft horse whenever you see one. There were fifty-two Shire stallions shown at the Chicago International, and this one was the best. There were eighteen in the same age class, and the tailings were prize winners at other shows. The Breeders' Gazette said of this stallion: "He combines substance with quality and finish to a rare degree. He has the bone, middle and general width to give him scale and quality to wear well. He walks snappy and alert and trots with a straight movement, keeping his legs well under his body and planting his feet easily and firmly. MAZEMOOR HAROLD is a finished matured stallion of a stamp that cannot be surpassed." The champion mare of this breed, Wrydeland's Starlight, also exhibited by Trumans' Pioneer Stud Farm, was represented in the October number of this paper. This mare is now sold to the Iowa Agricultural College, where they are greatly interested in the problems of draft-horse raising.

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

Fifteen Minutes a Day.

Languages have been learned, sciences mastered, preparation for a life's work accomplished, by devoting a small portion of time daily to systematic reading or studying. Fifteen minutes a day, or even ten minutes, devoted to good reading by the house mother will change her whole life. It will keep her in touch with the movements of the day and give her interests beyond the four walls of her home or the quarter section of land in which she has an interest.

In the magazines she reads she will meet other women who will show her new ways of doing the house work and various means of enjoying life. The poets she becomes acquainted with will awaken her to behold new beauty in the sky, the earth and all its creatures. The stories she reads may make her laugh or they may make her cry, but the house work will be forgotten while she loses herself in them and she will come back to her tasks refreshed and more competent to successfully perform them.

Because much time cannot be devoted to reading some of us neglect it entirely. By making a rule of spending fifteen minutes with books or magazines each day, a woman can keep up and scarcely miss the time used. A book shelf in the kitchen with a late magazine and a few well-chosen books will help in accomplishing this reading, and it may encourage an occasional needed rest of just a few moments between tasks.

This "keeping up" is something which every woman owes to herself and to her family. The husband usually finds some time each day to read, and in time he will outgrow the wife who is too busy to ever pick up a book.

As the children grow in knowledge they will be quick to observe whether mother is "up" in the events of the day. Even though the sewing machine does most of the mending and in spite of the fact that the parlor needs dusting, and must be neglected once in a while for the reading, the woman who perseveringly devotes an allotted time to her mental culture will some day glory in the fact that she knew how to properly shirk her work.—Janet Thomas Van Osdel.

A Woman's Pin Money.

A woman living in the suburbs of a city has hit upon an easy and profitable way of making money. They keep six cows and sell milk and cream to private customers. This gives quite an amount of skim milk which the woman of the house turns into coin by allowing it to sour and then making it into cottage cheese balls, which she disposes of at the grocer's. She makes from six to eight dozen a week and there is a bigger demand for them than she can supply. She receives 25 cents a dozen for cheese balls of medium size, which bring her in on an average of $1.75 a week, and of this she has cleared about $1.50.

In connection with the cheese balls this woman also makes potato chips at the same store at which she places her dairy wares. She purchased a potato slicer which does the work more speedily and cuts the potatoes thinner than can be done by hand. She peels her potatoes in the evening, runs them through the slicer and puts them under a weight in cold water to stand until morning. Early in the morning she fries them and has them all out of the way before the active duties of the day begin. She receives for these thirty cents a pound, and disposes of about fifteen pounds a week. This gives her an income of $4.50, of which about $4.00 is clear. Added to the income on cheese balls, she receives about $5.50 clear each week, doing very little extra work, going to little expense and incommoding her house work little, if any. The potatoes and lard are raised on the farm, which reduces expenses. Janet Thomas Van Osdel.

Uncle Piper does not say much in the office concerning the Book of Live Stock Champions which he is giving away with a two-year subscription to The National Farmer and Stock Grower for one dollar. This is the boss editor's pet book, and he is not satisfied to have it used as a subscription premium. There are 500 half-tone pictures in this book, all of them representing champions. These are now historical champions. The book starts with the Chicago World's Fair and ends with St. Louis.

The EDISON PHONOGRAPH

reproduces all sounds, and especially the sounds of the human voice and the music of instruments, so marvelously that you would be amazed at it as a scientific invention if you had not become so used to its wonderful work.

We want everyone who has not yet experienced the delight of owning and listening to an Edison Phonograph to go to some dealer today and hear the Edison Phonograph play. There is only one way to know how good the Edison Phonograph is and that is to hear it. Nothing can describe it.

There is a dealer in the town where you do your marketing who will be glad to show you the Edison Phonograph and let you hear the new records. He has an assortment of both Edison and Amberol Records, and he has Phonographs in various sizes and styles, at different prices—all low. You can arrange with him for putting an Edison Phonograph in your own home. Some dealers sell on the instalment plan.

Edison Amberol Records

The New Phonograph Records that play twice as long as the regular Edison Records

These are the new Records which have just been made to play on the Edison Phonograph. They play twice as long as the old ones and play far better.

This is the latest great discovery of Mr. Edison for the benefit of his favorite invention, the Edison Phonograph, and for your benefit if you are wise enough to get an Edison Phonograph with the Amberol attachment at once.

An Edison Phonograph with the Amberol attachment plays both Records, the old two-minute Records and the new four-minute Records.

There are thousands of selections already made up in the old Records which you can enjoy, and there will be many new ones every month in both the old Records and the Amberol Records.

Edison Records are made in Bohemian, Cuban, Danish, French, German, Hebrew Hungarian, Italian, Norwegian, Polish, Spanish, Swedish, etc.

Edison Amberol Records, 50c. Regular Edison Records, 35c.
Edison Grand Opera Records, 75c.

If you are not ready to buy at once, ask your dealer for a catalogue of Phonographs and a catalogue of selections. You will be surprised that so much music is available to the owner of a Phonograph. Do not be misled by any other sound-reproducing instrument. The Edison Phonograph is the best for the home.

AN EXCELLENT ATLAS.

Free Premium and the Best Farm Paper For Three Years For One Dollar.

The subscription price of The National Farmer and Stock Grower is 50 cents a year, or $1.00 for three years. We are glad to obtain subscriptions on credit, payable at the end of the first year, but we are better satisfied if the dollar is paid in advance; therefore we offer premiums to induce advance payments.

Our very best premium is Hammond's Handy Atlas of the World, and it is remarkable what this wonderful book contains.

Hammond's Handy Atlas of the World consists of 107 pages, 6x8 inches; in printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns.

Every country in the world is shown by maps of the latest plates.

All maps are carefully printed in colors on best cream-laid paper, boundaries distinct, names of towns in graded type, indicating their size. A work of rare beauty and usefulness.

This Atlas contains arranged lists of cities, giving the latest census figures of all states and territories and foreign countries, and a vast amount of interesting information.

Our Subscription Offer.

We will send you The National Farmer and Stock Grower for three years and send you absolutely free, prepaid, Hammond's 1908 Handy Atlas of the World, all for One Dollar.

SUBSCRIPTION BLANK.

National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.:

I enclose One Dollar to pay for my subscription to your paper for three years in advance, on condition that you send me, free and prepaid, one copy of Hammond's 1908 Handy Atlas of the World, as per your guarantee above.

Poultry Notes.

A writer on the subject of Brahma fowls says that they will grow a pound for every month in the year.

Poultry raisers may never have heard that this country has imported many eggs from China, but it is a fact; they arrived in bulk as egg yolk. On account of there being too much borax used as a preservative, Dr. Wiley, the government chemist, has condemned a number of shipments and will not pass any more. They were used in pastry, principally in custards.

The Petaluma Poultry Journal of California reports that just before Thanksgiving one Express Company received and shipped 12,000 pounds of dressed turkeys in one day. They were shipped from Turlock, in Stanislaus county, to San Francisco. The price was 27 cents a pound.

The incubator season has come again. Don't fail to read the advertisements. Send for the catalogues and study them carefully. The motherly hen is all right in her way, but if you mean poultry as a business to suport you in youth, in age, and when you are crippled up, then the incubator question has to be met face to face, and the answer is: "Yes; you need an incubator."

From Sedalia, Mo., December 17th, it is reported that Fred Allison, a merchant of Longwood, has accomplished the task of driving 140 turkeys from the mouth of the Lamine river to Hughesville, a distance of twenty-five miles, where he sold them.

Mr. Richard Croker, the ex-New York Tammany boss, who went across the water and won the English Derby, is now turning his attention to chicken raising. He will have an incubator constructed that will hatch 150,000 chickens.

The Thirty-fifth Illinois State Dairymen's Convention will be held at Clinton, January 19th, 20th and 21st, 1909. There will be a very interesting session and milk and butter contests. This Clinton is in De Witt county, on the Illinois Central Railway, between Bloomington and Decatur. There are two Clintons in Illinois.

Alba Heywood, President, of San Benito, Cameron county, Texas, is advertising some of the rich lands which grow every crop of grain and vegetables, including tropical fruits. See land classification on the eighth page.

PREPARE FOR HOG KILLING.

Slaughtering time involves lots of hard, disagreeable work, and anything that will tend to decrease this labor is of incalculable value and well worth the money spent for it. You should consider the most effective means of getting through the work, and, what is still more important, realize as much as possible from your hogs.

To this end, there's nothing that will help more than an "Enterprise" butchering outfit —"Enterprise" Meat and Food Chopper and a Sausage Stuffer and Lard Press. The cost of this outfit is comparatively small, and measured by the increased value that your hogs return, will pay for itself in one season.

The "Enterprise" Meat and Food Chopper chops the meat uniformly, without crushing and grinding—every minute piece retains all of its goodness and flavor.

A great deal of the drudgery and hard work of butchering is eliminated by the use of the "Enterprise" machines.

Another machine of great value to poultry raisers and on the farm is an "Enterprise" Bone, Shell and Corn Mill. It is especially adapted for grinding dry bones, oyster and other shells, corn, grain, etc. It is a good general mill for farmers, poultry men, etc., and for compactness, strength and durability cannot be excelled.

It insures a variety in food supply for your poultry, increasing their yield and value tenfold. "The Enterprise Housekeeper," a book of over 200 choice recipes and kitchen helps, will be mailed free to anyone sending their name and address to The Enterprise Manufacturing Company of Pennsylvania, 220 Dauphin street, Philadelphia.

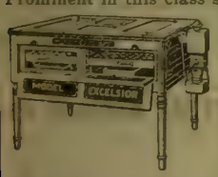
Address STUART PLASTER-PAD CO., Block 57 St. Louis, Mo.

HELPS FOR THE POULTRY INDUSTRY.

Early Chicks the Most Profitable—a Trustworthy Incubator Vitally Important to the Success of a Modern Plant.

The incubator has doubtless done more for the poultry industry than has any other single factor. "Raising chickens" was of little importance before this machine was invented, simply because "hen-hatched" chickens could not be matured early enough in the season to sell at a profit. However, the incubator now makes it possible for chicks to be well matured by the time most hens begin to show signs of broodiness.

Thus incubators have come into common use, and some few makes have established their right to the confidence of the public. Prominent in this class stand the "Excelsior" and "Wooden Hen," the former having been one of the earliest of the artificial hatching machines put on the market.



Both types are built upon practical lines, and have won the approval of thousands of poultrymen everwhere. They are made in sizes varying from 50 to 600 eggs, thus adapting themselves to poultry plants great and small.

In "Excelsior" and "Wooden Hen" Incubators the principles of heat, moisture and ventilation, so vital to the development of healthy chicks, have been perfectly worked out. Regulation of the heat, which may be supplied by kerosene, gas or electricity, is practically automatic, reducing to almost nothing the attention required to keep the machine going.

"Excelsior" and "Wooden Hen" Incubators and Brooders are illustrated and described in attractive catalogues and literature issued by the manufacturer, Geo. H. Stahl, Box 53 B, Quincy, Ill., who will gladly mail same to any address upon request.

TEN THOUSAND DOLLARS IN CORN PRIZES

Offered by The National Farmer and Stock Grower, of St. Louis, Mo.

The best corn-growing farmer in the United States of America is Mr. L. B. Clore, of Johnson county, Indiana. His reputation has been made, sustained and become illustrious by the exhibits of Johnson County White Dent Corn of his own breeding and raising.

Mr. L. B. Clore makes no pretense that he is any better or more capable than any other corn-growing farmer, and he claims to live in the midst of a prize-winning corn-growing community. In fact, Johnson county is full of prizes won at the National Corn Show. But when Mr. L. B. Clore makes an exhibit for a grand prize he gets it.

And there was a magnificent contest. At Omaha there were 6,000 bushels of corn in competition. In one class for the best ten ears in one state there were 226 entries. The whole farming community was on hand with the best exhibits.

Mr. L. B. Clore, the winner of the largest number of grand prizes in America, has placed a certain amount of his Grand Sweepstakes White Corn at the disposal of the editor of The National Farmer and Stock Grower, to be used as subscription premiums.

Therefore, anyone who will send us one dollar to pay for two-years' subscription to The National Farmer and Stock Grower can select one pound of Clore's Grand Sweepstakes White Corn, and we will send it postpaid by mail as a free premium.

Furthermore, to encourage those who receive this corn to plant, cultivate and harvest it separately from all other corn raised by them, and for the purpose of encouraging honorable competition, we will pay a number of premiums for corn grown from the seed furnished from this office. If any of our patrons grow corn from premium seed corn furnished by us as a free premium and exhibit the same at their own State Fair—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1909 with corn grown by our subscriber from the seed corn furnished by us to him as a free premium.

These prize offers are good in every state where a State Fair is held, and are also good at any National or International Show. If any of the premiums are won at the National Corn Show of 1909, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and if winning a state sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive fifty dollars additional from us, and, if winning a sweepstakes prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn. Mr. Clore did it from his own seed corn, and our readers will be furnished seed of the same family and breed of corn from which all the Clore premiums have been won. We are also offering a similar line of premiums for yellow corn, which will be found in another column.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Nervous Collapse

"I have traveled for thirty years continually. I lost a great deal of sleep, which together with constant worry left me in such a nervous state that finally, after having two collapses of nervous prostration, I was obliged to give up traveling altogether. I doctored continually but with no relief. Dr. Miles' Nervine came to my rescue—I cannot describe the suffering which this Nervine saved me. Whenever I am particularly nervous a few doses relieve me." A. G. C. LIBBY, Wells, Me.

There are many nervous wrecks. There is nervous prostration of the stomach, of the bowels, and other organs. The brain, the kidneys, the liver, the nerve centers are all exhausted. There is but one thing to do—build up the nervous system by the use of Dr. Miles' Restorative Nervine. Its strengthening influence upon the nervous system restores normal action to the organs, and when they all work in harmony, health is assured. Get a bottle from your druggist. Take it all according to directions, and if it does not benefit he will return your money.

How Bobby Orde "Showed Off" Before That Little Carlton Girl.

Stewart Edward White's story, "The Little Girl," in the January American Magazine, is full of real stuff. It actually takes the reader's mind back to the experiences of childhood. Take, for example, Bobby Orde's behavior the day he first met Celia Carlton, that pretty little girl about his age. Celia was alternately nice to him and "bad" to him. Part of the time she played with him, and part of the time she snubbed him. This so "fussed" Bobby that he cut loose, broke Mrs. Orde's cake, and ended up the day with a good spanking and an early departure for bed. Now let Mr. White tell the rest of the incident:

"Bobby loved to have his father lie beside him on the bed. They never said much; but the little boy lay, looking up through the dimness, bathed in a deep, comfortable content at the man's physical presence.

"To-night they lay thus in silence for at least five minutes. Then Bobby spoke:

" 'Papa,' said he, 'don't you think Celia Carlton is pretty?'

" 'Very pretty, Bobby,'

"Another long silence.

"'Papa,' complained Bobby at last, 'why does Celia be nice to me, and then not be nice to me, and change all the while!"

"Mr. Orde chuckled softly to himself.

" 'That's the way of 'em, Bobby,' said he. 'There's no explaining it. All little girls are that way—and big girls, too,' he added.

"So long a pause ensued that Mr. Orde thought his son must be asleep, and was preparing softly to escape.

" 'Papa,' came the little boy's voice from the darkenss, 'I like her just the same.'

" 'Carroll,' said Mr. Orde to his wife, as, blinking, he entered the lighted sitting room, 'you can recover your soul's equanimity. I've found out why he broke into the cake.'

" 'Why?' asked Mrs. Orde eagerly.

" 'He was showing off before that little Carlton girl,' " replied Mr.Orde.

TO MAKE UP SIMPLE DRESSES.

While the evenings are long this winter, I want to make up several pretty, simple dresses for afternoon wear next summer. Please suggest a suitable material. It ought to be very moderately priced. I don't know of anything stylish and pretty at the price I can pay. COUNTRY SCHOOL TEACHER.

Answer—No matter how much money you might be able to pay, you could find no prettier or more stylish material for summer afternon dresses than Simpson-Eddystone Zephyrette Ginghams. They are exquisite in coloring, with beautiful designs, and so light-weight, soft and fine that you will be amazed at their very moderate price. You can secure any wanted color, and a large variety of designs.

The Naive Duke.

"The late Dr. William M. Stonehill," said a college settlement worker of New York, "was called the Bishop of the Bowery. It was a title of affection. The Bowery loved this good man.

"He sometimes used to laugh over the naivete of his Bowery audiences. He used to say that in their frequent audible comments on his sermons they reminded him of the famous Duke of Cambridge—the old Duke, you know.

"From his great pew the Duke rumbled out all sorts of remarks and criticisms every Sunday morning. It would be," said Dr. Stonehill, "like this:

"Preacher—'Let us pray.'

"Duke—'By all means.'

"Preacher prays for rain.

Reliable Dress-goods

For over 65 years the women of the United States have used **Simpson-Eddystone Black-&-White** calico prints. A long time for one kind of cotton dress-goods to remain the favorite! The reason: beautiful patterns, absolutely fast colors, and cloth of enduring quality.

Ask your dealer for Simpson-Eddystone Prints. If he hasn't them write us his name. We'll help him supply you. Don't accept substitutes and imitations.

"Duke—'No good in that as long as the wind is in the east.'

"Preacher (reading)—'Zachcheus stood forth and said: "Behold, Lord, one-half of my lands I gave to the poor." '

"Duke—'Too much, too much. Don't mind subscribing, but can't stand that.'

"Preacher quotes a certain commandment.

"Duke—'Quite right, quite right, but very difficult sometimes.'

"Preacher quotes another commandment, which need not be indicated.

"Duke—'No, no! It was my brother Ernest did that.' "—New York Times.

Mrs. Brown's Front Porch.

I want to tell you why Mrs. Brown's front porch—and her back one, too, for that matter—is always so beautifully clean, in spite of the fact that her two robust boys are overflowing with animal spirits and usually have several playmates in the yard or about the house with them.

She has made them monitors of the porches and they are wholly responsible not alone for the scrubbing of them, but also for seeing that they are kept clean. They take pride in their work and are quick to warn one another and their companions against tracking up a freshly-cleaned porch.

Many a time has Mrs. Brown smiled to herself at hearing Harold or Howard call out to their visitors: "Clean your feet off good and then take long steps across the porch, because we just cleaned it this morning!" She does her part in keeping heavy rugs for the cleaning of boots, and the rest she leaves with the boys.—Janet Thomas Van Osdel.

A Skating Party.

Young people usually enjoy skating, and a skating party is one of the most enjoyable of winter entertainments. The first thing to be done is to decide upon a suitable place, and one does not usually have to go far to find a lake or pond that will fulfill the requirements. The next thing is to ascertain whether or not the ice is perfectly safe, selecting one in whose judgment you have perfect confidence to make the investigation. If there is any doubt on this point, postpone the party for a while, for "it is better to be safe than sorry."

Your invitations should not be sent out more than twenty-four hours in advance, since no one can tell what a day may bring forth in the way of weather. The afternoon is often preferable to evening, but if for any reason the latter time is chosen, make some arrangement about lights. The simplest plan is to set posts on either side of the pond, run wires across from one side to the other, and hang lanterns on the wires. If this does not make it light enough, each man may be requested to bring a lantern.

The refreshments should be simple, as a skating party is an informal affair. Hot coffee, soup, crackers, sandwiches and cake will be enjoyed. Some kind of a stove is a necessity. If there is a house near the lake, it will be just the place to serve the refreshments, or, failing this, a tent may be put up and will answer the same purpose.—E. J. C.

ROOFING SAMPLES FREE

BEFORE YOU BUY shingles or prepared roofing from anyone write us and ask for Roofing Samples, and we will send you free by return mail a complete set of good sized samples of roofing of all kinds, felt, flint surfaced and rubber roofing and complete Roofing Catalogue, the greatest roofing proposition ever made. **63 cents per roll** and up for good roofing, much cheaper than shingles, much better quality and lower price than sold by others.

VETERINARY COURSE AT HOME.
$1200 year and upwards can be made taking our Veterinary Course at home during spare time; taught in simplest English; Diploma granted, positions obtained for successful students; cost within reach of all; satisfaction guaranteed; particulars free. **Ontario Veterinary Correspondence School, London, Can.**

The Twice-a-Week GLOBE-DEMOCRAT

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Republican newspaper in the United States. It is published at $1.00 per year, and is worth the price.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

On account of the interest in the present political campaign we are able to combine both of these papers for the price of one.

SEND US ONE DOLLAR

and we will mail to your address **The St. Louis Globe-Democrat Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years.

Address,
EVANS SUBSCRIPTION AGENCY,
3552 Vista avenue, - St. Louis, Mo.

SELECTED POETRY.

COMPANIONSHIP.

Men laughed in ancient Egypt long ago,
And laughed beside the lake of Galilee;
And my glad heart rejoices more to know,
When it leaps up in exultation, too,
That, though the laughter and the laugh be new,
The joy is old as is the ancient sea.

Men wept in noble Athens, so they say,
And in great Babylon of many towers,
For the same sorrows that we feel to-day;
So, stranded high upon Time's latest peak,
I can with Babylonian and with Greek
Claim kinship through this common grief of ours.

The same fair moon I look upon to-night,
This shining, golden moon above the sea,
Imparts a richer and more sweet delight
For all the eyes it did rejoice of old,
For all the hearts, long centuries grown cold,
That shared this joy which now it gives to me.

Whate'er I feel I can not feel alone;
When I am happiest or most forlorn,
Uncounted friends whom I have never known
Rejoicing stand or weeping at my side—
These nameless, faceless friends of mine who died
A thousand years or more ere I was born.
R. M., in London Nation.

THE STEPCHILD.

When I was little, papa used to tell
Long stories to me every night,
And mamma, 'cause she wasn't very well,
Would lie by me and hold me—just as tight!

But mother says I'm most half grown
And ought to go to bed alone,
And making fools of children isn't right.

When I was little, papa used to be
A growly dog, and then I'd be a cat,
Or else he'd be a bear a-chasin' me,
Until I'd run to mamma, where she sat,
But papa doesn't want to play
Since mamma went and went away,
'Cause mother says I'm much too big for that.

When I was little, papa used to hold
Me on his lap and cuddle me, and let
Me cuddle him, pretendin' he was cold,
And mamma never seemed to mind or fret.
But when I go to kiss him now,
He tells me not to make a row,
'Cause mother hopes I'm not a baby yet.

Once mother went way, I don't know where,
And papa was alone, just him and I,
And so I went and climbed up on his chair,
And then got on his knee, and by and by
He cuddled me, and rocked me, too,
Like him and mamma used to do,
And then I felt so good I had to cry.
—Edmund Vance Cook, in Appleton's Magazine.

GOOD FEELINGS.

I do not care how long I go
Without my bread and meat;
I like to very hungry grow—
It feels so good to eat!

When summer's at her very worst,
And withers berne and brink,
I like to get an awful thirst—
It feels so good to drink!

And through the days of toil and fret,
By labor hard opprest,
I do not mind how tired I get—
It feels so good to rest!
—Joe Cone, in Puck.

HE NEVER HAD THE TIME.

I've always meant to learn a lot—
To take a little time to read,
Not any sort of silly rot,
But solid matter; yes, indeed.
I know that is the stuff I need;
But I'm tied down, to my regret,
And though some day I may be freed,
I haven't had the time as yet.

I'd love about the globe to trot,
To go where fancy chose to lead,
With notebooks, wherein I might jot
Odd happenings—a travel screed,
Clad in a suit of tourist tweed,
With other things that I must get,
I'll analyze the foreign breed,
I haven't had the time as yet.

At home, within my humble cot,
A lot of chores I have agreed
To do. The garden I have got
To get in shape—a lawn to seed,
Then beds to dig and beds to weed
And trees about the place to set.
With these few tasks I make small speed.
I haven't had the time as yet.

L'Envoy.

Dear sir, I've many mouths to feed,
That is the fact that makes me fret,
That still my progress doth impede.
I haven't had the time as yet.
—Rag Time Muse.

AN OLD-FASHIONED LOVE SONG.

Tell me what within her eyes
Makes the forgotten spring arise,
And all day, if kind she looks,
Flow to a tune like tinkling brooks;
Tell me why, if but her voice
Falls on men's ears, their souls rejoice;
Tell me why, if only she
Doth come into the companie,
All spirits straight enkindled are
As if the moon lit up a star.
—H. C. Bunner.

BACK TO THE FARM.

Back to the farm, where the bobwhite still is calling,
As in remembered dawnings when youth and I were boys,
Driving the cattle where the meadow brook is brawling,
Her immemorial wandering fears and joys!

Home to the farm for the deep green calms of summer,
Life of the open furrow, life of the waving grain—
Leaving the painted world of masquerade and mummer
Just for the sense of earth and ripening grain.

Down in the hayfield where scythes glint through the clover;
Lusty blood a-throbing in the splendor of the noon—
Lying 'mid the haycocks as castling clouds pass over,
Hearing insect lovers a-piping out of tune.

* * * * * *

Off to the wood lot, where brier bloom runs riot,
And wary forest creature no hunter's snare deceives,
Virgin growth beguiling the solemn-hearted quiet
With songs of winter fires a-ripple through the leaves.

* * * * *

Out in the dews with the spider at his shuttle—
In that half-dreaming hour that awakes the whip-poor-will,
And sets the night hawk darting sinister and subtle,
E'er the full moon complacent loiters o'er the hill.

Back to the farm! With the friendly brute for neighbor,
Where youth and nature beckon, the tryst who would not keep?
Back to the luxury of rest that follows labor,
Back to the primal joys of hunger and of sleep!
—Martha G. D. Bianchi, in Scribner's Magazine.

A MIDNIGHT SONG.

When the folks are out on a midnight scout
And I am left alone,
And I try to sleep as the shadows creep
And wint'ry breezes moan;
With an elbow prop on the side of the cot
I hear a merry tune
As the dear little clock goes hippity-hop
On the shelf in the dining room.

When the stars shine bright through the lonely night
And birds in tree-tops ride,
And the grass is lost 'neath a heavy frost
Upon the steep hill side;
When the wild geese flop in a wedge-shaped flock
Beneath the silver moon,
Then the dear little clock goes hippity-hop
On the shelf in the dining room.

When the lightning's flash and the thunder's crash
Are making music sweet,
And the driving rain on the window pane
Is lulling us to sleep;
When the street lamps hop all along the block
And ghastly shadows loom,
Then the dear little clock goes hippity-hop
On the shelf in the dining room.

Oh the dear little clock! May it never stop
Through ages dark and long,
But stand on the shelf and amuse itself
With happy, care-free song;
When at last I drop in the Reaper's shock
And sentenced to my doom,
May the dear little clock go hippity-hop
On the shelf in the dining room.
—W. C. Gibbons.

FARMER LAD'S LOVE.

Oh, Sally was as sweet a lass
As ere the sun has riz on;
Her eyes so blue, her teeth of pearl
And golden locks all in a curl,
Made for my heart a prison.
But summer boarders came along
To fill her father's pocket;
An' fust we knew that wicked girl
Had give one dude a shining curl,
And ne'd give her a locket.
She's married to the city swell,
Her heart an' all is his'n.
Ef he will let we go our way,
We do not mourn, not us, but say,
Why, we'll let she go his'n.
—Life.

HER LAST LESSON.

When I married my wife she had studied stenography,
Got that down solid, then took up photography.
Mastered that science, and started geography,
All in the course of a year.

She presently took up a course of theology,
Followed that up with a touch of mythology,
Got a degree in the line of zoology;
Still her great mind remained clear.

So she took a full course on the theory of writing,
Some lessons and points on the subject of fighting,
A long course of house building, heating and lighting,
Far over her classmates she'd soar.

Then she studied the subject of steam navigation,
Took also instruction in church education,
And mastered the study of impersonation,
And still she was longing for more.

Next she tackled the latest great fad—electricity;
"Dress Reform" institutes taught her simplicity;
Sought the best way to encourage felicity;
Oh, she's as smart as a book.

She at last ended with a course of phonetics,
Gave a little attention and time to athletics;
The rest of her time she then gave to magnetics,
And now she is learning to cook.
—New York Weekly.

AT BEST.

The faithful helm commands the keel,
From port to port fair breezes blow;
But the ship must sail the convex sea,
Nor may she straighter go.
So, man to man; in fair accord,
On thought and will the winds may wait;
But the world will hand the passing word,
Though its shortest course be straight.
From soul to soul the shortest line
At best will bended be;
The ship that holds the straightest course
Still sails the convex sea.
—John Boyle O'Reilly.

LOOK AHEAD.

Look not back on past mistakes,
Look ahead;
Bury blunders and bad breaks;
Look ahead;
Let the past in human eyes
Give its reasons how to rise,
But not effort paralyze,
Look ahead!
—Baltimore American.

NOT WORTH THE OFFER.

"I was standing out in front one night," said a theatrical manager, "when a ragged little urchin came along with a dog under his arm. The dog was a yellow cur of the mangiest variety I had ever seen.

"'Are you the manager of the show?' asked the boy.

"I told him I was.

"'Well,' remarked the lad, 'I want to see the show, but I hain't got no money. I'll tell you what I'll do. I'll give you this dog if you'll let me in.'

"I looked at the boy and then at the dog, and my heart melted. 'You can go in,' I said, 'but never mind giving me the dog. Take the dog along with you.'

"The lad went in with the yellow cur under his arm. After the performance I was standing out in front and happened to see the urchin come out.

"'Well, sonny,' I remarked, 'how did you like the show?'

"'Oh, pretty well,' he said, 'but I'm awful glad I didn't give you the dog.'"—Philadelphia Ledger.

Buy Your Family Supplies OF LARKIN CO.

And Furnish Your Home Without Cost

Make Your Dollars Buy You a Bigger Dollar's Worth Than You Have Ever Before Received.

Buy Direct From Our Factories to Your Home

Your Laundry and Toilet Soaps, Baking Powder, Flavoring Extracts, Tea, Coffee and other Family Needs which you must have. We give you the highest quality and double the quantity you can get anywhere else. For $10.00 you can have $10.00 worth of Family Supplies, which we sell you at the usual retail prices, and in addition we give you, without cost to you, some article for your home or something to wear, which of itself would cost you $10.00, or we give you $20.00 worth of Family Supplies without Premium for $10.00. You always receive $20.00 worth at retail prices for only $10.00. We are the largest manufacturers in the World of Soaps and Toilet Preparations and we sell the entire production of our immense Factories direct to you,—the user, with only one small profit on each sale. I Cured My Rupture

I Will Show You How To Cure Yours FREE!

I was helpless and bed-ridden for years from a double rupture. I wore many different kinds of trusses. Some were tortures; some positively dangerous, and none would hold the rupture. The doctors told me I could not cure it without a surgical operation. But I fooled them all, and cured myself by a simple method which I discovered. Anyone can use it, and I will send the cure free by mail, postpaid, to anyone who writes for it. Fill out the coupon below and mail it to me today.

Free Rupture-Cure Coupon

CAPT. W. A. COLLINGS,
Box 516, Watertown, N. Y.

Full Feed or Half Feed.

The most costly economy one can practice is to half feed fattening animals and dairy cows. There may be some animals about the farm which need only moderate rations during the winter months; but fattening or dairy stock does not come under that head. The farm teams that are not worked do not require full feed now, but it is by no means good economy to "rough" them through the winter. The farm horse that has used up much of his energy during the winter is hardly fit to stand six or eight months of hard work later on. I do not believe it pays to feed anything just enough to keep it alive. With fattening stock, gain and profit come in proportion to the amount of food the animal puts to good use. Fattening animals should have no backset; and the real money-making feeder is the one who knows when to feed out high-price grain with a lavish hand. The dairy cow requires constant liberal feeding. If she be allowed to go even for a month or two on scant feed, it will take two or three months to get her back on to a profitable basis. Regular feeding and ample feed are the things which count, and I have yet to find the man who ever made any money out of fattening stock or dairying on any other basis.—L. C. Brown.

RICE PRODUCTION IN ARKANSAS.

Dear Sir:—I bought my rice land in February last, paying $45.00 and $50.00 per acre. The first thing I did after buying my land was to contract with the Layne & Bowler people for a well. I then commenced to plow for rice the 1st of March. I had plowed 40 acres before my well was finished. I had begun to get a little nervous, thinking they would not get me a well in time to water my rice, but before I began sowing any rice they got me a fine well of 1,550 gallons per minute. This well cost me $2,114.52, and will water 200 acres of rice. The cost of my pumping machine was $1,450.00.

This year I watered 115 acres of rice, pumping 75½ days, and only 12 nights. I have threshed 93 acres of this, getting 7,450 bushels, or a fraction over 80 bushels per acre, for which I received $1.06 per bushel, or a total of $7,897.00. To get my rice crop ready for market cost me about $20.00 per acre, not counting cost of farm tools and teams. I have 22 acres yet to thresh. Yours Respectfully,

(Signed) J. P. RICH, Stuttgart, Ark.

Send Your Cow, Steer and Horse Hides,

Calf, dog and other skins to the Crosby Frisian Fur Company, Rochester, N. Y., to be converted into fur coats, robes, gloves, mittens or rugs. They are the largest custom fur tanners of large wild and domestic animal skins in the world. Send for illustrated catalogue.

WIRE FENCE BUILDING.

Every year thousands of farmers join the already great number who have found it profitable to weave their own wire fences, saving fully one-third on the usual cost. So easy is the work that at least forty rods can be completed in a day by the farmer or his boy.

How to weave the wire, why Coiled Spring Wire should be used and all other needful details as well as an explanation of the saving afforded by the use of the Carter Machine is told in the free booklet the company is distributing to farmers.

To secure this valuable information and to be up on all questions relative to wire fence building, address the Carter Wire Fence Machine Co., Box 11, Mt. Sterling, Ohio.

WHAT HE CAME BACK FOR.

"I forgot something," said the husband.

"Yes," pouted his wife, "you forgot to kiss me."

"That may be, but what I came back for was my overshoes."—Kansas City Journal.

THE OWNER OF DAN PATCH

Gives Some Late Facts in Regard to the World's Champion.

Editor of National Farmer and Stock Grower, St. Louis, Mo.:

Dear Sir:—During the past few months I have noticed the various comments printed about Dan Patch and his 1908 performances. Some of these have been written in all fairness to the fastest horse that has ever lived, and have been based on facts. Others seem to have been written under pressure of prejudice or based on absolute ignorance.

We have many truly great and fast horses in this country and new ones will develop from time to time. As a horse breeder I certainly believe this or I would not continue in the business. I do not wish to appear as trying to detract from the greatness of any horse, but simply to state facts about Dan Patch.

Early in the summer I stated that Dan Patch was faster than ever, and that, although he was twelve years old, he would pace the fastest mile in his life. Dan's first fast mile this year was the last week of August, when he paced a mile in 2:00 with every eighth in fifteen seconds. At that time I told Hersey that his first mile proved my statement and that it was the easiest and best mile I ever saw Dan pace, and I saw his miles in 1:55¼ and in 1:55. Dan's second performance was a mile in 1:58¾, finished where a tremendous crowd had taken possession of the track with just room enough for Dan to pass between the crowding people. His third mile was in 1:58, and his fourth mile was paced in 1:57¼. On October 11th, at Lexington, Dan paced the first quarter in twenty-nine seconds and the second quarter in twenty-seven and one-half seconds, a 1:50 clip. He was at the half in 56½ seconds, a 1:53 clip, and at the three-quarters in 1:25½. At the seven-eighths the pacemaker, driven by Scot Hudson, broke a blood vessel and slackened down enough to shorten Dan's tremendous stride of twenty-two feet, and yet Dan Patch finished that mile in 1:56¼, which all fair-minded men must acknowledge was by far the fastest and greatest mile in the life of the fastest harness horse in the world. Hersey states that when this happened Dan was going easy and was not tiring, and that, barring the accident to pacemaker, Dan would have surely beaten 1:55. In no other year has Dan ever started out with a mile in 2:00 and then reduced it at every performance. His last mile is absolute proof that Dan Patch in his twelfth year was faster than ever, which is doubly remarkable from the fact that Dan has been performing these world-famous miles for six years.

From some of the comments I have seen printed the readers would be led to believe that it was a very ordinary event for a horse to pace faster miles at twelve years of age than any other pacer has approached at any age. I am sure that the facts carry me out in my statement that Dan's performances in 1908 were the most remarkable in his entire life, and indisputable proof that he was faster than ever. Is it not an astonishing event in all harness-horse history when Dan Patch at twelve years of age paces the fastest miles in all of his wonderful career? Dan returned to my farm in good shape and is jogging sound and full of life and energy. I have no doubt but what he will be able to give a good account of himself in speed performances during 1909, to the gratification of his millions of warm friends.

I will make the prediction right here that Dan Patch will pace faster miles in 1909 than have ever been paced by any other horse. Very Truly Yours,

M. W. SAVAGE.

INFLUENZA AMONG HORSES

is common at this season of the year if the owner is not alert to prevent these dread troubles. Every experienced horseman who has tried it and any prominent veterinarian advise the regular use of the tonic "Craft's Distemper and Cough Cure" as a preventive of coughs, distemper, shipping fever, pinkeye, etc. Two or three doses a week of this liquid on the tongue or mixed with the feed prevents trouble. If the prevention is neglected, it is unequaled as a cure. Druggists should furnish it in two sizes of bottles, 50c. and $1.00. Sent prepaid, also, by the manufacturers, The Wells Medicine Company, 17 Third street, Lafayette, Ind.

FUR DEMAND ACTIVE.

Manufacturers and Exporters Buying Freely at Funston Bros. & Co.'s Big Fur Sales in St. Louis.

Every reader of this paper who does any trapping will be interested in knowing that the fur market has decidedly recovered—and the daily sales that are held in Funston Bros. & Co.'s great establishment in St. Louis are well attended and the bids are large, with the consequence that the prices Funston Brothers are giving trappers and individual shippers are particularly satisfactory.

Funston Bros. & Co. have prepared for the guidance of trappers a particularly valuable Trapper's Guide. This year's edition is so large that they have authorized us to notify every reader to send for this Trapper's Guide and get it free. Even the postage is paid. Every reader is also invited to write for the latest price-list, which shows just what the market offers on every kind of fur. And Funston Bros. & Co. will also send free tags, shipping lists and complete instructions as to how to deal with them by mail and get the best prices for your furs. Almost every kind of fur is in big demand, and now, of course, is the height of the trapping season. When you write, mention National Farmer and Stock Grower, and your request will receive prompt attention. What you receive will prove very interesting reading. Address, Funston Bros. & Co., 286 Elm street, St. Louis, Mo.

Consumption Book

FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 2767 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

PILES, FISTULA, BLEEDING, RECTAL, ULCER, Etc.

Cured without surgical operation. Cures guaranteed. All protruding stopped in one or two treatments. Do not continue to suffer when you can be cured without an operation. Consultation free. Call or write, inclosing 2c. stamp for 100-page Book on Rectal Diseases.

DR. M. NEY SMITH, 814 Pine St., St. Louis, Mo.

Please mention Nat. Farmer and Stock Grower.

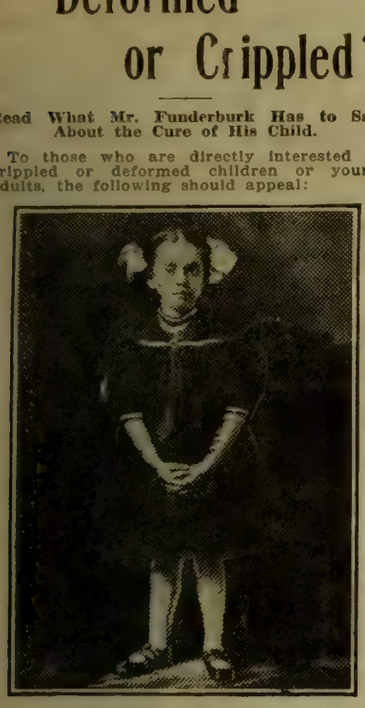
Are You Deformed or Crippled?

Read What Mr. Funderburk Has to Say About the Cure of His Child.

To those who are directly interested in crippled or deformed children or young adults, the following should appeal:



Springfield, Ill., Sept. 10, 1907.
The L. C. McLain Sanitarium,
St. Louis, Mo.

Gentlemen:—Edith has no trouble at all. She uses her limbs as if they never had been paralyzed, and that is hard to realize when we remember that when we took her to your Sanitarium five years ago, she had no use of her legs at all, due to infantile paralysis which followed a severe attack of brain fever.

We recently had her picture taken and mail you one to show you how well she is now, but the picture does not convey an adequate idea and you should see her run about in order to realize just how well she is.

I have referred dozens of afflicted people to your place, and hope some of them have seen you.

Yours very truly,
GEORGE W. FUNDERBURK.

What we have done for this child and hundreds of other crippled and afflicted people, we can do for you if given the opportunity.

Write us freely and at once regarding any case of spinal deformity, crooked feet, infantile paralysis, crippled or deformed joints or limbs and we will be pleased to advise you. Our book, "Deformities and Paralysis," with references, is Free for the asking. The L. C. McLain Orthopedic Sanitarium, 3104 Pine Street, St. Louis, Mo.

THE UNIVERSAL MAGAZINE.

This is a nice, thirty-two-page, three-column magazine, issued monthly. It contains illustrated reading matter of interest to all the family. There are nice stories, historical sketches, selected poetry, a splendid line of patterns and a number of original household articles. The subscription price is 25 cents a year, or five subscriptions for one dollar. Anyone sending in a subscription can select as a free gift a Mascot Mirror. These are circular mirrors, 2¼ inches in diameter, and are said to bring good luck, fame and fortune. They are also of fine glass and will last a lifetime. Five subscriptions for a dollar, including five mirrors. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Misses' Sheath Skirt.

No. 6175.—The close-fitting sheath skirt has become an acknowledged favorite and treated in such a way as this is well suited to young girls. It allows most satisfactory use of banding, and it gives the slender lines essential to present styles without undue exaggeration. In the illustration it is made of Panama cloth and is trimmed with bands of satin, but braid could be substituted for this last or bands cut from either the same or any contrasting material can be utilized.

The skirt is cut in seven gores and the panel is joined beneath the edges of the front and left side gores. The trimming of buttons and simulated buttonholes is both fashionable and handsome, but the buttons without the buttonholes can be used if liked, or they can be omitted altogether. The fullness at the back is laid in inverted plaits.

The quantity of material required for the sixteen-year size is 5½ yards 24 or 27, 3¼ yards 44 or 52 inches wide, with 1 yard of satin 20 inches wide, or 5 yards of braid for the trimming.

The Pattern 6175 is cut in sizes for girls fourteen and sixteen years of age, and will be mailed to any address by the Fashion Department of this paper on reecipt of 10 cents.

Girl's Coat.

No. 6182.—The long, loose coat is the one that little girls like best and which is most becoming. Here is a model that can be made either with or without the single reverse and which is adapted to all cloaking materials. In the illustration dark-red cloth is trimmed with black Astrakahn cloth and the combination is a handsome and effective one, but genuine fur could be substituted for the fur cloth or braid could be used as trimming, or the coat could be made with velvet collar and cuffs and either with or without the reverse. Again, it allows a choice of inserted or patch pockets, and consequently the same model can be made adapted to the plain coat of school wear and to the dressy one. For the school coat, dark-colored cloth or one of the Scotch mixtures with collar and cuffs of plain broadcloth would be smart as well as durable.

The coat is made with fronts and back and the sleeves that are cut in two portions each. There is a rolled-over collar at the neck and patch pockets are applied over the fronts, while the inserted ones, when used, are arranged on indicated lines.

The quantity of material required for the medium size (ten years) is 4 yards 27, 2¼ yards 44, or 2 yards 52 inches wide, with 3½ yards of banding 2 inches wide.

The Pattern 6182 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Fancy Blouse.

No. 6156.—In spite of the vogue of long sleeves, a great many women cling to those of three-quarter length, and they unquestionably will be worn for indoor occasions throughout the season. This model allows a choice of that length, or the sleeves that are extended to the wrists, and even over the hands, and fills a very useful place in the wardrobe. It is more dressy than the plain waist, and it is not over-elaborate. It is adapted to veiling, to cashmere and to simple wool material. It would be charming made up in any of the soft silks that are so much worn just now, and it can be utilized both for the gown and for the odd waist. In this case Crepe de Chine is the material, while the chemisette is of tucked net and the trimming is handsome buttons. For the chemisette, however, net, all-over lace, chiffon and all materials of the sort are appropriate, and there is a great deal of opportunity for the exercise of individuality in the matter of color. The waist made of rose color with the chemisette of taupe would be exceedingly smart as well as beautiful and novel. While the chemisette made from net or chiffon in matching color makes one of the features of the season, white and cream color are always pretty and always desirable when the color of the gown needs relief.

The blouse is made with a fitted lining, and the fronts and backs are faced to form the chemisette. The fronts are lapped one over the other and held in position by the buttons, but the closing is made at the back. The high collar finishes the neck and the sleeves are arranged over fitted linings.

The quantity of material required for the medium size is 4¾ yards 21 or 24, 3⅜ yards 32, or 2¼ yards 44 inches wide, with ½ yard 18 inches wide for the chemisette.

The Pattern 6156 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Loose-fitting House Coat.

No. 6142.—Much of the popularity extended to the house coats made on such a plan as this one is due to the ease with which they can be made and to the comfort that they provide. In the illustration, elderdown flannel is the material, and the trimming is ribbon banding, but the various lighter-weight flannels are exceedingly beautiful this year and equally appropriate, while cashmere and Henrietta cloth and fabrics of similar weight are preferred by many women, and the design suits them all equally well. Again, if something still less expensive is wanted, the pretty flannelettes and cotton crepes may well be suggested as being especially well adapted to the purpose.

If the closing of buttons with loops is not liked, the fronts can be finished with hems and the closing be made with buttons and buttonholes, while the lower edge and the collar and the sleeves are finished in any way that may be liked.

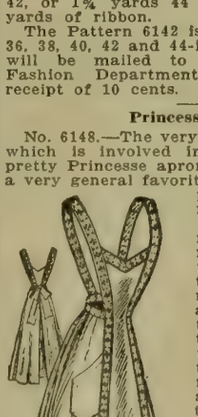
The coat is made with fronts, backs and under-arm gores and is finished at the neck edge with a roll-over collar. The sleeves are in two portions each.

The quantity of material required for the medium size is 3½ yards 24 or 27, 2 yards 42, or 1¾ yards 44 inches wide, with 4½ yards of ribbon.

The Pattern 6142 is cut in sizes for a 34, 36, 38, 40, 42 and 44-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Princesse Apron.

No. 6148.—The very small amount of labor which is involved in the making of this pretty Princesse apron is certain to make it a very general favorite. It is becoming and practical and can be made from any apron material, cross-barred muslins and the more fancy ones as well as the plain lawn illustrated. It has generous, roomy patch pockets and will really protect the gown at the same time that it is attractive in effect, so that it cannot fail to find admirers among active womenfolk, let their employment take what form it may. In this case the trimming is embroidered insertion, but there are a great many bandings that can be used, or if a very plain apron is wanted, bands of the material stitched at each edge will be all sufficient.



The apron is made with the full skirt and the panel, which is cut in one with the shoulder straps. The skirt portion is gathered and joined to the belt, and the ends of the shoulder straps are attached to position while sash ends are joined to the belt by means of which the closing is made.

The quantity of material required for the medium size is 6¾ yards 24, 4¾ yards 36 or 44 inches wide, with 5¼ yards of insertion.

The Pattern 6148 is cut in three sizes—small, 32 or 34; medium, 36 or 38, large, 40 or 42 inches bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Please address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St.Louis,Mo.**

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. RELIABLE WATCH CO. Dept 32, Chicago

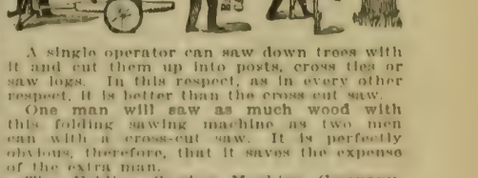
The Machine That Beats the Cross-cut Saw.

We are showing here an illustration of the folding sawing machine manufactured by the Folding Sawing Machine Company, of Chicago. Most readers of this paper are familiar with it. We know that a great many of our readers are using it at the present time. We feel that a great many more would be using it. They certainly would be doing so if they knew what it would do and save for them.

In the first place, it is a machine which can be operated successfully by one man. It makes fast work of sawing, and makes the labor easy. It is equally adaptable to small jobs, like the cutting of cord wood, or to the large jobs like cutting up timber for a sawmill.



A single operator can saw down trees with it and cut them up into posts, cross ties or saw logs. In this respect, as in every other respect, it is better than the cross cut saw.

One man will saw as much wood with this folding sawing machine as two men can with a cross-cut saw. It is perfectly obvious, therefore, that it saves the expense of the extra man.

The Folding Sawing Machine Company, of Chicago, which manufacture it, always welcome inquiries. They will be glad to tell you more about it. If interested, write them and give them an opportunity to tell you how good it is.

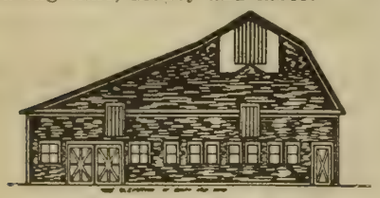
PRACTICAL BARN PLANS.

A Great Book For the Farmer and Stockman Sent as a Subscription Premium.

This is the name of the best book out. Every farmer needs it. No matter what kind of buildings he may have on his property, he needs it anyway. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.



A Practical Farm Barn.

Each and every plan in the book is accompanied by a lengthy written description explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "New $5,000 Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid,** including one-year's subscription to this paper.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Dear Sirs:—Enclosed please find $1.00, for which send to my address one copy **Book of Practical Barn Plans,** as described in your advertisement; also **The National Farmer and Stock Grower** for one year.

Start Early.

[Written specially for this paper.]

This is a good maxim in any business or undertaking. It has especial application and importance on Southern farms at the present time.

Start early in preparing for next-year's crops on land which was last year in cotton, is the full application I would urge.

The simple fact is that though crops can grow on Southern lands twelve months in the year, most of us do not and will not do so on cotton lands. The value of winter cover crops—the use of grains, clovers and vetches—in constantly increasing. They are, as a rule, chiefly used where least needed. The great expanse of millions of acres of cotton fields remains bare and subject to washing through the late fall and early winter. The inevitable result is that the fertility of our soils, the surface of our cultivated fields, muddies our streams and finds its way into the ocean. Millions of tons of fertility are in this way yearly wasted and the farming South staggers in the vain effort at replacing this wasted wealth in the form of commercial fertilizers.

There is no valid excuse for this condition. Burr clover, crimson clover and the vetches can be sown as successfully between rows of unpicked cotton as red clover is in the North sown between rows of unpicked corn. It is already done by many farmers. The number is constantly on the increase. I believe the practice will become general, particularly as the boll weevil drives us to the use of earlier-maturing varieties of cotton. Meanwhile, however, our cotton fields remain brown and bare for several months. Meanwhile thousands of tons of phosphoric acid, nitrogen and potash are being washed from our soils which might easily be retained for future crops.

"Start early" is the simple remedy for this disastrous waste.

The whole procedure is as simple and self-evident as the melting of ice. A soil which has been packed by summer and autumn rains sheds water almost like a roof. A soil which is broken early absorbs and holds winter rains like a sponge. The importance of this difference is increased by the fact that the comparative lack of humus in cotton soils makes them naturally less absorptive than is true of soils containing more humus, which is the most absorptive part of all soils.

The other advantages of early plowing should not be overlooked. The action of frost; the killing of weed seed; the destroying of insects, and having the work behind you instead of before you, are important. They are, however, secondary as compared to the great advantage of saving fertility, and otfen the soil itself, by putting it in condition for holding winter rains.

It must not be supposed that the necessity for early plowing exists only in the South, nor that the advantages are local. They simply illustrate a universal truth. The difference in practice is chiefly in the time of application.

In spring-wheat sections early plowing means water absorbed and held in the soil by freezing, to become released gradually to meet the requirements of the growing crop. In the winter-wheat belt it means a soil protected from washing and a crop so well rooted as to best resist the danger of winter killing. In corn sections it means a well-started sod, a desirable rotation and all the advantages of a cover crop.

It should be remembered that the importance of this prevention of washing is increased by the fact that the most costly element of fertility, nitrogen, is the one most easily and rapidly leached from the soil. Potash, on the other hand, whatever the form in which it enters the soil, soon forms soil combinations in which it remains absorbed as a soil constituent. Potash, therefore, seldom leaches from a pulverized, absorptive soil, but, like fertility, may be rapidly washed from the surface of a packed, unabsorptive soil. The prevention of these serious losses, the securing of these great advantages, are all effected by the simple practice—"Start early."—H. E. Stockbridge.

Weed Seeds in Oats.

It is not a difficult matter to make seed oats nice and clean, yet many of the smaller weed seeds are passed by unnoticed and they are sown along with the grain. I recently examined a lot of seed oats which contained an enormous number of small weed seeds. These oats are bright and very heavy and are as fine as I have seen in many years. The weed seeds are Ball Mustard and Curled Dock. These are small seeds and can be easily cleaned out of oats. This dock is a persistent weed in meadows and pastures, but a little work should keep it out of the grain fields. The Ball Mustard is a bad pest and should be kept in check. Too many sow weed seeds unwittingly. The farmer who owns these oats declared they were absolutely clean of all weeds and he actually believed it. The screenings from a good fanning mill will oftentimes reveal many things we little suspect. There is no excuse for any one sowing oats containing any of these small weed seeds, for a proper adjustment of screens will take them all out. But it is different matter when one undertakes to clean out wild buckwheat, wild oats and other large seeds. Many oat fields were cut low this season on account of the very short straw, and, unfortunately, we have an oversupply of weed seeds to contend with. No one should think of sowing oats until they are carefully cleaned and graded. If it is found impossible to clean out the foreign seeds, better buy a fresh supply of seed oats than take the risk of scattering weed seeds broadcast over your oat fields.—L. C. Brown.

GERMAN NURSERY CATALOGUE.

A new nursery and seed catalogue comes to us this year from the German Nurseries, Beatrice, Neb. This is their twenty-second season. Their catalogue is a 112-page book, having grown from a four-page circular issued as a catalogue about twenty years ago. The catalogue contains many interesting things, one being a currant and gooseberry tree. These are imported from Germany direct. It looks strange to see currants or gooseberries growing on a tree four or five feet high. It is very easy to take care of the fruit on a tree of this kind, and no back-aching job to pick it.

Each year it is the custom of this concern to illustrate the newest fruit on the cover of their catalogue. This year their cover shows two new grapes and a fine new variety of plum. Any reader writing for a copy of this catalogue, and mentioning this paper, will get one packet of an excellent vegetable novelty free. Address, German Nurseries, Box 95, Beatrice, Neb.

No Flies on Him.

Two Irishmen, just landed, stopped at a private boarding house on one hot July night. Retiring early, they left the window open and the light burning brightly. The mosquitoes swarmed into the room and began biting.

Mike, awakening, called to Pat to put out the light. Pat got up and put it out and crawled back to bed again.

Pat awoke about an hour later and found the room full of fireflies and said: "It's no use, Mike; they are coming in with lanterns!"—Ex.

A Man May Eat Any Meal

And Digest It Easily If He Will But Try.

FREE DIGESTIVE TABLETS.

Don't be afraid of your meals. The reason you have dyspepsia is that something is lacking in your digestive apparatus necessary to the stomach's work.

A perfect stomach loves to work. Perfect digestion is not afraid of any meal and benefits by its consumption of food the whole machine of man.

Stuart's Dyspepsia Tablets make easy the work of digestion, because they combine active fruit and vegetable essences which are needed by the stomach.

These essences are so powerful they digest food without aid from the stomach. They have done this with a meal encased in a glass tube.

We will send a trial package to any one free for his name and address.

Eat what you will or when you will, then take a Stuart Dyspepsia Tablet and see how you will digest that meal. In a short time your stomach will have a natural supply of gastric juices and your whole system will be able to take care of digestion easily.

Ask any druggist about Stuart's Dyspepsia Tablets. His answer will tell more than we can say. Ask him how they sell. If you want to buy them, give him 50c. But if you want to test them, write us and you will receive a trial package by mail without cost. Address F. A. Stuart Co., 150 Stuart Bldg., Marshall, Mich.

ARE YOU GOING TO BUILD?
THIS BIG BOOK IS FREE.

If you are going to do any building or remodeling write and get our wonderful Catalogue No. **143** of Building Materials, showing the lowest prices you ever heard of on doors, sash, windows, mouldings, etc. We can save you about one-half on *building materials.*

WE FURNISH FREE architects' plans and specifications for fifty styles of houses, showing whereby you can save one-third on your building cost. Whether you want to build the finest house or just do a little remodeling be sure to write for our great Catalogue No. **143** of Building Materials, and see what we can do for you. Address

SEARS, ROEBUCK & CO., CHICAGO, ILL.

LET US TAN YOUR HIDE,

Whether Cow, Steer, Bull, or Horse Hide, Calf, Dog, Deer, or any kind of hide or skin, soft, light, odorless and moth-proof for robe, rug, coat or gloves, and make them up when so ordered.

But first get our illustrated catalog, with prices, shipping tags and instructions. We are the largest custom fur tanners of large wild and domestic animal skins in the world.

Distance makes no difference whatever. Ship three or more cow or horse hides together from anywhere, and Crosby pays the freight both ways. We sell fur coats and gloves, do taxidermy and head mounting.

The Crosby Frisian Fur Company, Rochester, N. Y.

Eyes Cured

Without the Knife

Grateful Patients Tell of Almost Miraculous Cures of Cataracts, Granulated Lids, Wild Hairs, Ulcers, Weak, Watery Eyes and all Eye Diseases—Send Your Name and Address With Two-Cent Stamp For Free Trial Bottle.

The cures being made by this magic lotion every day are truly remarkable. I have repeatedly restored to sight persons nearly blind for years.

Ulcers, wild hairs, granulated lids disappear almost instantly with the use of this magic remedy. Weak, watery eyes are cleared in a single night and quickly restored to perfect health. It has repeatedly cured where all other remedies and all doctors had failed. It is indeed a magic remedy and I am glad to give this free trial to any sufferer from sore eyes or any eye trouble.

Men have thrown away their glasses after using it a week. Preachers, teachers, doctors, lawyers, engineers, students, dressmakers and all who use their eyes under strain find with this Magic Lotion a safe, sure and quick relief. If you have sore eyes or any eye trouble, write me today. I am in earnest in making my offer of a free trial bottle of this lotion. I am glad to furnish proof in many well-proven and authentic cases where it has cured cataract after the doctors said that only a dangerous and expensive operation would save the sight. If you have eye trouble of any kind, you will make a serious mistake if you do not send for my great free offer of this Magic Eye Lotion. Address with full description of your trouble and a two-cent stamp, H. T. Schlegel Co., 3020 Home Bank Bldg., Peoria, Ill., and you will receive by return mail, prepaid, a trial bottle of this magic remedy that has restored many almost blind to sight.

First Steps in Gardening.

If the dead stalks from last season have not already been disposed of, take the first suitable day for burning them. This will not only get them out of the way so that a smooth, neat job of plowing can be done, but it will rid the place of any insect or fungous life which may be lurking about them. But be careful not to start a neighborhood conflagration in the work. The fall has been so dry that in many places disastrous fires have been a result of tidying up. Better the weeds than fire; but caution will still give chance for the clearing of the ground in this most rapid and effectual way.

When cleaning out the poultry house it is no great task to scatter the refuse in the garden. Have a regular system in this, and distribute it as regularly as would be done in a field. Though but a small amount accumulates from week to week, yet if it is well scattered one will be surprised at how large a space this best of all fertilizers will cover. And if put on before the ground is plowed, its concentrated nature will bring no unpleasant aftereffects. It is especially valuable on ground designed for onions, cabbage, cucumbers and melons, all of which require a very rich soil.

If wood is burned, save all the ashes for the garden, but not applying them upon the part covered with the poultry fertilizer, as a combination of the two liberates the ammonia in the fertilizer. The ashes not only contain valuable fertilizing elements but tend to lighten up a soil inclined to be heavy. Coal ashes also aid in the latter purpose, though containing no special fertilizing element in themselves. A half-rotten sawdust heap may likewise help in this, but must not be applied so heavily as to sour the ground.

Winter plowing will help to kill the insects in the soil, and especially the cutworm. The intermittent freezing and thawing also render the soil loose and easily worked in the spring. Then if the chickens are allowed to scratch in it before garden work commences in earnest they will not only find some dainty bites but will help to work it up loose and fine. While it holds moisture longer in spring and cannot be dragged so early, yet the gain in time is on the whole well worth the saving, and of course the soil can be prepared a little earlier than if one had to wait to do the plowing, especially if the garden takes a back seat to wait for the other farm crops.

While the ashes and other fertilizer mentioned help in getting the plant food ready, a liberal dressing of barnyard fertilizer should, of course, be applied before plowing. The intensive culture of a good garden is a corresponding drain upon the soil. To make good this deficit a liberal addition must be made every year. Any neglect of this will speedily show in less luxuriant growth. Let the extra be added from time to time as it is ready, and be sure that the more liberal feeding plants will appreciate it and give good returns. A few years of this work will render the soil so light and easily worked that hoeing and weeding become mere play.—Bessie L. Putnam.

An Echo of the Civil War.

In conversation a few days ago with a veteran of the Civil War we chanced upon the topic of dreams.

"I had a dream," he said, "when I was in the army which I shall never forget. I was only sixteen at the time. It was the night before battle and I had retired. About midnight I dreamed I was under a railroad bridge spanning a river. I lay on the bank of the river, under the bridge. Suddenly a shaft of light appeared on the bridge at the approach on the opposite shore. After a few minutes the devil appeared in this shaft of light, and, crouching down so that each knee rested on a rail, and also each elbow, he started across the bridge, sliding in this position on the rails. The light followed him.

"Naturally, in this position he would be looking down. When he was directly above me he stopped and in a voice so clear that it is still vivid to me even to-day, he said:

"'You will be carried from the field of battle to-morrow a corpse!'

"This awoke me. My father and brother were in the same regiment, and were with me, but I didn't awake them and relate my dream.

"I couldn't go to sleep again, try as hard as I might. At last I got up and went out of the tent, thinking that if I walked about a bit I could go to sleep again. But after an hour's walk I was more awake than ever. I gave up the idea of sleep and in the morning I was the first to stir up the campfire and put on the coffee.

"I said nothing to my father and brother about my dream when we went into battle. When night came the fighting was over with and I was far from being a corpse. I wasn't even wounded. Then I told of my dream.

"Well, sir, that dream convinced me that the devil is a d—d liar!"

Boiled Down From Recent Bulletins.

The Illustrated London News describes a simple but unique safety nest for new-laid eggs made by having a false bottom made of two inclined boards with a space between them. Straw is filled into the box below and some put on the incline. The egg falls through the straw safely to the box below, and is safe from hens having a propensity for eating eggs.

Experiments at an Ohio Station for spraying against codling worm show that the addition of soap or other stickers to lead arsenate solution is not profitable for apples. The net profit of spraying an average sized tree throughout the season, at a cost of from 30 to 50 cents, is from three to seven bushels increase.

At the Washington Station reports are of almost total annihilation of this pest by spraying. Only one spraying is given for the early brood, arsenate of lead applied in a coarse spray and with a powerful sprayer.

Up in Connecticut they are emphasizing the fact that the chief source of bacteria in milk is the cow, some coming from the udder, but the larger part from her surface. A gram of the powder obtained from currying a cow has been found to contain 207,000,000 organisms. Hay, and even grass, contain a large number. Flies add enormously to this, and 45,000,000 is the number estimated as found on the hands of the average workman around the farm previous to milking! Certainly there is no danger of taking too much care in being clean.—Bessie L. Putnam.

POEM POSTAL CARDS.—The newest and best out. The Post Cards each with a picture of the poet, one of his verses and a beautiful scene. They are printed in colors and gold. There are twelve to the set. Send us 15 cents in one-cent stamps and we will send you our fine illustrated monthly publication, the Universal Magazine, for six months, and we will also send the set of Poet Post Cards. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

FREE DEAFNESS CURE.

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh. Address, Dr. G. M. Branaman, 1264 Walnut St., Kansas City, Mo.

FREE TO FARMERS.

By special arrangement Ratekin's big 1909 seed catalogue, with a sample of "Diamond Joe's Big White" seed corn that made 153 bushels per acre, will be mailed free to every readers of this paper who are interested in the crops they grow. This big book tells how to make the farm and garden pay. It's worth dollars to all who plant or sow. Write for it and mention this paper. The address is Ratekin's Seed House, Shenandoah, Iowa.

"SATISFIED WITH YOUR REMEDY."

J. N. Young, Victor, N. Y., writes under date of September 1, 1908: "I procured the Absorbine and after using it as directed for a period of five days my horse was entirely cured of lameness. Have used it two or three times a day since using clear stuff and bandages, but not the wash. At any price am satisfied with your remedy and thankful to see him go without the limp." Absorbine is mild in its action and positive in its results; it does not blister or remove the hair! $2.00 a bottle at all druggists or express paid. W. F. Young, P. D. F., 106 Monmouth street, Springfield, Mass.

SEED GROWERS PROTECTED.

Buyers of seed have had very little protection and many gardeners hesitate about buying seed on account of not knowing whether they are getting seed of high germination. This is an important matter, for it means much to the farmer or gardener, and it pays to get seed that can be depended upon.

We are very glad to report that the A. A. Berry Seed Company, of Clarinda, Iowa, are giving their customers an iron-clad guarantee. We find that this company guarantees all their seeds to be fresh and of high germination, and any who need seeds will do well to write them for their new 100-page 1909 descriptive catalogue, which will be sent free. Their adv. appears in another column. Address, A. A. Berry Seed Company, Box 224, Clarinda, Iowa.

PILES Cured Quickly

Without Pain, Great Cost, Operation or Trouble in the Secrecy of Your Own Home.

Trial Package By Mail, Free.

Every druggist carries Pyramid Pile Cure in stock. Why? Because pile sufferers buy it in such quantities that the druggist is compelled to supply the demand, or lose this class of patronage.

These little cones perform their duties so quickly as to be almost an over night relief or cure.

Testimonials unsolicited come to us daily of the great success Pyramid Pile Cure is making.

Cases of ten and fifteen years have been cured after a short time by these little healers.

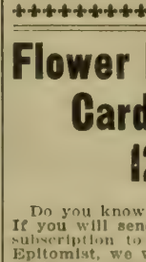
No worry is necessary, the dread of pain and hopsital and operating table is removed.

Don't be skeptical; buy a box at once and give yourself relief. It will not take months to prove their value. One or two applications is all the proof you will need.

Any druggist, anywhere, will supply you, or if you prefer, send us fifty cents and we will send you a box by mail in plain wrapper, or send us your name and address and we will send you a trial package by mail free. Address Pyramid Drug Co., 152 Pyramid Bldg., Marshall, Mich.

A HITCHING STRAP PREMIUM.

We will send The National Farmer and Stock Grower for two years and one safety hitch strap by mail postpaid for one dollar. This is The National Farmer and Stock Grower. It is published monthly. Read it through and through; you will find it to be interesting and useful. The hitch strap is very handy and simple. It does away with tying and untying the troublesome knot. Easy to hitch. Saves time, temper and lives. Everything handy, neat, durable and practical. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



Flower Language Post Cards, a Set of 12 FREE.

Do you know the "Language of Flowers?" If you will send 10c. for a six-months' trial subscription to our large family paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower postcards. Each card is different and represents the natural colors of the flowers and every card has the language of the flowers portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write us to-day and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send to-day if you want them. Address,

THE EPITOMIST,
237 Barnes Block, Spencer, Ind.

(From the Chicago Inter-Ocean.)

All readers of The National Farmer and Stock Grower who have sick friends, suffering from rheumatism or kidney trouble, will be interested:

FINDS NEW KIDNEY CURE

Dr. T. Frank Lynott, New York Specialist, discovers remarkable remedy.

At last a perfectly harmless and positive cure appears to have been found. Dr. T. Frank Lynott, formerly of the New York University, New York, later of the famous Bellevue hospital, and now a celebrated specialist in Chicago, has a very quick acting formula which has been approved by the best doctors.

The editor of The National Farmer and Stock Grower saw the above clipping from the Inter-Ocean and wanted to know of this new formula for curing kidney trouble.

Arrangements were then made by which Dr. Lynott offers National Farmer and Stock Grower readers a **free treatment.** Dr. Lynott, however, says that he proposes to give the free treatment only for a limited time to convince the public in every part of the United States of the positive wonderful efficacy of his treatment.

Furthermore, Dr. Lynott wants to make it clear that he has no "cure-all." He is a specialist in kidney and bladder diseases and rheumatism, so please do not write to him unless you have one of these diseases. If you write at once, both the medical advice and the medicine are entirely free.

The editor of this paper, The National Farmer and Stock Grower, feels that with such a free offer, anybody who stays sick with kidney trouble or rheumatism deserves to be sick.

I know that a good many free offers have been advertised where the public had to send money, **but this free offer really IS A FREE OFFER.** And remember that instead of getting an ordinary physician, you get the medical advice free direct from America's greatest of all specialists on these diseases. See Free treatment certificate at bottom of this page and get relief **right now.**

STOP!

Stop that back breaking, twisting, terrible, terrible unbearable agony! Oh, that awful, awful digging soreness—the back all bent—the joints stiff, the heart-wringing pain—*stop that pain RIGHT NOW!*

Yes, Write For the Free Treatment—

a REAL Free Treatment that will give you relief—relief at once—not next week, not tomorrow, but relief AT ONCE—**immediately** after starting the treatment. It is so **simple,** so mild, yet so scientific and so **sure**—this treatment for rheumatism, kidney and bladder trouble. Write now, today.

See the Free Treatment Certificate below—sign it and send it today. **No money—no obligation. At last you** can get relief, and, if you write at once, you get the treatment absolutely free. Just think—a genuine **free** treatment by America's and Europe's **leading** specialist—absolutely free—really and genuinely free **to convince the public.**

If you have Kidney Trouble, or Rheumatism (the cause of those pains), then **it's your loss** if you suffer any longer. When Dr. Lynott says free, he means free—not one cent to pay; and it is "up to you" whether you want the best medical advice and medicine all without a cent of cost. Don't miss this wonderful liberal offer. See the Free Trial Certificate at the bottom of this page.

Look at these poor sufferers all bent with nerve-racking pain — they are victims of kindey trouble; they think it is a rheumatic twitch. Friends say they grumble, but considering their awful pain, they bear up most bravely.

Oh, it is terrible that there should be such suffering, when you can be relieved so quickly, so surely, so simply, and right **now, free of charge.**

Writing of Dr. T. Frank Lynott, who gives the medical advice free, a brother specialist writes as follows:

"I have for years been considered an authority on urinary diseases, but I must confess my respect, my profound sense of esteem, for Dr. Lynott, whose wonderful success in treating urinary diseases has surprised us all. Dr. Lynott, by the way, is making a most remarkable free offer—the most genuine and generous offer ever made by a high grade physician. It seems to me the medical world ought not to be jealous of his success, but should praise him for what he has done and is doing for humanity."

Dr. T. Frank Lynott

whose photo is printed here, is, as you perhaps know, the world's greatest authority on kidney and bladder trouble and rheumatism. Never before has a physician of such high standing offered to treat patients by mail. But Dr. Lynott *wants* the people to get the benefit of this free treatment.

His cures have stirred America and Europe. In fact, Dr. Lynott received a special diploma on urinary diseases from the great New York University—of which the famous Bellevue Hospital, New York is now an honored part.

WATCH These Symptoms!

Trouble in the kidneys begins slowly, slowly. It creeps upon the unsuspecting patient like a thief in the night. Slowly, slowly, those stinging, racking pains foist themselves upon the sufferer; gradually, gradually the pains increase into a daily, nightly, constant, endless torture. Watch the symptoms, and cure yourself. Here are the principal symptoms of uric acid disease:

The Symptoms

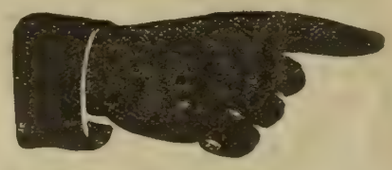
1—Pain in the back.
2—Too frequent desire to urinate.
3—Burning or obstruction of urine.
4—Pain or soreness in the bladder.
5—Prostatic Trouble.
6—Gas or pain in the stomach.
7—General debility, weakness, dizziness.
8—Constipation or liver trouble.
9—Pain or soreness under right ribs.
10—Swelling in any part of the body.
11—Palpitation or pain around the heart
12—Pain in the hip joint.
13—Pain in the neck or head.
14—Pain or soreness in the kidneys.
15—Pain or swelling of the joints.
16—Pain and swelling of the muscles.
17—Pain and soreness in nerves.
18—Acute or chronic rheumatism.

NOW THEN, This Certificate is FREE

You get the treatment, the medicine and Dr. Lynott's personal attention absolutely free, if you write at once. Instant Relief for those terrorizing pains!

Send no money—read the certificate, note that it puts you under no obligation. Dr. Lynott is glad to see a sufferer cured—write at once and get the free treatment.

JUST



Your Name and Address and the Symptoms

of your disease given by number. That is all Dr. Lynott wants. Read the free treatment **certificate**; read how it puts you under **no obligations** whatever; how it says specially and distinctly that you are not now nor later under any obligations whatever.

SEND NO MONEY—just write for the free treatment

REMEMBER:—This free treatment offer is LIMITED. Only a certain number will be taken, all under Dr. Lynott's personal care. If you answer this offer the first time you see it you are GUARANTEED the FREE treatment. So better send the free treatment certificate today, at once, and remember, you need INSTANT, IMMEDIATE relief from those awful pains.

DR. T. FRANK LYNOTT, 2327 Occidental Bldg. CHICAGO

If you have a friend suffering with kidney or bladder trouble or other uric acid disease, such as rheumatism, don't you feel that you owe it to your friend to tell him or her of this free offer?

Free Treatment Certificate

What is Your Name?.....
State plainly, Mr., Mrs. or Miss.

Your Address?.....

What Symptoms Have You?.....
Give numbers from table above—that is all

What is Your Age?.....*Married?*.....

Just fill out the above—nothing to sign, you see. Just answer the questions and be sure to give your name and address. You are under no obligations whatever. The **FREE** treatment will then be sent **at once, prepaid.** Cut out this certificate (or write a letter describing your symptoms) and **get INSTANT relief from those racking, rocking pains.** Address personally

PRAIRIE QUEEN—Grand champion Hereford female at Indiana, Illinois and Missouri State Fairs, and first-prize winner at the Chicago International Show of 1908. Exhibited by W. T. McCray, of Orchard Lake Stock Farm, Kentland, Indiana. This magnificent cow with calf at side represents practical perfection in beef cattle. A cow that takes championships at the principal State Fairs is worth looking at. Here is an example to follow. A farmer who has ordinary, plain, every-day, scrub cattle should begin by purchasing a pure-bred bull. He will soon have a crop of half-breed heifers. He will then find it easy to sell the first bull and get another one. He will then soon have a crop of three-quarter-blood females to breed and steers to send to market, and every cross he makes brings his cattle nearer to an ideal beef herd. After he has made two crosses he needs no further instructions. The time has come when the handy, fat young steer that is sired by a pure-bred bull is worth two scrub steers, and it costs but little more to get the high-class beef steer, and it costs less to fatten it..

THE ST. LOUIS HOG MARKET A LONG WAY THE BEST. A COMPARISON OF SALES.

On February 1st, at the St. Louis market, the top price for hogs was $7.00 per 100 pounds, paid for choice loads averaging 235 to 278 pounds, and the bulk of all the hogs sold at $6.50 to $6.75 per 100 pounds. St. Louis had 8,500 hogs on sale. At Kansas City, on the same day, there were about 8,000 hogs on sale. The top price at Kansas City was $6.55, or 45 cents lower than St. Louis, and the bulk of the Kansas City hogs sold at $5.95 to $6.45, or 30 to 55 cents per 100 pounds lower than St. Louis. This is a remarkable comparison. It is taken from the official reports. Allowing that St. Louis averaged only 35 cents per 100 pounds higher than Kansas City, and allowing the hogs to average 200 pounds, the 8,000 hogs at St. Louis brought $5,600.00 more than the 8,000 hogs at Kansas City. So wide a margin may not exist every day, but it is clear that a shipper who can reach St. Louis has a magnificent market at their service. Stockmen who ship west to Kansas City will surely make money by shipping east to St. Louis.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

Do you want a fine farm for little money

—a farm that is bigger than you can afford to own where you live now?

—a farm that will grow bigger crops than you can grow on your present farm?

—a farm that will make you a good living and leave you some profit besides?

—a farm that will grow more valuable each year?

You can get such a farm

in the Southwest

along the Cotton Belt Route in Southeast Missouri, Arkansas, Louisiana and Texas.

Some of the finest land in the Southwest lies along this line. It can be bought on easy terms for $5 to $25 an acre.

The low rates offered by the Cotton Belt each month would make a trip of investigation very cheap and profitable.

COTTON BELT ROUTE

Do you want to know more about this land? Write me for free copies of beautifully illustrated books about this great country. It will pay you to read them. Write today.

E. W. LaBEAUME,
Gen. Pass. and Ticket Agent,
1551 Pierce Bldg., St. Louis, Mo.

Making a Hotbed.

A hotbed is necessary for the starting of early tomatoes, cucumbers, melons, sweet potatoes, etc. My method of making a hotbed is as follows:

In a well-drained spot I dig a trench eighteen inches deep, six feet wide and sixteen feet long. I use two boards twelve inches wide and sixteen feet long for sides and two boards twelve inches wide and six feet long for ends. I nail the ends in securely and nail three pieces 1x4 inches by six feet long for cross braces, which give a cross brace each four feet.

I secure manure from the horse stable which contains about one-half straw. Oat straw is the best for this purpose. I fork it over several times in order to thoroughly mix it to ensure an even heat. I fill the trench about one foot deep, sprinkle on three or four buckets of water and tramp down evenly, then fill again and tramp as before until the trench is filled and about one-half of the frame.

I then fill in six inches of good dirt which has been thoroughly worked over to make in best condition for planting. I sprinkle the earth thoroughly and allow it to stand until dry enough to work well, then hoe it all over to give it more life and kill the weeds which may be started.

I take a board four inches wide and as long as the bed is wide and level with the edge of it, being sure to have the center of the bed fully as high as the sides, as usually the center settles most.

I then sharpen one edge of the board and make furrows in which to plant the seeds by pressing the edge down into the soil about three-fourths of an inch. This leaves the seeds covered about one-half of an inch deep. If the soil is inclined to bake or crust, I sprinkle some fine sand over the surface and water lightly with a sprinkler.

I cover the frame with a good grade of muslin by lapping it down over the edge at the back of the frame and tacking laths over it, placing the laths end to end. I allow the ends of the muslin to extend four or five inches over each end of the frame and sew a double fold across each end, then sew loops on the fold and draw these down and hook over nails driven in the edge of the frame.

I have the muslin extend over the front edge far enough so that a hem can be sewed the full length deep enough to allow a board two inches wide to be run into the space made by this hem.

I draw the ends and front tight so as to hold the heat in and have some boards and straw at hand so that the bed may be covered in very cold weather.

I keep the bed covered closely until the plants begin to come up, uncovering only when necessary to water. In cold weather I water in the morning so the bed can warm during the day. After the plants begin to come up I give them plenty of air, and when not too cold uncover the bed every warm day.

It is not best to put cabbage and tomatoes in the same bed, as cabbage plants require less heat. It is better to make more than one bed, and plant cabbage in one, tomatoes in another, etc. The beds may be made large or small, according to the number of plants desired.—Wm. H. Underwood, Ozark, Ill.

Cutting Up a Big Ranch.

When the Espuela or Spur Ranch was first established in the Panhandle of Texas it was said that such a magnificent body of land was too good to be devoted to grazing purposes; but people who saw more clearly into the future said: "The farmers will get it some day;" and the day of the farmer has come. This ranch was started in 1880 by people who knew Western Texas when it was all an open range, and they bought the best railroad land, alternating with school land, and it was a body of land that is worth investigating, and a county that has already made itself famous by raising first-class crops. Anyone who is figuring upon a future location will do well to write for information and prices of Spur Farm Lands. A card appears on page 8 entitled Spur Farm Lands—The Farmer's Opportunity. Write for information to Chas. A. Jones, Manager, Espuela, Texas.

Make the Soil Fit the Crop.

When studying farm conditions in Illinois I have always noticed that those farms are the most productive which have a considerable amount of barn-yard manure to spread over the fields every year. It is apparent that that our soils need this coarse, moist stuff to improve the mechanical condition, and that the best results are obtained when barn-yard manure is reinforced with mineral fertilizers. Under our more recent practices, when much less stock is kept, it is important that this question of special fertilizers be taken hold of and worked out carefully in order to keep our fields up to the maximum production. A Putnam county farmer sowed a field of thirty acres to wheat the fall of 1907. This field was the second year from clover sod. It was coated thinly with barn-yard manure and in addition some 200 pounds of ground rock phosphate per acre was spread over it. The yield of wheat was forty bushels per acre, and the straw was stiff and stood up remarkably well. Nearby fields which were liberally treated with barn-yard manure but did not get any phosphate produced weaker straw, with a tendency to lodge, and made much smaller yields. While I am the staunchest friend of barn-yard manure and constantly urge the keeping of live stock, yet we might as well face the situation in a practical manner. We have reached a point in growing wheat and oats where barn-yard manure will not supply an adequate amount of plant food, and the sensible thing to do is to supply the needed elements. I, like thousands of other farmers, have always been a "sticker" for barn-yard fertilizer. I believe yet that we cannot make too much of it, but I also fully recognize that best results may be had by supplementing our barn-yard manure with mineral elements which are essential to strong straw and well-filled heads of grain.—L. C. Brown.

POTASH

Whether you are growing for the earliest markets, the winter demand or home supply, you ought to know about the effects of Potash on

POTATOES

Potash makes a healthy, deep-rooted vine, with a maximum yield of smooth, well-shaped tubers of fine texture and sound, solid flesh. Learn about it, for we can show you that

POTASH IS PROFIT

A Potato Fertilizer should contain 10 per cent. of Potash in the form of Sulfate.

Death to the Green Bug.

The wasp, that is the deadly foe of the green bug, is the subject of a very interesting article in the Technical World Magazine for August. It is a very interesting article. It concludes by saying: "The intelligent farmer can greatly aid the parasite in preventing recurrences of the pest if he will destroy the winter abiding places of the aphids. This can be done by cutting down patches of autumn-grown volunteer grain in fence corners and around threshing stacks; by burning old straw-stacks and other warmth-generating accumulations, and by thoroughly cutting up the surface of the planted fields with disc harrows."

MANSON CAMPBELL, President, The Manson Campbell Company Ltd.

I'll Give You Plenty of Time to Prove that the CHATHAM Fanning Mill is the Best Seed Grader and Cleaner Made

—And Will Pay For Itself in a Year

You can prove this by simply taking my proposition and **cleaning your grain**—before you **sell** it—or before you **sow** it. **$1,000,000** lost by Farmers in every state each season by selling and sowing **dirty grain** is a low estimate. You **won't** haul it to **be cleaned** before you sell your grain, so you are "docked" on the price because of **dirt** in every bushel. Just take me up on my offer—get a **CHATHAM Fanning Mill** and save its price easily by using on your place. Take 30 Days' Free Trial first.

WHAT IT DOES BESIDES GRADING

Cleans all such **Texas Crops as Rice, Kaffir Corn, Maize, etc.** Cleans and separates all kinds of grain—Separates Oats from Wheat better than any mill you can buy—Cleans Red Clover—Takes out Buckhorn Plantain. Cleans Alsike Clover and Alfalfa—Cleans Beans, Oats, Barley—Grades Corn—Cleans Timothy Seed—Takes all Chess and Cockle out of Wheat.

Chatham Free Book Tells You My Plan On 30 Days Free Trial

Freight Prepaid

This valuable book tells many other ways than those above that a Chatham Fanning Mill will make and save for you. As a practical man you know that all I've said above is true and you also know that in selling direct from our factory—prepaying freight to you—giving you **30 DAYS' FREE TRIAL**—and our wholesale price—we have simply **got** to give you a **CHATHAM Fanning Mill** that does all we claim for it. Our business life depends on our mills making good. Remember that

I Prepay the Freight I'll send you a **CHATHAM Fanning Mill** on 30 Days' Trial without any advance payment, just to prove it will do all we say it will. 250,000 sold already in U. S. and Canada. Experiment Stations indorse them, and Agricultural Papers recommend them to subscribers. So why take **low prices** for dirty, mixed grain, or sow seed that **grows weeds** and **mixed crops? Write nearest office** for full particulars, prices and New Catalog.

17 Screens and Riddles Enough for Every Purpose

[Please mention National Farmer and Stock Grower.]

Depth to Cultivate Corn.

The season of 1908 will long be remembered because of the very unusual conditions which prevailed during the entire growing season over a greater part of the corn belt. Never have I known a season when proper handling of the soil counted for so much, and never have I seen such a difference in yield on nearly adjacent farms. I went into a field in Iroquois county, Illinois, late in September, which produced about 35 bushels of corn per acre. The owner declared that he had plowed and cultivated this ground practically the same as he had done for many years, except, as the dry weather came on, during the last two cultivations he had run his surface cultivators shallower than he had ever done before.

No doubt this depth of cultivation had considerable to do with the outcome of this crop. This ground is tile-drained, no doubt, and experience has shown that the soil will retain moisture much better when cultivated at a depth of, say, three inches during the season than by merely scratching the surface, or, say, running the knives just so to shave off a half inch or so of the top crust. The reason for this is, that there is not deep enough soil mulch to check evaporation. In the case cited, the growth of stalks showed that there had been ample moisture up to about the tasseling period, but from that time on through the balance of the season the crop suffered.

I visited about one hundred farms last fall. Wherever good plowing was done and the ground kept in condition for drawing up a constant water supply during July, August and September, there you will find good, big corn crops, without a single exception. Terry, of Ohio, has said many times that he could grow a bumper crop of corn on his land, without rainfall from planting time to gathering. I believe that Mr. Terry could do that, because he knew precisely the texture of his soil, and he knew when to stir his soil and when to leave it alone, and, besides, his fields had been handled along these very lines for several years and were in fit condition to absorb moisture and retain it.—L. C. Brown.

THE MOST IMPORTANT FARM MACHINE

THE MANURE SPREADER

Are you Saving Money, or are you Losing it by being without One?

You believe that money spent for a mowing machine or a binder is well invested. Still you use these machines only a few days in the year.

You use the hay rake, because it saves you time and labor.

These are valuable machines. They are now counted indispensable by most farmers, even though they stand unused over eleven months in the year.

But a manure spreader is a still more valuable machine. Its purpose is to keep up the fertility of the soil. It is the machine you use *all seasons*, and the one on which the rea. usefulness of all your other farm machines depends.

If you have not already done so, you should consider now the advisability of having an I. H. C. manure spreader on your farm.

You will have choice of three different spreaders in the I. H. C. line—the Cloverleaf, endless apron spreader, the Corn King, return apron spreader, and Kemp's 20th Century, a return apron spreader. Each of these spreaders handles the manure in all conditions perfectly and will give you long satisfactory service.

These spreaders are not ordinary. Their frames are made of air dried wood stock. They have serviceable, tractive, power-producing wheels, beaters that are unsurpassed for tearing the coarsest manure into the smallest pieces and applying it uniformly, aprons that deliver the manure to the beater with the least possible friction and in a uniform manner. Any one of these machines will, if given proper care, last a lifetime.

The labor of spreading manure is greatly lessened by using one of these I. H. C. spreaders. Not only is the labor lessened, but it is changed into agreeable work.

But the strongest reason for using an I. H. C. spreader is the increased value you get out of the manure. The best authorities agree that manure spread by an I. H. C. spreader has at least double the value of manure spread by hand.

The I. H. C. spreaders pulverize and make the manure fine, and spread it evenly over the ground just as thick or as thin as may be required. The manure is placed upon the ground in a condition that is at once available for plant life. All is washed by the first shower into the soil—none is wasted.

The good effects upon the crop are immediate and the permanent benefit to the land is greater than when the manure is spread by hand. There is no question but that land manured by an I. H. C. manure spreader will give an increased yield of two to ten bushels per acre over land where manure is spread by hand.

Consider the labor saved, the more agreeable work, the better crops, the more fertile condition of the land—is not an I. H. C. manure spreader the machine you should have?

Are you not losing money instead of saving money by being without one?

Call on the International local agent and investigate one of these machines. He will supply you with catalogs and particulars, or if you prefer write direct to the home office.

Alsike Clover as a Seed Crop.

A Cass county, Illinois, correspondent asks whether alsike clover is as good as red clover, and whether it pays as a seed crop.

Alsike clover has been grown only in limited areas in this country, but wherever it has got a foothold it has proved very satisfactory. I would not recommend alsike where medium red clover will do well, for of all our clovers I consider the red the most valuable to grow. But alsike has its place, and under some conditions it no doubt will be safer than red clover. It is more bunchy than red clover. It is very nutritious, and as a pasture grass it does well when filled in with timothy or meadow fescue. It grows strong roots, well covered with nodules, so that as a soil improver it probably is equal to red clover.

Low, damp ground is not at all suited to red clover, but right under these conditions alsike will prosper best. It will not kill out like red clover, and it will live four or five years, while red clover lives only two years. Alsike clover is grown quite extensively in Northern Illinois and all over Wisconsin, but principally in localities where red clover has frozen out.

As a pure seed crop alsike usually produces more than red clover. From one to three bushels of seed per acre is usual, and frequently as much as five or six bushels per acre are secured. But seed comes with the first crop, and when it is grown for seed, not much else is secured. It should be sown in the spring, like any other clover, preferably with a light nurse of oats or barley. When it is sown for hay, best results are had when it is mixed with timothy, say about six pounds of alsike and ten pounds of timothy per acre.—L. C. Brown.

Equitable Farm Leases.

Never have I seen so much uncertainty about handling of what are called "leased lands" as there has been during the last year. Many landlords who decided six months ago to boost rent prices have found themselves up against a stone wall. Many good, reliable tenants have left farms which they have worked for many years; and when it came to finding new tenants to take those farms at the advanced rents, none were to be had. The inevitable result has followed. Many landlords not only had to recede from their stiff positions, but they have been begging for tenants to take their lands under former conditions. It seems strange, but it is a fact frequently noticed: The best and most desirable tenants are the ones usually bound down by the hardest conditions.

The sensible course is for landlords and tenants to get together. The landlord should keep foremost two things—soil stability and good crops. Any system of tenantry which does not recognize both of these things means loss of fertility, and instead of such lands becoming more valuable, they really are worth less per acre, after each crop is removed. This renting problem has always been a troublesome one, and conditions are not getting better.

A Mercer county, Illinois, farmer is trying to work out the problem in this manner: He has leased his farm to a young married man for five years. The lease carries with it all live stock and implements, which are appraised at actual cash value. At the end of five years, live stock and implements of equal value must be left on the farm. The tenant operates the farm and bears all expenses, and owner and tenant share equally in all crops and live stock sold.

In Kankakee county, Illinois, a landlord who lives outside of the state has arranged with the man who owns an adjacent farm to manage his lands absolutely for ten years. Before this arrangement was entered into, a schedule of crop, meadow and pasture land was carefully laid out. This provided that one-fourth of the acreage should be annually sown in spring grain and clover seeded with it. Grain rent is to be taken, except the crop seeded with clover; that crop is to be taken by the tenant, and it is to be seeded thinly, so as to make the clover the paramount crop.—L. C. Brown.

The Twice-a-Week GLOBE-DEMOCRAT

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Republican newspaper in the United States. It is published at $1.00 per year, and is worth the price.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

On account of the interest in the present political campaign we are able to combine both of these papers for the price of one.

SEND US ONE DOLLAR

and we will mail to your address **The St. Louis Globe-Democrat Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years.

LIGHT-WEIGHT BEEF CATTLE.

High-quality, Early-maturity and Handy Fat Cattle Will Insure the Prosperity of the Stock Farmer of the Southwest.

To the Editor of the National Faremr and Stock Grower:

Dear Sir:—I am very glad to accept the kind invitation to say a few words in your publication at this time, because of the assurance that it will be read by a large number of stock farmers of the Southwest. Although our firm is well established at most of the principal live stock markets, it is only during the past two years that we seriously contemplated perfecting our organization by establishing ourselves at St. Louis. There has been no lack of inclination on our part at any time, but always wishing our actions to be commensurate with the opportunity, we have simply waited until we believed the imperative moment had arrived. To place a first-class organization in a field that is already filled with business men of the highest class is not an easy matter, and certainly not an off-hand proposition, and as we purpose to be in the lead in the St. Louis market as elsewhere, and, at any rate, deserve success, we were unwilling to jump in prematurely. Having made the move to St. Louis, it is not out of order to say a few words to the stockmen in St. Louis territory and to remind them of their great advantages and opportunities.

During the past twenty-five years two great influences have taken place in beef cattle—production and marketing—one meeting the other half way. One is the influence of quality, which permits the prime beef steer to be produced at an earlier age than formerly, and the other is the market demand for lighter-weight beef cattle, which enables the early-matured steer to bring the top price upon the cattle market.

If we could resurrect a number of old-time cattle raisers and tell them that we can produce fifteen hundred-pound steers at two years old, they would say they would have to be shown; and if we also resurrected some of the old-time butchers to tell them that 1,100 to 1,200-pound steers had topped the cattle market, they would not believe it, even if they were shown.

The market has not entirely given up paying top prices for heavy cattle, but it has certainly given up paying a premium for weight alone, and unless one has continued experience with the market for many years, he can hardly understand how great the change has been.

My own experience in live stock raising and marketing is long enough to make me sure of my ground in reviewing the cattle market; but until I was forced to see the great changes that time was slowly but surely bringing about I was unwilling to give up the idea that a perfect beef steer must be brought to heavy weight. Yet to-day weight is not the first consideration, and weight without quality receives very little consideration on the part of the buyers.

In the beginning, however, cattle that did not grow to heavy weights were not regarded at all. In fact, we have to go back to the beginning to find out how heavy cattle were. Over a hundred years ago Shorthorn cattle were exhibited by Colling Bros., of the county of Durham, in North England. They were eminent breeders of these cattle. In order to popularize and advertise the breed they prepared an ox for public exhibition and at five years old the reputed weight was 3,024 pounds, and the "white heifer that traveled," the most famous Shorthorn female of her day, weighed 2,300 pounds, and her dressed weight was 1,820 pounds. And the old country did not have a monopoly of heavy-weight cattle. No sooner did the Shorthorn find a rival in the Hereford for honors in beef production in this country than the heavy-weight beef contest began. We read about the Hereford ox exhibited by Mr. Rust at the first New York State Fair in 1841 that weighed 3,700 pounds; also in 1844 of the 2,313-pound Hereford steer butchered at Brighton, Mass., and exhibited on the streets of Boston. At the first Kentucky State Fair held at Lexington in 1851, five-year-old Shorthorn steers exhibited by Mr. C. W. Innes weighed 2,710 to 2,740 pounds, and finally in 1857 the champion cattle feeder, Mr. B. F. Harris, of Champaign, Ill., marketed a full load of cattle at Chicago averaging 2,786 pounds, and these were picked out of 100 head that averaged 2,377 pounds.

It was Hon. J. D. Gillett, of Champaign, Ill., himself a great feeder of heavy cattle, who first gave to his brother stockmen the reasons why extreme heavy cattle would have to give way to early maturity and finish at lighter weight. He gave his experience and demonstrated the wastefulness of keeping a steer above three years old, stating that only 15-cent corn could justify such extravagance, and all the Agricultural Experiment Stations took up the work and arrived at the same conclusions, with the additional information that three years was too long, and a year and a half to two-years' time to perfect a steer was nearer the mark.

If the beef market had continued to pay a premium for heavy cattle, undoubtedly the production would have kept up. At one time Great Britain purchased most of our heavy beef cattle. They were shipped over the sea at a rate of so much a head, and the heavier the beef the more economical was the transportation. They were shipping baby beef from Ireland to England long before early maturity in beef cattle production was understood in this country.

I do not wish to be understood as saying that heavy beeves are entirely out of fashion; but 1,700 pounds now looks just as heavy as 2,000 pounds did formerly. Probably 1,500 pounds is the present ideal weight for a beef steer that, having the flesh and quality, will bring the top price on any first-class market. Furthermore, under present conditions the strictly high-grade steer that will combine the utmost economy of production and the best results in market will average from 1,100 to 1,300 pounds.

The grand champion car-load of steers at the International Show of 1908 averaged 1,406 pounds, and were two years old. They were pure-bred Aberdeen-Angus steers raised on blue grass and finished on corn and oil meal. They were held until December for exhibition purposes, but were top cattle in any market if shipped in August.

Of the twenty-eight head of beef cattle at the same show and undergoing the slaughter test, the fifteen yearlings averaged 1,260 pounds and the thirteen two-year-olds averaged 1,490 pounds. The two-year-olds dressed one per cent. better than

ST. LOUIS WATCHMAKING SCHOOL St. Louis, Mo.

Mr. CHAS. O. ROBINSON, of the live stock commission firm of CLAY, ROBINSON & CO., recently established at the St. Louis National Stock Yards.

the yearlings, but the yearlings outsold the two-year-olds by half a cent a pound. The year before, the yearlings averaged 1,244 pounds, and the two-year-olds 1,460 pounds.

We have seen the grand champion steer, Peerless Wilton's Defender, a 975-pound Hereford calf of eleven months old, and when brought back a year later with another 400 pounds added, he was too ripe to be classed as a perfect steer.

The next youngest steer winning the grand championship was the Shorthorn, Roan King, a fifteen-months-old yearling, weighing 1,080 pounds, which had gained 2½ pounds from birth to the butcher block; and The Woods Principal, another grand champion, weighed 1,645 pounds at twenty-five months, and still another—Clear Lake Jute—an Aberdeen-Angus steer, entered the show ring at two years and two months old weighing 1,624 pounds.

During the past several months I have studied the St. Louis market and the cattle sold upon it with the greatest interest. I see most clearly the great opportunity of the Southwest lies in the production of high-quality, early-maturing beef cattle, and I was very much gratified to notice how well the cattle of this class sold upon the St. Louis market. The old-style heavy cattle can be raised in the Southwest and perfected by expert feeders with an abundance of feed. They are and always will be the exception, but every farmer in Missouri, Illinois, Arkansas, Oklahoma and Texas can produce the calf that can be raised and fed to become a market-topping, prize-winning yearling, and I also have no hesitation in saying that they can do so better and cheaper than it can be done in any other country on the face of the earth.

This market demand for baby beef has been the subject of interesting experiment for many years, but it is only in the last few years that the Eastern butcher has had experience with them, and they like the sample. No waste, a large proportion of choice small steaks and roasts and no coarse meat of any kind.

Let me say in conclusion that no grade bull will produce the early-maturing, high-quality steer. Pure-bred Shorthorn, Aberdeen-Angus, Hereford or Galloway bulls are necessary. The half-breed, the three-quarter blood, the fifteen-sixteenths-blood steers show up well in the market. Quality is the foundation, feeding from calfhood to market comes next and produces perfect beeves; the market is calling for them, and the Southwest is the country to produce them.—Chas. O. Robinson (of Clay, Robinson & Co.).

Controversy Over the Roads.

The controversy over the building of public roads is a keen one. There are those that believe in building hard roads, and there are others that are advocates of the dirt road. Within the past ten years we have seen much bitterness developed as a result of the advocating of hard roads.

The writer knows of one group of hard-road specialists that set out from Washington to make a trip through the Middle West and convert the farmers to the advantages of hard roads. They got as far as Chicago with no serious backset, but after a few stops at Illinois points for meeting purposes they gave up the plan. Their reception by Illinois farmers was decidedly hostile.

There is no doubt that hard roads are a good thing, but there is also no doubt that they cost too much. Those living in the cities have to face the road problem in an acute form, for street paving is almost an essential. Yet the very great cost of paving the streets is a heavy burden, even on the men that own fifty-foot lots. If this is true of the man owning a frontage of fifty feet, how much more is it true of the farmer that owns a quarter section of land bounded on two sides of a public highway?

In road discussions at conventions it has often been asserted that macadamized roads could be built at $1,500 to $3,000 per mile. Why such figures are put out the writer does not understand, for it is well known what the building of a good macadamized road costs. To build a macadamized road seventeen feet wide costs to-day in Northern Illinois, about $2.00 per running foot on each side, or a total of $4.00 per running foot.

There are 5,280 feet in a mile, and four times that gives $21,120. This is the cost of building one mile of macadamized road where prices are about the same as in the vicinity of Chicago. Of course location plays a considerable part in determining this matter.

Now, in the country many of the mile sections are bounded on all sides by a highway. A quarter section has a half mile stretch of road on one side of it and a half mile stretch on the other side. That makes a full mile of road touching each quarter section. To macadamize the road at a cost of $21,120 would mean that the owner of each quarter section would have to pay $10,560.

It is argued that he would have ten years in which to pay the bill, but that would mean $1,056 per year. In addition there would be an annual interest charge of 5 per cent. on the deferred payments. The first year this interest charge would amount to $475.20, which, with the first installment, would mean an aggregate of $1,531.20.

Is it any wonder that there is an uprising when it is suggested that macadamized roads ought to be built in the rural districts? We want road improvement, but not of a kind that will cause the confiscation of property.

Great Fences
AMERICAN FENCE
Made of wire that is all life and strength — wire that stretches true and tight and yields just enough under impast to give back every jolt and jam it receives.
Made of materials selected and tested in all the stages from our own mines, through our own blast furnaces and rolling and wire mills, to the finished product. Our employment of specially adapted metals is of great importance in fence wire; a wire that must be hard yet not brittle; stiff and springy yet flexible enough for splicing—best and most durable fence material on earth.
To obtain these and in addition apply a quality of galvanizing that will effectually protect against weather conditions, is a triumph of the wiremaker's art.
These are combined in the American and Ellwood fences—the product of the greatest mines, steel producing plants and wire mills in the world. And with these good facilities and the old and skilled employes back of them, we maintain the highest standard of excellence possible for human skill and ingenuity to produce.
Dealers everywhere, carrying styles adapted to every purpose. See them.

OLD TRUSTY INCUBATOR CATALOGUE.

If you have not got the Old Trusty catalogue, you are missing a treat. More than that, you are missing some of the best poultry information of the season. It's a large book this time and full of pictures and realities. From cover to cover it is chock full of good things for the poultry raiser. While it is profusely illustrated, every page has some sober sense on the chicken question. We like the book and so will you. Take our word for it, you will get something valuable when you write M. M. Johnson, Clay Center, Neb., for his 1909 catalogue. Johnson has a way of his own for saying things and doing things. He says that he is the editor of the catalogue. After reading it we know that he is right.

Low wheels, wide tires; easy work, light draft. We'll sell you a set of the best steel wheels made for your old wagon. Spoke united with hub, guaranteed not to break nor work loose. Send for our catalogue and save money.

ELECTRIC WHEEL CO., Box 222, Quincy, Ill.

Some Clover Questions.

A Livingston county, Illinois, correspondent asks these questions about clover: Can you give me any reason why clover should not do well on land which has grown one crop of corn and one of oats since it was turned? I sowed a twenty-eight-acre field last spring to oats and at the same time seeded to clover. There is practically no clover alive. The year that I turned under the sod the clover did not seem to do well. (2) Is it a good plan to seed oats with clover on rather thin soil?

The fact that our correspondent did not get a stand of clover from his last spring's seeding is not surprising, nor is it an unusual experience. Last season was a very trying one on young clover plants, and not much of the spring seeding amounted to anything. The condition of the soil may have added to the general debility of the crop. One of the gravest mistakes made last spring in sowing clover seed was referred to in a recent article; that is, there was too much oats sown on the ground. Under the most favorable weather conditions an overseeding of oats works against the clover and holds it in check until after the oats are harvested. I heard of cases last spring where as much as four bushels of oats were sown, and then clover on top of that.

In regard to the previous crop of clover not doing well: Some get a wrong impression of the part that clover plays in keeping ground in good condition. It will do great things; but clover sickens. At times it does not seem to prosper. When it reaches that stage it had best be turned under and cultivated crops grown for two or three years. Clover-root worms may be the cause of the unthriftiness, or it may be due to the hurtful influence of certain microbes in the soil. There are some things here we do not quite understand. But whatever the cause, the thing to do is to grow other crops on the land for several years and not attempt to grow clover. Some get the notion that if clover-sick land is abundantly manured it will be brought into heart again and will readily grow clover. This also is an error. Manuring does no good. Change of crop is necessary.

Our correspondent touches upon a practice which is altogether too common—that of seeding oats on thin soil and clover along with it. I do not favor even sowing oats alone on thin soil, but when sown with clover it is essential that the oat plants make a vigorous early growth and get out of the way of the clover plants. It is also essential that the ground have sufficient strength and that in the form of available nitrogen, to nourish the clover plants until they are able to get food from the air. We wonder sometimes why clover plants should pine away along about harvest time. They simply lack nourishment. The oat crop has exhausted, or nearly so, the available plant food, and the tiny clover plants are starved to death.—L. C. Brown.

Safest Varieties of Corn to Plant.

In talking with corn growers in the central section of the corn belt I find that many are discarding the late-maturing varieties of corn and planting earlier sorts. The same mistake has been made by growers over the whole corn belt—that of trying to increase yield by increasing the size of the ear. The result has been the same from Wisconsin clear to Southern Illinois. Corn has been growing later every season. The stalk has been getting taller, and, altogether, results are very unsatisfactory. I believe it wise to plant the largest-eared corn that will ripen with you within a normal season. It is hazardous to undertake to lengthen the season, and really with well-bred corn it is not the big, coarse ears that shell out the most corn. We count that dairy cow the most profitable that will produce the greatest amount of butter-fat from a given amount of food. With corn, we should count that variety best which will produce the largest amount of shelled corn with the least expenditure for cob and stalk. Soil condition has much to do with the maturing of the corn crop, so every grower should consider both his soil and his seed when selecting a safe variety to plant. For the general crop I would not plant a later-maturing variety than has usually been grown upon the farm. If a change is desirable, I should rather plant an earlier-maturing variety. We have been taking altogether too great risks with big, late-maturing seed corn. Stick to corn that will mature in your locality under your soil conditions. If planting is delayed for two or three weeks, as was the case last spring, by all means plant one of the early sorts. A forty-bushel, well-matured crop of small ears is worth sixty bushels of big, soggy ears.—L. C. Brown.

Fit the Ground Good.

I was asked at a Farmers' Institute, a few days ago, which two essentials I considered the most important in growing the corn crop. I consider good seed the most important of all, for unless vigorous seed is planted the crop is handicapped right at the start; then the second great essential is fitting the seed-bed so that the young plants start under favorable conditions. I have seen corn growers pay $5.00 a bushel for their seed corn and then plant it in among clods, so that there was no possible chance of getting more than two-thirds of a stand. The ground must be well plowed; no cut-and-cover job of plowing ever made much of a crop. The ground must be pulverized before clods form. Corn ground is apt to turn up rather cloddy in the spring. The harrow and pulverizer should follow close to the plow, both for the purpose of reducing the clods and securing moisture. Then keep down the weeds. If one cultivation or harrowing will do it, all well and good; but more likely it will need several harrowings before the planter is ready to start. You have lessened your chances of a bumper corn crop very much if weeds are allowed to show up in the rows ahead of the young corn plants.—L. C. Brown.

Three Free and Useful Booklets.

Perhaps you have often wondered, as you were plowing with modern plows, what kind of implements people used a thousand years ago. You can see pictures of such ancient plows by writing to Deere & Co., Moline, Ill., for their three booklets. The booklets Deere & Co. are sending out this year are very fine. They are printed in colors and illustrated from photographs. Besides the pictures shown, the information concerning plows from the days of Pharaoh until 1909 is both interesting and valuable. Write for these three plow booklets. They will be sent free if you mention this paper.

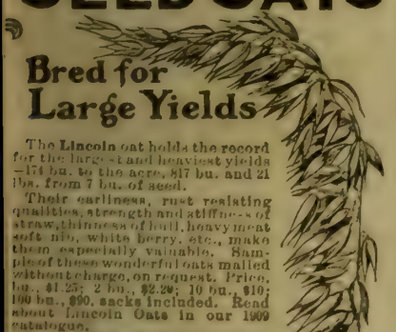
SEED OATS



Bred for Large Yields

The **Lincoln** oat holds the record for the largest stand, heaviest yields—174 bu. to the acre, 317 bu. and 21 lbs. from 7 bu. of seed.

Their earliness, rust resisting qualities, strength and stiffness of straw, thinness of hull, heavy meat soft rich, white berry, etc., make them especially valuable. Sample of these wonderful oats mailed without charge, on request. Price, bu., $1.25; 2 bu., $2.20; 10 bu., $10; 100 bu., $90, sacks included. Read about Lincoln Oats in our 1909 catalogue.

Don't sow ordinary oats when you can get genuine, high-grade seed from the hardy North adapted for all conditions and climates.

Each year we test and improve many new varieties of oats; but we do not offer them until we know that they are right. It is our business to know before we sell. The farmer ought not to experiment, but should buy tested seed from a reliable source.

25th Anniversary Catalogue

It is richly embellished with numerous colored plates and hundreds of fine photographs—a book of 152 pages filled with useful and valuable suggestions. Every planter, whether he uses few or many seeds, should have this book. We cannot afford to distribute them indiscriminately, but will mail it free upon request to those who buy seeds.

Send your name and address today.

Neglect of Fertilization.

After all that has been said about the necessity for using fertilizers of all kinds it might be supposed that every farmer in a civilized land would be making the fertilizing of his acres one of his chief concerns.

One cannot but be surprised by the neglect this problem receives. The fertility of the soil is the first factor in the following of a practical farming career, yet in some localities we find the adage, "Cultivation is fertility," well fixed.

Now, cultivation is in no sense a substitute for fertility. We have seen soils that were perfect in texture and that had been cultivated and cultivated till they were as fine as dust, yet they were unproductive because they lacked a single element of fertility.

The writer has in mind a great farming area which was largely produced by lake deposits in past ages. The soil of that area is so soft and arable that it turns like a mass of fragile silk. In texture it is perfect. Yet because it resulted from the decay of plants having in them little potash, no part of that vast area produced more than a small harvest of anything, unless potash is applied in considerable quantities.

On that area are living farmers that have plowed, cultivated, seeded and harvested crops from that area for a lifetime without getting from it more than enough to pay them meager wages for their work. Now on that same area every farmer understands that he must apply potash to get satisfactory results.

Yet there are many other sections equally deficient in some one of the fertility elements, where the farmers have not yet awakened to a realization of the real condition of the land.

In the rockier states of the Union, fertilization has been more common than in the states where the soil is like silk and the plow runs easily. Yet in those states the soil is often being supplied with mineral plant food than on the great prairies where the soil has a larger content of vegetable matter.

The most profitable thing that a farmer can do is to keep up the fertility of his acres to a high point. Most owners of land have never tried to find how much fertilizing they could do without losing money. One man that the writer heard of entered on some experiments to determine just how much fertilizer of various kinds he could put on a certain acre without hurting its crop-producing quality. He reported that he was surprised at the large amount of fertility of various kinds he could apply with profit.

If the farmers of this country were fully awake to the great advantage there is in keeping soil in a high state of fertility, the fertility question would be more effectually studied than it is being studied at the present time.

Real Galvanizing.

Undoubtedly the farmers of this country have wasted a great many thousand dollars in recent years on poor wire fence. Many of us have been unable to understand why, what seems like a good fence will become utterly useless in such a short time. Our eyes have recently been opened on this question by a little booklet written by an expert on this subject, who shows how in the rush to get rich quick many manufacturers have neglected the fundamentals of good fence building. They have built fences with light uprights, and have used wire that was hardly galvanized at all. Mr. Brown, the author of the book, points out that in true galvanizing, the galvanizing compound is not merely washed on the wire like cheap-plated jewelry, but that a chemical action takes place whereby the spelter used for galvanizing becomes a part of the wire. It is not a simple covering for the wire, but a part of the wire itself. He attributes the long life and durability of the Brown Fence to its superior galvanizing and its extra heavy uprights. We know every one of our readers will be interested in Mr. Brown's little book. Write to the Brown Fence and Wire Company, Dept. 45, Cleveland, Ohio, and ask for it.

Frank A. Saunders, of Bristol, N. H., and Guy Carr, of Ossining, N. Y., came West after the National Dairy premiums for the Dutch Belted cattle exhibit. Mr. Saunders received both the championship awards—the full-aged bull Auten being the grand champion—and Echo, 2d, was female champion. Mr. Carr was also blue-ribbon winner.

The World's Leading Cream Separators

Of Different Styles Are In

The Empire Line

Take Your Choice of Style, Price and Size

DON'T buy a separator where you have no choice of design, style of construction or method of separation, until you have seen what the Empire Line offers you.

We make the really standard models, and make them better than anyone else **can** make them. We don't need to push **one hobby** on you. Having the different models we can state **facts** about each. We don't claim **everything** for any **one** machine. You know what you want—what you need—we have it—you take **your choice.**

Empires differ in pattern and price but not in quality. **All** are **First Grade** separators. One costs less than another because that style costs less to produce. That is a point that touches your pocketbook. Investigate it.

The Frictionless Empire—The Empire Disc Backed By the Empire Guarantee—As Good As a Government Bond

Each style of the Empire has its full range of sizes. And regardless of style or price, every Empire is better than any other separator—because into each has been put Empire materials, Empire workmanship and Empire "know-how"—the things that made the name **Empire** stand for all that's best in cream separators.

We show the Empire Disc here. It is the closest skimmer, and the lightest, easiest to turn, easiest to clean, most improved Disc Separator made.

The Frictionless Empire is known, used and praised all over the country. Hundreds of thousands are in use. It has held its leading place against all comers, old and new.

Get The Books and Compare. The large, handsome Empire catalog is free. It is the fairest, most impartial separator book ever published. It gives the unbiased truth about different styles; illustrates them; doesn't **claim** anything, **states facts;** doesn't push **one** hobby, describes the different standard models—**you take your choice.** Write for this interesting and instructive book today.

SUTTON'S CORN GROWS

RATEKIN'S 100 BU. OATS

Ratekin's Big Banner 100 Bushel White Oats The biggest prettiest, plumpest oat in every one. Side by side with common sorts they yield 100 bushels per acre where other sorts make but 25 to 35 bushels. Strong stiff straw, branched heads ripen early, never rust, blights or lodges. **There is none like them,** and when our stock is exhausted there is no more to be had. **Samples Mailed Free.** Also our Big Illustrated Catalog of farm, field, grass and garden seeds. A postal card will bring them to your door.

Address, **RATEKIN'S SEED HOUSE, Shenandoah, Iowa.**

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly.

By THE HALE PUBLISHING CO.

Philip H. Hale, Managing Editor.

Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.

Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

Our Corn Premiums.

We desire to invite attention to the corn premiums offered by The National Farmer and Stock Grower to our own patrons. Any exhibit contesting for our premiums should be exhibited with a card, saying: "Grown from seed corn furnished the exhibitor as a subscription premium by The National Farmer and Stock Grower of St. Louis, Mo." We will then pay any premiums to which the exhibit is entitled on presentation of the certificate issued by the Secretary of the Fair. We will take the greatest pleasure in paying these premiums, and the more there are the better we will be pleased.

Death of Charles E. Whitman.

We sincerely regret to report the death of Charles E. Whitman, of the Whitman Agricultural Company. He was born in 1837 at Winthrop, Maine, a son of Luther Whitman, who in that early period was an inventor of agricultural implements. His entire life was devoted to this line of business, and at one time was Western manager of the Walter A. Wood Harvester Company. The Whitman Agricultural Company is a St. Louis institution of thirty-seven years' standing. It is world renowned. Whitman implements, principally baling presses, are in successful operation wherever agriculture has a foothold.

Charles Whitman was the business manager, and his sterling qualities won him a host of friends. He came in close contact with all the farm newspaper men; that he did business with them was only one of the causes of his popularity; they were his close companions at all the Fairs and Expositions. He rests after a life's work well done, and his achievements will continue to benefit mankind through many ages to come.

The Cream Separator in Marketing Dairy Products.

Those who have sold milk know what an enormous amount of work is connected with it and much of it at very unpleasant hours. Living some distance from the shipping station means to milk very early in the morning to be ready at the shipping point (if shipping), and this must be done every day, rain or shine. This sometimes is very unpleasant business. Of course, those who live very close to the shipping station have it more convenient, but all farmers cannot live right at the shipping point, and consequently must, or at least should provide the conditions most suitable and convenient, taking the profit into consideration.

In view of the value of skim milk for feeding, I am of the opinion that a great many men who sell whole milk could make more money with less work, to have a good cream separator and make good, first-class butter and use the skim milk for feeding purposes.

From my experience in the feeding of milk, I think it is doubtful if the price paid on the average is equal to the real value of the milk. The old way of skimming milk that has been put away in crocks and jars and churning the cream in the old dash churn, is unsatisfactory because of the labor connected with it.

I think, and it has been my experience, that the separator can be made to solve the problem of a great deal of hard labor connected with marketing the dairy products. I have fed pigs on almost all kinds of feed for several years, and therefore know that there is nothing that is better for them than plenty of skim milk with the addition of some mill feed. And this skim milk is a rather cheap food. The valuable properties are taken out by the cream separator and made into butter, and sold at perhaps a good price, sometimes a fancy price. Often a man can find customers who will pay fancy prices for strictly fresh butter, and in this way the cost of handling is reduced and the profit, I think, usually greater. Right on the farm is the place to manufacture this skim milk into pork and beef. The calves can be fed on it successfully, when fed in connection with some other good food, and will produce beef cheaper than letting them have the whole milk, which is the case where there is no cream separator on the farm.

Using this cream separator will do away with the unpleasantness of hauling the whole milk some miles through the rain and perhaps snow, and in this way alone is very helpful.

One of the very best features that I consider in using the cream separator is being able to use the milk on the farm instead of selling it off the land. Selling the butter is not selling the fertility very fast; in fact, there is very little fertility about butter. One hundred pounds of straw or hay will remove about as much fertility from the soil as a ton of butter, and this is a great consideration when followed up for several years.

Of course, when this feed is fed out on the farm a great per cent. of it is returned to the soil, but when the milk is separated from the cream and made into butter and the butter sold, that leaves practically everything on the farm with a good profit brought in beside. This is what I consider good business on the farm. We must first of all look at the fertility of the land. This must be kept up or the income is sure to decrease.

Now there are men who are milking even three or four cows, and what milk is not consumed for family use is just fed the calves and hogs whole and no attempts made to make any butter for sale. On such farms a good cream separator could be used to great advantage. This surplus milk could be separated and the cream made into butter and sold at a good price and then the skim milk fed out with some mill feed and the feeding value would be about the same and have the price of the butter beside.

I would suggest to those who are selling whole milk or who have only just a few cows and are feeding the whole milk out on the farm, to try buying a cream separator and use it for a while and see if it is not a good, safe investment. It may take some time to get a good business established, but I am satisfied that when it is once done the profit will be much greater than it is at present.—R. B. Rushing.

FARM AND RANCH LANDS.

Arkansas.—Fine lands on the Cotton Belt Route. All very valuable but cheap at this time. See page 2 and read the advertisement of **E. W. LaBeaume,** G. P. & T. A., 1551 Pierce Bldg., St. Louis, Mo.

Kansas.—Catholic homeseekers will find what they want at Westphalia, Kansas. Big parish and parochial school; fine hay, corn and wheat land. Write **Hatton & Kohake,** Westphalia, Kas., for lists.

IMPROVED HOMES IN IDAHO.

We are marketing our Bonner county cut-over timber lands in five, ten and twenty-acre tracts, improving them for the purchaser by planting to fruit and meadow, selling on long-time payments and caring for the land and crops while purchaser is paying for them.

Write to **Colburn Mercantile Co.,** Colburn, Idaho, for terms.

Michigan.—I sell Farms in Oceana, the best county in Michigan. Fruit, Grain, Poultry and Stock Farms. Write for list. **J. D. S. Hanson,** Hart, Mich.

Mississippi.—320 acres, eight miles south from Iuka, Miss., and four miles from the I. C. Railroad. About half is fine bottom land and all has good growth of timber. Well adapted to corn and cotton and would make a good stock farm. Price, $1,600. It is worth $25 an acre. Address, **J. W. Jourdan,** Iuka, Miss.

Mississippi.—2,350 acres of fine, rich, bottom land, 500 acres cleared, balance timber, that when cut will pay for the land. Will produce cotton, corn and four crops of alfalfa a year. Cane grows twenty feet high. Water facilities unexcelled. Three houses and barns. More particulars will be sent on request. **Jno. A. Stinson Co.,** Columbus, Miss.

CENTRAL MISSOURI FARMS. — For farms and homes that will prove both satisfactory and profitable, write for new illustrated list; 100 farms described and priced. **G. W. Hamilton & Son,** Fulton, Mo.

Finest Farm

In Missouri at the price. Only $40 an acre; easy terms. 2,520 acres. Improvements very substantial. Fine soil. 600 acres hog-tight fence, remainder five barbed wires. 500 acres in cultivation and tame grass. 800 acres prairie bluegrass pasture, balance timber bluegrass pasture; a small portion timber too thick for grass; numerous lasting springs and running streams, also tanks and pipes for winter watering. Four dwellings and eight barns. Church and school adjoining farm. I think it is the best proposition in Missouri for the money. It will sell in smaller tracts for $100 an acre in a few years. Must sell it in a body.

J. H. LIPSCOMB,
306 Fidelity Trust Bldg.,
Kansas City, Mo.

Missouri.—560-Acre Home, eight miles from this city and five miles to another railroad town. 350 acres in cultivation. Level land and mostly free from rock. Good fences. Good five-room house; two tenant houses. Barn, 36x50; three other barns. All necessary outbuildings. Wells and spring. 10 acres young bearing apple orchard. Various other fruit. 70 acres meadow. 100 acres pasture. Close to school, churches and store. Free mail. Phone. Covered stock scales. Price, $20.00 per acre. Have also larger and smaller tracts for sale. Write your wants. Send for lists and descriptions of the county. **Wright & Waterstripe,** Marshfield, Mo.

Tennessee.—Send for booklet on farming and full description and price of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

TEXAS Land for Sale and Exchange. Bargains for homeseekers. Also pointers for real estate men. Write **Southern Land Co.,** Burleson, Tex.

SPUR FARM LANDS—THE FARMER'S OPPORTUNITY.

As owners of over 430,000 acres of high-class Texas farm lands, we are now subdividing into quarter sections and offering them direct to the homeseeker, not loaded with selling commissions. First offerings are in Dickens county. Land produces wonderfully, easily cultivated. Reliable cotton territory, this crop having never failed. Absolutely free from boll-weevil; it cannot propagate here. Corn, small grains and feed stuffs produce abundantly; alfalfa in portions. Ideal for hog raising—cholera unknown. Excellent fruit growing region.

The Stamford and Northwestern Railway is scheduled to operate to these lands in time to handle 1909 crop. Present purchasers secure lands at lower price than after railroad in operation. Easy terms. Fine, healthful climate; altitude about 2,000 feet, lying below the plains.

For further information, address **Chas. A. Jones,** Manager for S. M. Swenson & Sons, Espuela, Dickens county, Texas.

Texas.—Smooth agricultural lands in any sized tracts, along line of Orient R. R. Write me your wants. **J. P. Rice,** Alpine, Texas.

Texas.—Large and small farms for sale in the southern part of the state from $2.50 upwards. It will pay buyer of Texas land to address **Box 84,** National Stock Yards, Ill.

Texas.—12,000-acre ranch within eight miles of Sabinal, Uvalde county, Texas. A part fine grazing land and the balance richest agricultural soil. Will sell in 2,000-acre tracts or less. Agricultural lands average $11.00 per acre and grazing lands average $4.75. Greatest bargains in the state. For particulars address **Albert D. Evans,** National Stock Yards, Ill.

VIRGINIA FARMS, $5.00 Per Acre and upwards. Easy payments. Catalogues free. Loans made on country real estate. **George E. Crawford & Co.,** 1009 East Main St., Richmond, Va. Established January, 1875.

CASH FOR YOUR FARM OR BUSINESS,

No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

WESTERN CANADA

320 Acres Instead of 160 Acres

As further inducement to settlement of the Wheat-Growing lands of Western Canada, the Canadian Government has increased the area that may be taken by a homesteader to 320 acres—**160 free and 160 to be purchased at only $3.00 per acre.** These lands are in the grain-raising area, where mixed farming is also carried on with unqualified success.

A railway will shortly be built to Hudson Bay, bringing the world's markets a thousand miles nearer these wheat fields, where **schools and churches are convenient, climate excellent, railways close to all settlements and local markets good.**

"It would take time to assimilate the revelations that a visit to the great empire lying to the North of us unfolded at every turn." Correspondence of an Illinois Editor, who visited Western Canada in August, 1908.

Lands may also be purchased from Railway and Land Companies at low prices and on easy terms. For pamphlets, maps and information as to low Railway Rates, apply to **Sup't of Immigration, Ottawa, Can.,** or to the **authorized Canadian Government Agent.**

SIXTEEN CENTS FOR JANUARY MILK.

The Cream Rate Situation Settled—Milk Rates Still an Undecided Question.

In opening the January meeting of the Directors of the Milk Producers' Protective Association, the President, Hon. D. I. Furbeck, said that the Interstate Commerce Commission had rendered a decision in regard to the transporation rates on cream, but that the rates on milk had not been disposed of.

It will be remembered that in the summer of 1907 the railroads generally issued tariff sheets, announcing an advance in the shipping rates on both milk and cream. This was done quietly, and not until the day set for the advance had almost arrived was the gravity of the situation understood. The Milk Producers' Protective Association was called into emergency session and took the position that the service was no better than it had been for seventeen years, and that there was no good reason for the advance. The creamery proprietors and the city distributors were of the same opinion, and, acting on the same lines, secured a temporary injunction and a hearing before the United States Court. The result was several hearings and a postponement from time to time, and finally the railroads abandoned the proposition, intending to start it up again when nobody was watching.

It next appeared before the Interstate Commerce Commission practically for the same purpose, but starting as a cream proposition. Taking advantage of the antagonism between the small and large creamery operators, and believing they could work in a general advance on milk and cream, they proposed to raise it only on cream shipped to the big cities. This advance would affect every member of this association, but it was hoped that owing to the creamery differences the large creameries would have to fight the battle alone. But the milk shippers, the large creameries and the city distributors of milk and cream stood for a square deal to everybody and no advance in rates, and the Interstate Commerce Commission has decided that where interstate rates have been advanced a reduction must be made. Although this decision does not specifically mention rates to St. Louis, the principle does apply and will have its effect. In this contest the most influential association representing the dairy farmers' interest was the Milk Producers' Protective Association of Missouri and Illinois.

But the battle is not won, and there still remains the action which the railroads will take on milk alone; therefore all milk shippers are advised to be on the look-out for any new advanced milk schedule which may be posted in order to give the association officials time to get busy.

In regard to membership dues, Mr. Ben Schomaker, the Delegate representing shippers on the B. & O. S.-W. Railway, paid over to the Secretary the yearly dues in behalf of John Parsuhn, Anton Hempen, Theo. Donnewald, Ralph Hershfeldt, Menard Etters, Caspar Krebs and Math Menkhaus, all shipping from Carlyle, Ill. No other reports were received. Mr. Wm. A. Fischer, Secretary, stated that the treasury funds were running low and members and non-members should be reminded that we are now in a new year and there is urgent necessity for funds to pay up expenses legitimately incurred for the good of the association. Mr. A. M. Schultz, of Shipman, Ill., and Mr. Wm. Niemeyer, of Lebanon, Ill., took part in the discussion.

Mr. Furbeck, acting as Milk Committee, said that the best he could do was to report a generous supply of milk, and 16 cents would be paid by the dairy buying the largest quantity of milk in the open market. This is for the January product. Two of the larger dairies receive very little milk direct from shippers, unless the product is contracted.

It was ordered that during the month of February a circular should be sent out by the Secretary to all known milk producers, urging them to join the association.

The next meeting will be held in St. Louis, March 22d. In the interval between meetings all communications should be addressed to the Secretary, Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo.

At the meeting of the Illinois Dairymen's Association held at Clinton, in January, the highest award for dairy butter was for the exhibit of Chas. Foss, of Cedarville, Ill., on a score of 90.9 points. Other meritorious exhibits were by Mrs. W. C. Bereiter, Zion City; R. H. Pennington, Plainfield; Eli I. Croser, Utica; and F. L. Gaston, of Normal.

At the Illinois Dairymen's meeting held at Clinton, in January, the highest-scoring creamery butter was that exhibited by Ferdinand Grimm, of Chadwick, and the score was 94½; Geo. Simonson followed with a score of 94; and B. K. Peter, of Dallas City, was third with a score of 93⅔. Other exhibits, twenty-one in number, scored 90 and better.

Incubator a Commercial Proposition.

The incubator season has come again. In this trade most of the experience is gained in the spring. People who are interested in poultry raising must learn to consider the incubator as important to them as the plow is to the farmer. A few hens will make anyone a few dollars a year, but poultry raising for market is a commercial proposition and requires up-to-date tools to work with. An incubator is the main reliance of the money maker in the poultry industry and cannot be eliminated from the business. Poultry catalogues are also most instructive reading. See pages 18 and 19.

A large wagon-making concern in Kentucky is advertising for increased capital for the purpose of increasing the business. The advertisement is entitled "Guaranteed 7 Per Cent. Interest."

GOLD SPECTACLES FREE.

One-hundred-thousand pairs of the Dr. Haux famous "Perfect Vision" Spectacles are being given away free to genuine bona-fide spectacle-wearers as an advertisement, by the Dr. Haux Spectacle Co., of St. Louis, Mo. Every one of our spectacle-wearing readers (no children) should write them at once for full particulars.

WAIST HIGH

EASY RUNNING

$29.75 FOR THIS NEW LOW DOWN AMERICAN $29.75

CREAM SEPARATOR

A SEPARATOR THAT EXCELS ANY SEPARATOR IN THE WORLD

DON'T HESITATE BECAUSE OUR PRICE IS LOW. The quality is high; we guarantee it. It is up to date, well built and well finished. It runs easier, skims closer and has a simpler bowl with fewer parts than any other cream separator. Don't accept our word for it. Judge for yourself. Our offer enables you to do this at our expense. Write us a postal card or a letter and receive by mail, postpaid, our 1909 catalogue. It is handsomely illustrated, showing the machine in detail, and fully explains all about the Low Down AMERICAN. It also describes the surprisingly liberal LONG TIME TRIAL proposition we can make you. Competition is defied by the quality and price we make. Our generous terms of purchase will astonish you. Remember, we are the oldest exclusive manufacturers of hand separators in America, and the first to sell direct to the user. You are not dealing with any agent, middleman or catalogue house when dealing with us. Not one single profit is paid anyone between ourselves and our customer. You save all agents', dealers', even catalogue house profits and get a superior machine by dealing with us. Our New Low Down AMERICAN Waist High Separator is the finest and highest quality machine on the market and our own (the manufacturer's) guarantee protects you on every AMERICAN Separator. We can ship immediately. Western orders filled from Western points. Write us and get our great offer and handsome free catalogue on our New Low Down AMERICAN Separator. Address

[Please mention National Farmer and Stock Grower.]

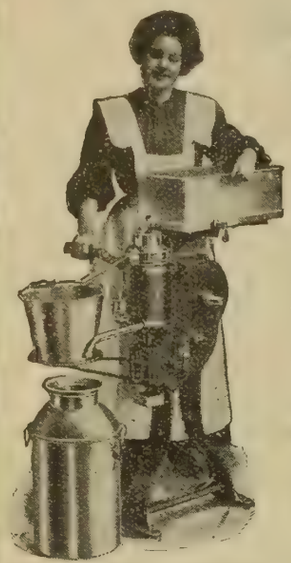
IN THE LEAD

For **1909**

The 1909 Model U. S. Cream Separators

retain *all* features that have given them their great reputation for durability and efficiency, and have several improvements that make them even to a greater extent than ever before, the ideal machine for dairymen who are posted and who **demand the best.** And by intensifying the circuitous and tortuous currents of the milk in its passage through the separator bowl, we have been able to



Greatly Reduce the Diameter of the Bowls

which makes them operate easier than ever and still retain their great milk capacity.

Notwithstanding most manufacturers were complaining all last year of dull times and small sales the UNITED STATES SEPARATOR had one of the **largest sales** in its history and since this fall season began, sales are larger than last year.

Do not forget that the *United States* has *beaten* every separator in *endurance tests* and holds the WORLD'S RECORD.

No dairyman can afford to purchase a cream separator until he has first examined the construction and operation of the

1909 Model

Sales agents in nearly every dairy section. If no agent in your town, **write direct to us for Catalog No. 125,** and we will also quote prices.

We have distributing warehouses in every dairy section in the United States and Canada.

VERMONT FARM MACHINE CO., Bellows Falls, Vt.

Oats on Rich Ground.

A Grundy county, Illinois, farmer asks whether oats will do well on a field which was in corn last year where the fall previous a rank growth of clover was turned under. He says that his corn crop was not what might be expected from a rich clover sod. He also asks whether the oats are liable to lodge on this ground.

If our correspondent has read my articles on oats, published in this paper during the last three or four months, he will have observed that I recommend sowing oats on good ground, and not relegating it to the poorest piece of ground on the farm. This soil, no doubt, in Grundy county is a sandy loam. On account of the stores of nitrogen which this field probably contains I should sow one of the early-ripening varieties of oats. These early oats grow rather a short, stiff straw and will stand rich ground much better than the taller varieties. I should not sow over six pecks to the acre, drilled in. I believe that if 200 pounds of ground rock phosphate was drilled in here ahead of the oats, that good results would follow. One other thing I wish to speak of here: Farmers in Grundy and adjacent counties are practicing thin seeding of oats—usually five or six pecks of the small-berry varieties, and not over eight pecks of the large-berry sorts. They claim they get stiffer straw, less rust and less chaffy oats. This thin seeding is usually followed where clover seed is sown with the oats.—L. C. Brown.

A Great Guernsey Record.

Last March, the two-year-old Guernsey heifer, Dolly Dimple, 19,144, Ad. R. 628, finished a year's official record of **14,009**.13 pounds milk, **703**.36 pounds butter-fat, which would be equivalent to **820** pounds butter. This is undoubtedly the most remarkable year's official record in the world, when age of animal is considered.

October 9, 1908, this remarkable heifer dropped her second calf. During the last fifteen days of the month she gave **927**.1 pounds milk, which contained **41**.63 pounds butter-fat. During the month of November she gave **1,898**.6 pounds milk, which tested **4**.49 per cent., and thus contained **85**.25 pounds butter-fat.

She recently gave in a seven-day official test the following:

	Pounds Milk.	Pounds Butter-fat.
December 8....	62.4	3.202
December 9....	63.0	2.907
December 10....	65.8	3.288
December 11....	63.3	2.852
December 12....	66.4	3.625
December 13....	64.2	3.427
December 14....	59.7	2.733
Total....	444.8	22.034

Statement of feed given: Hay, 70 pounds; silage, 105 pounds; roots, 140 pounds; beet pulp, 63 pounds; bran, 12.6 pounds; pea meal, 8.4 pounds; Ajax, 8.4 pounds; ground oats, 12.6 pounds; gluten, 12.6 pounds; oil meal, 8.4 pounds; alfalfa meal, 8.4 pounds; cotton-seed meal, 8.4 pounds; hominy, 4.2 pounds.

It is doubtful if there is a better seven-day record for an animal of same age and on equal feed of any breed in the world.

This remarkable heifer is a member of the Langwater Farms Guernsey herd at North Easton, Mass., and she is now under her second year's official test.

Dairy and Creamery Notes.

Jacoba Irene, 146,443, is the next Jersey cow to finish an astonishing record for one year. She has produced 15,503 pounds of milk and 843 pounds of butter-fat in ten months. This is approximately 18,600 pounds of milk and 1,180 pounds of commercial butter a year. She is now in the last month of her test, which is being conducted by the Illinois and Wisconsin Experiment Stations. Jacoba is owned by A. O. Auten, of Jerseyville, Ill., and has already given three calves and made 2,613 pounds of butter in thirty-five months. She is a wonder.

There are quite a number of dairy experts, professors, critics and theorists who can only contemplate one class of butter, and that to score 90 points or better. And for this grade of buttter they always contemplate a high price. The fact of the matter is that if all butter was choice butter it would all have to sell at a low price. It is a good thing that there are as many grades of butter as there are grades of people to buy and eat it. This item is written by one who retailed butter at 40 cents a pound in a community where lots of good butter sold for 18 to 24 cents a pound. There is always room at the top, because all people cannot make the top grades of butter.

In recent milking tests of Holstein-Friesian cows for entry in the Advanced Register, 119 animals averaged 27 quarts of milk a day that was 3.55 per cent. butter-fat, equal to 16½ pounds of butter per cow per week. These, of course, were high-class cows, but nearly half of them were heifers with their first or second calves. Dairymen who are milking 12-quart cows should take a note of this.

At eighty-three creameries in South Dakota, 15,607 patrons received an average of $135.09 for their butter-fat. The average price per pound of butter was 22¾ cents. The butter was sold at an average of 22¾ cents. They made 10,584,181 pounds of butter from 9,256,113 pounds of butter-fat. This looks like a 14-per-cent. overrun.

"The farmer who has an abundance of good silage is going to get the largest milk checks this winter, because his cows are not going to suffer for want of feed. If it comes to a pinch, the grain in the silage will take care of the cows in a large measure. Of course, it is not a balanced ration, but it is a whole lot better than dry feed and no grain."—Nebraska Dairyman.

At Chicago, recently, in one week, 1,093 samples of milk were inspected and less than 3 per cent. was found below grade. These samples were taken after the milk had passed from the hands of the producer into the hands of the dealer.

The Buggy of Quality

SEND US $56.95

for our latest, highest grade Automobile Seat Top Buggy here illustrated and you will get the very best buggy that anybody wants to use. We didn't consider cost in making this buggy. We aim simply to make a **buggy of quality,** using the best materials obtainable and putting into it the highest grade workmanship possible, making it in our own great buggy factory in Evansville, Ind., where we build 50,000 vehicles a year, under the supervision of our own experts. We can sell you a top buggy as low as $29.95, guaranteed as good as you can get elsewhere for $20.00 to $30.00 more money. We can sell you a runabout as low as $23.95, surreys as low $50.95, farm wagons as low as $31.15, business wagons as low as $33.95; but if you want the **buggy of quality,** send us $56.95 today and ask for our Bent Panel Automobile Seat Top Buggy here illustrated.

Save Time and Freight Charges

as we ship buggies direct to you from warehouses in Kansas City, Mo.; Wichita, Kan.; St. Paul, Minn.; Fargo, N. D.; St. Louis, Mo.; Omaha, Neb.; Milwaukee, Wis.; Grand Rapids, Mich.; Columbus, Ohio; Pittsburg, Penn.; Buffalo, N. Y.; Albany, N. Y., and Evansville, Ind.

We have special Catalogues of **Farm Wagons, Business Wagons** and **Pony Vehicles.** Don't fail to ask for any or all of them if you are interested.

If you are in the market for a vehicle of any kind, whether you want to order the buggy above illustrated or not, be sure to ask for our beautiful free **Vehicle and Harness Catalogue No. 5501,** containing over eighty styles of the latest up to date vehicles at prices $20.00 to $35.00 lower than their equal can be purchased elsewhere.

If you are in a BIG HURRY for a buggy, just cut out this ad. and send it to us with $56.95, telling us which of the above warehouses is nearest your town, and we will send you QUICK our latest high grade Automobile Seat Top Buggy here illustrated. Only a few days to wait and only a small freight bill to pay.

SEARS, ROEBUCK AND CO. CHICAGO

Raise the Heifer Calves.

A great many farmers who have a sufficient number of young cows sell the calves for hardly more than half of what they are worth, just to get rid of taking care of them. If they keep any at all, they save the steer calves. I believe this is a great mistake, and especially just at this time. There never was a time in the history of dairying when good cows were in greater demand than at the present time. In fact, it is somewhat difficult to buy them at all. With the increased attention which is being given to the dairy industry will come even a greater demand for good dairy stock.

I believe there is no question that it is more profitable for any farmer to raise a good heifer than a good steer, and the indications are that in the future it will be even more advisable to do so than now.

Every farmer who raises cattle should keep the heifer calves from good cows, giving them good care, and when they are two years old arrange to have a fresh cow with a calf by her side to put on the market. The expense of raising her will be about one-half what it will cost to put a three-year-old fattened steer upon the market, and she will bring just about the same price. The demand will take care of the sales, if good animals are produced.—Wm. H. Underwood, Ozark, Ill.

Milking Machines.

The practicability of milking by the use of mechanical milkers has been a very important question in the economy of the dairy farm since the first introduction of such machinery.

A milking-machine plant was installed at the Nebraska Agricultural Experiment Station for the purpose of investigation in October, 1906. Since that time a number of experimental trials have been made with the milking machines and careful records have been kept of their use in the University dairy.

A study was made of the effect of the milking machines upon yearly records of production; short period trials and detailed experiments; time required to milk with machinery; the influence of the milking machine upon the bacteriological condition of milk.

A list of questions covering the practical use of milking machines was sent out to every dairyman in Nebraska who had been or was using machines, and the answers submitted by these men are considered in the conclusions which were as follows:

Heifers in the first lactation apparently give better results by machine milking than do aged cows that have been accustomed to hand milking for one or more years.

Some cows are not adapted to machine milking.

Afterwards hand and machine methods of milking have a detrimental effect upon the milk flow.

Manipulation of the udder by hand is absolutely necessary in some instances before all the milk can be drawn by the machine.

One man operating one machine can milk about the same number of cows per hour as one man milking by hand.

Two men operating four machines can practically do the work of three men milking by hand.

Two operators with four machines milked twenty-one cows per hour in the University dairy.

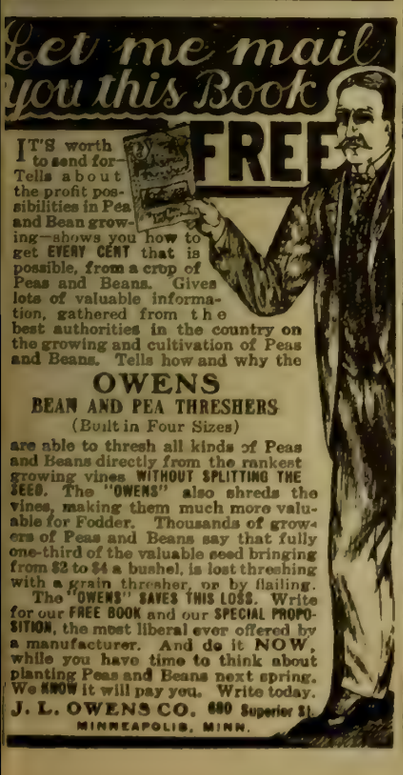
It was found necessary to thoroughly wash and boil the milking machine parts after each usage in order to produce milk with as low a bacterial content as that resulting from careful methods of hand milking.

Washing the machines at irregular intervals or simply drawing water through them will increase the bacterial content of the milk, even above poor methods of hand milking.

The man operating the milkers must thoroughly understand the care and management of dairy stock. He should also be persistent in the attention to details in order to obtain the best results.

From these studies it would appear that the milking machine is fitted for large herds rather than small ones, and we believe it would be impracticable to install them where fewer than thirty cows are milked the year round.

Bulletin No. 108, containing the complete records from which these conclusions are drawn, may be obtained free of cost by making application to the Nebraska Experiment Station, Lincoln, Neb.



Let me mail you this Book
FREE
IT'S worth to send for—Tells about the profit possibilities in Pea and Bean growing—shows you how to get EVERY CENT that is possible, from a crop of Peas and Beans. Gives lots of valuable information, gathered from the best authorities in the country on the growing and cultivation of Peas and Beans. Tells how and why the
OWENS
BEAN AND PEA THRESHERS
(Built in Four Sizes)
are able to thresh all kinds of Peas and Beans directly from the rankest growing vines WITHOUT SPLITTING THE SEED. The "OWENS" also shreds the vines, making them much more valuable for Fodder. Thousands of growers of Peas and Beans say that fully one-third of the valuable seed bringing from $2 to $4 a bushel, is lost threshing with a grain thresher, or by flailing. The "OWENS" SAVES THIS LOSS. Write for our FREE BOOK and our SPECIAL PROPOSITION, the most liberal ever offered by a manufacturer. And do it NOW, while you have time to think about planting Peas and Beans next spring. We KNOW it will pay you. Write today.

MINNEAPOLIS, MINN.

Flavor of Winter Butter.

It is both perplexing and surprising to the careful and particular buttermaker to find so many different flavors in one week's output of butter. A woman who has now the name of being one of the best buttermakers in the whole state of Indiana tells of her earlier trials with this same matter. She began, several years ago, to build up a city trade for her product, which would average about 50 pounds a week the year around. Her system included personally delivering on Saturday each week to her customers. All went well until early in the winter, when two or three customers remarked that her butter did not seem to have that nice flavor that it had during the summer. Finally two customers quit. Then it was plain that something had to be done or all her well-thought-out plans would amount to nothing; besides she would have to carry the odium of being a poor butter-maker.

That woman meant business, and the way she went at it to discover the source of these bad flavors may help some others who find no two rolls or prints of their butter with the same flavor.

She began by noticing the feed of the cows. Everything seemed all right here. The hay was sweet and bright, the mill feed was good and the water was pure. So it was evident the source of trouble was farther along the line. Like many housewives put up with now, the milk during the winter was kept in the pantry, off of the kitchen. Part of it was placed for one week in a side room, away from the kitchen and away from where the men hung their work clothes. The cream from this milk was churned separately. The trouble was found. The cooking odors, the cleaning odors and all other odors all found lodgment in the milk set in the pantry. This woman did the sensible thing. She soon had a milk room, and that room contained nothing else except the buttermaking utensils and the separator.

It is the same old story, but I believe it is the same old cause that is responsible for so much winter butter being off flavor.—L. C. Brown

DE LAVAL CREAM SCORES HIGHEST AT GREAT DAIRY SHOW

At the great National Dairy Show held recently in Chicago, cream skimmed with DE LAVAL separators won all highest honors. The cream exhibits were made in two classes and the winners in each were as follows, all being users of DE LAVAL hand separators:

MARKET CREAM

1st Prize, Gold Medal, G. C. Repp, Ohio.....Score 98¾
2nd Prize, Silver Medal, W. R. Newberry, Ohio.....Score 94

CERTIFIED CREAM.

1st Prize, Gold Medal, Tully Farms, New York.....Score 94½

The contest was under the direction of the Dairy Division of the United States Department of Agriculture, Washington, and Mr. Repp's winning exhibit in the Market class was pronounced practically perfect and given the highest score ever awarded by the Dairy Division.

For the past twenty years butter made from DE LAVAL cream has won all highest honors in every important contest. Sixteen of the largest 1908 State Fairs awarded their first prize to DE LAVAL butter, and now comes this sweeping victory for DE LAVAL cream in the big Dairy Show contest, which only goes further to prove that DE LAVAL machines are head and shoulders above every other skimming device in every feature of separator use.

A DE LAVAL catalogue tells why DE LAVAL cream is always superior. Ask for it today, or, better still, let us demonstrate the merits of a DE LAVAL separator in your own dairy.

What Style Drill is Preferable?

We find a wide difference of opinion even in the same neighborhood as to what style furrow opener is most preferred on a grain drill. One man will say that he prefers a shoe or runner, another a single disc, and still another a double disc. Sometimes a farmer makes a mistake and realilzes it after using his drill. The Kentucky Drill, manufactured by The American Seeding Machine Co., Incorporated, Richmond, Ind., is an interchangeable grain drill. All that is necessary is to change the furrow openers—either style, single disc, double disc or shoe, interchanging on the same machine. It matters not what style drill a farmer prefers, or in what section of the world he lives, he can get a Kentucky Drill—"good as wheat in the mill"—that will do his work as it should be done. The feed is really the "heart" of a grain drill, and the Kentucky hasn't got heart disease. The furrow openers play an important part, because they make the seed trenches, therefore whatever type is selected, the Kentucky can always be relied upon to make the most perfect seed trench. It is fully and freely guaranteed—nothing misleading about it—just plain English — a warranty that means protection to the purchaser. Send to the manufacturers for a copy of their Kentucky catalogue and any special information you may want. Then go to your implement dealer and tell him you want to see the Kentucky Drill. Don't let the dealer put off a substitute on you, because it costs him less money. Remember there is a guarantee on the Kentucky that the manufacturers could not afford to make unless the Kentucky would do all they claim for it.

Standard Poland-Chinas.

The regular annual meeting of the Standard Poland-China Record Association of Maryville, Mo., will be held in the Live Stock Exchange Building, at the Stock Yards, South St. Joseph, Mo., on Wednesday, February 10th, 1909, 9 a. m., for the purpose of electing a President, one Vice-President from each state represented, and seven Directors for the ensuing year, and for the transaction of such other business as may come before said meeting.

The officers of the association are: Fred L. Rood, President, and George F. Woodworth, Secretary. At the meeting addresses on appropriate subjects will be delivered by Jno. Blain, Pawnee City, Neb.; H. H. Harshaw, Butler, Mo.; Chas. Dawson, Endicott, Neb.; H. L. Faulkner, Jamesport, Mo.; A. B. Garrison, Summerfield, Kas.; S. McKelvie, Lincoln, Neb.; Prof. J. J. Ferguson, Chicago, Ill.; and Prof. J. W. Connaway, of Columbia, Mo.

Blooded Stock.

H. C. Myers, of Rural Route 2, Hopkinsville, Ky., is advertising four fine, large, black jacks. Mr. Myers is a breeder of good reputation, and his stock is well worth considering.

Mr. C. M. Chambers, owner of the Pleasant Valley herd of Red Polled cattle, R. R. 1, Bartlett, Iowa, has a card in this paper. He has about fifty for sale. Their sires were such bulls as Stout, Slasher and Roscoe. This breed of catle is noted for dairy production and beef. They were always noted for splendid dairy qualities and they show the beef. Rover, the herd bull, weighs 2,100 pounds, and at his best weighed 2,388 pounds. He is for sale at $200, a sure breeder and gentle. Some of his bull calves weighed 1,050 pounds each at one year old. Much more can be said in favor of this herd, which is recommended to those who wish to buy first-class pure-bred cattle.

The Holstein-Friesian Association is offering premiums at thirteen important Fairs and Expositions. These range from silver cups to $500 in cash prizes. Particulars can be had of F. L. Houghton, Secretary, Brattleboro, Vt.

Mr. E. L. John, of Broadway, Mo., breeder of Large English Berkshires, writes that he has a nice lot of pigs of summer farrow which he will sell at reduced prices in order to make room for the spring farrow. He has a fine lot of hogs and not any too much room.

At the International Live Stock Exposition held at Chicago, Ill., November 28th to December 10th, 1908, Berkshires were awarded the following premiums: (1) Champion barrow of the show, over all breeds, grades and crosses; (2) Champion pen of three barrows, over all breeds, grades and crosses; (3) First on car-load, 350 pounds or over; (4) First on car-load, 250 pounds and under 350; (5) First on car-load, 200 pounds and under 250; (6) Grand championship car-load.

The H. Mueller Poultry Farm of Wellsville, Mo., advertise poultry and eggs. There are Light Brahmas, Buff Orpingtons, R. I. Reds, Barred Plymouth Rocks, Brown and White Leghorns, Buff Cochins, Toulouse and Embden geese, Bronze turkeys and White Fantail pigeons. The post cards also mentioned are from electros of their own fowls.

Angus cattle are the greatest beef-producing cattle this age has produced. This year again they won every grand championship the International Exposition offered (a show which is conceded the greatest in the world) in the form of grand champion steer, grand champion steer herd, grand champion car-load lot, grand champion carcass, and many other championships too numerous to mention. I offer bulls, heifers and cows closely related to these champions, and you will go a long way to find better and then come back here. You can return my cattle after resting ten days, if they do not please you. J. P. VISSERING, Box 1, Godfrey, Ill.

Land Matters.

The Colburn Mercantile Company is offering some improved properties for sale in Idaho. This is the right way to place lands on sale. See classified land advertising.

The Farmers' Home Journal of Louisville, Ky., says: "At a recent sale Wolf Island, a few miles above Savannah, Tenn., in the Tennessee river, was bid on by L. F. DeFord for $5,700. For the tillable land this price is a little more than a hundred dollars per acre."

The Rock Island-Frisco Railway System is offering low-fare tickets to the Southwest, where lands are cheap. There is a map schedule which is interesting and some books concerning the opportunities of the Southwest which all farmers who would like to change locations ought to have. Address, John Sebastian, 1937 Frisco Building, St. Louis, or at 1937 La Salle Station, Chicago.

Incubators and Brooders.

Cyphers Incubator Company, with headquarters at Buffalo, N. Y., have a card in The National Farmer and Stock Grower. This company issues a catalogue of 212 pages which is free to all our subscribers who raise poultry. It is an elegant book and most useful. Please mention this paper and write to Cyphers Incubator Company, Buffalo, N. Y., and ask for a copy.

SAFE HERD OF LARGE ENGLISH BERKSHIRES. Herd is headed by an excellent son of the St. Louis World's Fair Grand Champion. I have bred Sows for sale, also bred and unbred Gilts that are hard to beat, and fifty head of early Pigs. Can furnish pairs not akin. I have also S. C. W. Leghorns, Barred Rock Chickens and M. B. Turkeys. Eggs for sale and a few pairs of Peafowls. The breeding of this stock and poultry is the best and will be sold at prices in keeping with the times.

M. W. MAGNUSSON, Owner, Safe, Mo.

WRITE FOR FREE CIRCULAR. Leading varieties Pure-bred Poultry. Quotes lowest prices on fowls and eggs. Unused Photo Post Card, 5c. postage, from our fowls.
THE L. H. MUELLER POULTRY FARM, Wellsville, Mo.

TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won seven out of nine first prizes at Leyington Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907.
CHAS. FORD, Mortonsville, Woodford County, Kentucky.

FOR PURE-BRED BERKSHIRE HOGS, Shropshire Sheep and Fancy B. P. Rock Poultry, write or call on **E. L. JOHN,** owner of Broadway Herd, **Broadway, Maries Co., Mo.**

DRAFT and COACH STALLIONS, Also JACKS, for sale, from $300 up.
WALKER BROS., Glencoe, Okla.

Three real nice, smooth, young Black Jacks, well broke; two Registered Saddle Stallions—Chester Dare blood; good ones; one Standard and Registered Trotting Stallion, three years old, by the great Gambetta Wilkes, 2:19¼ sire of 200 in the list, dam by Nuthurst, 2:12; also two High-class Combined Saddle and Harness Geldings. We also sell Cowpeas in small or car lots. Come to see us, or wire for description and pedigrees.

W. C. BARHAM & SON, MILAN, TENN.

PONY RIGS

Give the children keen enjoyment, healthful fun in the open air, and are a profitable investment. We are exclusive manufacturers of Miniature Vehicles for the children.
THE COLFAX CO., South Bend, Ind.

Twenty-two Years of Progress.

To Win Permanent Success You Must Deserve It.

OVER twenty-two years ago (on September 13th, 1886,) the firm of Clay, Robinson & Co. was organized at Chicago by John Clay and Charles O. Robinson, succeeding the firm of J. M. Robinson & Co. Mr. Charles O. Robinson is a son of the senior member of that firm, and throughout the twenty-two years of Clay, Robinson & Co.'s business existence he has been at the head of their cattle department, personally selling and supervising. On December 1st, 1886, the firm opened a branch at South Omaha, a little later at Kansas City, in subsequent years houses have been established at Denver, Sioux City, South St. Joseph, South St. Paul, East Buffalo, and now—last but by no means least—at National Stock Yards, East St. Louis. John G. Forrest, Courtney A. Kleman and Frank H. Connor have, during these years of the firm's expansion and development, been admitted to partnership in the firm, Mr. Forrest having supervision over the Kansas City and South St. Joseph houses, together with their connections; Mr. Kleman being head of the firm's sheep department, resident at Chicago, where he personally sells, as well as supervises all sheep business, while Mr. Connor is financial manager, with headquarters at the firm's office in the Rookery Building, Chicago. Mr. John Clay has during the entire period been the active head of the organization, which has ever remained a private firm.

As illustrating the remarkable growth of the firm it may be of interest to know that, starting in 1886 with 212 square feet of office space and three employes, we now occupy an aggregate at all offices of 13,000 square feet of floor space, while the entire staff of employes numbers some 200.

In no small measure is the firm's remarkable success attributable to the very important fact of having very early in its existence selected and secured a coterie of salesmen and office men who have continued in active service throughout a long period of the firm's life. Two of the three men who constituted its entire staff of employes at organization are still with the firm, these being M. J. Keenan, who now, as at the beginning, is seling hogs at Chicago every market day, and H. Woods Robinson, who for many years acted as a general solicitor, and is now located at the firm's Chicago office. Albert Noe was engaged to sell cattle for the firm at South Omaha in 1887, and is to-day, after twenty-one years' constant service, still in the saddle there in the same active capacity. J. G. Forrest went to the South Omaha office as bookkeeper in 1887, and, as mentioned above, is now a member of the firm. F. H. Connor joined the firm's forces a year later, in the same capacity, and is now also a member, both of Clay, Robinson & Co. and of John Clay & Co. The same year, D. A. ("Art") Campbell joined the firm's cattle staff at Chicago and is now in charge of the feeder-buying department. "Jack" Sullivan, now one of the firm's cattle salesmen at South Omaha, also began in 1887. Other "veterans" of fifteen or more years' service might be named, while the roll of those in the employ of the firm for ten or more years is a long one.

In opening up their new branch at East St. Louis the fixed policy of the firm of having only the best and most efficient salesmen and employes in all departments has been strictly adhered to.

Bone Spavin

No matter how old the blemish, how lame the horse, or how many doctors have tried and failed, use

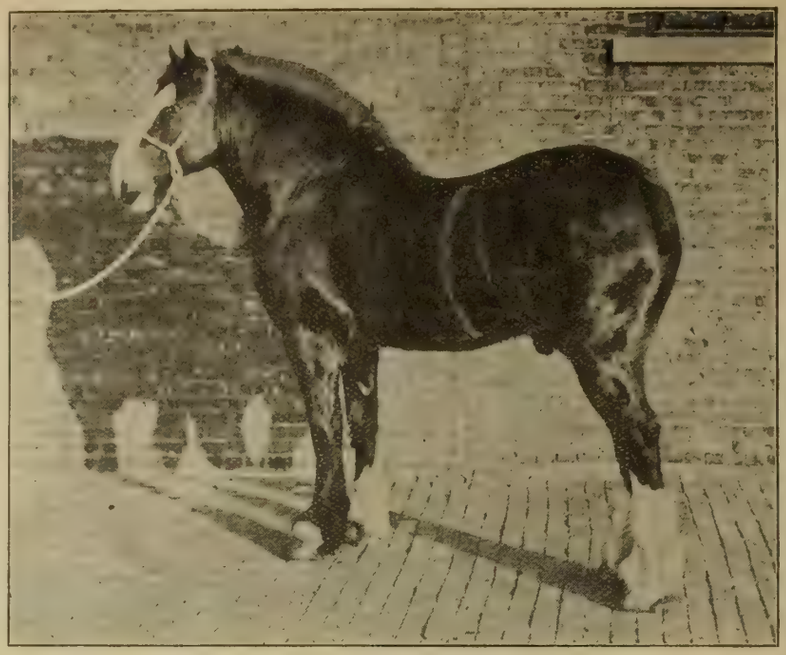
Fleming's Spavin and Ringbone Paste

Use it under our guarantee—your money refunded if it doesn't make the horse go sound. Most cases cured by a single 45-minute application—occasionally two required. Cures Bone Spavin, Ringbone and Sidebone, new and old cases alike. Not used on soft bunches. Write for

Fleming's Vest-Pocket Veterinary Adviser

Best book on blemishes, and we send it free. Read it before you treat any kind of lameness in horses. 192 pages, 69 illustrations, durably bound in leatherette.

FLEMING BROS., Chemists, 218 Union Stock Yards, Chicago, Ill.



BARON'S VOUCHER—Champion Clydesdale stallion at the Chicago International Show of 1908. Exhibited by Galbraith & Son, of De Kalb county, Ill. This grand stallion was foaled in April, 1902, and is in fact a massive draft horse. His perfect form and style give him a light-weight appearance, to which he is not entitled. He is strong and muscular without surplus fat, carrying only flesh enough to give a shapely appearance. Although in the annual contest there were heavier limbs and greater weight against him, he had sufficient development with his other qualities to win the grand prize.

KANSAS CITY HORSE TRADERS

Moving to the St. Louis National Stock Yards.

As stated in our January issue, there are great doings in and around the horse and mule market at the St. Louis National Stock Yards. It appears as though Kansas City is moving to St. Louis, lock, stock and barrel. All the new barns are Kansas City barns, and the intention appears to be to consolidate the Kansas City receipts at the St. Louis National Stock Yards. It looks like a surrender of the horse and mule trade of Kansas City to St. Louis as the great distributing center.

There is reason in all this. In the year 1908 St. Louis received 17,255 more horses and mules than Chicago; 56,335 more than Kansas City; 69,998 more than Omaha; and 86,518 more than St. Joseph. It has been stated by the best authorities that 80 per cent. of the horse buyers of the continent prefer St. Louis to all the other Western markets, because their shipping rates to the East and Southern seaboard cities are more favorable, and from St. Louis the run is just right, whereas the run is too long from the farther Western markets. It has always been clearly understood that the rapid growth of the St. Louis market was due to a large extent to the perfect location and the enjoyment of superior transportation facilities, but no one expected the confession to come from the largest operators in Kansas City. The horse shippers are entitled to have their horses sold where the least expense shall come out of the horse, and that market is St. Louis.

The leaders in this Kansas City slide to St. Louis are men of high standing. It will be some time before they can ask shippers to consign direct to them, but as "actions speak louder than words," they have surely given notice that St. Louis is a far better market than Kansas City, and shippers can take their actions as advice to ship their horses to St. Louis in the first place and have them sold directly to the user. Buyers also can rely upon it that St. Louis will receive more horses and mules than ever before and that they will be able to fill up loads quickly, thereby economizing on expenses. The St. Louis horse market bids fair in 1909 to increase rapidly. The gain is already considerable and the good work is going on.

New Owners For Fast Horses.

Spirit of the West mentions that John C. Crabtree, of Hillsboro, Christian county, Illinois, has sold his two celebrated pacing horses, Hedgewood Boy, 2:02¼, and Lady Maud C., 2:03¼, for a consideration of $40,000, to Richard Wilson, of Rushville, Ind. Hedgewood Boy and Lady Maud C. are own brother and sister, and were bred and raised by Mr. Crabtree. These horses were sired by Chitwood, 5,212; dam, Noretta by Norris, 17,569; grandam Maggie Yeazer, dam of Walnut Hall, 2:08¼; by Red Wilkes, 1,749.

At the sale of Shire mares held in December by Trumans' Pioneer Stud Farm, six head of imported fillies were purchased by Mr. Hans Hadnefeldt, of Storm Lake, Iowa. They were shipped to their new home and arrived safely in first-class condition. In Buena Vista county they claim to have some very fine draft horses, but they pronounced these as the best they had ever seen.

Going to Cuba.

The New York Herald says: "General John B. Castleman, President of the American Saddle Horse Breeders' Association since its formation in 1891, has sold his Kentucky farm and all his stock, and will, it is said, retire as a breeder of saddle horses. A syndicate, in which James Stillman, of New York, and J. B. Perkins, of Cleveland, are reported to be interested, has taken over all the stallions and mares owned by General Castleman and his son, Major David Castleman, for the purpose of establishing an extensive breeding stud for saddle horses in Cuba. Major Castleman is to be the manager of the enterprise and he has gone to Cuba to make arrangements for the shipment of the horses. The farm is located at Bahia Honda, about fifty miles from Havana. The officers of the company which will operate it are Charles M. Rainey, of Lexington, Ky., President; B. D. Barden, of Cleveland, Vice-President; and E. G. Guthrie, of Cleveland, Treasurer."

Picks Up Hay Profits

Free Books Tell How

Two-Cylinder NEW DEERE HAYLOADER

Let us put your name and address on the "Deere" mailing list—as a Progressive Farmer—and send you our new practical FREE BOOKS.

You know what the name "Deere" on a farm implement means—in highest quality of workmanship, materials, and latest improvements.

"Deere" makes are Standard of the World and it will pay you to keep posted about them. Write us now so we can send you our book about our new 1908 Hay Loader.

Greatest Time Saver —Greatest Capacity

Greatest time saver in haying time that you could own—most durable in construction and materials—has the latest and most practical exclusive principles applied to loading hay. Thoroughly tested out and proven entirely satisfactory by the best farmers and hay growers.

The only loader that successfully handles the lightest swath or heaviest windrow. Is also the

Lightest Draft

Don't think of buying an old type "Scratch Bar" hay loader. They are much heavier draft and jam and crush and injure good hay. The Deere handles alfalfa or ripe clover for seed, perfectly.

Write us for—"All About How to Make Hay Most Profitably," in our New Deere Hay Loader Book No. 126.

Deere & Mansur Co. Moline, Ill.

Don't Have a Blind One "VISIO" Wonderful Discovery

DISEASES of the EYE successfully treated with this NEW REMEDY.

An Absolute Cure

for Moon Blindness, (Ophthalmia), Conjunctivitis and Cataract. Shying horses all suffer from diseased eyes. A trial will convince any horse owner that this remedy absolutely cures defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO," use it under our GUARANTEE; your money refunded if under directions it does not effect a cure." "YOU PAY FOR RESULTS ONLY." $2.00 per bottle, postpaid on receipt of price.

Visio Remedy Ass'n Dept. C, 1933 Wabash Av. (Not Inc). Chicago, Ill.

A Ten-thousand-dollar Horse.

Mr. John Donovan, of King Hill Stock Farm, St. Joseph, Mo., has bought the California trotting stallion Washington McKinney, 2:17¼. He was sired by McKinney, 2:11¼, the greatest sire of extreme trotting speed, and is out of a mare with a record of 2:35, taken to a high-wheel sulky. Washington McKinney is one of the handsomest horses in the country; stands 16.1 hands and weighs 1,250 pounds; in color he is a raven black, with one hind pastern white, and a finely-shaped star in the forehead; he has a beautiful mane and tale, and is built very compactly and strong, while his disposition is perfect. Mr. John Donovan is manager of the St. Joseph Stock Yards. The price paid for Washington McKinney was $10,000.

FREE PAIL

Free Trial of Stock Tonic.

There is really no secret about stock tonics; neither about their ingredients, nor their effects on live stock. There is also no doubt about the usefulness of stock tonics. Their good effects are as certain as are the nutrient action of feeds. In fact, the benefits of a rightly-compounded tonic are more certain than that of feed.

Feed sometimes nourishes and sometimes it doesn't. It depends altogether on the condition of the organs of digestion and assimilation.

But a good tonic, used as intended, always acts with a stimulating and restorative effect on the functions that make nutrition possible.

The Wilbur Stock Food Company offers to demonstrate the certainty of the benefits of their Stock Tonic, in every case, by giving away, in localities where they have no agent, a twenty-five-pound pail to any stock owner who will ask for it, accompanying the request by a statement of the number of head of stock he owns.

They have been making this Stock Tonic for twenty-five years, and know absolutely what it will do. They run no risk in giving away the twenty-five pounds, as they are certain it will be its own best solicitor in the hands of the intelligent stock owner.

Every keeper of live stock ought to take advantage of the offer for his own satisfaction and profit. Write the Wilbur Stock Food Company, 529 Huron street, Milwaukee, Wis., stating the number of hogs, cattle and horses you own, or fill out the coupon attached to the company's advertising and send it with request for a pail of Stock Tonic, which will be sent promptly without any charge.

Well-fed Horses Required.

Dr. A. S. Alexander, in an article relating to marketing horses, says:

"On general principles, apart from the consideration of class requirements, every horse forwarded to market should be in good condition from full feeding. Extra condition, especially in heavy draft horses, is estimated to be worth twenty-five cents a pound in the market. For immediate purposes of work a horse should at least be five years old, well-matured and well-broken. Immature horses, under five years of age, do not stand work well upon the city pavements, hence are likely to sell at a depreciated price. There is, however, a good and growing demand for well-bred, well-formed, strongly-developed, sound, active, heavy draft geldings under five years in age to be fattened for market by men who make a specialty of that business. Such horses are classed as 'feeders' in the market."

And it goes without saying that the "feeder" that has to pay a freight bill out from the market and a feed bill for several months, and a freight bill back to the market, does not sell in market by many dollars per head the price of a full-fed horse in extra good condition.

Handling the Colt.

A correspondent asks if we can suggest the best way to handle a colt about seven months old. He says it will not eat much grain, and it does not seem to be thriving.

We suspect that our correspondent here has made the same mistake which is made by many others; that is, he has weaned his colt too abruptly and has taken the little fellow from its mother before it had learned to eat grain. If the colt is taught, or coaxed, to eat a mixture of bran and oats before it is actually weaned it will go right on after a few days as if nothing had happened. By all means get the colt to eat. The best mixture I can suggest is bran and oats, and after a little while add shelled corn—about one-third each of the above in the ration. Be sure that the oats are sweet and clean and the bran nice and sweet. The colt's appetite about this time is very finical, and musty food may cause serious derangement. If the colt has not been broken to halter, it should be taken in hand at once. Stalk fields and straw-stacks are not fit places for colts the first winter. Keep them in the barn, and during pleasant days allow them the freedom of the barn-yard or some near-by field for exercising. Many contend that in the stalk fields and pastures is really the best place to winter the colt, for by such treatment there is no likelihood of making a hothouse plant out of him. We do not believe in coddling a colt or any other young animal, neither do we consider it a good practice to run the young colts with the older horses and cattle in the stalk fields. Ample exercise must of course be allowed, or even insisted upon, but aside from this, careful feeding and good shelter are the things which will keep the young colt growing and in thrifty condition.—L. C. Brown.

Grays Outsell Blacks.

That the black Percheron stallion should outsell and outclass the dapple gray Percheron; that black is the favorite color of the American buyers, has never been satisfactorily explained to The National Farmer and Stock Grower, and it appears that others are also of the opinion that the Percheron popularity was gained by the dapple gray horse. Dr. A. S. Alexander, a competent horse market authority, says: "It has well been said that 'a good horse is a good color,' but there is some discrimination against 'washy' colors, pink noses, 'flea-bitten' gray, white and 'mealy' bay horses. A solid gray color, on horses of 'French blood,' will outsell black by $50 or over that figure in some instances. Carriage teams sell best when matched as regards color as well as other requisite points."

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

Clip Your Horses in the Spring

It Pays—Clipped horses look better, feel better and do better work—Clip

With the Stewart Ball Bearing Clipping Machine

The only ball bearing clipping machine made. Do not buy a frail, cheaply constructed clipping machine that will last you only a season or two, and give trouble all the time, when you can get this splendidly made, enclosed gear ball bearing machine for less than $2.00 more. Every gear in this machine is cut from solid steel bar and made file hard. They all run in an oil bath, so friction and wear are practically done away with. It turns easier, clips faster, and lasts longer than any other clipping machine made.

WE GUARANTEE IT FOR TWENTY-FIVE YEARS.

Price all complete, is only $7.50. Get it from your dealer or send $2.00 and we will ship C.O.D. for balance. Write for our big free catalogue.

Try this machine out side by side with any other machine on the market, at any price, if this is not worth three times as much, send it back at our expense both ways, we will refund every cent you paid. Send today.

To the Best Market, Where Business is on the Up-grade; Where There is the Greatest Competition.

Concentration of Horses and Mules.

Undoubtedly it is to the interest of the horse and mule trade to make a grand concentration of horses and mules at one market for the purpose of bringing the producer and user as close together as possible. All the

expenses of sale and expenses of transportation, expense of delay, expense of sorting and selection have to come out of the horse or the mule. The market must be in a good central situation or some of those either buying or selling or both must become dissatisfied. The mule is not always shipped to market in perfect condition, or the horse with a finished education. Many horses need working and feeding after arriving in market, and the mule dealer cannot do much business unless he can buy mixed loads of half-fat mules and make them better than when he received them. The market must necessarily include horse and mule dealers who are in a position to take the unfinished product and fit it for market. The mixed loads that come in are entirely different from the classified loads that are shipped out. The ideal horse market of the future will receive and ship not less than 4,000 to 5,000 horses and mules a day, and that is more than all the stock yard markets are handling at present.

For fifteen years a contest for supremacy has been going on between a number of horse and mule markets. That contest bids fair to be decided in favor of St. Louis. In the beginning Chicago had the advantage in numbers and has lost it; Kansas City had its market well organized when St. Louis was scattered over the streets of the city; the Far West claimed to sell the range horses, but they never sold satisfactorily anywhere until St. Louis perfected the range-horse auction.

The horse and mule trade has not been without drawbacks; it has not been a continued increase of receipts and sales; but St. Louis has surely been coming to the front. Recent action on the part of Kansas City people amounts to an open confession of disaster. Two men left that market and left demoralization behind. The principal Kansas City firm is establishing itself at the National Stock Yards, not inside, but near enough to obtain benefits of location. Not one barn, but several are under construction. It looks as though the Kansas City trade will be added to St. Louis market, and another step towards the grand concentration of horses and mules is undertaken. St. Louis has the location and the facilities and Kansas City furnishes the undeniable evidence to prove it.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,

Veteran Commission Salesman, General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Do not forget us when you wish to know anything about either the Sheep, Hog or Cattle Market or future prospect.

Don't hesitate to write or ship to

James H. Campbell,

National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

Shire Horses Booming.

That draught horse breeding is booming is plainly shown by the result at a public sale held by Trumans' Pioneer Stud Farm, in Bushnell, Ill., when twenty-six Shire brood mares, young and old, brought $22,750, an average of $875. This is the highest average on record in America by more than $100 per head. The Iowa State Agricultural College paid the top price, $2,000, for Wrydeland's Starlight, an imported mare by Bury Blood Royal, that won the championship at the recent International Horse Show in Chicago. Three draughters by this sire realized $4,725, an average of $1,575. Messrs. Truman have just received another importation of first-class Shires and Percherons.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

A Horse and Mule Report.

Holland & Nugent Bros., of the St. Louis National Stock Yards, report that they sold 551 horses at their last auction in January. It was their best sale so far. They report chunks from 1,200 to 1,500 pounds selling extra well. Plain, little, thin horses sold hard. Mules fifteen hands and up were selling well, but small mules have to be bought 10 to 15 cents lower to pay out in the market.

Handy Little Cattle.

At the St. Louis National Stock Yards, February 1st, thirty head, 966-pound Arkansas steers sold at $5.15 per 100 pounds, and another bunch, 818 pounds, sold at $4.65 per 100 pounds; twenty-four head Tennessee steers, 751 pounds average, sold at $4.10; twenty-four head, 885-pound Mississippi steers sold at $4.65 and a smaller bunch, 824 pounds average, sold at $3.80. On the same day a load of handy native butcher heifers, 719 pounds average, sold at $5.60 per 100 pounds.

Quarantine Cattle at St. Louis.

On the last Monday in January, at the St. Louis National Stock Yards, 1,266-pound meal-fed steers from Lancaster, Texas, sold at $5.55; from Sweetwater, Texas, 1,024-pound steers at $5.30; and 1,060-pound steers at $5.15; from Vernon, Texas, 865-pound cows at $3.50; also 981-pound steers at $5.00; and 1,300-pound bulls at $4.00; from Muskogee, Okla., fair, 1,210-pound steers at $5.10; and 963-pound steers at $4.50; from Broken Arrow, Okla., 1,035-pound steers at $5.25; from Weleetka, Okla., 957-pound steers at $4.75—all quotations being at the price stated per 100 pounds.

In January, St. Louis received 7,464 more horses and mules than Chicago. St. Louis received 16,853 and Chicago 9,389, and Kansas City 7,877.

McFARLANE COMMISSION COMPANY.

HORSE and MULE COMMISSION SALESMEN

AUCTION EVERY **MONDAY** IN THE YEAR.

McFARLANE COMMISISON COMPANY,
NATIONAL STOCK YARDS, ILL.

A Good Team Sold.

Heiman & Kirk, of the St. Louis National Stock Yards, recently sold to go to Houston, Teaxs, a fine team of 16½-hand bay horses weighing 3,300 pounds for the pair. They classed as fire horses and sold for $630 at the yards. They make a business of soliciting and selling good matched teams for business uses. Address, James Kirk, National Stock Yards, Ill.

The Monday Horse Auction.

The McFarlane Commission Company continue to hold auction sales of horses every Monday at the St. Louis National Stock Yards. Mr. W. R. McFarlane, however, is retiring from the business, surrendering the management into the hands of John K. Maxwell, who has assumed general management. John K. Maxwell is son of Joseph A. Maxwell and brother to George and Frank Maxwell, all identified and largely instrumental in the upbuilding of the market. He is

Mr. JOHN K. MAXWELL, successor to Mr. W. R. McFARLANE as general manager of the McFarlane Commission Company.

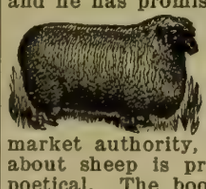
an expert horse and mule man from youth to manhood and has had thorough training for the position he now occupies. The other members remain the same. Mr. McFarlane will continue to be at the market during the season. Robert Lee (Bob) Hawkins will officiate in the auction ring, and S. B. Howell and Eddie O'Connell will also aid in handling the horse end of the business. Lan B. Morris will be in charge of the mule commission barn. Col. Howard will cry the horse auctions on Monday, as in the past, and Mr. Frank Mulholland will have charge of the office. The same efficient, reliable service is assured the shippers. The St. Louis horse and mule market is on the up-grade, and the Monday auction is a considerable factor in the advance movement.

Horse Market Prices.

It is very difficult to quote horse prices of the same age and weight; one can be old, blemished and inferior; hard sale at $60; and another can be a nice driver quickly sold for $250. Plugs are selling at $15 to $40. Southern horses have to be common at $45 to $55. They are fair at $60 to $85, and good at $90 to $110, and toppy horses at $100 to $150. Drivers sell at $125 to $250, according to age, color, size, gaits, action and condition. Eastern chunks are usually quoted at $100 to $155, with 1,300 to 1,400-pound chunks at $150 to $185. Common draft horses are quoted at $125 to $160; good at $165 to $200; and strictly extra at $210 to $265. A fine, big, showy draft horse, 16.2 hands, weighing 1,800 pounds, sold for $410, and went into a brewery team, being made up for the show ring.

"At the Sign of the Golden Fleece."

An article on sheep husbandry entitled as above has attracted much favorable attention, and because of the great demand has been reprinted in the form of a booklet. The article was written by Mr. John Clay, of the firm of Clay, Robinson & Company, and he has promised us that he will



send out a free copy to any of our readers who may write for it. Mr. Clay is a great sheep-raising and market authority, and all he writes about sheep is practical as well as poetical. The booklet contains several of the most beautiful pastoral pictures we have ever seen. In writing of a copy of the "Golden Fleece," please address Clay, Robinson & Company, National Stock Yards, Ill.

Beef Cattle Market.

Prices of beef cattle advanced during the last week in January at the St. Louis National Stock Yards. Fancy beef steers, 1,300 to 1,500 pounds, were quotable at $6.75 to $7.10; good to choice beef steers, 1,300 pounds up, $6.00 to $6.75; medium to good steers, 1,100 to 1,250 pounds, $5.00 to $6.00; choice to fancy yearling steers, any weight, 900 to 1,100 pounds, $6.25 to $6.75 per 100 pounds; good yearlings, $5.40 to $6.20; common to fair yearlings, $4.00 to $5.25 per 100 pounds.

Missouri Sheep and Lambs.

A few of the best sheep and lamb sales at the St. Louis National Stock Yards, late in January, included for Matt McKinney, Randolph county, Missouri, 127 head Western lambs, 73 pounds average, fed by himself, at $7.65 per 100 pounds; and 53-pound yearlings at $7.10; E. W. Jones, $7.65 per 100 pounds; and 83-pound clipped Western yearlings, 76 pounds average, sold at $6.00 per 100 pounds; Starr, Affleck & Co., Audrain county, Missouri, 498 Western yearlings, 84 pounds average, at $6.90; J. W. Clardy, Nodaway county, Missouri, 232 fancy Western lambs, 82 pounds average, at $7.80 per 100 pounds; I. W. Caldwell, Shelby county, Missouri, 108 head Western yearlings, 78 pounds average, $6.25 per 100 pounds; D. S. Sharp, Monroe county, Missouri, 139 Western yearlings, 63 pounds average, at $6.65; Charles Householder, 118 head Western yearlings, 90 pounds average, at $6.60 per 100 pounds. These sales indicate an excellent market.

Valuable Market Information.

Messrs. Godair-Crowley Commission Company, of the St. Louis National Stock Yards, issue special market circulars. This firm is enthusiastic in regard to the record of the St. Louis market, which is very satisfactory both in regard to increased receipts and selling activity. Messrs. Godair-Crowley Commission Company cordially invite all stock shippers to communicate with them for the purpose of getting on their list to receive their regular market reports. Address, Godair-Crowley Commission Company, National Stock Yards, Ill.

Fine Mules at St. Louis.

On the last Tuesday in January, R. R. Buckner, of Auxvasse, Mo., sold a car-load of big mules for $245 around, the high price of the season at the National Stock Yards for a car-load lot shipped in from the country. He also had another load of mules on the same day's market that sold for $225 apiece.

Closing Sheep and Lamb Prices.

At the closing day of January, at the St. Louis market, good to choice lambs were quotable at $7.00 to $7.65; fair to good butcher lambs, $6.00 to $6.90; culls at $3.00 to $5.00. Good mutton sheep were selling at $5.00 to $5.40; fair grades of mutton ewes, $4.25 to $4.90. Stock sheep were selling at $2.50 to $3.75; and bucks at $3.25 to $4.00 per 100 pounds.

Stock Cattle Trade Increasing.

St. Louis is becoming greater as a stock cattle and feeder market. The demands are larger and receipts more regular. The total sales have increased 1,500 to 2,000 a month over previous records. At the close of January, stock cows were selling at $2.25 to $3.00 per 100 pounds; inferior stock heifers, $2.50 to $2.75; fair to good stock heifers, $2.85 to $3.25; inferior light stock steers were selling at $3.50 to $4.00; and good stock steers, $4.25 to $4.75; feeding steers, 1,000 to 1,100 pounds, fair to medium, $3.90 to $4.50; and good to choice, $4.65 to $5.10 per 100 pounds.

The Thursday Horse Auction.

Said Mr. Tim Holland, of the firm of Holland & Nugent Bros.: "I am glad we discovered the merits of the horse and mule market at the St. Louis National Stock Yards in time to secure the Thursday auction before the rush from Kansas City began; in fact, we congratulate ourselves that we led the procession. The Kansas City people are coming here simply because it is the best location. Shipping out fifty loads of horses and mules a day is only ordinary business for this market. We have organized this firm to do a large business. Nugent Bros., who have joined me, have an international reputation as high-class horsemen. We have every confidence in the growth of this market. Kindly say that we send out special circulars giving up-to-date information to buyers or shippers. We will be glad to place the names and addresses of horsemen on our mailing list."

Female Butcher Cattle.

At the St. Louis National Stock Yards, on February 1, 1909, common canning cows were selling at $1.00 to $2.35 per 100 pounds; inferior cows, classed as cutters, $2.40 to $3.25; good to choice cows, $4.00 to $4.60; and fancy beef cows at $4.75 to $5.00; common to fair butcher heifers, $3.00 to $3.75; medium to good heifers, $3.75 to $4.75; good to choice heifers, $4.75 to $5.70; and choice to fancy heifers, $5.75 to $6.25 per 100 pounds. All fancy heifers are quickly snapped up by the buyers.

The Sow That Raises the Pigs.

We are now up to the time when the sows which are to raise the early litters must be bred. Here is where so many breeders fall down. The selection of the right sort of sows means the success of your next hog crop. This selection should have been made several months ago, but not many do that, preferring to wait until about breeding time and then do it. If these sows have had the run of the feed-yards, better get them out of there and cut down their corn allowances and increase the alfalfa, clover and bran portion. The essential thing, after the sow is bred, is to keep her thrifty, but not overfat. We heard an old stockman say last winter, at a Farmers' Institute, that the brood sow should be given ample range all the time, and after she was bred she should be fed plenty of corn. That sort of handling will make nice-looking sows, but they are never prolific, and the pigs they do farrow are unthrifty and hard to keep alive. Feed the sow rationally. Young pigs are not made out of corn, hence feed the mothers such feed as will keep themselves in good condition and at the same time supply the material necessary to frame the young. We have the best success in handling sows this way: After the sows are bred they are allowed the run of the pastures during the daytime. They are comfortably housed at night and none are allowed to sleep out around the straw-stacks. This habit of sleeping in their houses should be well fixed as soon as possible. About two weeks before the sow is due to farrow she is put up in an individual pen and kept there until her pigs are a month old. With some sows it may take a week or more to get them quieted down so they won't fret. Be patient and be quiet. The sow must be contented by the time she farrows, and this calls for quiet, gentle handling.—L. C. Brown.

Fakes and Insanity.

The poultry press is talking about five and ten-thousand-dollar beauties. Considerable of this is fake and the balance is insanity. A hundred dollars is a big price for the best chicken in America. The whole legitimate chicken business is on the bread-and-butter basis of egg and meat production.

So far as anyone is able to prove otherwise, it is safe to assert that any dozen Leghorn fowls taken at random will lay as many eggs as any dozen hens of the same breed which may be selected from any flock or strain in the land. The laying breeds are defined to a certain extent and the large meat breeds also, but when it comes to specifying particular birds as being worth ten thousand times more than a fifty-cent chicken, it is more than likely the fifty-cent chicken is worth the most money.

If you are engaging in the chicken business, adopt a breed and stick to it. Pay $5.00 each for hens and $50 for a cockerel, if necessary, to get a start. Don't be afraid to pay a good price for a setting of eggs, because in a year or two the expense will be forgotten in the increased number of the good stock you will own; but when people talk about foolish figures, remember that 25 cents a dozen is above the average price for eggs, and no one can guarantee a pullet to average over twelve dozen eggs a year, and remember also that an eight-pound fowl at 15 cents a pound is only $1.20.

In many kinds of blooded stock raising, fake sales have had their turn and done their breeds injury. Every-day, legitimate sales don't excite anyone, and no one expects more than they are reasonably likely to get, but the unsupported, extravagant claims for this hen and that hen that it is worth up into the thousands is only appealing to the monetary idiot who does not understand that the final end of the chicken is the axe, and that eggs are sold by the dozen.

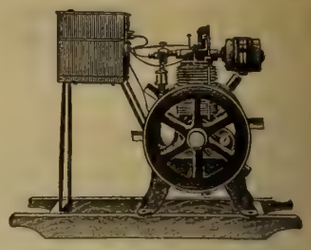
Some day we hope to see the great poultry associations make the egg producers put up the evidence or shut up and give us carcass competitions that will show whether the breed can produce a chicken that will sell in the market. At present the whole fabric of chicken fancying rests upon feathers and shape, and a first-prize bird may never have laid an egg, and if killed and dressed and exposed for sale might sell at the tail end of a market, where quality and flesh make up the price. As we stated at the outset of this article, considerable is fake, the balance is insanity, and the poultry associations by not using utility tests are responsible for the opportunities given to the fakir.

Preserving Eggs.

A correspondent in the Bloemfontein Post of South Africa gave the following recipe for preserving eggs: Take the eggs while still warm and gently rub them all over with butter—not a great deal and not thickly, but enough to close all pores—then pack in coarse salt. On this the Harrismith paper states that a few years ago a lady residing in that town buttered several dozen eggs in the above way and packed them in salt in a barrel. In due course the eggs were used, and two years later the barrel was again requisitioned for the same purpose, but in packing away fresh eggs, two of the former eggs were found. On breaking them open, it was discovered they were as fresh as newly-laid eggs, and they were used in a pudding that day.

An Excellent Cleaning Fluid.

"The following recipe contains nothing injurious, never takes out the stiffness from fabrics (as from veilings and chiffon), and is at the same time a disinfectant and sure preventive of moths," says Woman's Home Companion for February. "Sulphuric ether, one dram; alcohol, two drams; chloroform, one dram; oil of cloves, one dram. Three times this amount to one quart best gasoline. The oil of cloves may be omitted if desired, as in cleaning anything white it has a tendency to turn it yellow. To clean a dress skirt, just double or treble the amount of these ingredients. Men's trousers can be soaked over night in this, and when pressed are as good as new. It is fine for ostrich plumes, as it never takes the curl out. Be sure to shake out in the air until thoroughly dry. Old laces clean beautifully with this fluid. Let the article to be cleaned lie in the liquid for a while, according to how soiled it is. Articles can remain in all night without injury to the fabric in any way. By allowing to settle, and pouring off very carefully, one can use the fluid over and over again."



Be Sure To Get This.

Every reader of The National Farmer and Stock Grower who is interested in farm power of any kind should send today for our catalog of the

White Lily Gasoline Engine.

It is the best, simplest and cheapest Three Horse Power Gasoline Motor in the world. Four cycle—air cooled—automatically governed.

It's the Engine You Need.

Will do more work with less trouble than any other Three Horse Power Engine. Runs smoothly without jar or vibration. Absolutely dependable. Get our prices and special proposition. Write today.

HIGH GROUND.

The moral ground some men are found
To take is high enough;
But, after all, the highest ground
Is frequently a bluff.
—Boston Transcript.

Low Fares to the Cheap Lands

Feb. 2 and 16 March 2 & 16

Plan to go on one of these days—the trip will not cost you much. These special low-fare tickets over the Rock Island-Frisco-C. & E. I. Lines will allow you to go one way and return another, without extra cost. You will see more of the Southwest than you could in any other way, and can better decide where to locate.

Ask the ticket agent to sell you a ticket over the Rock Island-Frisco-C. & E. I. Lines, either through Chicago, St. Louis, Kansas City, St. Joseph, Memphis or Birmingham, according to your location.

If you will tell me where you want to go, I will tell you the cost of a ticket and send you a map-schedule.

I will also send you some interesting books about the Southwest. They will inform you of opportunities waiting for you there, and will open your eyes to new possibilities. Write for free copies today.

Rock Island SOUTHWEST FRISCO

Breaking the Camel's Back.

When eggs sell at wholesale in St. Louis at 28 to 30 cents a dozen, the West End retailer has to get 38 to 40 cents a dozen to pay out. It is not often that eggs are very high in price, but the higher they get at wholesale the greater the difference appears to be between the wholesale and retail price of eggs in the city neighborhoods where there is an expensive order taking and delivery system, including liberal credits and some slow collections. It is the same with the meat trade; a cent a pound advance in the quarter of meat by the wholesale butcher puts several cents a pound on choice cuts through the retailer, simply because the less desirable meats will not stand the advance, or rather the people are slow to buy the cheaper cuts at higher prices. Therefore the retailer puts up the prices where it will do him the most good.

Although we are not disposed to blame anyone for taking all they can get—and if we did they would not mind it—it is very certain that it is the increase in city populations, the increase of the cash-paying, moderate-priced buyers that give stability to the regular trade. In districts where it is fashionable for the purchaser to carry his own or her own basket to the store, pay the cash over the counter and carry home the goods, the price is nearer to bedrock than where the credit system prevails, and the retail dealer is just as well satisfied with the result, because he has no expensive delivery system and he does not have to charge up a nice little 10 per cent. to cross on collections.

The fact of the matter is that the high prices of food products are gradually bringing home to the thrifty housekeeper the absolute necessity of cutting away some of the margins between the price the farmer gets in market and the price the consumer has to pay. The short cut to this is the cash in hand and the basket on the arm.

This is pretty hard on the Merry Widow hat and the Directoire gown, and it is also rather hard to have to send the good man out marketing after his return from a hard day's work, and yet there is no denying that it is the only way that the mass of the city people can live.

Even then there are limitations on what people are able to pay. We notice in the Egg Reporter that when first-grade eggs in New York reached 40 cents at wholesale it broke the camel's back. This means that only a few could pay the price because it would certainly mean 50 cents a dozen for eggs in the fashionable quarters of New York City, and would also mean to get along without them, at lower prices, in the "cash and basket districts" of that great city. Storage eggs which were put in store at 17 and 18 cents were bought out and sold at wholesale at 27 to 27½ cents; and it is a very good thing that there are several grades of eggs, otherwise many people could never eat any of them, and the one top grade would never sell high or never at all be sold.

Growing out of the increased population in this country we hope to see more hand baskets carried to market, and we also hope to see a closer communion between the actual producer and the wholesale market. In both directions much has been done, much more than those who are not investigators have any idea of. We will have to find means to secure good and remunerative prices for farm products without breaking the camel's (the producer's) back.

He Had the Winner.

Hiram Squashly laid down his newspaper with a loud chuckle.

"Ma," he said to his wife, "them folks in Noo York is jest crazy."

"I allus knowed that," she replied, as she thought of the day she spent two hours trying to cross Broadway.

"I mean," he explained, "they're jest crazy on them Marathon races. You know I wuz tellin' you 'bout 'em last night."

"Waal?" she queried.

"They've been holdin' Marathon runnin' races, Marathon skatin' races, Marathon walkin' races, an' all sorts o' Marathons."

"I do hope, Hiram, you ain't plannin' to run in one of 'em. You know how your heart acted when the calf chased you round the lot."

"Don't you worry a minit 'bout that, ma. It just give me an idea."

"What be you goin' to do?"

"Why, I'm goin' to git up a Marathon contest right in this county, by gum! It'll be a Marathon sleepin' contest, an' if our hired man don't win it by sleepin' twenty-six hours without even turnin' over once, then I don't know apples from 'taters!"—New York Herald.

Breeding For Egg Production.

For eight years the Maine State Experiment Station has been trying to breed a strain of egg producers that would gain a little on egg production every year or every few years. They began with an average of 136.36 eggs per hen per year; the next was 143.44; and the next result was 155.68. Thus far appears a happy result, and if this had continued we would soon be drawing upon the Maine Experiment Station for the foundation of all our flocks; but the next five years the hens produced opposite results, and the records were 135.42, 117.90,, 134.07, 140.14 and 113.24, respectively. In other words, the first four years the average was 142.72 eggs per hen per year, and the last four years the average was 126.34 eggs per hen per year.

We will not enter into the full particulars of this experiment at the present time, for the reason that we have not had the opportunity to go into all the details; the figures, however, given without comment upon methods pursued, are very interesting. At the Maine Experiment Station, in our opinion, they cannot compete in egg production with the average producer in the Middle and Southern States. The barn-yard pullet in Texas, Arkansas or Missouri will easily average 144 eggs per hen per year, if not kept in too large numbers and allowed the free range of the homestead; therefore the Maine average of 135 eggs per hen per year from cooped-up hens does not look bad to us.

A Corn Planter Attachment.

It saves the seed, insures bigger crops, plants every hill just the right depth. The Century Adjustable Corn Planter Gauge will fit any planter shoe without boring holes. It is a planter attachment that very soon pays for itself. The circular explains directly what the attachment will do. See advt. of Century Gauge Co., La Crosse, Wis.

FREE Book of Facts and Figures On Roofing and Samples to Test

Write for this book today. Its suggestions will save you money and trouble if you are going to build or repair. We'll also send samples of ASBESTOS ROOFING, the only kind that protects buildings from fire; the only *permanently durable* ready roofing, which needs no painting, coating or attention of any kind. Other ready roofings have a felt foundation, made of shoddy, paper pulp, rags, wool, etc. Our foundation is *Asbestos*, the fireproof, indestructible mineral fibre—waterproofed and weatherproofed.

J-M ASBESTOS ROOFING

Let Us Quote Prices on any roofing material you need. We make all kinds of ready roofing and Asbestos Siding. Also J-M Roof Coating, the most durable compound known for making old leaky roofs tight again. *Get our money-saving prices and suggestions before you buy.*

Rural Co-operation.

[Written specially for this paper.]

Co-operation among farmers is in its infancy in the United States. In European nations it has already assumed large proportions. The difference is a natural one, due to the different ways of financing agricultural enterprises.

We read in the Consular reports that on the continent of Europe many hundreds of co-operative associations of various kinds are now in operation. These represent many tens of thousands of members and hold capital amounting to millions of dollars.

But in this country co-operative societies among farmers are little heard of, with the exception of the co-operative creameries, which have proved a great success, and the co-operative elevators, which appear to be proving themselves a great success.

Probably the first cause of this slow growth in this country is the way in which the land was secured here. It was homesteaded by some and by others purchased in large tracts by the means of money borrowed for that purpose.

In the early days of the settlement of the Prairie States the East supplied most of the capital. In the main the farmers that borrowed capital for the purchase of this land and for the equipping of the farms with buildings and stock, made money. The outlet for their products was so great that competition between individual farmers was little felt and is not yet much felt.

Competition is one of the great factors leading to co-operation. We see that in the business world, where the combinations are brought about to prevent competition. So long as men do not suffer from competition they pay little attention to co-operation.

The great Rochdale Co-operative Society in England, one of the most remarkable in the world, was started by some laboring men in one of the manufacturing towns, co-operating in the purchase of goods It will be observed that they were not well-to-do people, for people that are moving along in comfort do not care to bother themselves with the troubles of other people.

Even the labor unions have been formed to prevent the competition of laborers with each other. In the country, labor unions have not yet obtained a strong foothold, and all the suggestions for the hired men to organize have proved little effective and will do so while labor in the country is scarce and the hired man is not in serious competition with other hired men.

This indicates the natural lines along which co-operation moves. But it is a desirable arrangement and should be fostered. An intelligent people should recognize the value of co-operation as a great and potent ally. We ought not to wait for hard circumstances to drive us into a course that reason dictates.

The conditions are favoring co-operation among the people that sell things to the farmer, but do not favor co-operation among the farmers. The farmers are therefore buying their supplies from people that co-operate both in the furnishing of the materials and in the making of prices for them.

This is to the lasting advantage of the farmers. The writer of this article overheard the conversation of some Chicago men who have on foot a plan to bring all local implement dealers in the rural districts into a general understanding as to what prices shall be asked for farm implements. One man remarked: "Of course this will mean an increase in price to the farmers, but it will insure the dealers against doing business at a loss." Whether the scheme will work out remains to be seen. More co-operation among farmers is desirable.

PRACTICAL BARN PLANS.

This is the great book we have advertised for a year. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor. There are 156 pages, 8x10½ inches. The publishers claim that the first copy cost $5,000. The price of this book is One Dollar, out of which we are allowed a small commission, and for this we will credit one-year's subscription to The National Farmer and Stock Grower. Send in One Dollar and we will send you a copy of the book post free, also the paper for one year. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Credit Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of the National Farmer and Stock Grower will be glad to furnish the paper three years for **One Dollar**, the same to be payable at the **end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

Scours in Young Pigs.

One of the complaints that is most frequently heard among pig raisers, especially when the weather is cold and wet, is the scours, and there is nothing more detrimental to the growth and lives of the pigs than these attacks of scours. They should be taken in hand at once and the cause removed and the pigs given relief, if possible.

A frequent cause is damp bedding and catching colds. It is not an easy matter at this season of the year, with these weather conditions prevailing, to keep the beds dry and clean, and this is one of the necessities to prevent scours. We necessarily have to be on guard and vigilant at all times in order to prevent these conditions occurring. If the mother of the pigs takes on a cold, either by exposure or lying in a draught, she will give it to the pigs through her milk, and the pigs will have to be treated through the sow for quick relief.

While there are other causes of scours in young pigs, these are the prevailing causes, yet overfeeding the sow or a sudden change in the feed sometimes results in scours, while spoiled fruits or acids thrown in the slop and fed to the animals will result in serious scours.

Scours is the worst enemy we have to contend with in raising pigs, and the best plan is to use all preventives possible. I am very careful in watching the feeding, letting it be regular, moderate in proportion and make no violent changes. A change of feed should be made gradually. I watch the pens and bedding, catch what little sunshine there is for them and keep things moving along smoothly and properly.

However, should any of my pigs get the scours, even after these precautions, I clean out the pen thoroughly and sprinkle air-slacked lime over the floors. I keep it cleaned up every day, supplying fresh bedding. I take one tablespoonful of copperas, dissolve it, and put it in a gallon of slop or milk and give it to a sow with eight pigs. If the sow has a greater or less number than eight pigs, I give in proportion. For years this has proven a valuable remedy with me.

Some people check the scours by feeding charcoal made from corn cobs, while others in obstinate cases give three drops of laudanum in a little milk to effect a cure.—Wm. H. Underwood, Ozark, Ill.

The Truth About Tonics.

A stock tonic is not a medicine, a cure, a remedy, but an aid to the digestive and assimilative processes of nutrition. It is thus a preventive of disease. A rightly-compounded stock tonic simply supplies the animal artificially with certain necessary elements for the perfect regulation of the processes of nutrition, just as does the supplying of salt in the same way.

Note that we say a rightly-compounded tonic. For either an excess or a lack of certain ingredients depreciates the value of a tonic just as an incorrectly-balanced feed lowers its nutritive value.

There is no secret about the composition of the well-known stock tonics. Indeed, most states have laws requiring that the ingredients of the contents be plainly printed on every package.

The exact proportion of certain elements differ in different brands, but the approximate proportions are known to most stockmen, or can be obtained from the National Department of Agriculture, or from the different State Experiment Stations.

The question then arises, why cannot a farmer make his own tonics? He can, just as he can make his own clothing, if he can spend the time, get the correct proportions and accomplish the most effective combination. For it must be remembered that the right amount of each material simply put together in some sort of a way does not make a suit of clothes; no more does it make an effective stock tonic. Not only must the proportions be correct, but the condition of each ingredient must be right, and its consistency such that it will properly blend with all the others. The makers of stock tonics have the proportions and the proper consistency of the elements "down fine," and the thrifty stockman knows that he is not only buying the right material in a reputable stock tonic, but he is also buying the skill and experience it takes to compound the tonic correctly.

The Original Chick Feed Man.

The W. F. Chamberlain Feed Company, well known as the manufacturers of the famous "Chamberlain's Perfect Chick Food," is making a most attractive offer to poultry keepers, large and small. Mr. W. F. Chamberlain, the head of the company, is a veteran and successful poultry man and has conducted for many years an extensive poultry farm near St. Louis. His laying stock is of the highest class of tried and proven breeds, and the reputation for business integrity and straight dealing which he has acquired and sustained during his long business career insures the genuineness of any representation he makes. Any prospective buyer of eggs for hatching purposes will make no mistake in communicating with him. His fowls are pure bred and his guarantee of quality is the result of long experience in his line. See his advertisement.

Best Paint in the World Body and trimmings, two coats. Your choice of colors. Then you will not need to paint again for about 8 years. That is 53 cents a year for improving the looks and value of your property. This low priced and long lasting paint is only procurable of us. It is the highest grade paint in the world. We have other paint much cheaper than this and much cheaper than any other house can sell, as low, in fact, as $2.50 for a house like this. But it will not look as good nor last as long as our reliable "Tower" paint at $4.24, though fully as good as other firms sell for their best paint at a much higher price.

Before you buy get our big 1909 Paint Book and Color Card

It tells you how to estimate cost of paint for any building, how to combine colors, how to save money and do the job right—in fact what you ought to know about buying and using paint. Color Card shows about 125 actual samples of our paint.

What Size Building Are You Going to Paint?

Let us tell you in dollars and cents our low price for paint enough for body and trim two coats, to do the job in a perfect manner and at least cost. We make no charge for this information.

Get Our Paint Book Now. Figure out the cost, best colors, etc. A copy will be sent free. Just write us a postal card or letter and say: "Send me your new House and Barn Paint Book and Color Card," or cut out this ad., write your name and address on the margin and mail to us.

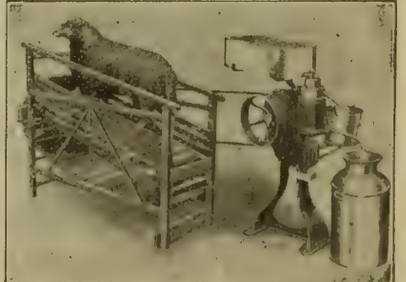
MARY'S LITTLE LAMB.

When Mary's little lamb followed her to school, the teacher did a common-place, if natural, thing in turning her out; it would have been much more useful to put the lamb to work. Perhaps the lamb wished to learn how to do something useful and therefore followed her mistress to the teacher. Had that teacher been reared on a farm, she would have been familiar with the ingenious **Sheep Power** made by the **Vermont Farm Machine Company** to operate the U. S. Separator and would have trained the lamb to it.

Thes **Dog, Sheep** or **Goat Powers** are designed for animals weighing from 150 to 200 pounds, and are low-priced, durable, efficient and altogether satisfactorily practicable. There is so little friction in operating the U. S. Separator that the animal hardly realizes any physical effort in walking on the tread. Full details regarding these Powers will be found in their catalogue, which will be sent free on request.



For seventeen years the U. S. Separators have been the leaders in their field. They are most effective, holding the world's skimming record for securing the greatest percentage of butter-fat from the milk; are so durable that with ordinary care they never wear out, and are operated with little labor. So great is their value to the farmer that they soon pay for themselves in the money they daily save. Indeed, this question of economy is so generally recognized to-day that it does not need to be argued. A U. S. Separator is an essential part of the equipment of ever dairy farm. He who does not use it is doomed to a heavy handicap in the business of farming. Even those milk producers who sell their whole milk to cities for table use have learned that the use of the U. S. Separator is essential in order to properly clean their product before it has to undergo the scrutiny of Health Board Inspectors. Send for Catalogue No. 125 to the Vermont Farm Machine Company, Bellows Falls, Vt., for money saving facts and figures.

LAMBS FOR THE EARLY MARKET.

An Industry Flourishing in Virginia and Especially Suitable For the Great Southwest, Including Missouri, Arkansas and Oklahoma.

At the live stock markets of Washington, D. C., Baltimore and Philadelphia many lambs are received from planters in the state of Virginia and are sold at good prices. The leading sheep-growing counties are Augusta and Loudoun, although Highland, Pulaski, Wythe, Grayson, Tazewell and Russell counties are pretty strongly represented by lamb shipments to market.

The Virginia Agricultural Experiment Station has recently issued a bulletin giving particulars concerning this industry, and it begins by saying that in the counties where there are the most sheep the lands are the highest in value, the inference being that the sheep improve the land.

Farmers in Missouri, Arkansas and Oklahoma are in about the same situation in regard to St. Louis as a market as the Virginians are to Baltimore and Philadelphia, and there is not so much difference in the matter of climate; if anything, the Virginia climate is more severe than the south half of Missouri and the states of Arkansas and Oklahoma.

From the Virginia bulletin we gather and submit the following information: The percentage of lambs dropped is 111, and the percentage of lambs saved is 81½.

They breed the ewes about September 15th and expect lambs about February 15th, and expect to have their lambs on the June market.

Of the lambs lost, three out of four could have been saved by proper care and attention, therefore it is possible to save and market a lamb for every ewe.

They consider one ram to fifty ewes the right proportion, and consider it advisable, where they can use different small pastures, to keep fifty sheep to the flock.

They consider that any wethers running with a ewe flock are out of place and a disadvantage to all concerned.

The bucks are turned into the flock only at night. In case of failure to breed, ewes will come in season again in eighteen to twenty-one days.

The Virginians use pure-bred rams of the mutton breeds; and Shropshires, Southdowns, Hampshire, Oxford, Dorset and Cotswold are mentioned.

The ewes are largely from the original mountain sheep of Virginia, and as the Virginia farmer often sells his lambs very close, and some of the ewes, they are continually buying stock ewes from Tennessee.

Breeding ewes usually range in age from two to eight years, but some good, reliable ewes are kept longer for the reason that Virginia has a difficulty in keeping up the supply of breeding ewes, especially as the mutton market is continually offering a premium for the ewes as well as the lambs.

They lose a number of sheep from dogs, but it is a small percentage and is included in the difference between the number of lambs saved and the number dropped.

Ewes are fed when necessary, and especially during the month before lambing. Clover, cowpea hay, soybean hay, corn silage, sugar beets, turnips, together with a little grain, constitute the ration. Lambs begin to eat cracked corn and oats at two weeks, and from that time forward they gain rapidly.

Many sheep are run and lambs are marketed without any shelter, but a shed that is closed on the north, west and east and open on the south is essential and necessary.

The difficulty in obtaining and keeping a supply of ewes is the only reason why Virginia does not increase in the lamb-raising industry. Farmers in Missouri, Arkansas and Oklahoma can buy ewes at the St. Louis or Kansas City Stock Yards, have them shipped in from Texas, New Mexico and Arizona, or even from the Western ranges of Wyoming. Ewes can be had at reasonable prices, and it is sometimes desirable not to buy them until they are bred or until it is time to breed them.

The Missouri, Arkansas and Oklahoma farmer can devote his time from January until August to his general farm work and receive the ewes in the fall. He can breed the ewes to lamb as early as his climate and surroundings will permit; he can feed the lambs for the earliest possible market; he can shear the ewes and market the fleece, and after the lambs are marketed he can sell them for more than they cost him in the beginning.

In the last twenty-five years this entire sheep and lamb industry has grown up. In the year 1880 the grand total of sheep receipts at four principal Western markets was less than a million head, whereas in the year just closed the receipts and sales were eight and three-quarter millions, and the actual demands of the sheep and lamb trade were not fully supplied.

The St. Louis market is especially in need of sheep and lambs, and the climate and grasses of the Southwest are suitable for producing the lamb for the early market.

Intestinal Worms

In horses, sheep, cattle and hogs are easily removed by the use of Cooper's Worm Tablets. They are sold by F. S. Burch & Co., Chicago.

A New Zealand Sheep Dog.

"A Smart Dog.—'Now I've got a dog here I would not take £20 for, you can believe me or not, but what I am going to tell you is true. I'll take my affidavit.' The speaker turned to the company of agriculturists assembled, determined to 'go one better' than any story that had been related. He went on: 'In the early part of last spring I lost six ewes, and could find them nowhere, until about three weeks after, when, as I was looking across my house to the edge of the moor opposite, about two miles away, I noticed some sheep. I got my telescope and assured myself that they were mine. I placed the telescope in a suitable position and made my dog look through it. After about a minute he wagged his tail and was off like a shot. In less than two hours he brought the sheep home safe and sound!' "—Farmers' Union Advocate.

The Callaghan Ranch Sold.

Old-time sheep raisers all remember the Callaghan Ranch, in Webb county, Texas, which used to produce a famous clip of light-shrinkage wool. When sold, price was usually quoted freely, as it always amounted to upwards of hundred thousand pounds. In recent years the ranch was owned by Hon. Albert Urbahn. This ranch, the ground only 125,000 acres of grazing land, has just been sold to a syndicate represented by Tom Coleman, of San Antonio, at a price mentioned as $700,000. This is an example of the saying that the best buyer for a Texas ranch is a Texas ranchman.

The Commissioners' Court of Coke county, Texas, has sold the county school lands lying and being situated in Cochran county, Texas, being 17,712 acres, to W. H. Laswell, of Parmer county, and R. I. Tubs, of Lubbock county, for the principal sum of $124,000, to be paid in installments in forty years. The school land tracts are some of the best properties in the state of Texas.

According to the Year Book of the Department of Agriculture for 1907, there were 54,970,762 sheep in the United States, and 77,582,000 in Argentina, South America.

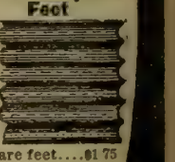
95 Cents Per Roll 108 Sq. Feet

Ready Roofing Galvanized RUBBER and ASPHALT

An entire lot of factory 'mill ends' of prepared roofing, strictly high grade, brand new at less than cost of manufacture. Two or three pieces of galvanized rubber or asphalt roofing in each roll of 108 square feet. This is $2 and $3 grades of roofing; it is made of wool felt, thoroughly saturated with water-proof composition of rubber, after which it is coated with hard rubber composition and galvanized between heavy iron rolls. It is suitable for all climates, all ready to lay. Only tools needed a hammer and jack-knife. This roofing will impart no taste to rain water and can be laid over old shingles. We guarantee every roll as represented, or money back.

Steel Roofing Only $1.50 per 100 Square Feet



We have 50,000 squares of Steel Roofing, size 2 feet 6 inches wide by 5 feet 6 inches long, (30 inches by 66 inches) at this price. These sheets were used about 30 days in connection with the manufacture of soap. They were never exposed to the weather or nailed.
Every sheet is clean and free from nail holes, and practically as good as new. It is extra heavy, from 24 to 28 gauge.
Every sheet is given a coat of our red "Gelatine" on both sides. It is a new discovery in paints and prevents rust.
Flat, per 100 square feet....$1.50 Corrugated, per 100 square feet....$1.75
Will last longer than light weight Galvanized Roofing. Just the thing for Barns, Warehouses, Factories, Sheds and Buildings of all kinds. Also for ceiling and siding. Satisfaction guaranteed or money back.
CATALOGUE of bargain building material, including pipe and fittings, bathroom and plumbing supplies, heating apparatus, home water supply systems, poultry netting, wire fencing, etc., FREE. Your name on a postal card will do.

Rural Public Opinion.

[Written specially for this paper.]

Public opinion in the country is as potent as in the city, and it is more quickly effective. In the cities no great improvement is possible without the education of the people along that particular line.

The same is true in the country, but in the country there is not much machinery for creating opinion, and opinion does not make or unmake except in the presence of strong educating forces.

We have an illustration of this in the slowness with which country schools improve. Legislature after Legislature has put into the hands of the farmers the power of improving their schools, but most rural communities know little of the existence of such laws.

Many of the laws that are favorable to the development of the rural communities have not been created at the demand of the farmers, but at the request of people other than those living on the farms.

There is one potent factor to-day in shaping public opinion in the rural sections, and that is the agricultural press. Yet this is but one factor and does not touch all the farmers by any means. This is perhaps in part due to the scattering of the circulation of paper over wide areas rather than localizing the circulation of individual papers in certain sections. It is a well-known requisite of the making of a good fire that the sticks of wood must lie close together, that one may help burn another.

The same is true of the subscribers of any farm paper. If the farm paper be a virile one, and have many subscribers in one neighborhood, an educational campaign entered on by the paper will cause the drawing together of individual readers into a common movement. The lone reader in a locality finds himself little able to start things to moving in the direction that he believes best.

For this reason the increase of circulation of good farm papers in the vicinities in which they have already obtained a foothold is much to be desired. The paper becomes a means of intercommunication.

To-day we need to educate public opinion in both city and country on some of the great questions of the day. One of the burning questions is the attendance of the farmer's child in the public or private school. Public opinion in the country, at least in Illinois, favors keeping the boys and girls out of school whenever the work on the farm presses.

At the Teachers' Convention held at Springfield, Ill., recently, it was shown that in some counties the ages of boys and girls graduating from the eighth grade in country schools are about the same, on an average, as the ages of boys and girls graduating from the city high schools. This means that the country schools are in their work about four years behind the city schools, in the higher grades.

These lost years the farmer's child never makes up. He is cheated out of the education that might be his. But rural opinion is so much against forced attendance that the compulsory educational law is a dead issue in the country.

Public opinion in the country needs to be educated along the line of consolidation of the small country schools. It is utterly impossible to make progress with the great multitude of schools too little to be effectively taught. There are to-day in the state of Illinois 10,613 schools having but one room. Many of these one-room schools have fewer than ten pupils enrolled. The obstacle to combine them has been the lack of public opinion favorable to this move.

Edison Phonographs are sold everywhere at the same prices

$12.50 to $60

Edison Amberol Records 50c
Regular Edison Records 35c
Edison Grand Opera Records, 75c

It is Mr. Edison's desire that a Phonograph should not only be cheap enough for everyone to own one, but also that everyone should enjoy the same advantage in purchasing it.

Wherever you buy an Edison Phonograph you buy it at the same price. The purchaser in the small country town has the same advantage as those who live in large cities.

Nothing else that you can buy will provide so much of the best kind of amusement for yourself and your family at such a trifling cost as

The EDISON PHONOGRAPH

It differs from all other sound-reproducing instruments because it was invented and perfected by Thomas A. Edison, and because it is constructed on a principle which is more nearly perfect than that used in any other instrument made for a like purpose.

The first Phonograph ever made was made by Mr. Edison, and from that invention was perfected the Edison Phonograph which today is considered the most perfect instrument for reproducing music, voice and other sounds.

For you the Edison Phonograph means constant and varied entertainment in your own home.

You can have any kind of music you like—your kind of music, the kind of music your family likes, the kind of music your friends like.

You may hear the songs of great singers, the music of great orchestras, the speeches of great speakers. You may hear your favorite hymns and the good old songs you've always enjoyed. You can reproduce the latest vaudeville hit, the popular songs that everyone is whistling, or the star part of a star opera singer, in your own home, to a circle of your own friends.

No method of spending an evening can be pleasanter. The Edison Phonograph is always there, always ready to be turned on; it is easily operated and the cost is slight.

Edison Amberol Records

Mr. Edison did not consider his Phonograph good enough with Records that played only two minutes, so he experimented until he produced a Record which will play four minutes. It is no larger than the other Record. It is played on the same Phonograph by means of an attachment which your dealer has. It more than doubles the enjoyment of the Phonograph. Music formerly unavailable for the two-minute Record, on account of its length, can now be heard in full and to better advantage.

Edison Records are made in Bohemian, Cuban, Danish, French, German, Hebrew, Hungarian, Italian, Norwegian, Polish, Spanish, Swedish, etc.

Even if you are not ready to buy at once, go to the nearest Edison store and hear this wonderful home entertainer, the Edison Phonograph. Ask the dealer for a catalogue of Phonographs and a catalogue of selections. Do not be misled by any other sound-reproducing instrument. The Edison Phonograph is the best for the home.

Thomas A. Edison

National Phonograph Co., 168 Lakeside Ave., Orange, N. J.

Kangaroo From Australia.

On December 23d the New York Produce Review said:

"T. Silz has received a consignment of twenty-nine kangaroo from Melbourne, Australia, and advices from the shipper state that he is about to ship 200 more. The kangaroo are expected to jump into favor here with the high-class hotels and restaurants, as it is popular in some European cities. This is the first time kangaroo have been received here for consumption and adds one more article to the long list of game foods which Mr. Silz has introduced into this country and which have since become so popular as to be found at all times on the bills of fare of the leading restaurants."

Most men are more prompt about paying a grudge than a debt.

Charcoal Purifies Any Breath

And In Its Purest Form Has Long Been Known As the Greatest Gas Absorber.

Pure willow charcoal will oxidize almost any odor and render it sweet and pure. A panful in a foul cellar will absorb deadly fumes, for charcoal absorbs one hundred times its volume in gas.

The ancients knew the value of charcoal and administered it in cases of illness, especially pertaining to the stomach. In England today charcoal poultices are used for ulcers, boils, etc., while some physicians in Europe claim to cure many skin diseases by covering the afflicted skin with charcoal powder.

Stuart's Charcoal Lozenges go into the mouth and transfer foul odors at once into oxygen, asborb noxious gases and acids and when swallowed mix with the digestive juices and stop gas making, fermentation and decay.

By their gentle qualities they control beneficially bowel action and stop diarrhoea and constipation.

Bad breath simply cannot exist when charcoal is used. There are no ifs or ands about this statement. Don't take our word for it but look into the matter yourself. Ask your druggist or physician, or better still, look up charcoal in your encyclopedia. The beauty of Stuart's Charcoal Lozenges is that the highest pharmaceutical expert knowledge obtainable has been used to prepare a lozenge that will give to man the best form of charcoal for use.

Pure willow and honey is the result. Two or three after meals and at bedtime sweeten the breath, stop decay of teeth, aid the digestive apparatus and promote perfect bowel action. They enrich the supply of oxygen to the system and thereby revivify the blood and nerves.

Sturat's Charcoal Lozenges are sold everywhere in vast quantities, thus they must have merit. Every druggist carries them; price, twenty-five cents per box, or send us your name and address and we will send you a trial package by mail, free. Address F. A. Stuart Co., 200 Stuart Bldg., Marshall, Mich.

New Varieties of Fruits.

It is a fact that most of the new valuable varieties of fruits have been accidents and have not resulted from well-planned processes of variety development. They have come as the result of discovery and not invention.

Generally, too, the fruit tree has been a seedling that came from no one knew what parentage. Often the fruit produced has been so different from the ordinary fruit grown in the neighborhood where the said tree was discovered that it has puzzled students of fruit history.

We have an illustration in this in the Wild Goose plum. A wild goose was killed and its entrails thrown out. In time where the entrails were deposited a plum tree appeared and produced good fruit that attracted the attention of the propagators.

The fruit of the plum tree was so different from all other known plums that it was given a distinctive name, and the family of Wild Goose plums came into existence. But the mystery is, where did the parents of this remarkable variety reside?

Wild geese are birds that fly fast and far, and there is no doubt that the stone that developed into the Wild Goose plum tree was brought hundreds of miles. But it was doubtless from a fruit that was the result of cross pollenization. The plum family require cross pollenization more than most any other kind of fruit.

A little further consideration of the subject convinces us that this seed must have been one of many millions of seeds from the same original locality. But this one only produced a fruit of such character that it attracted the attention of men, or that at least was discovered by men.

This leads up to the point that millions of seeds of anything must be sown to get a few remarkable varieties better than the original stock.

A few years ago the writer was walking through an orchard of more than twelve hundred seedling plum trees. He was in company with the man that had planted the seeds. The trees had already come into bearing, and twelve hundred varieties of fruit were in evidence. The propagator told the writer that he intended saving not more than twelve out of the multitude, and that the others would be cut down and cast into the flames. He remarked that in seedlings of any fruit, the tendency was for the quality to be below that of the parents, and that it was a rare exception for the seedling to produce better fruit than did its parents.

The reason for this is that all of our cultivated fruits are now highly artificial, and there is a constant reversion towards the old types.

This is less observable in the plums that belong to the native American groups than of those belonging to the other groups, for the reason that the native American plums are yet very near their original types and have not been developed into that artificiality required by the demands of man.

Man must search for new varieties largely along the same line as indicated by nature. He must plant millions of seeds and watch the result. He has the advantage of the natural process in that he can hold and propagate a superior variety, while in a state of nature they mingle with poorer varieties and so lose their identity. It is by holding fast what is good that man has accomplished more in a few hundred years than nature has in many thousands of years.

FREE BOOK ABOUT CANCER.

CANCEROL has proved its merits in the treatment of cancer. It is not in an experimental stage. Records of undisputed cures of cancer in nearly every part of the body are contained in Dr. Leach's new 100-page book. This book also tells the cause of cancer and instructs in the care of the patient; tells what to do in case of bleeding, pain, odor, etc. A valuable guide in the treatment of any case. A copy of this valuable book free to those interested. Address, Dr. L. T. LEACH, Box 91, Indianapolis, Ind.

HAMMOND'S HANDY ATLAS.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For One Dollar paid in advance we will send one copy of Hammond's Handy Atlas post free by mail and credit three-years' subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

"A Kalamazoo Direct to You"

TRADE MARK REGISTERED

We build Elevating Graders, Road Machines, Drag and Wheel Scrapers, Road Plows.

Valuable Books Free.

Many books are valuable, although they are free, and it is particularly the case with those handy, elegant booklets which are issued by the German Kali Works. They explain the benefits derived from the use of potash in agriculture, and in doing so explain more clearly the true principles of farming, and money cannot buy this instruction in better form. The books include "Principles of Profitable Farming;" "The Farmer's Guide;" "Why the Fish Failed;" "The Cowpea;" "Truck Farming;" "Plant Food;" "Strawberry Culture;" "Potash in Agriculture;" "Potato Growing." Farmers can obtain any or all of these instructive books by mentioning this paper and addressing German Kali Works, Monadnock Block, Chicago.

The Wonderberry.

Don't forget the Wonderberry ripening in three months from seed. You have heard of Luther Burbank, the agricultural wizard. This is one of his creations. It is interesting and instructive to follow his work.

The American Steel & Wire Company has issued an elegant pamphlet entitled "Eradication of Farm Weeds. Chemicals in solution applied to certain plants kill them. Sulphate of iron kills weeds without injuring the field crops; in fact, oats or barley are benefited thereby. The sulphate is applied at the right time with spraying machines." This subject is interesting to all progressive farmers. Write for a copy and address American Steel & Wire Company, Chicago, Illinois.

SHE COULD DRIVE ANYBODY.

A summer visitor who was trying a horse, the property of a New Hampshire farmer, with a view to buying him, noticed that after driving a few miles the animal pulled very hard, requiring a firm hand and constant watching. "Do you think this is just the horse for a lady to drive?" he inquired. "Well," answered the owner, with an air of great candor, "I must say I shouldn't really want to be the husband of the woman who could drive that horse."—Christian Register.

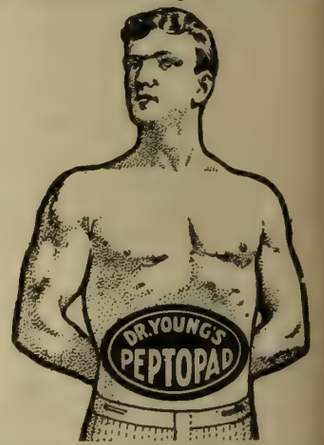
If you want to save money on your purchase of fence, write Kitselman Brothers of Muncie, Ind., for their free catalogue. They are selling fence direct to the farmer on 30 days' trial for 15 cents a rod up. See their ad. in this issue.

"See here. The horse you sold me runs away, kicks, bites, strikes and tries to tear down the stable at night. You told me that if I got him once I wouldn't part with him for $1,000." "Well, you won't."—Lutheran Observer.

Stomach Troubles Quickly Cured

My Peptopad for the Cure of Indigestion, Dyspepsia, Etc., Sent Free to All

Free Relief to Every Man or Woman



I want you to write for one of my powerful $1.00 Peptopads for the cure of all stomach ills **Dyspepsia, Indigestion, Acute Gastric Catarrh, Heartburn, Loss of Appetite, Pains at Pit of Stomach, Constipation, Bowel Pains, etc.** No matter what form of stomach trouble you have, let me relieve you free. This offer is extended to any man or woman. I will do just exactly as I say I will do. No charge whatever for this powerful stomach draft. Wear it; eat and enjoy your meals without pain or distress. If you are really a sufferer just send 10 cts. to pay packing and mailing expenses, and one of my $1.00 Peptopad (Stomach Drafts) will be sent to you free. Write Dr. G. C. YOUNG, 304 National Bank Bldg. Jackson, Mich.

Attractive Corn Exhibit.

The above is a picture of the seed corn booth of Mr. G. D. Sutton, of Mason City, Ill., which was the center of attraction at the Illinois Corn Show, held at Springfield, November 23 to 28. As will be seen, the booth was a most attractive one. Very appropriately, King Corn, a heroic-sized figure, occupied the pedestal in the center. The King, as well as the heavy columns and the roof timbers, was made of husks and the matchless ears of Sutton corn, ornamented with multi-colored autumn leaves. The scene was made still more striking by

being illuminated day and night by 100 electric lights.

The booth, striking and beautiful as it was, did no more than justice to the subject, for Sutton is a good deal of a King among seed corn men. He is the man who raises all the seed corn he sells, and he has 30,000 bushels of it this year, the best in type and quality he ever raised. Last year he had 18,000 bushels, and this was all sold before the season was half over. Since Mr. Sutton went into corn growing his sales every year have increased 50 to 100 per cent. over the preceding season.

They have a large force of men at work crating corn for shipment. They have the very best machinery for grading shelled corn that money can buy.

All Sutton corn, whether in crates or sacks, is shipped on approval. You can get your money back if it doesn't stand any test you give it.

Our readers will do well to write at once to G. D. Sutton, Dept. 7, Mason City, Ill., and write for Corn Book and Samples.

Effects of Cold on Trees.

Freezing is in effect drying; the water is taken out of the tissues of the plant and changed for the time into ice. If the tissues are unable to take water again they necessarily die. Sometimes the injury is apparent as soon as the tissues have thawed, but many cases of winter killing do not become evident until the vigorous growth of early summer begins.

In general, the trees native to a given section resist injuries of this kind. Yet much can be accomplished in growing exotic trees, at least to a certain age, by careful attention to their location, and if a naturally-sheltered place is not available, they can be protected by screens of native evergreens.

Many trees, especially smooth-barked ones, have their trunks and larger branches injured on the southwest side by the freezing and consequent death of patches of bark. During the warmer winter days there is sufficient heat at noon to stimulate portions of the growing layer into premature growth; such tissue is killed if cold weather follows immediately. The injury, often, does not become manifest until well into the summer. The dead tissue forms a favorable place for the growth of parasitic organisms and such a tree usually dies from rotting in a few years. This trouble must not be confused with that type of sun scald which is due simply to extreme heat in summer, when the growing layer may be literally cooked. Such cases occur most typically in the arid sections of the Southwestern States.

Trees that are worth the care are best protected by wrapping the parts liable to this sort of injury with straw or paper. Often merely shading the part liable to this injury with a board or shingles is sufficient to prevent it.

Another winter injury often confused with freezing is actual drying out. This may occur anywhere, but most typically in the higher altitudes of the West, where the dry and rarefied air and bright sun favor evaporation from the tree surface of more water than the roots can obtain from the cold and frequently sandy or gravelly soil. Evergreens are especially subject to this difficulty, since their leaves transpire to some extent throughout the winter. Whatever conserves the moisture of the soil tends to decrease this injury; for example, mulching and fall or winter irrigating. Trees normally hardy will often winterkill if unable to ripen their wood completely; this often happens as a result of defoliation in late summer.—Year Book Department of Agriculture, 1907.

Burpee's Farm Annual.

Burpee's Fordhook Farms are the largest and most complete trial grounds in America. The farmer who has not a Burpee Farm Annual is just short about half his equipment. W. Atlee Burpee & Co. offer a cash prize of twenty dollars for the best collection of vegetables grown from Burpee's seeds at every State Fair in the United States; a premium of $5.00 in like manner is offered for the best display of seeds and vegetables at each and every County Fair. There is also a hundred-dollar prize for the largest cash total prizes won by any single exhibitor. More than ten thousand dollars were paid last year for prizes won by growers of Burpee's seeds at different County and State Shows. It pays to do business with a reliable, up-to-date, enterprising and generous seed house. Address, W. Atlee Burpee & Co., Burpee Bldg., Philadelphia, Pa., and ask for the 1909 Seed Catalogue. Also kindly mention The National Farmer and Stock Grower.

GRAND CHAMPION YELLOW CORN.

Liberal Premiums Offered by The National Farmer and Stock Grower For the Benefit of Our Patrons.

This picture represents in a reduced size the most famous ear of yellow corn in existence to-day. It was grown two years ago by Mr. D. L. Pascal, of Iowa, and it won the Allee Trophy for the best ear of corn of any variety grown in Iowa. Since then it has been exhibited at two National Corn Shows and is yet the ear which nearer than any other represents perfection in yellow Dent corn.

Mr. Pascal has raised this Reid's Yellow Dent Corn from seed purchased of the originator. Mr. Pascal has sold us some of this seed corn for distribution to our subscribers. Therefore, anyone sending in One Dollar to pay in advance for a two-years' subscription to The National Farmer and Stock Grower can select a pound of Pascal's Grand Champion Seed Corn as a free premium. Furthermore, this Reid's Yellow Dent Corn has been bred straight for sixty years. Anyone with a single pound of seed has a fair chance of producing champion ears of corn. Ten ears of first-class corn will win a first prize at any Fair. Therefore, anyone who will send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower can select one one pound of Pascal's Grand Champion Yellow Corn, and we will send it postpaid by mail as a free premium.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a free premium and exhibit the same at their own State Fair—for every championship premium won by said corn we will pay the exhibtor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1909 with corn grown by our subscriber from the seed corn furnished by us to him as a free premium.

These prize offers are good in every state where a State Fair is held, and are also good at any Interstate, National or International Show. If any of the premiums are won at the National Corn Show of 1909, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and if winning a state sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive fifty dollars additional from us, and, if winning a sweepstakes prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn. Our readers will be furnished seed of the same family and breed of corn from which all the Pascal premiums have been won. We are also offering a similar line of premiums for white corn, which will be found in another column.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will also please send me one pound of Pascal's Grand Champion Yellow Corn as a free premium.

A MILLION TONS OF BUTTER

and over have been saved to dairymen since the introduction of the cream separator. Add to this the increased feeding value of the warm, sweet skim milk containing the natural heat, saving of time and labor, to say nothing of the item due to the improved quality of the product, and the financial result will astonish the most enthusiastic separator advocate. Though separators were originally looked upon with the greatest suspicion, yet to-day every wide-awake keeper of cows acknowledges the cream separator as an absolute necessity. With him it is merely a question of which one, and we must confess it, it is rather a complex question. However, in selecting a machine, we would certainly recommend our readers to obtain a copy of the catalogue issued by the American Separator Company, Bainbridge, New York. It treats very thoroughly on the separator subject and at the same time is really beautifully illustrated, showing sectional and full views of the complete machine and detail working parts, which readily explain why the separator is so easy to run and keep clean; why they are able to make such wonderfully low prices and yet furnish such an excellent separator. Certainly no fair-minded man would ask for a more liberal trial or better terms of payment than that contained in this catalogue. Write for it, addressing the American Separator Company, Box 1102, Bainbridge, N. Y.

Incubator and Brooder Construction.

Attention is invited to the advertisement of H. M. Sheer, of 487 Hampshire street, Quincy, Ill., who is advertising a new lampless brooder, also repairs and supplies for all kinds incubators and brooders. Mr. Sheer also issues a book upon incubator construction, so that the buyer can construct his own incubator and brooder. The advertisement will be found on page 18.

DON'T BUY GASOLINE ENGINES UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engine; revolutionizing power. Its weight and bulk are half that of single cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. THE TEMPLE PUMP CO., Mfrs., Meagher and 15th Sts., Chicago. THIS IS OUR FIFTY SIXTH YEAR.

Ten Doctors
Said He Would Die

"In 1903 we wrote you regarding my husband, who was suffering from heart trouble. He was superanuated by the North Georgian Conference. Ten doctors at different times said he would die. You advised Dr. Miles' Heart Remedy and Restorative Nervine; we did as advised, and improvement was apparent from the very first. He recovered and the Conference in 1904 gave him a charge. He never felt better, although he has very heavy work and does a great deal of camp meeting work. I am so glad we took your advice and gave him the medicine, and feel that I ought to let you know of the wonderful good results from its use."

MRS. T. S. EDWARDS,
Milner, Ga.

This proves what Dr. Miles' Heart Remedy will do. Get a bottle from your druggist and take it according to directions. It does not matter whether your heart is merely weak, or you have organic trouble, if it does not benefit you take the empty bottle to your druggist and get your money back.

POEM POSTAL CARDS.—The newest and best out. The Post Cards each with a picture of the poet, one of his verses and a beautiful scene. They are printed in colors and gold. There are twelve to the set. Send us 15 cents in one-cent stamps and we will send you our fine illustrated monthly publication, the Universal Magazine, for six months, and we will also send the set of Poet Post Cards. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

TAPE-WORM Expelled alive in 60 minutes with HEAD or no charge. No fasting, no sickness, no pain. Medicine pleasant and perfectly harmless. Medicine sent to any part of the country. Large booklet containing valuable information FREE. **DR. M. NEY SMITH, Specialist,**
Office, 814 Pine Street, ST. LOUIS, MO.

FAT reduced by a simple remedy—Sample Box, etc., mailed free to any address. Hall Chem. Co., Dept. 502, St. Louis, Mo.

BED WETTING Cured. 25c. Pkg. **FREE. C. H. ROWAN, Dept. 103, London, Can.**

MARRY RICH Big list of Descriptions and Photos FREE (Sealed). STANDARD COR. CLUB, Grayslake, Ill.

THE LANGUAGE OF FLOWERS.

This is a beautiful study, and it is elegantly explained by the most satisfactory methods. There are twenty-four post cards, and each post card shows a different flower, grouped in such a way that the sentiment that each flower represents is spelled out by the flowers. For example, the violets of the violet card spell "Faithfulness;" the roses "Love;" clover, "Be Mine," etc. Each post card is different, finished in many colors and glossed.

THE UNIVERSAL MAGAZINE

is a nice, bright, cheerful, illustrated monthly magazine, published at 25 cents a year, and the post cards can be selected as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Fine and Pretty Ginghams.

Question—Can you tell me of any ginghams, suitable for dresses for a young lady, that are less expensive than the imported ginghams, yet fine and pretty? M. E. R.

Answer—Fine, pretty ginghams in exquisite designs and colors are called Simpson-Eddystone Zephyrettes, made by the Eddystone Mfg. Co., Philadelphia, and they are less than half the price of the imported ginghams. You should be able to purchase them at any first-class dry goods store. If you don't find them, write the company and they will advise you of a dealer who does keep them.

Very Nice of the Hens.

"Yes," the lady remarked, "since John's uncle died we have a nice country house, horses, cows, pigs, hens and—"

"That must be charming," broke in the other. "You can have all the fresh eggs you want every day."

"Oh, well," hastily interrupted the first speaker, "of course the hens can lay if they like to, but in our position it isn't at all necessary."—Harper's Weekly.

Good Money For Cranberries.

The cranberry appears to be more popular than ever. This industry is largely conducted at Cape Cod, Barnstable county, and Plymouth county, Mass., where 200,000 barrels were raised in 1908. The island of Nantucket produced 1,000 bushels this season for the first time. In the New York market, cranberries sold at $12 to $14 a barrel, and the top price was $16.

Attend to His Business.

A minister was horrified one Sunday to see a boy in the gallery of the church pelting the hearers in the pews below with horse chestnuts. As the good man looked up, the boy cried out: "You tend to your preaching, mister; I'll keep 'em awake!"—Phoenix Sayings.

A Wise Girl's Method.

This young girl has learned that when money is scarce there is nothing that runs away with dimes and dollars as fast as the small things of dress, and she saves many a dime by taking care of her small belongings. Her veils, ribbons and gloves never look as though they had been rescued from the family rag bag, for they are smoothed out with the fingers after each wearing and carefully put away, and they not only look better but last a great deal longer. Her ruffled underskirts are hung upside down every night with the ruffles pinned to the foundation to prevent them from becoming stringy and limp, and her dress skirts and jackets are kept in shape by hanging them over coat and skirt hangers, and these small articles can be bought for a trifle.

She buys the best stockings, and when the feet become worn she buys new feet for them and sews onto the old legs, and they are as good as new stockings, and then she saves her stockings and underwear by laundering them herself. These articles are soaked and soaped in a solution of borax and warm water in the proportion of a tablespoonful of borax to the gallon of water, and the tendency of the flannel to shrink is thus greatly lessened and much softer, and when they are washed clean through this suds they are put through a second water of the same temperature and with the borax and soap added.

Good wool soap is used for washing these garments and the borax softens the water, and hard water and resin soap will soon ruin woolens, and these articles are washed separately from the other washing, and they are as soft and pliable as new after each washing.

When buying kid gloves, she buys cotton thread and some court paster of the same shade as the gloves, and a small split in the glove is neatly and quickly mended by a strip of the plaster stuck on the wrong side, and a larger hole or rip is mended with the thread.

When black gloves grow rusty, their usefulness is prolonged by brushing them lightly with good black ink or shoe polish.—M. H.

Welcome Guests.

"You always ask company to stay to supper, just as if you really wanted them, and then you always have a delicious meal, just as though you had known they were coming, even on wash-day. How do you manage?" asked Julia, dropping down at Aunt Ruth's knee.

"I do really want them, child, or they wouldn't be asked. I learned that lesson is hospitality long ago. As for the meal, I never worry about that, for I always have something that I consider good enough for any company put away for them. I always keep on hand a jar of salad dressing. It keeps for months, and with that on hand I can easily get up the substantial part of the supper. How do I make it? Take two eggs and beat them well; add two tablespoons sugar, one-half teaspoon each pepper and salt, two teaspoons mustard, a tablespoon of butter, one-half cup of water and the same amount of vinegar. Stir together and cook in a double boiler until it thickens. Just before using stir a little cream into the portion to be used.

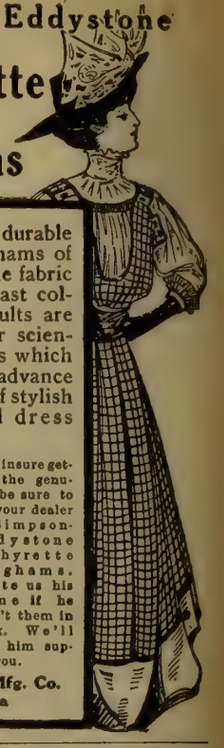
"Then I always keep a couple cans of salmon and some sardines up on the top shelf of the pantry. The children are forbidden to take anything from that shelf, so I know that there is always a supply there. In that jar there are some molasses cookies, and these are changed for fresh ones whenever I bake. So I always have cookies on hand, even the day after Sunday. Then there is always a fruit cake up there, and the older that gets the better, for it is a regular old-fashioned fruit cake, the kind that dreams are made of, and it is delicious. And a few of my very choicest cans of fruit are put up there. Yes, it's a 'company shelf,' honey, but just try one now in the early days of your housekeeping and it will make you a better hostess and keep the wrinkles from coming into that pretty forehead, just from puckering it up and wondering what you ever will do when old Aunt Ruth or somebody else drops in unawares."—Janet Thomas Van Osdel.

Cure For Creaky Shoes.

"There is one certain and simple remedy for this annoyance," says Woman's Home Companion for February. "It is to drive little wooden pegs into the soles. The pegs prevent the friction of the shoe soles. Any cobbler will do it for you very cheaply and it restores your peace of mind quite wonderfully."

Self-esteem never lets up until it reaches the jumping-off place.

Simpson-Eddystone Zephyrette Ginghams



Remarkably durable new dress ginghams of great beauty, fine fabric and absolutely fast colors. These results are obtained by our scientific new process which marks a decided advance in the making of stylish and economical dress ginghams.

New Process Dress Ginghams — SIMPSON — REG. U.S. PAT. OFF. EDDYSTONE Zephyrettes

To insure getting the genuine, be sure to ask your dealer for Simpson-Eddystone Zephyrette Ginghams. Write us his name if he hasn't them in stock. We'll help him supply you.

SELECTED POETRY.

JIM PARKS'S STORE.

You know Jim Parks? He used to farm
Out Hopkins Corner way.
Well, he got tired of planting corn,
And cutting oats and hay.
It was too hard and dull a life—
He said he could make more
To move to town and open up
A little grocery store.

The opening up was easy done,
And things just 'peared to swim,
You work a farm, but keep a store—
It seemed like fun to Jim.
His trade? Well, he had more or less—
'Twas hardly ever more—
But times would better in the fall,
And—he liked keeping store.

One day last week I called around,
And found him dreadful blue;
He'd kept the store all right, but kept
The things inside it, too.
"The business suits me lots of ways,
But tell me how," said Jim,
"A man can keep on keeping store
When it will not keep him?"
—Woman's Home Companion.

THE SMILE THAT HELPS.

When you're out of sorts and grumpy,
And life's bed seems rough and bumpy,
Just remember that a smile will help a lot;
You may not be feeling funny,
But it costs naught to look sunny—
Just remember that a smile will help a lot.

When a street car seat is proffered,
Do not freeze the one who offered—
Please remember that a smile will help a lot;
Your own journey's made more painful
When you try to pose disdainful—
So remember that a smile will help a lot.

If you've been investigated
And you've feeling irritated,
Just remember that a smile will help a lot;
Don't give out some press-talks spiteful,
Nor predict a panic frightful—
Just remember that a smile will help a lot.

If you've nearly up and fainted,
When your gift-coin is called tainted,
Just remember that a smile will help a lot;
Give another million dollars
Just to hear the latest hollers—
And remember that a smile will help a lot.

In short, if rich and perky,
Or as poor as poor Job's turkey,
Bear in mind that a smile will help a lot;
You are sure to make a winning
If, at every day's beginning,
You'll remember that a smile will help a lot.
—Denver Republican.

"SOME RECKON TIME BY STARS."

Some reckon time by stars,
And some by hours;
Some measure days by dreams,
And some by flowers;
My heart alone records
My days and hours.

Some have a dial, a clock
That strikes a bell;
Some keep a calendar
To con and spell;
But I—I have my love,
Infallible.

My heart is clock enough;
It beats for her.
Both day and night it makes
A happy stir;
It keeps the time quite true
With throbs for her.

The only calendar
That marks my seasons
Is that sweet face of hers,
Her moods and reasons,
Wherein no record is
Of winter seasons.
—Madison Cawein, in the Metropolitan Magazine.

NEVER TROUBLE TROUBLE.

My good man is a clever man,
Which no one will gainsay;
He lies awake to plot and plan
'Gainst lions in the way,
While I, without a thought of ill,
Sleep sound enough for three;
For I never trouble trouble till
Trouble troubles me.

A holiday we never fix
But he is sure 'twill rain,
And when the sky is clear at six
He knows it won't remain.
He's always prophesying ill,
To which I won't agree,
For I never trouble trouble till
Trouble troubles me.

The wheat will never show a top—
But soon how green the field!
We will not harvest half a crop—
Yet have a famous yield!
It will not sell, it never will!
But I will wait and see,
For I never trouble trouble till
Trouble troubles me.

He has a sort of second sight,
And when the fit is strong,
He sees beyond the good and right
The evil and the wrong.
Heaven's cup of joy he'll surely spill
Unless I with him be,
For I never trouble trouble till
Trouble troubles me.
—Anonymous.

THE WHITE MAN'S BURDEN.

Take up the White Man's burden—
Send forth the best ye breed—
Go, bind your sons to exile
To serve your captives' need;
To wait, in heavy harness,
On fluttered folk and wild—
You new-caught, sullen peoples,
Half devil and half child.

Take up the White Man's burden—
In patience to abide,
To veil the threat of terror
And check the show of pride;
By open speech and simple,
An hundred times made plain,
To seek another's profit
And work another's gain.

Take up the White Man's burden—
The savage wars of peace—
Fill full the mouth of famine,
And bid the sickness cease;
And when your goal is nearest,
(The end for others sought),
Watch sloth and heathen folly
Bring all your hope to naught.

Take up the White Man's burden—
No iron rule of kings,
But toil of serf and sweeper—
The tale of common things.
The ports ye shall not enter,
The roads ye shall not tread.
Go, make them with your living,
And mark them with your dead.

Take up the White Man's burden—
And reap his old reward.
The blame of those ye better,
The hate of those ye guard—
The cry of hosts ye humor
(Ah slowly!) toward the light—
"Why brought ye us from bondage
Our loved Egyptian night."

Take up the White Man's burden—
Ye dare not stoop to less—
Nor call too loud for freedom
To cloak your weariness.
By all ye will or whisper,
By all ye leave or do,
The silent, sullen peoples
Shall weigh your God and you.

Take up the White Man's burden!
Have done with childish days—
The lightly proffered laurel,
The easy, ungrudged praise,
Comes now to search your manhood
Through all the thankless years,
Cold, edged with dear-bought wisdom,
The judgment of your peers.
—Rudyard Kipling.

THE PRIDE OF BATTERY B.

South Mountain towered upon our right, far
off the river lay;
And over on the wooded height we held their
lines at bay.
At last the muttering guns were still; the
day died slow and wan;
At last the gunners' pipes did fill, the ser-
geant's yarns began,
When, as the wind a moment blew aside
the fragrant flood,
Our briarwoods raised, within our view a
little maiden stood—
A tiny tot of six or seven, from fireside fresh
she seemed,
(Of such a little one in heaven, one soldier
often dreamed),
And as we stared one little hand went to her
curly head
In grave salute. "And who are you?" at
length the sergeant said,
"And where's your home?" he growled
again.
She lisped out: "Who is me?
Why, don't you know? I'm little Jane, the
pride of Battery B.
My home? Why that was burned away;
and pa and ma are dead;
And so I ride the guns all day along with
Sergeant Ned,
And I've a drum that's not a toy, a cap with
feathers, too;
And I march beside the drummer boy on
Sundays at review.
But now our 'bacca's all give out, the men
can't have their smoke,
And so they're cross—why even Ned won't
play with me or joke,
And the big colonel said to me to-day (I
hate to hear him swear)
He'd give a leg for a good pipe like the
Yankee had, over there,
And so I thought when beat the drum, and
the big guns were still,
I'd creep beneath the tent and come out
here across the hill,
And beg, good Mister Yankee man, you'd
give me some Lone Jack.
Please do! When we get some again I'll
surely bring it back—
Indeed I will, for Ned, says he, if I do what
I say
I'll be a general yet, maybe, and ride a
prancing bay."
We brimmed her tiny apron o'er. You
should have heard her laugh
As each man from his scanty store shook
out a generous half.
To kiss the little mouth stooped down a
score of grimy men,
Until the sergeant's husky voice said:
"'Tention, squad," and then
We gave her escort till good-night the
pretty waif we bid,
And watched her toddle out of sight—or
else 'twas tears that hid
Her tiny form—nor turned about a man, nor
spoke a word,
Till after awhile a far, hoarse shout upon
the wind we heard.
We sent it back, and cast sad eyes upon
the scene around,
A baby's hand had touched the tie that
brothers once had bound.
That's all—save when the dawn awoke again
the work of hell,
And through the sullen clouds of smoke
the screaming missiles fell,
Our general often rubbed his glass and
marveled much to see
Not a single shell that whole day fell on the
camp of Battery B.
—F. H. Gassaway, in Globe-Democrat.

THE SAME OLD THING AGAIN.

You go to see the play, a new one, so they
say;
It's fresh from some great playwright's
burning pen;
You hold your breath and wait, for surely,
kindly fate
Is going to let you witness something new
again.
The heroine a blonde, the hero brave and
fond;
The villain, dark and dismal, struts
around.
They have a hot old time, are mixed in plot
and crime,
And then the curtain falls—the lights go
out—
And it's just the same old thing over again.

The latest novel out is talked and talked
about;
You buy it and you sit up all the night
To read it through and through of course it
must be new,
And you expect a treat of rich delight;
Historical or not, perhaps it has a plot,
And for a while the hero is a wreck,
But finally he wins, he gets up on his pins,
And soaks the villain one right in the
neck,
And it's just the same old thing over again.
You meet a winsome fay some sunny day in
May;
You tell her that you love her more than
life,
And in a little while you marry her in
style,
And think you've won a treasure for a
wife;
But by and by you find she has a hostile
mind,
And hands you ice in chunks, both rude
and coarse,
And then you learn to jag and both will
chew the rag,
And later on you cop out a divorce;
And it's just the same old thing over again.
A cradle, curtained white, a few short years
so bright;
A little time to play and go to school;
A few brief years of bliss and then you
learn to kiss,
And after that a time to act the fool.
Then age begins to come and whitened
hairs, oh, hum!
And rheumatism binds you like a slave,
And then a chilling breath, a silence we call
death,
And we are tumbled in the narrow grave;
And it's just the same old thing over again.
—Sioux City Tribune.

30 DAYS' FREE TRIAL

OF OUR PLAN TO CUT

1/2 FROM YOUR LIVING EXPENSES

By your living expenses we mean what you pay everywhere, (unless you are a Larkin customer), for such things as Soap, Tea, Coffee, Spices, Starch, Baking Powder, Carpets, Crockery, Furniture for the Kitchen, the Parlor, the Bedroom. I Cured My Rupture

I Will Show You How To Cure Yours FREE!

I was helpless and bed-ridden for years from a double rupture. I wore many different kinds of trusses. Some were tortures, some positively dangerous, and none would hold the rupture. The doctors told me I could not cure it without a surgical operation. But I fooled them all, and cured myself by a simple method which I discovered. Anyone can use it, and I will send it cure free by mail, postpaid, to anyone who writes for it. Fill out the coupon below and mail it to me today.

Free Rupture-Cure Coupon

CAPT. W. A. COLLINGS,
Box 516, Watertown, N. Y.

Dear Sir:—I wish you would send me your New Discovery for the Cure of Rupture.

A MAGNIFICENT PREMIUM.

The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color. A million and a half of these hats have been sold. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

No Rupture Fakes Or Lies By Brooks

Brooks' appliance retains and cures rupture. Immediate relief guaranteed and a square deal for every sufferer. No fakes or lies, no subterfuge or evasion; just straight business and money refunded if not satisfactory. High financial references and 30 years' success with rupture are behind these statements. Where others fail is where I have my greatest success. Thousands of men, women and children relieved and cured at a cost less than the price of many slipping, galling trusses. No springs, pads, salves or harness, but just a simple, natural, guaranteed appliance which gives instant relief, rest, security, when all others fail. There is truth in Brooks' book about rupture. It is free and gives prices and names of people cured. Don't wait, or forget, but write today for Brooks' Book. Address,
C. E. Brooks, 8789 Brooks Bldg., Marshall, Mich.

WE PAY $90 a Month SALARY and furnish rig and all expenses to introduce poultry and stock remedies; new plan; steady work. Address IMPERIAL CO., D 38, PARSONS, KANS.

Nitrate of Soda Tests.

It is placed within the power of farmers to experiment with nitrate of soda as a fertilizer without cost to themselves and an opportunity is presented to win a valuable prize. See nitrate of soda advertisement on page 20 and write for a copy of the booklet "Corn Growing For Profit." This paper is offering champion seed corn as subscription premiums, and we have no doubt that it will pay our subscribers to write for the book and for particulars concerning the amount of nitrate of soda furnished for experimental purposes. Address, Wm. S. Myers, 71 Nassau street, New York, and mention The National Farmer and Stock Grower.

GRAND SUBSCRIPTION COMBINATION.

FOR ONE DOLLAR paid in advance we will send the NATIONAL FRUIT GROWER, the best fruit paper; the RELIABLE POULTRY JOURNAL, the best poultry paper; the UNIVERSAL MAGAZINE, the best home and story paper; and THE NATIONAL FARMER AND STOCK GROWER, the best monthly farm paper. Each for one full year. This is the finest combination for the subscriber. HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

PRACTICAL FARMING AND GARDENING.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, irrigation, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, hog, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you Practical Farming and Gardening, postage paid, and The National Farmer and Stock Grower for one year. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

GRAND SWEEPSTAKES WHITE CORN.

Liberal Corn Prizes Offered by The National Farmer and Stock of St. Louis, Mo.

The best corn-growing famer in the United States of America is Mr. L. B. Clore, of Johnson county, Indiana. His reputation has been made, sustained and become illustrious by the exhibts of Johnson County White Dent Corn of his own breeding and raising.

Mr. L. B. Clore makes no pretense that he is any better or more capable than any other corn-growing farmer, but when he makes an exhibit for a grand prize he gets it. He won the grand sweepstakes at the National Corn Show in 1908, also in 1909.

And there was a magnificent contest. At Omaha there were 6,000 bushels of corn in competition. In one class for the best ten ears in one state there were 226 entries. The whole farming community was on hand with the best exhibit.

Mr. L. B. Clore has placed a certain amount of his Grand Sweepstakes White Corn at the disposal of the editor of The National Farmer and Stock Grower, to be used as subscription premiums.

Therefore, anyone who will send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower can select one pound of Clore's Grand Sweepstakes White Corn, and we will send it postpaid by mail as a free premium.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a free premium and exhibit the same at their own State Fair—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1909 with corn grown by our subscriber from the seed corn furnished by us to him as a free premium.

These prize offers are good in every state where a State Fair is held, and are also good at any Interstate, National or International Show. If any of the premiums are won at the National Corn Show of 1909, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and if winning a sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive fifty dollars additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn. Mr. Clore did it from his own seed corn, and our readers will be furnished seed of the same family and breed of corn from which all the Clore premiums have been won. We are also offering a similar line of premiums for yellow corn, which will be found in another column.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

$3600 REWARD

This sum will be paid for a certain dollar, **$560** for a certain half dollar, **$5800** for certain gold piece, **$715** for certain five-cent piece, **$100 for certain cent** and other premiums ranging from five to five thousand per cent. upon the face value of half-cents, cents, two-cents, three-cents, five-cents, dimes, quarters, halves, dollars and other U.S. and colonial coins of very many dates **prior to 1900** and on some coins issued even since then—buying prices being based upon the rarity and condition of the coin.

We also buy foreign coins of all countries, Confederate and other old or curious paper currency, etc.

We buy used postage stamps of every kind, including the commonest varieties now in use (these are wanted by us for export) and in fact every stamp has a distinct money value.

The gatherings of old coins by a New Jersey man were recently sold at $12,500.00; those of a Salem (Mass.) man for $37,859.00 and we could fill this journal entirely with interesting details showing where persons (not dealers) have earned and are gaining large to enormous premiums for old coins and stamps which they gather.

A pamphlet giving a great amount of interesting information, figures, etc., will be sent postpaid upon application—a postal will do. **May be worth many dollars, perhaps a fortune to you.** Address, **MONEY & STAMP BROKERAGE CO.,** 150 Nassau St., D 289, New York, N. Y.

. H. H. Green's Sons, Box K, Atlanta, Ga. ease mention Nat. Farmer and Stock Grower.

Simple Kindergarten Work For Country Homes.

In the cities there are Kindergartens to bridge over the period of restlessness which comes upon a child when he is emerging from babyhood but has not yet reached the school age. Mothers living in the country feel this same striving of the little one, and in districts where neither teacher nor directors are strict in regard to the school age many children of five and sometimes younger are found in the school room. This cannot be anything but detrimental to a child under ordinary conditions. A substitute may be found by introducing into the home simple Kindergarten work which may be readily taken up by any interested mother of average intelligence, and she may thus keep her children in the home environment until they are six or seven, unspoiled by the varied influences associated with the school room.

In some corner of the home provide a box or shelf on which the child may keep his papers, pencils and other tools. This will give him a sense of ownership from the beginning. Make him responsible for the orderliness of his little corner and insist that it be kept neat. A box filled with kernels of corn, of two colors, if possible; a few sticks of crayon, white and colored; a box of colored pencils; a slate, a blackboard, or a few large sheets of paper, will do for a starter. Draw figures of a large size, such as circles, squares, outlines of fish, birds, letters and numbers, place on a flat surface and let the child outline them with kernels of corn. If he has the corn of two colors, suggest an artistic combination of the colors. Give him only one figure at a time to fill out. Draw other figures upon a paper and let him outline them by pricking around the edge with a pin; or magazine pictures may be used for this work. Cut pages from old magazines and let him prick with a pin all the letters, "o," "e," etc. Let him draw the outline of his hand, leaves, and such flat objects by placing them flat upon the drawing surface and tracing around them with a pencil or crayon. Have him arrange toothpicks or burnt matches in squares, triangles, piles of twos, threes, etc. With his box of crayons he can color the advertising pictures of old magazines. A few words now and then in regard to an artistic combination of coloring will be advisable. Provide a pair of blunt scissors of the kind made especially for children and which can be purchased for ten cents. Use these in cutting pictures from old magazines and from advertisements. Have the child file these away systematically and later help him to make a book of muslin or calico in which to paste the cut-out pictures.

Every mother understands the elements of paper cutting well enough to show a child how to cut circles of paper, dolls, simple figures and perhaps other figures. Bright scraps of paper saved for this purpose will make the work more interesting. The colored crayons may also be used here in coloring the cut-out work.

An hour or two each day will be sufficient time to give to this work, and it will be enough to keep the child usefully busy, developing him along right lines without fatigue. All of this is a training of the eye, hand and mind, accustoming them to work accurately, artistically and harmoniously. These, however, are only rudimentary suggestions, and can be enlarged upon as the mother may wish.—Janet Thomas Van Osdel.

Postage on a Seed Catalogue.

The postal receipts will be largely increased this month on account of the mailing of one of the largest catalogues ever sent from Minneapolis. Over four car-loads of paper were used in printing the first edition, and the bill for postage will be over $11,000.

It is one of the most complete catalogues ever printed in the United States, having over 430 engravings, most of them from photographs. In printing it one of the largest plants in the Northwest was taxed to the utmost, being compelled to work seven large up-to-date presses night and day.

The catalogue referred to is issued by Northrup, King & Co., the seedsmen, and commemorates their twenty-fifth anniversary in the seed business. The extra fine work put into these catalogues makes them very expensive, but if any of our readers will write this old reliable seed house, stating that they are interested in good seeds, and name this paper, we are sure the catalogue will be promptly mailed them without charge. Address, Northrup, King & Co., 47 Bridge Square, Minneapolis, Minn.

Animals on Farms and Ranges.

According to the United States Department of Agriculture, there are 20,640,000 horses and 4,053,000 mules on farms and ranches of the United States; also 21,720,000 milch cows; 49,379,000 other cattle; 54,147,000 swine, and 56,084,000 sheep. Compared with January 1, 1908, the following changes are indicated: Horses have increased 648,000; mules increased 184,000; milch cows increased 526,000; other cattle decreased 694,000; swine decreased 1,937,000, and sheep increased 1,453,000.

CEMENT WORKERS' HANDBOOK.

This book is designed to teach farmers how to work with cement; how to build walls, floors, ceilings, troughs, tanks, etc. It is a handy little cloth-bound book of one hundred pages. We use it as a subscription premium. For $1.00 we will send The National Farmer and Stock Grower for three years and a copy of the Cement Workers' Handbook. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

FREE DEAFNESS CURE.

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh. Address, Dr. G. M. Branaman, 1264 Walnut St., Kansas City, Mo.

FIRE-PROOF ASBESTOS ROOFING.

Attention is invited to the Asbestos Roofing advertised on page 19. Any of our readers can obtain samples to test, also a book on roofing construction, also instructions for making leaky roofs tight. Write for Book No. 61 and samples. Address, Johns-Manville Co., 501 North Third street, St. Louis, Mo., and mention The National Farmer and Stock Grower.

A Substitute For Matrimony.

"Successful business girls and women," says Mrs. Anna Steese Richardson in Woman's Home Companion for February, "are too well off financially to want to marry.

"The girl who earns twelve, fifteen or twenty dollars a week sets for herself a standard of living, dress and small luxuries which would require a husband earning twenty-five, thirty and fifty dollars, respectively. She regards as necessities what her mother considered luxuries. If a man who is earning only as much as the girl or a few dollars more a week asks her to marry him, he knows that the girl must either deprive herself of some things she has grown to regard as necessities or she must continue to work. And there is many a home-hungry young man to-day too proud to allow his wife to work.

"Through agitation and her own honest effort at desk, counter and loom, woman is rapidly nearing the goal of equality in work and wages with men. Her services are worth to-day as much as those of the man who might marry her—if her services were worth less."

THE SUBSCRIPTION EDITOR.

How Uncle Piper Was Put on the Sick-list — A Reminiscence of Horace Greeley and the Story of the Indian Chief.

Uncle Piper, subscription editor of The National Farmer and Stock Grower, was down with a painful sickness during the month of January. It was neither rheumatism nor pneumonia that prostrated him. The doctor said it was something like heart failure, but as Uncle Piper was treated with restoratives and stimulants day after day, we are happy to say that the patient is in a fair way to recovery.

Be it known to all men that in every newspaper office they have to occasionally experience a shock when some misguided subscriber stops his paper. Something appears in the reading matter which the subscriber objects to and he naturally gets frantic; he immediately writes a letter, and in it he says something mean, and after it has gone through the office and has been attended to, his letter is deposited in what is called the Morgue.

The morgue is full of letters which are of this character. Some of them are nice and business-like, and could not offend anyone; but others indicate a want of tact, a want of courtesy; in fact, some of them are very rank. Now as a general rule nobody cares except the editors, and they will not read them. The paper is issued just the same, and for every stop one or more new subscribers come in, and in fact if there were no stops there would be a dictatorial editor with a pronounced case of big head.

All green editors, all young business managers and subscription solicitors have to become hardened to this "stop-the-paper" business. Some of them in their early days become despondent and commit suicide, but a majority of them are hardened and survive. At first they are amazed that anyone should fail to appreciate the excellent publication with which they are identified; this amazement is succeeded by pity for the poor, unappreciative person who insists that he don't want the paper and never did want it; then pity is followed by indignation and indignation by indifference.

Uncle Piper.

This reminds us of Uncle Piper's good, old friend, Horace Greeley. Horace was editor of a great daily paper. He also published what he called a "Cabbage Department," now handed down to posterity as the New York Tribune Farmer. Well, Horace Greeley offended one of his subscribers, and said subscriber raved, tore his hair and finally started for the Tribune office. On his way he met the editor and he roared out, saying: "Horace, I have had enough of this, and I have determined to stop your paper." "Oh, for goodness sake, don't do that," said Horace; "if you do I will be ruined." "Ruin or no ruin," replied the irate subscriber; "I will stop your paper if it is the last act of my life;" and he passed on, leaving poor, old Horace in deep dejection. Returning later, he saw Horace again, who was very disconsolate over his first stop, and said: "I've done it, Horace, and your paper is stopped." And Horace looked at him very hard and for a moment appeared to be stunned, and then, pulling himself together, he rushed off towards his office, ran madly through the crowd, with his old coat-tails flying in the air until he reached the Tribune establishment. There he saw everything going on as usual. They were still taking in money at the counter, and the machinery was working very much as usual. And then Horace went and stuck his thumbs in the arm-holes of his vest and paraded himself back to the old friend who had deserted him and said: "No, you didn't stop my paper. The business is still running just as though nothing has happened."

Notwithstanding the hardening of the newspaper heart against stoppages and the cultivated indifference to harsh words in connection therewith, good, old Uncle Piper is just as tender upon that subject as if he were still a little child. It is strange that he has not yet become hardened. The clerks used to take delight in reading these mean letters, saying: "Here's one on you, Uncle Piper;" but when they saw how much such letters distressed him they would simply pass them into the morgue and hide the morgue from Uncle Piper.

During the month of January, however, through carelessness in the subscription room, Uncle Piper found the morgue and read letter after letter—the accumulated stops of six months—and then he fainted. At first no one could imagine the reason, but after it was understood that he had read some the morgue's worst letters it was clear as day. And there was nothing left to do except to send for Mrs. Piper—something that was not done willingly—for be it known to all men that Mrs. Piper is said to be a little strong-minded, and occasionally Uncle Piper arrives at the office with a look of dejection, as though his morning meal had consisted of biscuit and discipline; in fact, 'tis understood at the office that Uncle Piper does not know that his good, old soul is his own. However, she came, and, after glaring at the office force, she took him away. Her parting shot was as follows: "You have let him read every blessed thing that is mean. Now send him something good, and if no one else will compliment the paper, write compliments yourself and sign them "Pro Bono Publico," which is the custom in newspaper offices, and I hope you know your business."

The consequence is that we have been feeding Uncle Piper on compliments, and some of them are really and truly genuine, even if we did have to change the dates on a few of them.

We have reason to hope that Uncle Piper will soon be out again spending office money for subscription premiums, and when he is fully recovered his strong-minded wife can rest assured that she alone has the opportunity of making him feel dejected, and he will never have another chance at the morgue.

Uncle Piper would not have collapsed quite so soon on reading a few letters if he had not received news which had otherwise troubled him. He had just received word that his good, old friend Chief Hump was dead. Hump is a peculiar name, and it belongs to a Sioux Indian. He was of the tribe of Minneconjous, which means dwellers by the waters. Chief Hump was a great-grandson of Black Buffalo, a turbulent chief who got mixed up with the Lewis and Clark expedition in 1804. Hump's tribe camped by the Cheyenne river where it empties into the Missouri river in Dakota. Hump started out in life as son of the head chief in a campaign against the whites. He fought under Red Cloud, and in 1876 he was in the Custer campaign. He was in the party attacking Major Reno. He finally surrendered with others of the Sitting Bull Indians to General Miles. In those days Uncle Piper was at the Cheyenne River Indian Agency. He had assisted in building telegraph lines; had even guarded the stage coach lines of the frontier. At one time he was employed by the government to drive captured Indian ponies down to Sioux City to be sold at auction and to bring back cows and heifers to replace them. He was furnished thoroughbred Indian scouts as cattle drivers. Hump was one of these scouts; he had seen how useless it was to fight against the government, and he became a government guide and scout. When on the return trip the other Indians desired to kill Uncle Piper and the other white men in the party and again start on the war-path, it was Chief Hump in the midnight councils who reminded them that they had held up their hands and sworn to keep the peace, and his counsel prevailed, notwithstanding several in the party, notably Little Wounded and Long Rock, broke out in rebellion as Ghost Dancers some years later. It was on this trip down to Sioux City after cattle that the friendship between Uncle Piper and Chief Hump of the Minneconjous started, and they remained good friends and brothers for thirty-two years, until the Great Spirit saw fit to take his friend Hump to the happy hunting grounds.

Do You Hear Well?

The Stolz Electrophone—A New, Scientific and Practical Invention for Those Who Are Deaf or Partially Deaf— May Now be Tested in Your Own Home.

Deaf or partially deaf people may now make a month's trial of the Stolz Electrophone at home. This is unusually important news for the deaf, for by this plan the final selection of the one completely satisfactory hearing aid is made easy and inexpensive for everyone. This new invention (U. S. Patent No. 763,575) renders unnecessary such clumsy, unsightly and frequently harmful devices as trumpets, horns, tubes, ear drums, fans, etc. It is a tiny electric telephone that fits on the ear, and which, the instant it is applied, magnifies the sound waves in such manner as to cause an astonishing increase in the clearness of all sounds. It overcomes the buzzing and roaring ear noises, and also so constantly and electrically exercises the vital parts of the ear that, usually, the natural, unaided hearing itself is gradually restored.

Mrs. C. Lidecka, 238 12th Ave., Maywood, Ill., wears an Electrophone. Less conspicuous than eyeglasses.

Prominent Business Man's Opinion

STOLZ ELECTROPHONE CO., Chicago. —I am pleased to say that the Electrophone is very satisfactory. Being small in size and great in hearing qualities makes it PREFERABLE TO ANY I HAVE TRIED, and I believe I have tried all of them. I can recommend it to all persons who have defective hearing.—M. W. HOYT, Wholesale Grocer, Michigan Ave. and River St., Chicago.

Write or call at our Chicago office for particulars of our personal home test offer and list of prominent endorsers who will answer inquiries. Physicians cordially invited to investigate. Address or call (call if you can).

STOLZ ELECTROPHONE CO., 1678 Stewart Bldg., 7th Floor, Chicago.

Branch Offices: Philadelphia, Cincinnati, Indianapolis, Pittsburg, Los Angeles, Seattle, Des Moines, Toronto.
Foreign Office: 82-85 Fleet St., London, Eng.

Uncle Piper, although known as the genial subscription editor of The National Farmer and Stock Grower, and the most modest and gentlest of mankind, has been the associate of great and good men, and not the least of them were Horace Greeley, of New York City, and Chief Hump, of Dakota. When General Miles took Chief Hump to Washington to interview the Great Father, a few years ago, he introduced him to the President at the White House as the bravest man he ever met.

CANCER CAN BE CURED.

Scores of testimonials, from persons who gladly write to those now suffering, all tell of perfect cures. My Mild Combination Treatment destroys growth and eliminates the disease from the system. Free book, "Cancer and Its Cure," and 125-page book of testimonials from cured patients in every State in the Union. No matter how serious your case, how many operations you have had, or what treatment you have taken, don't give up hope, but write at once for my books.

Piles Quickly Cured at Home

Immediate Relief, Permanent Cure—Trial Package Mailed Free to All in Plain Wrapper.

Piles is a fearful disease, but easy to cure if you go at it right.

An operation with the knife is dangerous, cruel, humiliating and unnecessary.

There is just one other sure way to be cured—painless, safe and in the privacy of your own home—it is Pyramid Pile Cure.

We mail a trial package free to all who write.

It will give you instant relief, show you the harmless, painless nature of this great remedy and start you well on the way toward a perfect cure.

Then you can get a full-sized box from any druggist for 50 cents, and often one box cures.

Insist on having what you call for.

If the druggist tries to sell you something just as good, it is because he makes more money on the substitute.

The cure begins at once and continues rapidly until it is complete and permanent.

You can go right ahead with your work and be easy and comfortable all the time.

It is well worth trying.

Just send your name and address to Pyramid Drug Co., 92 Pyramid Building, Marshall, Mich., and receive free by return mail the trial package in a plain wrapper.

Thousands have been cured in this easy, painless and inexpensive way, in the privacy of the home.

No knife and its torture.

No doctor and his bills.

All druggists, 50 cents. Write today for a free package.

CATARRH MEDICINE FREE

If your Ears ring or roar, or your hearing is affected, if Eyes ache, water or burn, or sight is failing, if you K'hock, spit, cough or have bad breath, scabs in Nose, Irritation in Bronchial Tubes, Lungs or Stomach, your name and address will bring to you **absolutely free** a 32 days course of medicine prescribed to meet your **individual** requirements and complications.

We have cured many who have tried various so-called Catarrh cures with little or no benefit, and we make you this liberal offer to introduce our splendid treatment in your section.

REMEMBER send only your symptoms, name and address. **NO MONEY**—and without cost you will receive a 32 days course of medicine prescribed especially for you.

FREE STUART'S ADHESIVE PLASTER-PAD TRADE MARK REG'D PATENTED SEPT 12. 1908

RUPTURE CURE.

Stuart's Plaster-Pads are different from the painful truss and being self-adhesive they hold the rupture in place without straps, buckles or springs—cannot slip, so cannot chafe or compress against the pelvic bone. The most obstinate cases cured in the privacy of the home. Thousands have successfully treated themselves without hindrance from work. So easy to apply—inexpensive. Guaranteed in accord with National Drug Laws. Write to-day and "Trial treatment," with interesting book will be sent FREE. Address STUART PLASTER-PAD CO., Block 77 St. Louis, Mo.

Please mention Nat. Farmer and Stock Grower.

A Party of Hearts.

It was on February 14th that a young hostess gave her party of hearts. She bought sheets of red cardboard and cut hearts of all sizes from the very tiniest to the very large ones. With these she decorated the parlor, living room and dining room, putting them up, some singly, some in twos and threes, and others strung on cords by tens or fifteens. After the guests had gathered, they were given five minutes in which to count the hearts and were apprised of the fact by this rhyme, which was written upon a blank card and handed with a pencil to each guest:

"Cupid asks that you will count
All the crimson hearts in sight;
Write your name and the amount;
He'll reward you if you're right."

Such scrambling and laughter! Only one counted correctly, and her count was 321. She was awarded a box of dainty motto hearts, which she passed among the guests, and they spent some minutes in reading aloud the sentiments printed upon the hearts they selected.

After that each one was given a crimson heart, blank on both sides, and told that twenty minutes would be allowed in which the young women should write what they considered the best way of making a proposal, and the young men what they considered the best way of answering it. The hearts were numbered and the corresponding number with the person's name kept on a list. The proposals and answers were collected and read by two persons, first a proposal being read, then an answer. These were greeted with shouts of merriment. The company voted as to which of them was the best. The young woman receiving the prize of an immense cooky heart, wrote the following proposal:

"To thee, my sweet and most adored,
I beg, beseech, until I'm floored.
If you my only one will be,
Your finish you will surely see."

The refreshments consisted of minced-meat sandwiches, cut in the shape of hearts, potato salad in which were mixed nuts and celery, olives and pickles, ice cream molded into heart shapes and all manner of iced cakes in odd shapes.—Janet Thomas Van Osdel.

Mice and Rats in Stables and Barns.

As a matter of safety, all mice and rats should be exterminated from the premises by the farmer. They do damage in many ways and some of the ways have not been generally recognized by the men whose barns are the hiding places of these rodents.

It has been pretty well proven that rats carry the pest that sometimes ravages European countries. The extermination of rats is therefore one of the precautionary measures taken when the pest is spreading. It has not, however, been recognized that rats and mice may carry some of the insects that lessen the value of our farm stock.

In Germany field mice were captured and were found to be infested with the larval form of the ox warble fly, Hypoderma bovis. The grubs were embedded under the skin of the mice, just as they are found under the skins of bovines.

These grubs annually do an immense amount of injury by lessening the value of the hides taken from cattle. To exterminate them has been one of the cares of the cattle raiser. It is now seen that the field mouse may be a means of keeping this insect pest alive on the farm. In the case of the mice taken in Germany, they had been living in a pasture given over to the pasturing of cows, so their securing of the grubs is easily understood.

This being the case, we may infer that in many of our cattle pastures the ground is infested with the eggs of the flies in question, which, when taken into the digestive tracts of the mice, soon become grubs and in turn develop into flies. In this way the grubs may be kept on a farm indefinitely. The extermination of the mice, therefore, becomes a necessary measure of protection.

Rats and mice in the barns get into any grain or meal feed given the animals and thus infect the food with the germs. This applies as much to the poultry yard as to any other part of the farm, and roup and other deadly poultry diseases are doubtless often helped to spread by these rodents.

Hog cholera is probably carried from farm to farm by rats and mice which are often present in great numbers where hogs are kept. The feeding of corn provides the rats with a steady grain diet which they appreciate. One hog raiser found the rats such a persistent nuisance that he was compelled to tear out all his wooden floors and lay cement floors in their place. Under the old floors he found the ground burrowed and tunneled by the colonies of rats that had dwelt there. Nothing but digging up the soil drove out the last rat.

There are many ways of getting rid of rats and mice, but it is not easy to prevent other rats and mice from coming to take their places. This is the thing that should be done first and not last. The foundations of the barns must be made of such a nature that the hiding places of the rats and mice will be destroyed.

In the building of new barns this should be always provided for. There is no good reason for the existence of the rat-and-mice pest, for it is possible to so construct all buildings that the rodents cannot get in. In the past the necessity for this has been overlooked.

She Did Her Very Best.

Nikola Tesla, famous for his original and daring electrical researches, said the other day of perpetual motion:

"It will come. That is to say, something equal or superior to it will come. There is the Wright machine, for instance; doesn't that solve the impossible problem of a man's lifting himself up by his own boot straps?"

"Ambition," said Mr. Tesla, "accomplishes daily miracles. Remember the ambitious hen.

"This faithful creature always laid an egg of the same size as the porcelain nest egg used on her as a decoy.

"Perceiving his hen's intense ambition, the farmer put a porcelain goose egg in her nest. She laid a goose egg.

"Then the farmer, greatly pleased, put in the nest a whitewashed football. The next time he visited the barn he found in the nest an egg as big as the foot-ball, but no hen was in sight.

"He took up the egg and saw engraved on it:

"'I'm no ostrich, but I've done my best.'"—Globe-Democrat.

"A man is seldom as black as he is painted or a woman as white as she is powdered."—Chicago News.

Deaf People Now Hear Whispers

Listening Machines Invented by a Kentuckian.

Invisible, When Worn, but Act Like Eye-Glasses.

Ever see a pair of Listening Machines? They make the Deaf hear distinctly. They are so soft in the ears one can't tell they are wearing them.

And, no one else can tell either, because they are out of sight when worn. Wilson's Ear Drums are to weak hearing what spectacles are to weak sight.

Because, they are sound-magnifiers, just as glasses are sight-magnifiers.

They rest the Ear Nerves by taking the strain off them—the strain of trying to hear dim sounds. They can be put into the ears, or taken out, in a minute, just as comfortably as spectacles can be put on and off.

And, they can be worn for weeks at a time, because they are ventilated, and so soft in the ear holes they are not felt even when the head rests on the pillow. They also protect any raw inner parts of the ear from wind, or cold, dust, or sudden and piercing sounds.

* * * *

These little telephones make it easy for a Deaf person to hear weak sounds as spectacles make it easy to read fine print. And, the longer one wears them the better his hearing grows, because they rest up, and strengthen, the ear nerves. To rest a weak ear from straining is like resting a strained wrist from working.

Wilson's Ear Drums rest the Ear Nerves by making the sounds louder, so it is easy to understand without trying and straining. They make deaf people cheerful and comfortable, because such people can talk with their friends without the friends having to shout back at them. They can hear without straining. It is the straining that puts such a queer, anxious look on the face of a deaf person.

* * * *

Wilson's Ear Drums make all the sound strike hard on the center of the human ear drum, instead of spreading it weakly all over the surface. It thus makes the center of the human ear drum vibrate ten times as much as if the same sound struck the whole drum head. It is this vibration of the ear drum that carries the sound to the hearing Nerves. When we make the drum vibrate ten times as much we make the sound ten times as loud and ten times as easy to understand.

This is why people who had not in years heard a clock strike can now hear that same clock tick anywhere in the room, while wearing Wilson's Ear Drums.

Deafness, from any cause, earache, buzzing noises in the head, raw and running ears, broken ear-drums, and other ear troubles, are relieved and cured (even after ear doctors have given up the cases), by the use of these comfortable little ear-resters and sound magnifiers.

A sensible book, about Deafness, tells how they are made, and has printed in it letters from hundreds of people who are using them.

Clergymen, Lawyers, Physicians, Telegraph Operators, Trainmen, Workers in Boiler Shops and Foundries—four hundred people of all ranks who were Deaf, tell their experience in this free book. They tell how their hearing was brought back to them almost instantly, by the proper use of Wilson's Ear Drums.

Some of these very people may live near you, and be well known to you. What they have to say is mighty strong proof.

This book has been the means of making 326,000 Deaf people hear again. It will be mailed free to you if you merely write a post card for it today. Don't put off getting back your hearing. Write now, while you think of it. Get the free book of proof.

Write for it today to the Wilson Ear Drum Co.
213 Todd Building, Louisville, Ky.

THIS $3.50 PAIL

We will also give away 10,000 beautiful N. Y. Standard R. R. Watches

TO PROVE BEYOND ALL DOUBT TO EVERY INTELLIGENT STOCK RAISER THAT

WILBUR'S STOCK TONIC

is the World's Greatest Conditioner and Feed Saver we will Actually give this 25-lb. Pail Free, where we have no Agent, to Every Reader of this Paper who fills out and mails to us the Coupon shown below. (You can also get free a N. Y. Standard Railroad Watch)

WHAT WILBUR'S STOCK TONIC IS

Nearly a quarter of a century's actual experience has proven beyond all doubt that Wilbur's Tonic is a money-maker for feeders. WE KNOW THIS. It has been PROVEN to us thousands upon thousands of times in the most forceful manner. We want to convince YOU and are willing to do it AT OUR OWN RISK.

You know the value of the pasture for any kind of stock: how it keeps the animal in good condition—nature's own way of doing it. There is no argument about the value of the pasture, but it does not last the year 'round. We prepare a tonic which, mixed with grain and fed to stock, furnishes in stall or feed box, in the proper proportion, the ingredients of pasture diet, invigorates and fattens stock at small enough cost to make the tonic a money-making investment for the owner of one cow, horse, hog or sheep, and a proportionately larger one for the owner of thousands of head.

FOR COWS

You know when the pasturage goes down in the fall, the milk goes, the butter goes, the flavor goes until all are shortest when the price is highest. Wilbur's Tonic invigorates cows; it supplies the needed roots, barks and leaves of the pasture, sustains the flow of milk, and color, quantity and flavor of the butter. Take a cow right off the pasture, feed her Wilbur's Tonic in the stall and she will show very little loss of milk, and one cent's worth of Tonic per day saves one dollar's worth of grain per month.

FOR HORSES

Wilbur's Tonic builds up run-down horses, prevents colic and keeps them in good appetite. It keeps the bowels loose, water clear, blood cool and in a healthy condition. They are always ready for work. Wilbur's Tonic makes them relish their food, keeps the hair smooth and sleek and prevents that rough looking coat. It is a pure vegetable food, positively prevents disease, and makes horses strong, large and full of life. Wilbur's Tonic should be fed mares while they are suckling the colt and mixed with the colt's grain while weaning. It will prevent scour and keep them healthy and growing. Stallions should be fed Wilbur's Stock Tonic during the standing season every day. When out of the standing season, feed Wilbur's Tonic two or three times a week, to keep them regular and healthy.

FOR HOGS

Hogs, you know, are the most susceptible animals to contagious disease. But you know, too, if they escape contagion, they are kept cheaper than any other kind of stock. If you keep your hogs healthy they can resist contagion, will fatten quickly and cheaply. If they get sick and refuse to eat you know how quickly they will die. Nothing will save them; medicine is useless. To keep them healthy you must feed them something they will eat, and something that will satisfy the demands of their systems. We believe that there is only one thing in the world that will do this, and that is Wilbur's Tonic.

FOR STEERS AND CALVES

One ounce of food fed with grain to the steers when fattening for market will put flesh on them and save you money on grain. A healthy animal wastes no food. It is all transformed into flesh. For calves you are raising or ones you are fattening for veal, you can obtain the most wonderful results by using one-half measure of Wilbur's Tonic with one pint of ground oats or corn meal.

FOR POULTRY

Wilbur's Stock Tonic is an egg maker and a fat maker which will not only force more profit from the poultry yard but will also prevent disease and save birds. It is a sure preventive for cholera, gapes, pip, roup, indigestion, diarrhoea, apoplexy, and all other poultry diseases. For little chicks it has no equal and produces large, heavy birds.

PREVENTS ABORTION

By counteracting colds, and soothing the nerves while the mother is in a delicate condition, Wilbur's Stock Tonic PREVENTS ABORTION and saves for the breeder at least one-half more of his increase. Wilbur's Stock Tonic fed in small quanties to young animals, will make them grow large, strong and fat.

FYFIE KNIGHT—Two-year-old Aberdeen-Angus steer. Grand champion steer at the Chicago International Show of 1908, weighing 1,610 pounds. Exhibited by Purdue University, Lafayette, Ind., and sold by Messrs. Clay, Robinson & Co. at 26½ cents a pound. See article relating to grand champion steer on page 3.

Great St. Louis Hog Market.

An opportunity to show the merits of the St. Louis market over all the others was the last Friday in February. At none of the markets was there an excessive supply of hogs. At St. Louis the top price was $6.85 and the bulk sold at $6.40 to $6.65. At Chicago the top price was $6.65 and the bulk sold at $6.35 to $6.55. At Kansas City the top price was $6.50 and the bulk sold at $6.00 to $6.40. At Omaha the top price was $6.40 and the bulk sold at $6.10 to $6.22½. At St. Joseph the top price was $6.45 and the bulk sold at $6.10 to $6.35. St. Louis outsold Chicago 5 to 20 cents per hundred pounds; outsold Kansas City 25 to 40 cents per 100 pounds; outsold Omaha 22½ to 45 cents, and outsold St. Joseph 30 to 40 cents per 100 pounds. Any live stock shipper who is losing money shipping to lower markets will find it to his advantage to ask for a daily or weekly report of the St. Louis market. The commission firms advertising in this paper will furnish up-to-date information.

"At the Sign of the Golden Fleece."

An article on sheep husbandry entitled as above has attracted much favorable attention, and because of the great demand has been reprinted in the form of a booklet. The article was written by Mr. John Clay, of the firm of Clay, Robinson & Company, and he has promised us that he will send out a free copy to any of our readers who may write for it. Mr. Clay is a great sheep-raising and market authority, and all he writes about sheep is practical as well as poetical. The booklet contains several of the most beautiful pastoral pictures we have ever seen. In writing for a copy of the "Golden Fleece," please address Clay, Robinson & Company, National Stock Yards, Ill.

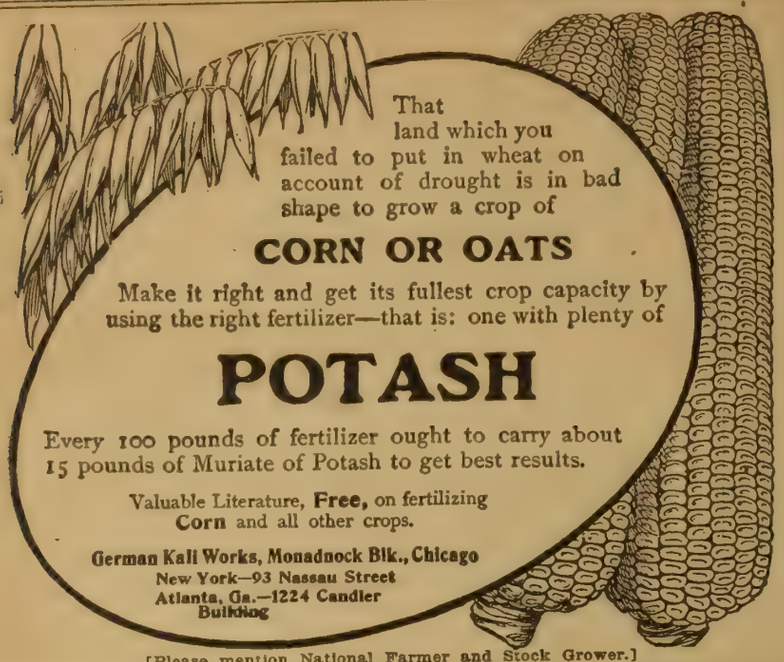
and Stock GROWER



That land which you failed to put in wheat on account of drought is in bad shape to grow a crop of

CORN OR OATS

Make it right and get its fullest crop capacity by using the right fertilizer—that is: one with plenty of

POTASH

Every 100 pounds of fertilizer ought to carry about 15 pounds of Muriate of Potash to get best results.

Valuable Literature, **Free,** on fertilizing **Corn** and all other crops.

[Please mention National Farmer and Stock Grower.]

Intensive Farming Coming.

With the increase of population in this country more intensive methods in farming are coming. This is a matter for encouragement to the farmers rather than the opposite, for it will produce a more desirable condition of farm existence.

Everything has its disadvantages, and so extensive farming has had its disadvantages. One of these has been the impossibility of keeping up social institutions. When farms are very large the houses are far apart, and it takes time and costs money to get people together. Where houses are at little distance from each other, social institutions thrive, on account of the ease with which people can unite in all kinds of enterprises.

This matter of the social life is a very large one. Social life includes educational efforts, which have never thrived when pupils had to be drawn from large areas. The better the true education of a people the happier it will be.

Intensive farming means the getting of a larger crop from any given area of ground. The American Indians got but little from the soil, but they probably thought they were good farmers and that the ground was yielding them its full abundance. It is possible that there is as great a difference between what we not get from the land and what it is capable of producing as between what the red man got from the ground and what we get from it.

Intensive methods are growing in favor even now and are affecting agricultural conditions. Two classes of farmers are being affected. The one class consists of those farmers that are anxious to make more out of their farms than they have previously made and are willing to learn in the school of the new experience. Such farmers are being bettered by the changing conditions. The other class consists of those that insist that they know all there is to know about agriculture and will not learn. The battle is going against them. Many of them are becoming involved in the meshes of debt and have little to expect from the future. They are still following the old wasteful methods of agriculture, putting high-priced corn into low-priced meat, and drawing crops from the land without giving it anything in return.

For the latter class of farmers the coming of intensive methods means ruin, if they do not die before the end of their poverty comes. Intensive agriculture seems to mean always high-priced land and hard conditions of marketing; that is, expensive conditions of marketing. The farmer that will not modify his methods to suit these new conditions can but be the loser. He cannot escape the expense of owning high-priced land, and he cannot reduce the rising cost of marketing, in the aggregate.

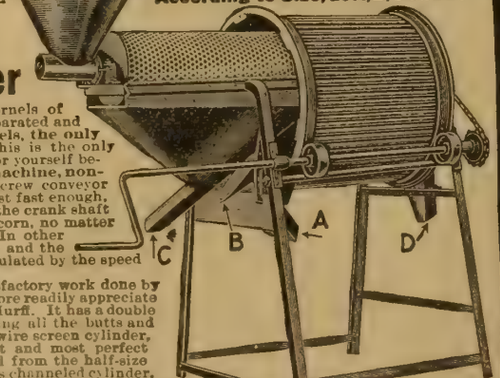
Relative to this cost of marketing, it might be supposed at first that its cost has been reduced because railroads do not now charge as much as they once did for hauling. But this does not fix the aggregate cost of marketing. To illustrate: Two years ago in some parts of the Middle West apples in the orchard sold at 20 cents per bushel, while the same apples sold in Chicago, in retail stores, at from 50 to 70 cents per peck, or from $2.00 to $2.80 per bushel. The enormous difference between what the apple growers got and what the consumers paid must be charged to cost of marketing. The farmer paid a large share of that expense himself.

This is a situation that cannot be ignored. Somehow the marketing of the products must be made less expensive, and the great gulf between the prices paid the producer and the prices the consumers have to pay must be greatly lessened, or intensive farming methods will bring in their train many disadvantages we do not now recognize.

RAISE MORE CORN TO THE ACRE

One reason why many crops of corn are so unprofitable is because much of the seed planted is not fertile. There are thousands upon thousands of small, shriveled-up kernels put into the ground, where most of them die for lack of vitality, while the balance reproduce their kind—dwarfed, stunted stalks feebly supporting small, undeveloped ears and sickly nubbins. With

The HURFF Seed Corn Grader



Delivers Four Grades of Corn, According to Size, at A, B, C and D.

Every one of these non-fertile kernels of corn is **thrown out**—perfectly separated and kept away from **plump, full kernels, the only ones that you should plant.** This is the only true grader. You can prove this for yourself before you buy. It is a **force feed machine, non-adjustable and fool proof.** A screw conveyor in the hopper supplies the corn just fast enough, and as the screw is operated from the crank shaft, the grader takes care of all the corn, no matter whether it is fed fast or slow. In other words the capacity of the grader and the feed are the same, both being regulated by the speed with which the crank is turned.

If you know about the unsatisfactory work done by other seed corn graders you will more readily appreciate the superior construction of the Hurff. It has a double process of separation, first removing all the butts and very small kernels by means of a wire screen cylinder, after which the largest, plumpest and most perfect kernels for planting are separated from the half-size second rate kernels in an ingenious channeled cylinder, which is so certain in its operation that nothing but good, big, fertile seed corn need be put into your planter. This means more bushels of corn to the acre, better corn and more money.

You can easily **grade three bushels of corn per hour,** getting four grades or sizes of kernels. No other machine can equal the Hurff for perfect work. It is the only grader made that will give complete satisfaction. An hour's use of it will demonstrate every claim made for it, but I will ship the machine to you and allow you a **TEN DAYS' FREE TRIAL.** Satisfy yourself that this is **the only practical seed corn grader**—that it sorts out exactly the kind of kernels you want to plant—that it will make your corn crop more valuable—that you can make it pay you a profit by grading corn for your neighbors. Write at once telling me that you are willing so give the Hurff Seed Corn Grader a free test. Let me tell you how little this machine will cost you to own, the money it will save and make for you, how well it is made and why you cannot afford to be without it.

TEN DAYS' FREE TRIAL

L. W. HURFF, Manufacturer
107 Blank St., GALESBURG, ILL.

A 10 Year Roofing Guarantee Backed by a Surety Company Bond.

In the advertising columns of this paper the United Roofing and Manufacturing Company are offering to every purchaser of three-ply Congo Roofing a National Surety Company bond, which covers a period of **10 years.** This company is one of the largest surety company in the world (capital and assets of about $2,000,000), and when they back a proposition there must be a great deal in it or they would not have risked their reputation on something about which there could be any question.

The Congo people are desirous of making this roofing the most used in the world, and with their usual foresight hit upon this excellent plan of giving the buyer satisfaction as well as increasing their sales. The bond is a plain statement of what they can and will do, and offers such protection that no prospective buyer can afford to overlook. This bond means protection to you.

It isn't necessary to buy the roofing to learn the contents of the bond—which is another pleasant feature. By writing to the United Roofing and Manufacturing Company, 504 West End Trust Building, Philadelphia, Pa., they will be glad to send you information regarding same and samples free.

Under pressure of necessity in Wisconsin the state authorities issue licenses to grade stallions, but the grades have to be sired by pure-bred horses. They are now trying to get an amendment to existing laws to require the owners to post up licenses to show that the horses are actually grades, and only grades.

More Money From Your Hay

You should get our big, new, handy reference book "All About Hay." It is packed with money-making suggestions for hay makers. Statistics from Secretary Wilson, What crops are most profitable and why. How to handle hay to the best advantage, and many other instructive facts.

This book cost considerable to get up, but we send it ***free*** to anyone who expects to buy any kind of hay tool this year.

We want to place our complete hay book in the hands of intending buyers, because it shows how money can be saved in hay making and better prices obtained for the crop. We make the great

DAIN HAY TOOLS

and tell about them in this big book. Why they are superior. What each does. How we overcome faults of other machines. You can't afford to buy any hay tool till you know the Dain. You would be doing yourself injustice. The more you investigate Dain Tools, the better you will like them. Ask men who use them. Write us for testimonials—they *prove* our claims that Dain Tools are simplest, strongest, smoothest-running and do most work in the least time. A quarter century of success behind us. Jos. Dain, Pres. of this concern is the greatest hay tool expert on earth. His hobby is building hay tools *right—that's* why we use best materials and have so many exclusive improvements. Tell us your hay tool needs and we will send you *free,* this valuable book—"All About Hay," which points the way to bigger profits. In the meantime, ask your dealer to show you the great Dain line of time-and-money-saving hay tools. **DAIN MFG. CO.,** 828 Vine St. Ottumwa, Ia.

On February 13th it was reported that new cases of the foot and mouth disease in cattle had been discovered by the Bureau of Animal Husbandry. The location is Delaware county, Pennsylvania, a few miles out from Philadelphia. All the animals were promptly slaughtered and burned.

Between dry-farming methods, the irrigation of all rich lands, intensive farming and improved machinery, no one need fear a shortage of feed stuffs. The United States can feed the world.

Do you want a fine farm for little money

—a farm that is bigger than you can afford to own where you live now?
—a farm that will grow bigger crops than you can grow on your present farm?
—a farm that will make you a good living and leave you some profit besides?
—a farm that will grow more valuable each year?
You can get such a farm

in the Southwest

along the Cotton Belt Route in Southeast Missouri, Arkansas, Louisiana and Texas. Some of the finest land in the Southwest lies along this line. It can be bought on easy terms for $5 to $25 an acre.

The low rates offered by the Cotton Belt each month would make a trip of investigation very cheap and profitable.

COTTON BELT ROUTE

Do you want to know more about this land? Write me for free copies of beautifully illustrated books about this great country. It will pay you to read them. Write today.

THE GRAND CHAMPION STEER.

How He Was Bred, Raised, Fed, Marketed, and His Carcass Record—The Best or All the Champions.

Fyfie Knight, Aberdeen-Angus steer, fed, finished and exhibited by the Purdue University of Lafayette, Ind., was the grand champion steer at the Chicago International Live Stock Show of 1908. He was only a two-year-old, weighed 1,610 pounds on arrival at the yards, and 1,590 pounds when sold by Clay, Robinson & Co. to The Fair, of Chicago, at 26½ cents a pound. This was considered a remarkably good sale and realized considerably more money than any of the butchers or packers were prepared to pay, notwithstanding they are inclined to be liberal when grand champions are on sale.

The grand champion was considered as being a marvelous beef steer, and we wish we had a better picture of him. He was smooth, with a kindly but not too soft touch; well balanced all over. He looked as if he had matured slowly, yet pleasing to the eye of the expert judge. He dressed 68.56 per cent. of beef on the hooks, and the hide weighed 98 pounds. The carcass was very smooth and of fine appearance.

The history and feeding of the grand champion is taken from the Drovers' Journal of Chicago, published on the day of award, as follows:

"Fyfie Knight, 99,003, the grand champion steer of the Ninth Annual International Live Stock Exposition, is a pure-bred Aberdeen-Angus, weighing 1,620 pounds. He was calved May 8, 1906, on the farm of Milton Foss, of Burrows, Ind. His sire was Woodlawn Knight, 4th, bred by Pierce & Son and owned by Fitzer Bros., of Clymers, Ind., and his dam was Black Queen M., 4,881. L. N. Mullen, of Burrows, Ind., bred the cow and sold her to Milton Foss, who owned her when Fyfie Knight was dropped, making both Mr. Mullen and Mr. Foss concerned in the breeding of the grand champion steer. The grandsire on the sire's side was Black Woodlawn, 42,088, bred by Pierce, and the grandam Nightingale of Woodlawn, 3d, 26,477. The grandsire on the dam's side was Heather Zaire, 51,696, and the grandam Rock Creek Flora, 2,411.

"But the credit of making a prize animal of Fyfie Knight belongs strictly to Purdue University. He was brought into the college farm in February, 1907. J. M. Hamer, Superintendent of Live Stock, selected and fed him under the direction of Professor J. H. Skinner, Head of the Department of Animal Husbandry, and Dean of the School of Agriculture of Purdue University. The steer came to the farm a thin bull calf, where he was castrated and turned in with other steers kept on the farm for instructional purposes. He had been on full feed about ten months, and during the past summer ran on blue grass at night and during the early part of the day. As cooler weather came on, he was turned on grass during the day and kept in at night. He has received a ration of bran, shelled corn, cracked corn, ground oats, wheat, silage and clover hay. The ration used just before entering the show was bran, one part; cracked corn, three parts; shelled corn, four parts (fed at noon); ground oats, seven parts; cracked wheat, one part; silage, one and a half pounds per day, and a light ration of clover hay. He was a good feeder, although somewhat nervous in the stall. Doubtless he would have shed his most perfect form during the show. This is his first year to show, and he has never been off feed a day. He has never received an excessively heavy ration. His gain for the past six months was 300 pounds; for the month of November, 50 pounds."

Loss and Gain in Storage.

Nearly everything undergoes loss in storage, and yet most things are stored with a profit, because the prices are better after storage periods than before. Whether it pays to store anything depends on many conditions. Also the losses and gains are regulated largely by the storage conditions all through the storage season rather than the conditions existing at time storage was begun. Thus, fruits and vegetables that went into storage in the fall are affected as largely by conditions at the end of winter as at the beginning.

Where the storage place is the cellar, especial care must be observed late in winter, as the temperature is modified in the cellar almost without being perceived. The light admitted acts disadvantageously to many of the vegetables, as it encourages growth. This effect is observed in the case of the potato, which responds to the warmth and light and pushes out its sprouts.

The man that knows best how to keep his stored stuff from deteriorating will make the most out of his products. Potatoes that are allowed to sprout also become soft and are of little use for general marketing. For planting even they are of lessened value, and if they are put on the market for seed potatoes they will sell at a discount, if at all. The seedsman makes it a point to store his potatoes in a dark and cold place, and also keeps them away from the air. The potatoes so taken care of come out in the spring hard and firm, and the sprouts on them have not started at all. They sell, of course, for a large price, and that price is made by the perfect manner in which they have been kept rather than anything else.

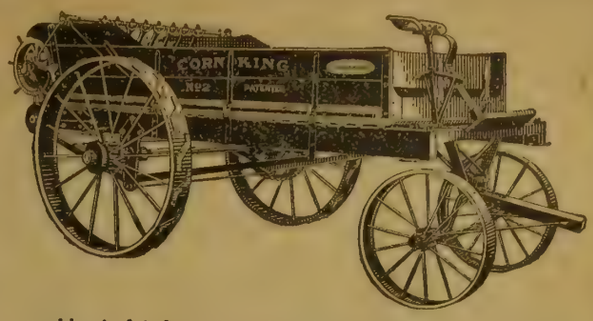
But when things are kept at their best, there is some loss during a storage period. Always there is some shrinkage in weight, which counts in the selling, even if that change in condition is not apparent to the eye. But even considerable losses are often compensated for by the advance in price.

An illustration of this is found in a test made in Vermont in the keeping of Hubbard squashes. A ton of these squashes was stored in October, when they were worth a cent a pound. By February they had shrunk in weight from 2,000 pounds to 1,488 pounds. The loss of moisture amounted to 20.8 per cent., and from rot 4.8 per cent. But the selling price of the lot was $53. There had been a gain in value of $33, in spite of the large loss from drying out and from rot. This is an extreme case, perhaps, for the prices varied greatly between October and February, but it illustrates the great advantage there is in the storage of products. This is particularly true of products that are gambled in on the Boards of Trade.

A good thermometer in the storage cellar is one of the best aids to success in storage operations. At this time of year it will often show the cellar very much warmer than it should be. The owner of the cellar can always remedy this to a considerable degree by letting in cold air during the day and keeping the cellar shut at night.

It would be easy to have a wooden or metal flue running into the cellar and so controlled by stops and valves that one could pour cold air into the cellar at any time without disturbing the windows, which should usually be kept closed during the cold periods of winter.

Why buy another farm?



Are you thinking of buying another farm in order to extend your operations and produce larger crops?

You will find it better in almost every way to build a new farm on top of the one you now have.

Do not seek to farm more acres but make your land produce more bushels.

If the farm you now have produces—say 35 bushels of oats per acre, instead of buying more land to get an additional 35-bushel yield, why not make the farm you have produce 70 bushels per acre? You can do it.

Buy an I.H.C. Manure Spreader

It is the machine which enables you to take the manure produced on the farm and in a few years fully double the productive power of your land.

It does this by placing the manure on the soil in the most available condition to support plant life.

It also makes the manure go further than can be done in any other way.

I. H. C. manure spreaders are made in three styles: Corn King, Cloverleaf and Kemp's 20th Century.

The Corn King is of the return apron type. The steel roller equipment of the apron on this machine reduces friction to the minimum, even with the heaviest loads. This machine will be supplied with either a ratchet feed or a double pawl worm feed for the apron. Either of these feeds can be regulated to bring the desired amount of manure to the beater. The beater is equipped with long, square steel teeth with chisel points. It is driven by means of a chain from a large sprocket on the rear axle. A vibrating rake is used on this machine to level the load as it comes to the beater. The Corn King spreader has steel wheels of the most serviceable construction and a frame made of thoroughly air-dried wood stock and put together in a very durable manner. There are three sizes of this machine: No. 2 small, No. 3 medium and No. 4 large.

The Cloverleaf is of the endless apron type. It is also supplied with two feeds for the apron—ratchet or double pawl worm feed. The beater on this machine is constructed the same as the beater on the Corn King. This spreader also has a vibrating rake to level the load as it comes to the beater, has steel wheels and a well made main frame. This spreader is made in three sizes: No. 2 small, No. 3 medium and No. 4 large. It is very attractive, being well painted and symmetrically designed.

The Kemp's 20th Century is of the return apron type. The apron on this machine has a worm feed which is very positive in its action. The beater bars are provided with long, round steel teeth, so placed on the cylinder that perfect distribution of the manure is insured. This machine has a leveling rake to insure a uniform supply of manure to the beater. The Kemp's 20th Century will be supplied with either wood or steel wheels. The frame of this machine is well braced both crosswise and lengthwise, and the wood stock used is of the very best. This spreader is made in a number of styles and sizes.

It is impossible to describe all of the features of the above machines in this small space. However, we have catalogs which illustrate and describe in detail the many excellent features of these machines. These catalogs are well worth procuring, not only because they describe the spreaders but because they contain information on soil fertility.

Points that are well to bear in mind in connection with these spreaders are that you can top-dress your fields and grow large crops of clover to turn under and enrich the soil, so that you may grow still larger crops and add to the soil's fertility. They double the value of the manure, save much time and labor and greatly increase the value of your land by increasing the soil's fertility.

Any one of these machines will pay for itself in from one to two years, depending upon the amount of work you have for it to do.

Call on the International local agent and see about owning one of these manure spreaders. He will supply you with catalog and full information, or, write direct to the home office.

F. E. BERRY,
Hog Salesman at St. Louis National Stock Yards for CLAY, ROBINSON & CO.

THE ST. LOUIS HOG MARKET.

Views of a Salesman—The Market Looks Good to Him.

A Little Touch of History—Pork packing Records of Past and Present.

The Hog a Good Feeder and Dresser—St. Louis in Need of 3,500,000 Hogs a Year.

Editor of The National Farmer and Stock Grower:

Dear Sir:—I am complimented by your request to furnish an article for publication in regard to raising and marketing hogs. Although in the habit of writing to our friends and patrons concerning the hogs which they have consigned to us and I have sold on the market, it is quite another thing to write for publication.

As regards the St. Louis market, I express about all I feel when I say that it certainly looks good to me. There appears to be a buyer for every hog, and when there is a good run the market appears to expand so as to take them all at prices which compare favorably with any other center. It is a resourceful market, and at the very last minute something may and often does arise to quicken the finish of a desperate day's work, viewed from the selling standpoint. In resisting a declining market St. Louis is practically in a class by itself.

I was very well fixed at Buffalo, where I sold hogs for the same firm, but I am glad to be at the St. Louis National Stock Yards, where there appears to be ample opportunity to do a large and satisfactory business in a section that has many new records to make in stock raising and marketing.

In saying that the St. Louis market looks good to me I refer as much to the past as to the present. It appears to be a market with a history, and the records show that it always was a good market. In the beginning, before the establishment of the National Stock Yards, it was a scattered market. There were stock yards in St. Louis attached to every railroad terminus, and buyers had to skip around lively if there was a light run of hogs. At that time all markets were young and not well organized. In looking up the records and from what I am told by the old timers, there was always a good shipping trade and there were always more local butchers than any other market of its size could boast of.

The record of St. Louis is certainly very attractive. In one month since I came here hogs were sold to be reshipped to thirty-one different points. The buyers on shipping account are not limited to any weight or quality. The hogs cannot be too good for the buyers. The local butcher trade is a very handy institution to help out a salesman who has butcher hogs of fine quality. No matter what may be said in regard to the kind of cattle that are sold in St. Louis, it is a sure thing that the St. Louis people eat fine hogs. Butchers are most particular and they stand up for quality by paying for it.

We must not underestimate the wonderful service which the great packers are doing for St. Louis and other markets. Their buyers take all the advantage which is on their side, and I presume that is what they are hired for, but I can safely assert that even a packing-house buyer cannot afford to take everything for granted on the St. Louis hog market. The packer is really the greatest benefit to the trade, for the reason that he represents the largest buying interest, and the packing-house purchases represent more largely than all others the meats that are exported. These packers shipped over a billion pounds of bacon, hams, pork and lard to foreign countries last year, and if they did not have an immense export trade I do not know where we could sell the farmers' hogs.

According to the Cincinnati Price Current, which is our best statistical authority upon pork products, the Western pork packing reached 27,981,000 hogs in the year 1907. If we consider the increase in hog marketing last year amounting to 3,000,000 head at the Western markets, we must not be surprised at a packing-house report of a total of 30,000,000 hogs packed in the West in one year, which is marvelous when we consider that twenty years ago the Western pork packing of the whole year was 10,799,000 head.

Although enumerating large figures, I may say that a record of 2,560,207 hogs in one year, all sold upon the St. Louis market, is a feat to be proud of. Of these, 1,849,510 head were slaughtered in St. Louis and East St. Louis. Out of 710,697 hogs sold to shippers, 588,979 went directly towards the East and the balance to interior and near-by towns for consumption.

I will try to reach the conclusion of this article by saying that the tendency of the times is towards lighter hogs. This is due to the increased population and the enlarged fresh-pork trade. Old-time pork packing ran largely to heavy hogs. The fresh-meat trade is built up on lighter weights.

At the Chicago International Show of 1908 the grand champion load of hogs weighed 375 pounds. They were a highly-finished load of Berkshires, as near perfection as we ever see in the stock yards. The second prize was awarded to a fine load of eight-months-old Berkshires weighing 274 pounds; and the third prize was awarded to a fine load of 227-pound Berkshire butcher hogs. Undoubtedly from the standpoint of the raiser and swine breeder and the exhibit, the awards were satisfactory; but there are two judgments upon hogs and they do not run together. Selling the hogs upon the market and upon their prize awards was an entirely different proposition. The 274-pound hogs sold for the highest price per pound; the 227-pound hogs came next; and the grand champion load of 374-pound hogs sold for less per pound than either of the other loads.

For the fresh-meat trade the heavy hogs were too heavy, and they classed as a load of choice packing hogs. The heaviest hogs sold for the largest amount of money, but they depreciated in value per pound after passing 275 to 285 pounds in weight. In regard to the hog-carcass competition at the same show ring I noticed that the judge said that the middle-weight barrows were more satisfactory to the general trade than heavier weights.

At the present time hogs are considered heavy at 250 to 265 pounds. Upon the St. Louis market of thirty years ago these look like medium weights. The famous Whittaker hams seem to rest upon hogs weighing 275 to 300 pounds, and other packers, notably C. & L. Rose, bought many thousands of hogs ranging from 310 to 350 pounds. Since then it appears that the hogs

arketed at St. Louis have come own considerably in weight averages, lthough heavy hogs are always well old when they come to St. Louis.

I cannot pretend to go into the ubject of swine raising to any extent. is seldom mentioned, but the fact emains that the hog is to the farmer n honest feeder. When the farmer eeds corn to hogs he knows there will e a good gain in weight to show for . The hog also outdresses any other eat animal, therefore the buyer is ell satisfied. Cattle have their hides, nd the sheep their pelts, no mean ems to the buyer; but when it comes meat, the hog will outdress sheep or attle 15 to 20 per cent.

I would not have gone into this ubject without an opportunity to say word in our own behalf. The firm I m connected with is well established t nine markets, and St. Louis, although ast, is not the least of them. We have o favorites when it comes to markets; he best interest of the shipper is all hat we have to study. The hog, as a eneral rule, is best sold at the nearest arket. St. Louis is the nearest and est market, as I understand it, for bout 3,500,000 hogs a year, therefore he farmer reading this need not hesiate to raise hogs, and his interest is afe when he ships them to St. Louis.

F. E. BERRY,
Hog Salesman at the St. Louis National Stock Yards for CLAY, ROBINSON & CO.

Great Sheep-feeding Station.

The Independent Stock Yards at men avenue, St. Louis, Mo., are being a great sheep-feeding station, purpose being to assist shippers to rket their sheep and lambs to the t advantage. It is a recent move- t, but it is giving satisfaction. It tended for a short feed, that sheep h are not in market condition will fattened, and at the same time the per will be able to take advantage the market. The sheep can be vered at the National Stock Yards through billing whenever they are ly and when the market is also dy. The sheep are fed No. 1 alfalfa . wheat screenings, cotton-seed meal cracked corn. There is no charge water, care or yardage. They are ting on flesh cheaper than it can be done at the Agricultural Colleges. One lot came in, and, being fed forty days, gained twenty-two pounds per head; they were wethers. Usually, however, the feed period is shorter. The yards are fixed up to become the largest feeding station in the country, and it is given over by sheep men as being the very best. The water is pure, the sheds are substantial, well covered and roomy, and the location is superior from every point of view. All who are interested in marketing sheep can obtain all information necessary by writing to commission firms advertising in this paper or to G. R. Collett, Vice-President, National Stock Yards, Ill.

Sowing Grass Seed in the Spring.

With so many disastrous failures in getting a decent "catch" of grass, when seeded in the spring, many have given up spring seeding altogether and are trying fall work. Some do get good stands from spring seeding, so that most failures may be set down as the result of poor methods. One must start with good, live seed. Seed weak in germinating power will succumb before it has strength to etsablish a root system. Heavy, live seed has sufficient energy stored up to sprout quickly and firmly establish itself in the soil.

The general practice now is to sow grass seed with spring grain—oats or barley. This is all right, providing the grain is not put in so thick that it smothers the young grass plants. Grass seed must not be covered too deeply. These small seeds require air, moisture and heat to do well. Whenever one of these things is cut off the seed cannot sprout. I saw this very thing happen last spring. A Will county, Illinois, farmer sowed a mixture of timothy and clover with his oats, broadcast, and then disced them under. The oats came up right, but his grass and clover seed was nearly all lost. He put them in so deeply that the atmosphere could not reach them, and the seeds decayed. He laid the blame to poor seed, but I have no doubt but that it was the depth of covering which killed the seed. Grass seed should be covered to just sufficient depth to insure moisture; in fact, that is the proper depth for planting all seeds. Drilling in grass seed at the same time as the grain, or sowing broadcast and then discing or shoveling under the seed, is always hazardous. The grass seed should be put in **after** the seed-bed has been prepared, and not before. Then a light harrowing or two will be all that is necessary to cover the seed.

When grass seed is sown on winter wheat or rye the harrow is the best implement to use to cover the seed to the proper depth. The mechanical condition of the soil has much influence on the start of the young grass plants. If the ground is in good tilth and then is brought into proper condition of fineness, the grass seeds are surrounded with moist, fine earth and they will start growth just as quickly as the ground warms up. Then don't be stingy with seed. Count on only 80 per cent. of your seed being viable; that is, capable of sprouting, and then count upon 25 per cent. of that being placed where it will not germinate, and govern your rate of seeding accordingly. This seeding proposition is largely a matter for each farmer to work out under his own conditions. No general rule will work out satisfactorily. Physical condition of ground, moisture and nurse crops, all have influence in getting the seeds to grow and prosper.—L.C.Brown.

Test the Seed Corn.

It is just such seasons as the present one when farmers get caught with bad seed corn. Last fall was a very favorable one for maturing and drying corn, and probably most of this corn, which was put away in good season and has had proper care throughout the winter, can be depended upon. But the trouble is right here. Many depend upon seed, which is good in October, staying good until May 1st. It will not do it, except under most favorable conditions. The best-posted corn breeder I ever met has told me time and time again that more seed corn is ruined in February and March than in October and November, and I believe he is right. The changing from 40 degrees above zero with a moisture-laden atmosphere to zero within a few hours will test the hardihood of corn germs if they are exposed. Make sure that your seed is all right; do it now by testing every ear. While some can pass upon an ear from outward appearances, better be sure and test four grains from each ear.—L. C. Brown.

Great Fences
AMERICAN FENCE
Made of wire that is all life and strength — wire that stretches true and tight and yields just enough under impact to give back every jolt and jam it receives.
Made of materials selected and tested in all the stages from our own mines, through our own blast furnaces and rolling and wire mills, to the finished product. Our employment of specially adapted metals is of great importance in fence wire; a wire that must be hard yet not brittle; stiff and springy yet flexible enough for splicing—best and most durable fence material on earth.
To obtain these and in addition apply a quality of galvanizing that will effectually protect against weather conditions, is a triumph of the wiremaker's art.
These are combined in the American and Ellwood fences—the product of the greatest mines, steel producing plants and wire mills in the world. And with these good facilities and the old and skilled employes back of them, we maintain the highest standard of excellence possible for human skill and ingenuity to produce.
Dealers everywhere, carrying styles adapted to every purpose. See them.

Producing Bumper Corn Crops.

I have on my desk this week the letters of two correspondents asking for information on making a bumper crop of corn. Both of these correspondents mention that they are farming lands worth around $150 per acre, and they find that the ordinary crops of corn will not pay for the cost of production and give any return from their land investment.

These men are right. Ordinary corn crops do not pay, and they are in precisely the same position as many thousands of other farmers who have failed to recognize the value of superior crops. It was a long, hard struggle before the more enterprising stock breeders could induce stock-raising farmers to get good bulls to grade up their herds and give their stock better care. But after a time feed became dearer, and stock feeders learned that it was only the superior or best-bred animals, well bred and cared for, that could be depended upon to turn their feed into profits.

With corn, in order to grow crops, we must make every step count from the time the ground is plowed up to gathering time. To tell another man how he can produce eighty bushels of corn per acre is a hard job. It requires good, strong ground, good tillage, good seed and a favorable growing season to make such a crop. Here is the way I did it: I am in Northern Illinois. A field of forty acres was plowed early in the spring. This same field had corn the year before, which left rank stalks to be cut and plowed under. This field was the second year from sod, but during the early spring we spread over it eight loads of manure per acre. The ground was plowed when it was rather wet, but the pulverizer followed closely behind the plow, and then the harrow followed next. This left the ground in fine condition for the planting, which was done between May 10th and May 15th. We run the harrow over this field three times after the corn was planted, so by the time the plants began to show in the hills we had the ground tolerably clean. From this time on it was nip and tuck. It seemed for a month we had to cultivate between showers; and then we had no more rain for nearly six months. We cultivated almost continually. Nearby neighbors were cultivating the same way, but there were more forty-acre yields in the neighborhood than larger ones. I put particular stress on our thoroughness in preparing the seed-bed, and doing the work so that we retained the moisture, which was so badly needed later in the season. This field did not suffer from want of moisture any time during the summer. Other factors, such as vigorous growing seed and good planter work, helped to make the crop. —L. C. Brown.

STEEL SHOES FOR FARMERS.

One Pair Outlasts Three to Six Pairs of All-Leather Shoes. They Prevent Colds and Rheumatism.

Thousands of farmers have discontinued the use of all-leather work shoes and are now wearing the new Steel Shoes. The time is undoubtedly coming when the use of Steel Shoes for outdoor work will be universal.

They are the Shoe Success of the Century. They cap the climax of the splendid series of modern inventions which have raised the American farmer to a position of prosperity, dignity and honor undreamed of fifty years ago.

Inventors have supplied the farmer with such a wonderful wealth of mechanical aids that his power has been multiplied to an amazing degree.

Now comes the steel shoe—designed to afford **foot comfort** and protect the **health** of the **farmer himself.**

All-leather shoes, no matter what they cost, become watersoaked in a comparatively short time when worn in the mud or slush. Coughs, colds and rheumatism or even the dread pneumonia, result from cold, wet feet. In drying out, the leather soles curl up and thus the shape of the entire shoe is ruined. Corns, callouses and bunions result from wearing such shoes.

Steel Shoes have an absolutely rigid sole, which forces the leather to keep its shape.

This extends an inch above the bottoms all around the shoe. The bottoms are studded with adjustable steel rivets, which can be replaced as fast as they wear out.

No other repairs are ever necessary.

The fact has been demonstrated time and again that one pair of Steel Shoes will outlast three to six pairs of all-leather shoes. Yet the cost of Steel Shoes is less than all-leather shoes.

Every wearer of Steel Shoes is so pleased with their comfort and service that he becomes a Committee of One to tell his friends and neighbors about the benefits of wearing them.

Readers of this paper who seek an easy, comfortable shoe and perfect safety from the ills that follow cold, wet feet, should wear steels. The Steel Shoe Company, Dept. 103, Racine Wisconsin, make them. Send them $3.00 for six-inch high shoes, or $3.5 for a pair of nine-inch high shoes, mentioning this paper.

"THIS IS THE ROOFING THAT NEEDS NO PAINTING"

THERE was a time when everybody bought roofings that required painting. It was the regular thing to do. In fact there was nothing else to do, for all roofings were "smooth surfaced" and required painting regularly to keep them from deteriorating.

Now there is Amatite, an improvement over painted roofings, having a *real mineral surface* imbedded in pitch—making a kind of flexible concrete.

This mineral surface needs no painting. The waterproofing material, Coal Tar Pitch, is the greatest enemy to water known. It is the base of many waterproof paints. Only in a paint the pitch is diluted and made into a thin film, whereas the Amatite waterproofing is *solid pure Pitch*—two layers of it. It would take something like a dozen coats of pitch paint to equal in thickness that upper sheet of pitch in which the Amatite mineral surface is buried. And under that heavy sheet of pitch is a layer of wool felt and under that another sheet of pitch, just as thick as the outer one. And below them all is another layer of strong felt. That makes two roofs in one.

If the storms wore away the mineral surface and dug through the pitch and destroyed the felt, they would still be only half way through. And if the weather then removed the next sheet of pitch, you would still have left a final layer of felt—nothing more or less than an ordinary smooth surfaced roofing which could keep off the rain very nicely if painted every year or two.

But as a matter of fact, the weather never gets past that mineral surface securely gripped in its matrix of pitch.

The mineral surface is there to stay. No painting—no bother—no further expenses after the roof is once laid.

We should be glad to send you a free sample of Amatite, and you can see for yourself how much better it is than the smooth surfaced kinds.

TESTING SEED CORN.

The Necessity For Doing So—An Important Topic at the Present Time.

It is the opinion of some farmers that there is no need of testing corn intended for seed. They claim that they can tell by a physical examination whether it will grow or not.

I do not wish anyone to take offense, but I must say that I have never yet seen anyone who could infallibly tell whether seed corn was sound or not without testing it. As a matter of fact, it cannot be done. For example: Pick out 100 ears of which you are absolutely sure that every grain will grow. Then take six grains from each ear and plant it, test it, and then see whether you are right or whether I am. I have selected corn from my own fields with the greatest of care, and yet in testing it I find that there is more or less that will not grow.

It is possible for us to know absolutely that our corn will, every grain of it, grow, and surely there is no time that can be better spent than being absolutely certain on this point before we put our seed into the ground. There may be conditions connected with the seed when planted that will prevent some of it even then from growing. It should be remembered that seed corn that will germinate in the test box will not always germinate in the ground. This is especially true in an unfavorable season. Hence, even after we know our corn is thoroughly tested we cannot expect to get a complete and perfect stand. A squirrel may take some; some may not be completely covered; but if these things happen with tested corn, what may happen with corn that has not been tested?

It is not a difficult matter to test seed corn, and while my method may not be the best, I think it is a good way and will briefly state how I do it.

I go carefully through my seed corn and select the very best ears, ears that most nearly approach my ideal in size and in shape. I lay them out in a row on a bench or on the floor in sections of ten or twelve. I then take an ordinary box, put an inch or two of dirt in the bottom and wet it. Next, I cut a piece of cardboard to fit over this and mark it off in squares of about an inch and a half, numbering them 1, 2, 3, 4, and so on. I then commence at the end of the first section and take four grains from each side of the ear, neglecting the butts and tips, putting the grains from Ear No. 1 in Square No. 1, and so on with all the ears. I cover this over with a piece of cloth, put on more dirt, and put it in the sitting room, where the temperature is even.

The number of days necessary for germination will depend on the temperature of the room. When there has been sufficient time for every grain to germinate, I lift up the cloth and note the germination. If all the grains from Ear No.1, for example, have thrown out vigorous sprouts, I leave it in the row. If but three grains out of the four are vigorous and the other weak, I shove it aside, and so on to the end. I reject all the ears that I have shoved back. I shell off the butt and tip ends of the ears, and then grade those ears I have accepted.

In grading corn, I note the shapes and sizes of the grains, and see that I have planter plates for the different sizes. I run enough of the corn through the planter to know that the planter plates will drop three grains every time, or at least ninety-five times out of one hundred. I put these different-sized grains in different sacks and mark them and the planter plates to correspond.

I always test my seed corn and have it ready to plant before planting time arrives, as I can do it several weeks before it comes time to plant corn, and at a time when I am not crowded with other work.

I urge those who have not been testing their seed corn to do so this season, as they will be morally certain of a stand, and I am sure that it will add from two to ten bushels per acre to the crop of corn this year.—Wm. H. Underwood.

The Empire Dealer Has The Cream Separator That Will Suit You in Price—Style and Size

THERE is no such things as the *one* best cream separator in the world for all men. Dairy farmers are tired of the manufacturer with *one* style that he tries to fit to all needs. Don't let him talk you into his way of thinking, just because he has nothing else to offer.

Take your choice as to bowl device or method of separation—your choice as to size and capacity—your choice as to price—from **Headquarters for Quality Cream Separators.**

We make both the models that are *recognized* as standard, and make a full range of sizes in each style. All are the same in quality—better than any other made at *any price.*

The Empire Line

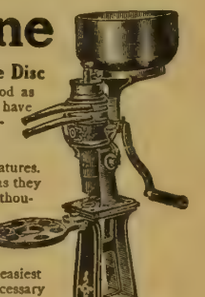
FRICTIONLESS EMPIRE

Includes The Frictionless Empire—The Empire Disc

Both are backed by the same Empire Guaranty, as good as a Government bond. Into each, regardless of price, we have put Empire patents, Empire materials, and Empire workmanship—which have always stood for *perfection.*

CONE BOWL. This type of bowl is used in the Frictionless Empire, along with many other exclusive features. It is the original Empire. Others have approached as near as they dare to this favorite model—but that isn't very near. Hundred of thousands are using the Frictionless Empire and would have no other.

DISC BOWL. The Empire Disc takes its name from having this type of bowl. The disc bowl is an old pattern and other disc separators are old idea machines. The Empire Disc is the disc idea modernized and perfected. As a result it is the closest skimmer in the world, turns most easily, is easiest to clean, and has a life-time of service in it. Empire designers and experts have the necessary "know how," and they are backed up by the best facilities, the best materials, the best factory and the best mechanics. That is the secret of the superiority of every Empire.



Different in Style—Not in Quality—All Sizes in Each Style

They differ in price because one style costs more to produce than the other. There is not a second grade machine in the Empire Line. But as one model costs less than the other, *we give you the benefit.*

A Guide Book For Cow Owners FREE

Write today for the Empire book, the fairest, most impartial cream separator book ever published. As it describes different kinds without prejudice, it will enable you to select the separator that will make the most money for you. And you'll find our prices and Guaranty *interesting.* Address—

EMPIRE DISC

SEED CORN SOLD ON APPROVAL

Test it any way you please for 10 days. And if not perfectly satisfactory, return at our expense and money will be refunded. We have 30,000 bushels of select seed ears for sale this season. Largest exclusively seed corn house in the world. Had over 60 men getting out our seed in October. Highest yielding varieties only—**Favorite White, Improved Boone Co. White, White Dent, Reid's Yellow Dent, improved Leaming (yellow).** All corn carefully selected as it comes from the field and dried by air shafts, steam pipes and electric fans. **Grew our own corn.** Ship in car or shelled. **Write today for our beautiful corn book and samples. Tells you how to grow a bumper crop of corn. Free for the asking.**

The G. D. Sutton Co., Dept. 7 MASON CITY, ILL.

SUTTONS CORN GROWS

RATEKIN'S 100 BU. OATS

Ratekin's Big Banner 100 Bushel White Oats. The biggest, prettiest, plumpest oat in existence. Side by side with common sorts they yield 100 bushels per acre where other sorts make but 25 to 35 bushels. Strong stiff straw, pumpkin heads ripen early, never rust, blights or lodges. **There is none like them,** and when our stock is exhausted there is no more to be had. **Samples Mailed Free.** Also our Big Illustrated Catalog of farm, field, grass and garden seeds. A postal card will bring them to your door.

Address, **RATEKIN'S SEED HOUSE,** Shenandoah, Iowa.

Protection and Reciprocity.

In our experience, so far as we have studied the subject, all farmers are Protectionists. They are Protectionists in England; they are Protectionists in Germany; and they are so in the United States. Some of them will say that they are not Protectionists until it is put up to them, but if the tariff is eliminated from partisan politics and considered as a policy as opposed to importations without paying duty, 90 per cent. of the whole people will stand by the imposition of duties on all imported goods for the purpose of raising revenue for support of the government, with all the protection to American industries that can be derived therefrom. This is in fact a reasonable amount of protection incidental to the necessary collection of customs duties.

The most outspoken American Protectionists of the agricultural interests are the stock farmers and ranchmen. They object to the removal of duties upon hides, live cattle and wool. It is a perfectly natural position to take. English farmers were not able to keep out American beef cattle, but they were able to cause them to be slaughtered at the landing and put the bars up against our stock cattle. German farmers cannot feed the German people, but are able to influence Germany to impose high duties and create restrictions. The French farmers are very much of the same mind.

The editor of The National Farmer and Stock Grower is consistently in favor of the retention of tariff duties on all farmers' products. There are quite a number of them. Some of them have very little effect at present, but they are in the right place in view of future contingencies.

We are in favor of a consistent duty on raw material, so that all imports pay something for the support of our government and reasonable tariff compensation to the manufacturer, that through him the home market may be protected for the benefit of all the people.

We attended the Reciprocity Convention some little time ago as a delegate. The first man who spoke said he was a live stock commission man from Buffalo. He wanted the duties taken off Canadian stock cattle, so that he could sell them to New York farmers to fatten. He could not sell many if a duty had to be paid. He did not consider the interests of the cattle raisers of the United States, who wished the Canadian cattle to at least pay as much for the support of the government as did the cattle raised in Iowa or Kansas.

People who have not studied the situation know nothing and care nothing about South America. That continent is owned by syndicates and grandee ranchmen. They have 75,000,000 cattle, 100,000,000 sheep, and only 30,000,000 population. They would like to send their hides, wool, mutton and beef here and not pay a cent for the support of our government. They have not shipped any meats to the Atlantic ports of the United States, but they are preparing to do so. Their dressed beef and mutton are cutting us out of the English market, but if farmers and stockmen have common sense they will see that the hides, wool and meats will not enter this country without paying their share of government expense. We should at least have them placed upon an even basis with ourselves, and if their meats, hides, wool, grain and cotton do come in, we have a right to demand that they will pay a tax and assume a share of expenses of our government.

This is not a selfish policy; it is broad and national. It means the same show for all American citizens and those who come and live with us. It is not one state against another, or one section against another section. People argue against protection of American industries who have not the slightest idea what it means. They think that goods of foreign nations are now barred out by duties that bring no revenues, whereas the fact remains that the United States government receives more money from customs duties than from all other sources of revenue combined. The imposition of duties upon imported goods is an absolute necessity.

Reciprocity is another misunderstood subject. Reciprocity is a form of tariff trading, one country with another. We are in favor of reciprocity. We have some trading to do with Germany and France. We need the benefit of those markets badly for the packing house products. The protection system which we have, with some ordinary safeguards which are necessary, will place the country in a position to do the necessary trading. This matter should be in Protectionist hands, that will not sacrifice our industrial interests for the benefit of other countries and will surely recieve benefits as well as make concessions. Reciprocity is a splendid game to play, but, like the game of chess, it needs an education before anyone can claim to play at it. There cannot be reciprocity unless the basis is protection. There is a movement on foot that will take the tariff question out of politics in the interest of the whole people, and it is a movement which is entitled to the highest consideration.

Credit Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of The National Farmer and Stock Grower will be glad to furnish the paper three years for **One Dollar, the same to be payable at the end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

ST. LOUIS HORSE AND MULE MARKET

The Greatest and Best in the World.

Horsemen are reminded that St. Louis has established a great horse and mule market; so great indeed, that it stands head and shoulders above any other horse and mule market in the world. It is in the right place, suits the shippers and suits the buyers. All the charges are reasonable; all the equipment is good and the predominant feature is quick service and small expense. The entire trade is on a fair and honorable basis, and the horse and mule trade is serving the shippers better than they were ever served before.

Commission firms are holding successful horse auctions every day except Saturday. The mules are not sold at auction and are disposed of by expert salesmen every business day in the week. The St. Louis receipts in the year 1908 were 17,255 more horses and mules than Chicago; 56,335 more than Kansas City; 69,998 more than Omaha; and 86,518 more than St. Joseph. The market is gaining rapidly in strength and importance.

In two months of the present year, 31,025 head were received. Of these, 14,172 arrived in February, showing an increase of 1,363 head over February of last year. Receipts so far are on the basis of 186,150 head for the entire year. The former largest record was 181,341 head of horses and mules in one year.

THE WONDERBERRY.

Don't forget the Wonderberry ripening in three months from seed. You have heard of Luther Burbank, the agricultural wizard. This is one of his creations. It is interesting and instructive to follow his work.

HAMMOND'S HANDY ATLAS.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For One Dollar paid in advance we will send one copy of Hammond's Handy Atlas post free by mail and credit three-years' subscription to The National Farmer and Stock Grower. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Different from all others. 4 or 8 horse. Geared 16 to 1 or 7 to 1. Grind Corn with shucks or without. And all small grains incl. Corn, Oats and Wheat. (Also make 7 sizes belt mills.)
L.N.P. Bowsher Co., South Bend, Ind.

LEARN VETERINARY DENTISTRY
and make **$2000** a year. We teach you at home in three months of your spare time by illustrated lectures and grant diploma with degree. Particulars Free. **Detroit Veterinary Dental College, Detroit, Mich.**

February and March Milk 16 Cents.

Hon. D. L Furbeck, President of the ilk Producers' Protective Association f Missouri and Illinois, was in town nd made arrangements for the prinipal dairy companies to pay 16 cents gallon for uncontracted milk delivered n February and March, 1909, by members of the association. Milk shippers re reminded that ten years ago ebruary milk brought 12 cents a allon and March milk brought 13 cents gallon, and even up to 1904 the highest rice paid for February and March milk as 14 cents, and this gain was due to he action of the Milk Committee.

Notwithstanding the improved prices btained by reason of the persistent ctivity of the Milk Committee, the ecretary reports that that there is no oney in the treasury to pay transporation or necessary expenses. The ecretary, Wm. A. Fischer, 409 Franklin venue, St. Louis, Mo., is instructed to end out a circular to all milk shippers t once and make an appeal for funds.

The next meeting of the Directors ill be held at the office of the Secreary on Monday, April 26th.

Goats For Milking Purposes.

The First Annual Meeting of the Conecticut Milch Goat Keepers' Associaon was held at West Hartford, Conn., ebruary 2, 1909. The following officers ere elected: President, George W. mith, of Melrose; Secretary, Alfred ixon, of West Hartford; Treasurer, ames A. Smith, of Hartford. To comare cows' and goats' milk, President mith made a demonstration analysis r milk-fat and milk-solids, with the llowing result: Cows' milk, 4.4 per ent. fat; 14.16 per cent. solids; goats' ilk, 5.8 per cent. fat; 15.46 per cent. olids. The Secretary reports that inreased interest is being manifested in e milch-goat industry. The first nnual field meeting is set for July 5th, ext, at the home of Milo N. Wooding, Hamden, near New Haven.

First-class Market Information.

Attention is invited to the card of ay, Robinson & Co. on page 13. Any ock raiser or shipper will do well to l out the blank form and mail it to e firm at the National Stock Yards, .., or at any of the markets mentioned the advertisement.

Best Corn For Silage.

A correspondent from Star City, d., asks which variety of corn is best silage, and whether flint corn makes od silage.

There is a long-standing notion mong dairymen (and they are the men o have tried silage in most every ape and found that the silage is ade from corn just as it reaches the nt stage. At that stage one would obably get the maximum amount of ain and a tolerably good amount of triment in the stalk and leaves. The st varieties to grow for this purpose the medium-season ones, those at make a large leaf growth, and will ture sufficiently before harvesting e arrives. Some try to make good age by allowing the grain to become tty hard and then cutting up the rtially-dried stalks; while others go the other extreme, paying no attenn to the grain part of the crop, but tting the greatest amount of green lks and blades possible. If one has buy most of his grain feed, then perps it is more economical to use a pig ilage corn and cut it while it is tolbly green. Under our conditions in rthern Indiana and Illinois, best sults are had from Learning or some lar variety, which has a well-anced plant, and when cut at the stage works into an excellent lity of silage. Flint corn does not ke very good silage.—L. C. Brown.

AND CHAMPION YELLOW CORN.

eral Premiums Offered by The Naonal Farmer and Stock Grower For the Benefit of Our Patrons.

his picture represents in a reduced the most famous ear of yellow corn in existence to-day. It was grown two years ago by Mr. D. L. Pascal, of Iowa, and it won the Allee Trophy for the best ear of corn of any variety grown in Iowa. Since then it has been exhibited at two National Corn Shows and is yet the ear which nearer than any other represents perfection in yellow Dent corn.

Mr. Pascal has raised this Reid's Yellow Dent Corn from seed purchased of the originator. Furthermore, this Reid's Yellow Dent Corn has been bred straight for sixty years. Anyone with a single pound of seed has a fair chance of producing champion ears of corn. Ten ears of first-class corn will win a first prize at any Fair. Therefore, anyone who will send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower can select one pound of Pascal's Grand Champion Yellow Corn, and we will send it postpaid by mail as a free premium.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a free premium and exhibit the same at their own State Fair—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1909 with corn grown by our subscriber from the seed corn furnished by us to him as a free premium.

These prize offers are good in every state where a State Fair is held, and are also good at any Interstate, National or International Show. If any of the premiums are won at the National Corn Show of 1909 we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and if winning a state sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show the exhibitor would receive fifty dollars additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn. Our readers will be furnished seed of the same family and breed of corn from which all the Pascal premiums have been won. We are also offering a similar line of premiums for white corn, which will be found in another column.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Amount of Milk For Calves.

There is a wide difference of opinion as to the amount of milk that should be fed to calves. Some recommend beginning with six to eight pounds a day, while others recommend twice the quantity. The amounts specified differ thus widely throughout the feeding period. The difference in view arises from a marked difference in the capacity of the calves to take milk.

With reference to this question, the following observations will hold good: The amount of milk fed should be determined by the observed capacity of the calf to take milk and by the relative cost of skim milk and adjuncts fed along with it. During the first weeks of the life of the calf, or until it begins to eat other feed freely, it should be given all the milk that it will take without disturbance to the digestion. Subsequently to that period, the amount fed ought to be determined, in part at least, by the relative value of the milk.

It would seem correct to say that usually it would be safe to begin with six pounds of skim milk per day, giving eight pounds at the end of the first week, and to add one pound each week subsequently until the age of ten to twelve weeks is reached. Any excess of milk given at once disturbs the digestion and is usually followed by a lax condition of the bowels.

Where at all practicable, milk should be fed for not less than three months, and it is seldom necessary to feed it for a longer period than four months.—Wm. H. Underwood.

Improvements in Amatite Ready Roofing.

Amatite Roofing, which has for several years been growing rapidly in popularity among our readers on account of its no-paint mineral surface, is now being made with several little improvements designed to make it easier to lay.

One of these is the smooth lap, left along the edge of the roll, about three inches wide, where the mineral surface is omitted. This smooth lap makes a closer and tighter joint possible.

The adhesive cement which is supplied with each roll now comes in liquid form and does not require heating before use.

Instead of supplying nails and caps, the nails themselves have extra large heads, thus saving considerable bother in putting down the roofing.

Readers who are unfamiliar with Amatite Roofing should send for a sample to nearest office of the Barrett Manufacturing Company, New York, Chicago, Cleveland, Boston, Pittsburg, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans and Cincinnati.

WATER CONTENT OF BUTTER.

By Prof. E. H. Farrington, University of Wisconsin.

The Dairy School of the University of Wisconsin is constantly receiving inquiries similar to the following, and the problem outlined is of such general interest as to make this question and reply worthy of publication:

"Is not the water content of butter and the moisture content the same thing? It is against the law to sell butter that has more than 16 per cent. of moisture in it, but I have seen in a paper that some butter-makers have sold butter containing 19 per cent. moisture as Extras. I had a butter-maker take my place for two weeks, and when I came home he had made butter containing 21 per cent. moisture, and the company which bought it sent it back, saying that it was against the law to sell it. What would be the best way to work this butter so as to make it salable?"—F. J. G., Dane county, Wisconsin.

The per cent. of water and the per cent. of moisture in butter are the same thing. Some persons use the first term and others the second. The present law states that butter containing over 16 per cent. water must pay a tax of 10 cents per pound, since it is classified as adulterated. It is quite necessary that butter-makers be absolutely sure that the butter they are making does not exceed the 16 per cent. limit.

I know of no way in which you can be sure of the water content of the butter made at your factory unless you test it from day to day. The Irish butter test has been suggested for this purpose. I think you need have no fear of exceeding the 16 per cent. limit if you will wash the granules of butter with cold water at about 50 degrees Fahrenheit, allowing the butter to stand in this water until the granules become hard and firm. Then after draining off the water, wash and allow the butter to stand in the churn some time until it drains rather dry. Sprinkle the salt over this and give it the usual amount of working. Excessive moisture is held in butter that is soft and not thoroughly drained.

The Farm Home Dairy.

When properly equipped and with a good herd of cows, well fed and cared for, the home dairy is the biggest money maker on the farm. That so many make a poor showing is due to one of several things. You must have good utensils to make sweet-flavored butter; cream must be kept in a cool place, with everything clean and the atmosphere pure. Salt and coloring are two essentials in the winter product. It is best to consult your patrons' wishes in regard to both of these items. Some want more salt than others, and some may object to the rich, June color you give your butter. Please your patrons, and be candid enough to ask them about these things. But the best skill of the butter-maker cannot overcome the bad effects of either poor feed or of poor care. The whole system, from feed to selling the product, must work harmoniously, and with just one object in view—that of putting out the highest-grade product, and making an effort to satisfy the people who buy and consume your butter. A real good article, delivered in an attractive manner, will always find people waiting for it.—L. C. Brown.

Not the Dairyman's Fault.

The milkman stood before her nervously twirling his hat in his hands. "So," she said, sternly, "you have come at last." "Yes, madam, you sent for me, I believe," he replied. "I wished to tell you that I found a minnow in the milk yesterday morning." "I am sorry, madam; but if the cows will drink from the brook instead of from the trough, I cannot help it."—Harper's Weekly.

At the meeting of the Illinois State Dairymen's Association, Mr. Charles Gilgerson, of Marengo, responded to the speech of welcome. In his remarks he said: "If the cow could only talk she would be heard all over the country bawling for a better breed of dairymen."

Pull Your Stumps with the Only Genuine All-Steel Triple-Power

400% Stronger Than Any Other Puller

HERCULES Stump Puller

There is no longer any excuse, Mr. Farmer, for you having stumpy fields. The problem is solved for everybody with the latest steel Hercules Stump Puller. It is the only all-steel stump puller and is the only one that uses triple-power.

Hitch On—The Stump is Bound to Come

The strength is there and the power is there. You may have had trouble with iron pullers, but this Hercules genuine steel puller is a different matter. It has 400% more strength than the best iron puller ever made, and with our triple-power attachment a one-third greater pull is developed. The Hercules is in a class by itself.

It is the only stump puller that is guaranteed for three years. The only stump puller made with double safety ratchets, making them doubly safe. The only stump puller having all bearings and working parts turned, finished and machined, reducing friction, increasing power and making it extremely light running.

Look At This Table

You will see why we have made the Hercules of steel. The table gives the strength per square inch of each different material. Steel is the only material for the Hercules.

Cast Iron 16500 lbs.

Copper 19000 lbs.

Bronze 36000 lbs.

Malleable Iron 40000 lbs.

Wrought Iron 47000 lbs.

Don't Risk Dynamite

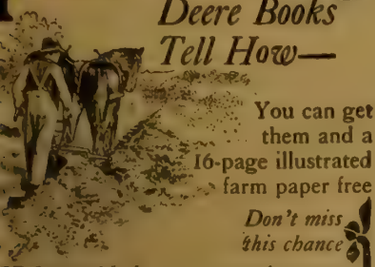
It's dangerous and it's costly. Besides, it only shatters the stump and leaves the roots in the ground to grow again. The Hercules pulls roots and all, big stumps and small stumps, good sized green trees, hedgerows, etc. It is the machine for satisfactory work and keeping down the expense. Investigate it now. Our little books are eye openers for people who have clearing to do. Let us send them to you. Free. Write today.

Hercules Manufacturing Co.
340 17th St., Centerville, Iowa

STEEL 120000 LBS.

Fine Plowing

Deere Books Tell How—



You can get them and a 16-page illustrated farm paper free

Don't miss this chance

IF interested in farming, get our farm paper. You can have it one year absolutely FREE. This paper will give you some new ideas. No other paper like it. We will also send you *three mighty nice booklets* which show all kinds of plows at work in the field. There are plows from many foreign lands, also pictures of modern walking plows, sulkies, gangs and immense steam plows that turn forty acres a day. Get posted.

Hired Help Costs Big Money

Your land is high priced and hired help expensive. There is only one way to make big money—use implements that cut down the cost of your crops. Isn't it true that when you break something on a plow it is nearly always a cast part? Wherever strain comes on a JOHN DEERE PLOW there you will find steel—tool steel. Take any plow that has had hard work for five years, put it along side of a JOHN DEERE which has been in service that long—and see the difference. Then there is no paint to cover up poor material. You can see the wear and the defects. The JOHN DEERE will be solid, staunch and ready for the hardest job. Then you begin to know that quality counts.

There is comfort and profit in having good plows. You can take pride in owning a JOHN DEERE—the standard plow of the world for two generations.

We will send you the farm paper and the three booklets free. All you have to do is to write us a postal card and ask for

Package No. 11.

Mention the number of the package then you will get exactly the right stuff.

DEERE & COMPANY, MOLINE, ILL.

Troubles With Cows.

With dairymen having large herds of valuable cows the loss from milk fever has been something enormous. Cows that are not crowded and kept in high condition right up to calving time are the ones which usually give the most trouble. No one should mistake the symptoms of milk fever; the cow becomes restless, lies down and rises with great effort; udder becomes flabby. Unless one knows precisely how to handle these cases, a veterinarian had best be called. In the meantime, keep the animal dry, out of drafts, and away from excitement.

Another malady which has been growing more serious every year is contagious abortion. It seems almost impossible to stamp out this malady. Much can be done by beginning in time, giving particular care to the chronic cases. Feed liberally, keep the animal in warm quarters at night, and give some tonic. No animal which has ever aborted should be allowed to run with the general herd within two months of the natural calving period. Then clean and whitewash all sheds and stables. After all these things have been done, then if some of the cows still abort, the cases are hopeless and the animals should be condemned as breeders.—L. C. Brown.

Rat Problem in Creameries.

In the New York Produce Review, H. G. Hawthorne, of Pennsylvania, answers the question "How would you rid a creamery of rats?" Hesaid: "Rats in a creamery are a nuisance, not on account of what they eat so much as the damage they do. The best method I know to rid a creamery of rats is to set traps baited with bacon or cheese. Roasted pumpkin seeds are also good for bait. The traps must be handled as little as possible, as the rats are very suspicious. The best traps are the ones known as the dead fall or guillotine traps, preferably all metal, as metal does not absorb germs or odors as readily as wood.

"Poison for rats is sometimes resorted to, but is nearly always unsatisfactory for a creamery. A good way to exclude rats from a creamery is by the use of cement. Cement the floors and walls also for a height of two or three feet above the floor. Do not leave any rubbish around the building where they can make a breeding place, and they will soon diminish in numbers, so there will be little damage done. If they do not entirely disappear, the remainder can usually be exterminated by a good cat. I think it worth while to allow a good 'mouser' access to all parts of the creamery building."

Dairy and Creamery Notes.

Another Jersey cow has made a big record, it being the best for a Jersey cow of her age. She is Rosaire's Olga 4th's Pride, whose test was begun January 25th, 1908, at the age of four years and six months. During the 366 days of her test she produced 14,104 pounds 13.6 ounces of milk, averaging 5.934 per cent. fat, making the estimated fat yield for the year 836 pounds 15.8 ounces, equivalent to 984 pounds 11 ounces of butter 85 per cent. fat. Her yield averages 2 pounds 11 ounces of butter per day per year. Mr. Geo. H. Sweet, of East Aurora, N. Y., is the owner of this valuable cow.

The following are Ayrshire cow year tests: Mature cow—Rena Ross, 15,072 pounds of milk and 751 pounds of butter. Four-year-old—Bessie of Rosemont, 14,102 pounds of milk and 675 pounds of butter. Three-year-old—Jennie of Sand Hill, 10,610 pounds of milk and 510 pounds of butter. Two-year-old—Baby Douglas, 9,652 pounds of milk and 440 pounds of butter.

At the recent meeting of the Georgia Dairy and Live Stock Association, Mr. J. H. McClain, of the Georgia Experiment Station, mentioned that a Chicago company had erected creameries and charged twice what they were worth and loaded them upon communities unable to support such enterprises unless the farmers would buy or raise 400 to 500 cows to supply the milk. In such cases the failure is generally from two reasons: First, the equipment is bought too high; and, secondly, those who sign up to furnish the milk do not carry out their own contract. There is no country in the world where 500 dairy cows can be assembled round a creamery quicker, cheaper or better than it can be done in Georgia, if they mean business.

The essential features of the method of ventilation generaly known as the King System are fully described and illustrated in a new popular bulletin, No. 164, just issued by the Agricultural Experiment Station of the University of Wisconsin. The construction of the necessary inlet and outlet flues in both new and old barns is described by Prof. C. A. Ocock, of the Agricultural Engineering Department, and clear working drawings are presented, which will give any builder or farmer a correct idea of how to install this system of ventilation. A copy can be had by addressing the Director of the Agricultural Experiment Station, Madison, Wisconsin.

USUAL CROP OF CREAM SEPARATOR SNARES AND TARES

If actual merit alone prevailed the DE LAVAL cream separator would be the only one made, sold or used.

But the dairy farmer with his dollars is an alluring proposition to those who "need the money," so that every season brings with it a new crop of separator fakes and fables, with some of the old conjurers over again and always a few fresh ones.

Last year the new and improved line of DE LAVAL machines literally swept the field. This year everybody has a "new" machine, which is the one thing they universally harp upon in their talk and advertising. But it is mostly bosh and nonsense. There is mighty little new to them. No more DE LAVAL patents have expired so that there is nothing else "new" that they can lay hold of this year.

There's the usual crop of fakirs appropriating the facts of DE LAVAL separator use and the endorsements DE LAVAL separators have received, and quoting them as though they applied to their own inferior imitations of the standard cream separator.

There's the concern which makes an inferior disc separator and speaks of the "disc" separator being "the machine which has won out universally in Europe, the home of the disc separator." True, but it was the DE LAVAL that has done the winning out in Europe, as it has in America.

There's the political separator concern, with the new "year" or "cents" trademark, whose claims it is to be hoped nobody ever believes, and which manifestly practices the circus man's theory that the great American public ever likes to be fooled.

There's the only concern which has stuck to the abandoned DE LAVAL "hollow bowl" of 30 years ago, but will this year desperately join the procession of 10 year back DE LAVAL imitations with a "disky" bucket bowl" machine.

There's the "Trust," striving to complete its monopoly of dealer and farmer, harvesting much costly separator experience, largely at the expense of buyers-for-use, through trying to build a cream separator like ordinarily made farm machinery.

There's the "mail order" outfit, with their cheaply made machines, bought here and there, not made by themselves or sold under the real manufacturer's name, all claiming the earth, and many of the things that should be below it.

But the merry lot changes and dwindles every year. They gradually drop out and leave their unfortunate patrons helpless with trashy machines. More will fade away this year. The dairy farmer, like the creameryman, is coming to know something of separators. He doesn't swallow mere "claims" so easily. 98% of the world's creamerymen use DE LAVAL machines. The percentage of farm users content with nothing else is always increasing.

There isn't a single reason why every man who buys a cream separator this year should not buy a DE LAVAL. There are many reasons why he should. The best costs no more than the various grades of inferior imitating machines.

A DE LAVAL catalogue may be had for the asking. A DE LAVAL machine may be tried for the asking.

BREEDERS' CARDS.

KIRBY'S KIND POLAND-CHINA SWINE.

If you are interested in Polands, write Kirby; he's got the kind. Pigs, Boars and Bred Gilts.

KIRBY STOCK FARM, Marmaduke, Ark.

FINE BUFF ORPINGTONS and **Leghorns,** cockerels and hens, that are beauties. Eggs in season. **Mrs. P. E. Kirby, Marmaduke, Ark.**

PIASA HURST ANGUS

I offer Angus Bulls and Heifers, kin to International winners, and that would be troublesome in any big show. The prices will suit you. **J.P. VISSERING, Box 1, Godfrey, Ill.**

TRUMANS' PIONEER STUD FARM,

Importers of

SHIRE, PERCHERON and HACKNEY STALLIONS.

Write for catalogue.

Address,

J. G. TRUMAN, Manager, BUSHNELL, ILL.

POLAND-CHINA SWINE. Chief Perfection Gilts bred to a $250 Spellbinder Boar, at $20 and $25. Boars and Sow Pigs, $10 to $15. S. C. Brown Leghorn and Barred P. Rock Eggs, $1.00 for 15. Seed Corn, $1.25 per bushel.

D. F. BEAUCHAMP, Meredosia, Ill.

FOR SALE: JACKS AND ANGUS CATTLE.

Twelve head registered Aberdeen-Angus Cattle at $7.00 per 100 pounds. Four Black Jacks, two to four years old, Mammoth breeding, $200 to $400.

STEWART BROS., Willow Hill, Ill.

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Prices reasonable.

WILARD MILLER, R. F. D. 2, Anita, Iowa.

BUFF WYANDOTTES, the Farmer's Fowl. Nice, big, blocky cockerels with good color, $1.00 and up. Also some choice **GALLOWAY BULLS** for sale. **F. B. Dow,** Stockport, Iowa.

RED POLLED DAIRY and BEEF CATTLE. This is the oldest and best combination breed for production of fat cattle and rich milk. A farmer cannot go wrong who buys and sticks to them. I have four Bulls for sale at $100 to $125 each; good Bull Calves at $40 to $55; fair Heifer Calves at $30 to $40; and first-class yearlings, both sexes, at $60 to $75. Have the right kind of cattle on your farm that will thrive and fatten. Good milk and good beef production in the same breed. **C. M. CHAMBERS, Bartlett, Iowa.**

R. C. JOHNSTON, Lawrence, Kas.,

Breeder of Thoroughbred

REGISTERED ANGORA GOATS.

Goats for sale from imported Turkey and South African Bucks. Satisfaction guaranteed. Write for prices on Bucks and Does.

EXCELLENT BLACK JACKS FOR SALE. Four (4) fine, large Kentucky Jacks, from 15 to 16 hands high, all black.

H. C. MYERS, R. F. D. 2, Hopkinsville, - Ky.

Jacks, Jennets and Harness Stallions.

We have the biggest and best string of Kentucky Mammoth and Imported Jacks at our Barns at the Wichita Fair Grounds of any firm in the West. We also have some very fine Jennets and Harness Stallions. Write for catalogue and see them before you buy.

J. F. COOK & CO., Lexington, Ky. Branch Barn, Wichita, Kansas. Mr. J. C. KERR, Manager.

BLOODED STOCK NOTES.

Attention is invited to the advertisement of Stewart Bros., of Willow Hill, Ill., offering pure-bred and registered Aberdeen-Angus cattle at seven cents a pound, and four black jacks at very reasonable prices. Willow Hill is in Jasper county, Eastern Illinois, at the crossing of the Big Four and the Indianapolis Southern. This advertisement means business.

At Kansas City, on February 9th and 10th, Chas. W. Armour, the Funkhouser Estate, Dr. J. E. Logan and others sold fifty-three Hereford females at an average of $127.80 per head; thirty-five bulls averaged $124.15; and the total of eighty-eight made a general average of $126.10. The top-price bull was Beau Folly, sired by Young Beau Brummel, consigned by Dr. Logan and sold for $365 to S. J. Gabbert, of Dearborn, Mo.; J. P. Cudahy, of Kansas City, paid $425 for the 1906 heifer Joyce, consigned by Mr. Armour.

On February 4th, at Toronto, Ontario, Canada, a public sale of Shorthorn cattle made an average of $324 for twenty-eight head. The gem of the sale was Pleasant Valley Jilt, the grand champion female of the Toronto Show, sold to Thos. Johnson, of Columbus, Ohio, for $2,500. She was bred by Geo. Amos & Son and is by Old Lancaster, also sire of the International champion Flora, 90th. To sire two grand champions of one year is a pretty good distinction for one bull.

It is reported by the Kentucky Farmer that the famous Biltmore, N.C., herd of Berkshire swine has been disposed of by Mr. George Vanderbilt to Mr. W. J. Cocke, of Nashville, Tenn. It is to be regretted that this fine herd of Berkshires should be removed from Biltmore.

At Wichita, Kas., February 17th, S. C. Hanna and Marshall Bros. sold forty-seven Shorthorns at an average of $96 per head. They were good cattle and sold low. Wyatt Stanley, of Burlington, Kas., bought the red yearling bull Harding by Imp. Collyne, for $175, and topped the male section of the sale.

At Memphis, Mo., in February, G. E. Leslie sold Poland-Chinas at auction with an average of $39.56 per head. The top price was $101, paid for the sow Georgiana, sired by Chief Sunshine, 2d, and was purchased by H. T. Hall, of Kirksville, Mo. Farmers bought quite a number at $40 to $45.

At Galesburg, Ill., February 15th, a sale of Poland-Chinas by J. V. Cotta resulted in an average of $55.41 per head for forty-one hogs. Six of the offerings sold above $100 each, and the top price of the sale was paid by W. J. Hanson, of Holbrook, Iowa, for the sow Pond Lily by Chief Sunshine, 2d.

At Woodston, Kas., February 17th, R. G. Sollenbarger sold about forty head of Duroc-Jersey swine at an average of $20.50 per head. It was a disappointing sale, and the result amounted to about eight cents a pound. The full range of prices was $14 to $43 per head.

At Pleasant Plain, Ohio, in February, at the sale of Poland-China hogs, the sow Inside Pocket sold for $1,350 to Dr. C. R. Smith, of Harrisburg, Ohio. The average of thirty-six head was $82.60 per head. Inside Pocket was sired by On and On, a meritorious boar. A gilt bred to Whirlwind, a $3,000 boar, sold for $90. Jas. F. Leahy, of Parnell, Iowa, bought the sow Shiny Keepsake for $157.50.

Safest Oats to Sow.

An Iroquois county, Illinois, correspondent asks whether Montana-grown oats would do well in Illinois.

The seed oats brought in from Montana is a rich, heavy sample, but it is grown under irrigation, and it is a question whether these oats will do as well as home-grown varieties. It is a general notion among practical farmers that seed grain under irrigation is not well suited for sowing in Illinois, because the change is too violent.

I believe this oat proposition must be worked out on different lines than have been customary in the past. Successful oat growing is largely a matter of adaptation of a variety to local conditions, so when we bring in seed grown under entirely different conditions we invite failure and loss of expensive seed. Several State Experiment Stations, as well as many farmers, are improving well-adapted varieties by selection. This seed is the safest to sow. Even with these tested home-grown varieties they are liable to wide fluctuations when grown under different conditions. Oats grown on irrigated land and oats grown in Canada have a larger percentage of husk than the same varieties grown in Wisconsin. This is a point which buyers of seed oats should carefully look into. Oats having the heaviest meats are by all standards the most valuable.

There is another feature about the value of seeds brought in from other sections. Last season there were thousands of cars of oats, bought at elevators in the Northwest, brought into Illinois, Indiana and Ohio and used for seed purposes. This oats was a fairly good sample, but of no particular variety, and of course with no record behind them of continuous yields. They came from sections which happened to be favored with ample moisture and a dry harvest period, so they looked nice, and they were cheap. Oat growers cannot hope to improve their yields by sowing such seed. Heavy crops must come from well-bred seed and from varieties which have been tested long enough to prove their adaptation to the localities where they are sown.—L. C. Brown.

MODERN POTATO HARVESTING.

It is not long since potato growers looked forward to "digging time" with dread, because of the hard labor connected with getting in the crop by hand. The monotonous drudge, drudge—up one row and down the next—the back-breaking strain of sorting and sacking, all made the week or two that the operation occupied an event to be remembered the whole year through.

All the drudgery of potato digging is now done away with by the manufacture of potato harvesting machinery. We are advertising the Hoover Potato Diggers.

The Hoover Diggers are noted for their unusually light draft, and are made under the careful personal supervision of the inventor. It is a point of pride with this company that no contract work whatever enters into the construction of their Diggers.

A particularly attractive feature is the fact that Hoover Diggers are sold upon a liberal trial offer, which gives the grower opportunity to test the machine before paying for it.

Details of this trial offer, together with literature describing their various Potato Diggers, Pickers and Sorters, may be obtained upon request to The Hoover Manufacturing Company, Box 98, Avery, Ohio.

PROFIT IN GRADING SEED CORN.

The Department of Agriculture has been a tremendous factor in showing the American farmer how to increase the value of his crops. One of the most notable of recent suggestions was officially made by D. N. Barrow. The experiment of persistently using selected corn for seeding shows remarkable results. An increased yield of from three to five bushels per acre was noted the first year and crops improved largely each year thereafter. The results of these experiments are so gratifying that the government urges the use of only the best seed and uniform planting. The only way to insure stands of uniform size and the proper distance apart is to have the seed graded. You can't plant irregularly-shaped corn accurately. This is the secret of profitable corn raising. The farmer who pays attention to the grading of his corn as well as to the choice of seed is the one who will enjoy the bumper crops of the future. Write for booklet "Bumper Corn Crops" and address Edwards Mfg. Co., 823 to 863 Lock street, Cincinnati, Ohio.

A FINE KIDNEY REMEDY.

Mr. A. S. Hitchcock (clothing dealer), 890 Carrier Building, East Hampton, Conn., says if any reader afflicted with a kidney or bladder trouble will write to him he will direct them to the splendid home remedy he so successfully used. He is glad to do this, and does not wish you to send him money.

THE SUCCESS MANURE SPREADER.

Attention is invited to the advertisement of the Success Manure Spreader. The manufacturers have a record of thirty-years' operation. It is a pioneer in this line of manufacture. It is roller-bearing, light-running, easy to understand, and a long-life machine. The catalogue shows every advantage to the buyer and user. Kindly mention this paper and write for catalogue. Address, Kemp & Burpee, Syracuse, N. Y.

FOX AND WOLF HOUNDS

of the best English strains in America; 40 years experience in breeding these fine Hounds for my own sport. I now offer them for sale. **Send stamp for catalogue. T. B. HUDSPETH, Sibley, Jackson County, Mo.**

SAFE HERD OF LARGE ENGLISH BERKSHIRES. Herd is headed by an excellent son of the St. Louis World's Fair Grand Champion. I have bred Sows for sale, also bred and unbred Gilts that are hard to beat, and fifty head of early Pigs. Can furnish pairs not akin. I have also S. C. W. Leghorns, Barred Rock Chickens and M. B. Turkeys. Eggs for sale and a few pairs of Peafowls. The breeding of this stock and poultry is the best and will be sold at prices in keeping with the times.

M. W. MAGNUSSON, Owner, Safe, Mo.

WRITE FOR FREE CIRCULAR. Leading varieties Pure-bred Poultry. Quotes lowest prices on fowls and eggs. Unused Photo Post Card, 5c. postage, from our fowls.

THE L. H. MUELLER POULTRY FARM, Wellsville, Mo.

TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won seven out of nine first prizes at Leyington Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907

CHAS. FORD, Mortonsville, Woodford County, Kentucky

A Few Testimonials.

The following are a few extracts from letters received by CLAY, ROBINSON & CO. at our various offices during the past week or two. If space permitted, many others of similar tenor could be shown:

B. D. LEMERT, Severance, Kas.: "Account sales of my car of lambs received O. K. I consider you made a good sale and am well pleased. Will have another car before long. I thank you for the interest taken and for the good sales you made."

J. B. MADDUX, Buffalo, Mo.: "I shipped to your firm and was well pleased with my sale."

J. P. HERMAN, Butler, Mo.: "I have done business with your house several times, and always got good results."

JAMES GILBERT, Fairview, Kas.: "I received the sale bill and was satisfied with the sales made. I was offered 6c. here, and would have to stand two docks, which would have been 80 lbs., whereas I was not docked there at all. I made about $20 by shipping."

JAS. B. DAVIDSON, Superintendent of the Sinissippi Farm at Oregon, Ill., of which Frank O. Lowden is proprietor: "I have your favor with check for cattle and hogs sold, and feel well satisfied with the results. We were fortunate in the market day, and I think you did well for us. Thank you for your good service."

JOHN W. COCHRAN, Marshall, Mo., writes: "The heifers you bought for me arrived this morning and I am well pleased with them at the price."

JOHN P. WEGER, Flat Rock, Ill.: "While I have not shipped stock lately, I have consigned to Clay, Robinson & Co. for almost twenty years, and have always been pleased with your deals for me. If I ship again, shall be glad to renew the acquaintance."

W. G. COLE, one of the proprietors of the Rupert Farms, with headquarters at Bloomington, Ill.: "I wish to acknowledge receipt of your check, the returns for my lambs sold yesterday. This being the last of our 800 head, I wish to say that the deal financially has been a success, which helps to prove that they were not only bought right, but sold equally as well."

J. W. LEWIS, of the extensive sheep and cattle-feeding firm of Clark & Lewis, Phillips, Neb.: "You not only bought our sheep worth the money, but also sold them at highly satisfactory prices. We secured through your Chicago firm $7.00, the top of the market, or four doubles of yearling wethers on January 18, which were obtained through your firm at South Omaha early in September at $3.85."

W. E. OLER, Economy, Ind.: "The cattle you shipped me on January 26 arrived at 9 o'clock the next day, all in good shape. Was well pleased with them, and will not hesitate to place my next order with C., R. & Co."

PAUL LEITZINGER, Muscatine, Iowa: "Returns from the car of hogs you sold for me last Thursday are at hand. I am well pleased."

JOHN F. ZIMMERMAN, Middleburg, Ind.: "I received the lambs you sent me and am well pleased with them. Think you made a good choice."

L. E. DEAL, LaGrange, Ind.: "The last deck of lambs arrived in good shape and are certainly a fine bunch. Many thanks for your care in selecting them."

F. D. SLAUSON, Hopkinton, Iowa: "Acknowledging receipt of returns from my hogs, I wish to advise you that the sale was much better from condition of the market than I expected."

MARTIN JOHN, Taylor Ridge, Ill.: "My cattle came through all right. Wish to thank you for the way you handled my order."

F. NANCOLAS, Hampton, Iowa: "Received returns from my load of cattle, and was well pleased with the sale of them."

J. T. FLANAGAN, Rock Rapids, Iowa: "I think you did very well on the last shipment of cattle I made to you."

J. C. QILLIAN, New Sharon, Iowa: "I sold the 835 lambs you bought for me. They made me some good money. I like to deal with men that give me a fair deal. M. S. Downey, Lacey, Iowa, bought the lambs, and he said they were the best he ever saw."

E. J. ALDRICH, Tekonsha, Mich: "Received in good shape car of cattle you bought for me, and am well pleased with them."

JOHN WAUGH, Poynette, Wis.: I wish to thank you again for the way you handled my lambs, and also for the information you gave me on the market. I am a subscriber to the Report, and value the information given in its columns very much."

WALTER CONVERSE, Plain City, Ohio: "You have topped the Buffalo market for me on wethers, and the Chicago house has bought feeders for me, the right kind at right prices. We are satisfied with the service."

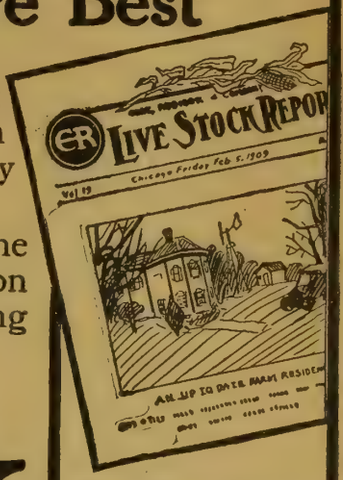
F. E. BRYANT, Manager of the Bolles Live Stock Company, Carlsbad, N. M.: "Owing to absence from home, I failed to acknowledge receipt of your letter of December 29, enclosing refund of $90.75 on the three cars of lambs. 'Bully for you.' I thought there was something wrong with that freight bill, and even went to the railroad office; but they assured me it was all right. Many thanks for the very thorough way in which you looked after my interests."

C&R LIVE STOCK COMMISSION & CO.

Ship to Any of Our Nine Houses—Let Us Tell You When and Where Prices are Best

BEFORE you ship your live stock let us send you the latest information regarding prices, prospects, etc., without any obligation on your part.

We have our own houses at all of the nine leading market centers. Therefore we are in position to advise you where we believe your stock will bring you the most money.



Live Stock

—To Small Shippers

It is especially safe and satisfactory for small feeders, who may ship only a car or two a year, to consign to any one of our nine houses. We give most careful attention to live stock consignments from farmers.

We appreciate how much even one small shipment means to the average farmer, and our expert salesmen give small lots just as careful attention as they do large ones.

We have received thousands of letters from farmers thanking us for the careful attention we have given their small shipments and good prices we got for them.

—To Large Shippers

Our extensive organization and splendid facilities, coupled with skill, experience and conscientious effort, make our live stock commission service, we believe, as nearly perfect as can be attained.

No shipment is too large for our facilities. We have the salesmen and the helpers in all departments, so that prompt and careful attention is assured all consignments.

Experienced yardmen attend to penning, feeding and watering the stock, and many a shipper has told us that his shrink was never so small as when we handled his consignments.

Remember that in addition to selling your consignments of fat stock for you at highest possible prices, we are in a position to render you most valuable service in the purchasing of such cattle or sheep as you may want for feeding or grazing. Send us your orders for stocker or feeder cattle or sheep and we will fill them in a way to please you. It stands to reason that with our facilities and experience we can buy for you to better advantage than you can buy for yourself. Write us your wants in this line.

Don't ship your next carload of Live Stock until you have written us at your nearest market (see below) for our free advice as to when and where to ship for best prices.

Anti-slipping Horseshoes.

United States Consul-General Skinner at Hamburg, Germany, says that a new anti-slipping horseshoe is for sale there, especially designed for asphalt and wood-block pavements, the valuable feature of which is a countersunk groove extending completely around the shoe, in which is inserted a piece of hemp rope. The rope can be readily replaced, and, as it alone comes into contact with the slippery pavement, the horse secures a very sure footing.

While the shoe is very far from being in general use, it is making considerable headway. The more usual anti-slipping device in this country is the screw calk. These calks are quickly replaced by others when they wear down. Horses with healthy hoofs are shod with the open shoe, while such as have soft hoofs are shod with completely closed shoes.

In this connection is is worthy of notice that Mr. Charles Berg, proprietor of the Brooklyn, N. Y., Horse Exchange, has invented a simple but effective device in the shape of a clamp, which is doing particularly good service on the icy streets of New York. The New York Herald considered it worthy of an illustration in that paper.

Horse and Mule Notes.

The New York Herald, writing of a famous horseman, said:

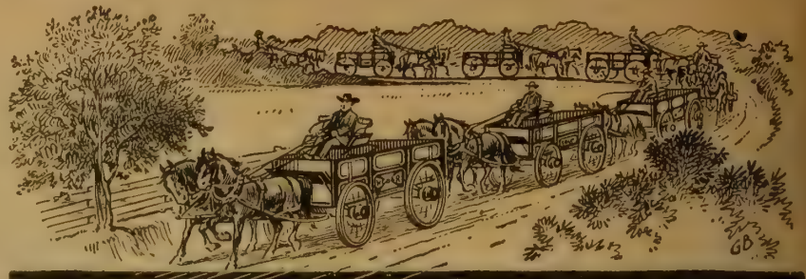
"Frank Work was ninety years old on February 10. In recounting the events of his career as a horseman the Trotter and Pacer says that he has driven trotters on the road in New York for seventy years. Mr. Work came to New York in 1839, and he began driving almost immediately afterward. Until a few years ago he had scarcely missed a day on the road, and he has driven his favorite black mare, Sea Girl, 2:18¼, within a twelve month; Pilot Boy, 2:09¼; Merle Moore, 2:26½; and several other fast ones are still in his Fifty-sixth Street Stable. The chestnut gelding, Edward, 2:19, long the apple of the owner's eye, died about a year ago at the age of thirty-six. Mr. Work has paid out something like $7,000 to keep the old trotter in comfort in his last years."

Dilham Prime Minister has been sold by Fred Pabst, of Oconomowoc, Wis., to R. P. McGraun, of Lancaster, Pa. Dilham Prime Minister is the most renowned pony stallion living. He is a little brown, 13.3-hand Hackney stallion. His picture is on page 151 of our Book of Live Stock Champions.

On February 16th, at Wichita, Kas., J. C. Robinson held his annual sale of Percherons of his own breeding. His twenty-four stallions averaged $827.08; his thirty-five mares averaged $586 per head, and the general average was $684.07 for fifty-nine head. Eight stallions sold at $1,000 or better, the top price being $1,510, paid by the Hamilton Horse Company, of Hamilton, Mo., for Artilleur, a two-year-old son of the great stallion Casino out of Losette by Sansonette. The mares ranged from $365 to $935, the top price being paid by Frank Gravenkant for Anna Bell, a five-year-old by Annibal.

At a sale of Percherons and jacks by O. P. Hendershot at Lincoln, Neb., fourteen stallions averaged $659.65, and eleven mares averaged $420.80. Three stallions sold at $1,000 or better, and the top price was $1,200, paid by C. M. Branson, of Lincoln, Neb., for the four-year-old having the peculiar name of Tripon-on-Kat; Queen Calmenia, a ten-year-old mare, sold to Pat Connor, of Wagner, S. D., for $1,015. The jacks sold from $455 to $600 per head.

Mr. David Strand, of Blandinsville, Ill., has purchased the imported Percheron stallion Guemene (66,682), rising four years old, weighing 2,125 pounds, of Trumans' Pioneer Stud Farm, Bushnell, Ill. Guemene is one of the best Percheron stallions now in this country. Mr. John Huston, a veteran breeder and importer of Percherons of Blandinsville, Ill., recommended this purchase.



WAGONS

The farmer is particular about the kind of wagon he buys—and rightly so—because a wagon is used nearly every day in the year. Note the following special features of the Weber, Columbus and New Bettendorf wagons, each one of which is built to give satisfactory service.

WEBER

For sixty-three years the name "Weber" has been the best guarantee as to the quality of a farm wagon. No other wagon is made better than the Weber—no other wagon is made with so much care. The Weber, king of all farm wagons, is the I. H. C. standard of excellence in wagon construction. Everything used in building Weber wagons is the best that the market affords—ironed on the made-to-order principle—painted as good as the average buggy.

COLUMBUS

The Columbus farm wagon compares favorably with other high grade wagons in quality of wood stock, ironing, painting and finish and has many points of special merit not found on other high grade wagons. All the running gear parts except the axles are the best quality of oak. The axles are select black hickory. The gears are well ironed, the rear hounds being ironed full length on the bottom.

NEW BETTENDORF

The New Bettendorf farm wagon is exceptionally strong, durable and light running. The gears are made entirely of steel, have greater carrying capacity than wood and weigh no more. There is never any trouble with loose skeins, season checks, improper seasoning or inferior quality of materials, such as is common on the ordinary wagon. The tubular axle is made in one piece. There are no joints at the collar and the removable malleable iron sleeve which protects the axle from wear is not found on any axle except the New Bettendorf.

Call on the nearest International agent who will be pleased to show you the meritorious features in the construction of the wagon he handles. Ask him for illustrated booklet and lithographed hanger, or if you prefer write us.

Care of Farm Horses in Spring Time.

There is no feed or care too good for the farm work horses, more especially at this time of the year, as it is near the time when the very busy work on the farm will begin.

As a rule, many farmers are overanxious to get all the work done they can, so as to get their crops planted as soon as possible, and sometimes work their horses harder than they should. It must be remembered that the horse is less able to stand hard work early in the spring than at any other time, on account of his long rest from labor. Then, too, the change from cold to warmer weather, and his shedding or changing his old coat for a new one all have a tendency to weaken his vitality.

It is well to govern him for a time with tight lines and stop him quite frequently for a few days until he becomes accustomed to steady work again.

As a heavy grain ration is not usually necessary nor desirable for horses that are not constantly employed during the winter, they need a little more grain as spring approaches, and if they are being fed shredded fodder, they should be given at least one feed of good hay each day. As the season advances it would be well to substitute hay entirely for the fodder.

I feed my horses good clover hay because I believe it is the best kind of hay to give farm horses. Timothy may be best to feed horses that work in the city, but in my estimation the best rough feed that can be procured for farm work horses is good clover hay, cut before it is too ripe and put up without rain. It also saves grain.

Corn should constitute a part of the grain ration in the spring; but no matter what kind of grain may be fed, it has been my experience that an occasional change is much relished by the horse. It is a good plan to feed oats or chop once a day, and a little oil meal.

Regularity in feeding is a matter of considerable importance. It is never best to feed the horse one morning at four o'clock and the next morning at seven, or miss one feed and give him twice the amount the next time.

I always water my horses before feeding for two reasons—to wash out the mouth, throat and stomach, and to keep from washing the feed out of the stomach before it is digested. During the busy season the horses should be given fresh water at least once between morning and the noon hour, and once between noon and quitting time. It takes a little time, of course, but the horses can do more work and they will keep in better condition.

It pays, after the cold days are over and the warm days of spring time are here, to clip the horses; that is, if the proper care is to be taken of them. They will stand more work and do it with more comfort.

The currycomb and brush should be freely used at least once a day when the horses are at work and brought in warm. They should not be compelled to endure the night with their legs covered with mud and the hair baked on them, but should be given a good rubbing.

Their feet need careful attention, and they should be shod when they need it without delay. It is never best, under any circumstances, to drive a horse on the road when his feet are worn and tender. If the hoofs get hard and are inclined to contract, they can be softened with tar or axle grease.

It is essential to keep the harness in good condition, especially collars, sweat-pads and traces. It is well to have three or four pads for each horse. And they should not be changed from one horse to another; they will not fit. If the pads are washed occasionally they will keep soft and pliable. It is the continued sweating and wearing rough collars and pads that so often cause sore shoulder. Perhaps some farmers have a certain team they would rather work than any others, but they should not wear out that team while others are idle.

While I do not advocate the idea of being late with the crops, it is much better to be delayed a day or two than to overwork our horses. They should not be compelled to lie down in dirty stalls, but should be provided with clean floors and supplied with plenty of good bedding. Any farmer will be well repaid for the time spent in giving his horses good treatment.—Wm. H. Underwood.

Low Fares to the Cheap Lands

March 2 and 16

Plan to go on one of these days—

The trip will not cost much. These special low-fare tickets over the Rock Island-Frisco-C. & E. I. Lines will allow you to go one way and return another, without extra cost. You will see more of the Southwest than you could in any other way, and can better decide where to locate.

Ask the ticket agent to sell you a ticket over the Rock Island-Frisco-C. & E. I. Lines, either through Chicago, St. Louis, Kansas City, St. Joseph, Memphis or Birmingham, according to your location.

If you will tell me where you want to go, I will tell you the cost of a ticket and send you a map-schedule.

I will also send you some interesting books about the Southwest. They will inform you of opportunities waiting for you there, and will open your eyes to new possibilities. Write for free copies today.

Rock Island SOUTHWEST FRISCO

A Famous Draft Stallion.

Trumans' Pioneer Stud Farm of Bushnell, Ill., have sold to Dwyer Bros., of Solon, Iowa, the grey two-year-old Shire stallion Bradgate Blue Jacket. This young stallion weighs 1,900 pounds in working condition and he won first prize at the Illinois and Iowa State Fairs last fall. His picture was in The National Farmer and Stock Grower last November.

Sale of Light Harness Horses.

At a sale of trotting and harness horses held in February at Lexington, Ky., by the Kentucky Sales Company, 330 head sold for $102,955, which is an average of $310 per head. The top price was $1,550, paid by L. V. Harkness, of Lexington, for Sister Collette, 2:09¾, and the second highest price was $1,525, paid for the bay gelding Mestigo by James Gay, of Pisgah. It was considered as being a good sale.

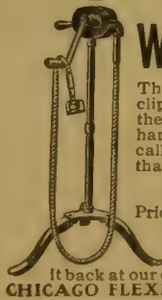
Clip Your Horses in the Spring



It Pays—Clipped horses look better, feel better and do better work—Clip

With the Stewart Ball Bearing Clipping Machine

The only ball bearing clipping machine made. Do not buy a frail, cheaply constructed clipping machine that will last you only a season or two, and give trouble all the time. Every gear in this machine is cut from solid steel bar and made file hard. They all run in an oil bath, so friction and wear are practically done away with. It turns easier, clips faster, and lasts longer than any other clipping machine made.

We Guarantee it for Twenty-Five Years

Price all complete, only $7.50. Get it from your dealer or send $2.00 and we will ship C.O.D. for balance. Write for our big free catalog. Try this machine out side by side with any other machine on the market, at any price, if this is not worth three times as much, send it back at our expense both ways, we will refund every cent you paid. Send today.

CHICAGO FLEXIBLE SHAFT COMPANY, 182 Ontario Street, Chicago

You Can INCREASE Your Corn Crop 30%

or more by using only such seed as has been carefully graded. You will also get far better corn. Government tests have proved that the main cause of *small* crops is an uneven stand. No corn-planter, whatever its merits, can drop seed evenly, *if the seed be carelessly graded or of all sizes that come from the ear.* But, *with seed carefully graded to a uniform size,* any good corn-planter can be depended upon to drop every grain just where you want it and thus make every inch of your ground do the service that it should. Government tests also have proved that the main cause of *poor quality* in corn is the planting of seed *not well selected.*

Careful Grading, Therefore, is at the Very Basis of All Richly Successful Corn Production.

$1,000 PRIZE EAR OMAHA EXPO.

$1 **The Simplex All-Steel Seed Corn Grader** $1

easily and quickly separates, in a new and scientific way, the *full, perfect, even-shaped* grains from the large, irregular, unshapely grains. Money back if not delighted.

Grades more corn and grades it better than any other device on the market, *regardless of price.* Capacity, 10 to 15 bushels per hour. A boy can work it. No machinery to get out of order. *Made entirely of steel*—nothing to wear out or rot—will last a lifetime.

Simply stop a dollar bill in a letter and mail to us. *You will never have to double that bill to buy your grader returns.* Grader will reach you promptly. If you don't find it is worth its weight in gold, return it and get your money. Thousands in use. Order today, and we will send with Grader, booklet—"10 MORE CORN CROPS—HOW TO SECURE THEM."

EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

The Monday Auction.

On Monday, the 1st of March, the McFarlane Commission Company sold 250 horses at auction at the St. Louis National Stock Yards. The prices were considered steady with the last week in February. A few draft horses were included in the offerings and sold well. The arrivals came from fifteen different shipping points. The firm also had moderate receipts of mules. The McFarlane Commission Company is doing an excellent,, aggressive, strictly commission business in horses and mules. This firm issues a valuable circular card to horse and mule dealers, and it is good to be on their mailing list. Address, McFarlane Commission Company, National Stock Yards, Ill.

National Stock Yard Receipts.

In two months of 1909 the receipts at the St. Louis National Stock Yards amount to 125,947 cattle, 499,794 hogs, 87,728 sheep and 31,025 horses and mules. The only increase so far this year is in sheep although cattle, hogs, sheep, horses and mules all increased during the month of February.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Try us once. We have a great and expanding Market at St. Louis.

McFARLANE COMMISISON COMPANY, NATIONAL STOCK YARDS, ILL.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign horses, cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

The St. Louis Horse and Mule Market

The Largest and Best in the World.

Also the Greatest Distributing Point For All Classes of Mules.

The Most Satisfactory Market For the Shipper.

Our company controls the two best auction days, Tuesday and Wednesday, the heart of the week.

We sell Mules every day except Sunday.

Every department is in charge of some officer of the company.

The fact that we handle more than one-third of the total receipts of the largest market in the world is sufficient evidence that we please our customers.

Write to us about selling your Horses or Mules.

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.

On Monday, March 1st, 1909, at the St. Louis National Stock Yards, the top price was $6.52½ for a load of 246-pound hogs shipped by M. E. Foristell, of St. Charles county, Missouri.

Sheep Sales at St. Louis Market.

During the last week in February the following sheep and lambs were sold on the St. Louis market: Wadsworth Ranch Company, Saugache county, Colorado, 279 lambs, 69 pounds, at $7.75; J. R. Britton, Rio Grande county, Colorado, 600 lambs, 65 pounds, at $7.35; S. R. Craighead, Audrain county, Missouri, 115 Western yearlings, 85 pounds, at $7.00 per 100 pounds; and two loads, 82 and 84 pounds, at $6.65; Dietrich & McArthur, Rio Grande county, Colorado, 533 head average, 65 pounds, at $7.60; Colorado Valley Land Company, 547 head, 66 pounds, at $7.60; C. F. Larick, Rio Grande county, Colorado, 298 head, 60 pounds average, at $7.35 J. W. Shaff, Rio Grande county, Colorado, 555 head, 63-pound lambs, at $7.40; Jno. Considine, Audrain county, Missouri, 120 Western yearlings, 89 pounds average, at $6.85. All quotations are at the price paid per 100 pounds.

P. O., National Stock Yards, Ill.

A Great Auction at St. Louis.

Mr. Tim Holland, of Holland & Nugent Bros. Commission Company, reports that they sold 672 fresh horses at the St. Louis National Stock Yards during the last week in February. Mr. Holland came to the market only a few months ago, but he has helped to bring about an energetic attitude in the market which can only result in additional receipts and sales of horses and mules. In one of the interviews with Mr. Holland he said: "Please announce to the dealers and shippers that when they are invited to consign their horses and mules to be sold on this market we expect them to understand that we are also inviting good buyers to come and meet their consignments. If a horse is bought to sell again, it must be shipped where it can be sold to advantage. We have the location and the light of this market shines brightly to the buyers as their great clearing-house. Keep the horses coming; keep up the interest of the buyer, and we will make the shipper money and save the buyers time and money at one sale. This is the market par excellence for a half million horses and mules a year."

Kansas Butcher Heifers.

At the St. Louis National Stock Yards, March 1st, sixty-six Kansas heifers, 710 to 715 pounds average, sold at $5.35 per 100 pounds, and twenty-nine head, 756 pounds, sold at $5.60 per 100 pounds. St. Louis is the best market in the world for that class of cattle.

We have a good sale on Gombault's Caustic Balsam. We recommend it, and have used it on one of our horses. It did all we could ask of it.—HINDE DRUG CO., Oregon, Mo. **Caustic Balsam Does All You Can Ask of It.**

Sale of Western Range Mules.

Mules in remarkable condition to arrive in market during a winter month were received at St. Louis in the middle of February. They were coming two-year-olds and coming three-year-olds. They were gentle mules, were broken to halter as weanlings and the quality was equal to any mules arriving at the St. Louis market from the domestic states, but they were strictly ranch-raised and not farm-fed. These mules, to the number of six or eight carloads, were sold at auction on February 16th. The coming two-year-olds sold from $60 to $117.50 per head, and the coming three-year-olds sold from $130 to $165 per head. These mules were sold by Messrs. Campbell & Reid and Western Sale Stables Company at the St. Louis National Stock Yards. This company is specially proficient in selling range horses and mules and can place them to great advantage in the interest of the shipper.

St. Louis Mule Quotations.

During the closing days of February there was a pretty good market for top-grade mules at the St. Louis National Stock Yards. It is difficult to make quotations for any particular height, for the reason that a top mule and a tail-end of the same inches may sell a hundred dollars apart; furthermore, a mixed load coming in is very different from a classified load going out. Fourteen-hand mules were quoted from $55 to $125; 14½ hands, $75 to $135; 15 hands, $125 to $175; 15½ hands, $150 to $225; 16 hands, $165 to $250; and 16½ hands, from $185 to $275.

Range Horse Sales of 1909.

At the St. Louis National Stock Yards the sales of Western range horses, conducted by Messrs. Campbell & Reid and Western Sale Stables Company, will commence on Tuesday, June 15th, and continue every other Tuesday of the season until November 2d. The dates are June 15th and 29th; July 13th and 27th; August 10th and 24th; September 7th and 21st; October 5th and 19th; and November 2d. Horsemen having stock to ship will do well to understand that these range horse sales are the most successful of all. St. Louis is in the center for people who can get the horses home, who know how to handle them, fatten them, train them and market them. Thousands of farmers are looking forward to these sales. Horsemen interested should write for further particulars to J. J. Searcy, Secretary, National Stock Yards, Ill.

Horse Quotations at St. Louis.

At the St. Louis National Stock Yards, during the closing week of February, there was a decline of about $7.50 to $10 on all the horses, and yet it was a pretty good market. The previous week was high, and the loss was taking off what had been put on. Plugs are quoted at $25 to $40; Southern horses, light and common, $45 to $60; Southern horses, fair to good, $70 to $110; Southern horses, good to extra, $120 to $160. Very few sold above $135. Eastern chunks, $110 to $160; common to fair heavy pullers, $125 to $160; draft horses, decent to choice, $165 to $220. Drivers are quoted at $150 to $225.

The first sale of Texas cattle in March at St. Louis National Stock Yards was 100 head 1265 pound steers sold at $5.80 per 100 pounds. They were received by H. A. Pierce, of Waxahachie.

You will be responsible AT HARVEST TIME If things don't go right

RIGHT then at harvest time are you to know success or failure for the year.

Every hour of rapid, smooth, uninterrupted work will pile up your reward.

Every hour of delay, of slow, hard going, will decrease that reward, fill you with anxiety, and rob you of profits that you have justly expected and built on.

You will have enough responsibility at harvest time without having to think of your equipment, upon which the success of the year will largely depend.

Get that heaviest part of your responsibility off your shoulders now.

Go over your equipment before the very busy season starts. Decide what you will need to do the work right.

Then make your selections carefully.

Start now. You will never have more time between now and harvest.

And you want time for choosing harvesting machines. There is too much at stake to allow yourself to be pushed to a hurried decision.

For it is not only a matter of choosing efficient, dependable machines, but the machines that are particularly adapted to your needs, the machines that you know you can do the most with under your particular conditions. For this reason the best start you can make in your investigations is to examine the International line. Because hundreds of thousands of farmers in all lands have proved the efficiency of every one of these machines, you can't go astray on quality. And, besides, you have so wide a choice that you are sure to find the machine that just suits your ideas and your requirements in every way under one of these names:

Champion McCormick Osborne
Deering Milwaukee Plano

Choose one of these and be sure—sure of top-notch efficiency, simplicity, dependableness, durability.

Choose one of these and be sure of the most for your money, the biggest returns on your investment, the most profit from the crops you harvest.

Choose one of these now and feel secure in your harvest expectations during the coming months of rush and hard work.

You will feel secure about results with one of them because each one of them is a known quantity. Each one has made its mark, has won its stamp of approval from the farmers of America and other countries.

You will get the most for your money because the manufacture of these leading machines by one organization means a great deal to you.

This means the concentration of forces on improvements, time and labor-saving features, finer materials, more skilled and painstaking workmanship.

And this means to you a more improved machine, made of the finest materials by the most expert mechanics, at a price that would not be possible under ordinary conditions.

This question of price must interest you, but only as a secondary consideration.

The difference in price between the cheapest, haphazard, flung together machine and a perfect one is an insignificant item compared to the results at stake.

The smooth, rapid, uninterrupted perfect work at harvest time is something no man can afford to jeopardize. And he cannot afford to put himself in danger of long delays in case of accident. He wants a machine that can be fixed quickly and fixed right, in case anything should happen.

With one of the International line you are safe. The extra parts are always at hand at the nearby dealers and the parts always fit.

But the main reason why you should select from one of the six leading lines is because nothing goes wrong without mighty good cause.

The machine will not stumble over its own mechanism because—The principle of construction is right—The materials are right—The workmanship is right. And each has been tested and retested under far more trying conditions than will ever be encountered in the regular course of work.

Such perfection would not be possible if the manufacturers did not own ore mines, steel mills, timber lands and saw mills so as to make sure of the raw materials, and if the vast output and great buying power did not insure the first choice of raw materials from all other sources. And the ability to employ the right men to work up these materials and to furnish these men with the most perfect facilities in the world—all this is of equal importance to you.

It is this co-operation, insuring the highest degree of efficiency in every machine turned out, that means the lessening of your responsibility at harvest time, the elimination of most of the risk, the freedom from anxiety and worry and discouragement.

Don't experiment. Don't take on any unnecessary responsibility, any needless risk. Profit by the experience of hundreds of thousands of others who reap all their harvests and all the profit with one of the six leading machines.

See the International dealer at once. Take your choice. The quality is the same in all—the best possible. If you don't know an International dealer, write us and we will give you the name and address of the one nearest you.

Don't experiment on binder twine either. Get one of the six perfectly dependable brands of twine and be sure. Choose Champion, McCormick, Osborne, Deering, Milwaukee or Plano—in Sisal, Standard, Manila and Pure Manila brands.

Cured Fistula and Poll Evil.

Peter O'Brien, Bazine, Kas., writes that he has used Fleming's Fistula and Poll Evil Cure for four years and that he cured seventeen cases out of nineteen and he was still treating the others. Write Fleming Bros., 218 Union Stock Yards, Chicago, Ill., for a copy of their Farm and Live Stock Almanac, which contains valuable information.

Mixing Breeds an Error.

A friend says: "We had full-blood Rose Comb White and Single Comb Brown Leghorns last year, and allowed the two to mix. This year we have some of the finest Rose Comb Brown Leghorns that I ever saw, and the color is good. I have not yet compared them with the 'Standard of Perfection,' so do not know if their points are all right or not."

It is safe to venture that they are not such as would satisfy a fancier, and perhaps another year they will not even satisfy the owner. It is a pity, when one has pure-bred fowls of any good breed, to spoil it all by cross-breeding. It emphasizes another point, however, that one breed is enough for one farm. Let the fancier dabble in as many as he chooses, but for the farm flock, the large margin of profit of which is due to their free range, it is not profitable to keep more than one breed, else there will be the inevitable mixture. And while cross-breeding with the amateur may at first seem a success, it almost invariably in the end proves but the propagation of mongrels.

Resolve to improve your flock in some way. If they are just "common chickens," decide what breed you prefer and hunt around the neighborhood, if you cannot afford to send away for pure-bred specimens, until you find some one who has good specimens of your preferred breed. Invest in them, even if you do have to pay two or three cents more a dozen than the market price. The improvement in your flock will well repay the extra expense and trouble. Introduce new blood every year through the males, and don't get discouraged and change for some other kind every year simply because a neighbor happens to have better luck with that kind. It may be in the food, the shelter, the age, the dozen little cares; in fact, any of the standard breeds will give good results with proper care; if this is lacking, even the best of fowls will prove expensive luxuries.—Bessie L. Putnam.

Failures in Home-made Brooders.

We often read or hear of home-made brooders that have proved successful. While it pays to save buying what one can as well make, yet serious mishaps often occur when the economy is carried to brooders. First, count your time and material, and then pattern accurately after one that is successful, unless you wish to take the chances of having a quantity of chicks too young to command market value as broilers cooked some night as a result of this misplaced economy. After the chicks are three weeks old, an old teakettle of hot water, or a jug or two of water placed in a warm but well-ventilated box of suitable size, with the addition of flannel hovers, will keep the chicks comfortable in moderate weather. This plan removes the necessity of buying more than one brooder, the last hatch being kept in it and the older ones transferred as above outlined. But a smoky lantern or other evils of the home-made brooder, may in the earlier stages of chick life fail to supply the necessities.

Poultry Notes.

A newspaper item claims that the first three-months' record of an egg-laying contest in England resulted in six Buff Plymouth Rock pullets leading with 374 eggs, which is on a basis of 249 eggs per hen per year, with three-quarters of the year to be heard from. Buff Orpingtons took second, fourth and sixth places, with an average of 343 eggs. The Buff Rocks lay their weight in eggs in less than three months.

The Missouri State Board of Agriculture has issued a very interesting pamphlet entitled "Poultry Problems and Profits." There are fifty-two pages of splendidly-arranged illustrated matter of an instructive and helpful character. A copy of this pamphlet can be had by addressing Geo. B. Ellis, Secretary, Columbia, Mo.

In looking over the reports of the Poultry Shows we fail to find any mention of prize capons. This is about equal to having a Cattle Show without a beef-steer contest. The poultry fanciers don't seem to consider meat production as having any place in the chicken business.

Although the incubator catalogues are issued for the purpose of selling incubators—and surely illustrate them inside and out—there is a wealth of information in these books concerning all branches of poultry raising; in fact, many of the catalogues contain more information than is contained in the best poultry journals.

It is just as well to have a well-bred chicken as a well-bred horse or cow. Any amount of food and care will not make a mongrel as profitable as a pure-bred under the same conditions.

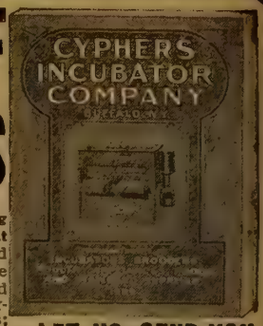
A hen that begins to lay in November and lays as many as ten eggs a month through to the end of February, which are sold at prices that prevail in any town, has paid for her feed a whole year, and all she produces during the remainder of the year is clear profit.

Healthy breeding stock is not found in a hen-house that is only cleaned out once a year. Houses should be cleaned out every week. Bad odors accumulate where droppings are allowed on the floors.

We cannot learn all about an incubator from a book. Experience comes from work in all lines of the poultry business. Raising poultry is a fascinating occupation, but it is not a successful business until one can be sure of good results from the use of an incubator. The incubator is like any other machine—it requires intelligence and perseverance and some skill. The incubators are all good, but they do not always receive constant attention.

Did you ever notice that the hens that have range about the stables are the best layers on the place? The question is how to make the hens lay more than ordinarily. If you look at it right, you will see why the hens at the barns and sheds lay the most eggs. They always have a deep litter to scratch in. There is plenty of scratching and digging to do in order to find the grains which are hidden away. They are at home, happy and contented. That is the natural condition of the hen.

BUYERS OF INCUBATORS



This Great Free Book has **Five Long Chapters on Feeding Chickens; Laying Records; Incubating; Brooding, and "What the Poultry Business Is."** It is full of pictures of Standard Bred Farm Fowls and Prize Winners; Photographs of the **Highest Priced Birds Ever Sold** (five fowls for $7,500), and letters from their owners; over seventy pictures of the Biggest Poultry and Duck Farms and Experiment Stations; over fifty photographs of Leading Breeders and Experts you have read about but perhaps have never seen; also pictures of some **nice flocks of fowls raised by women on the farm.** It explains fully the New Rules of Fire Insurance Companies; tells about our Newly Invented Electric Hatchers, and our Mammoth Incubator holding 40,000 eggs; also our New 1909 Pattern Insurable Incubators and Brooders. Growing Early Hog Pasture.

[Written specially for this paper.]

It is of as much importance to have early pasture for hogs, and especially small pigs, as for cattle, dairy cows or sheep. The hog has the name of being a mortgage lifter, and we must all acknowledge that the name is a very suitable one.

Knowing this to be true, why not provide in a way that will be most satisfactory to him and offer the largest profit to ourselves?

A hog does not relish corn for twelve months and nothing else, and it is not necessary to have to depend on corn alone for that length of time to feed him, nor is it profitable to allow him to have nothing else.

If the reader has not his farm so arranged that he can turn his swine on a field of red clover in the early spring, I would surely advise him to select a spot of ground that is loose and dry and sow some rape.

You, who have never tried this wonderful early hog pasture, will be surprised to know what even one-half acre of good rape will yield.

For the benefit of the reader I will give a bit of my last year's experience with a small lot of rape. Being just a little short of clover pasture for my hogs, I concluded to sow some small lots near my barn to rape. One of the lots lay just east of my barn and contained just one-half acre of ground.

As early as the ground was dry and would permit me to make a good seed-bed, I plowed it about like I would for corn and then let it lie a day or two. Then I went in with my drag and harrow and worked it until I had a nice seed-bed. I sowed five pounds of seed on this patch of ground.

After sowing, I took my team and harrow and went over the ground, which was sufficient to cover all the seed.

I often hear men say not to pasture rape until it is at least six weeks old; but it should be remembered that there are exceptions to all rules.

I just let this piece of rape alone until it was six weeks old and then turned ten head of good-sized hogs on the one-half acre, and in spite of all they could eat the rape grew larger every day, and the stalks or stems became almost as large as cabbage stalks. The reason for this, however, was, I did not turn onto it soon enough. It should be pastured as soon as it gets about four inches high, or by the time it hides the ground completely.

This patch was good ground well prepared, and it grew very rapidly, and I did not have enough hogs on the patch to keep it down.

This one-half acre of ground would have yielded about thirty buhels of corn, and as corn is worth about 50 cents per bushel at husking time, it would have been worth about $15, to say nothing about the labor of growing and handling the crop.

When sown in rape, this one-half acre would have kept about fifteen head of average-sized hogs for about three months and kept them in nice, thrifty growing condition. This in my estimation is worth a great deal more than the thirty bushels of corn. However, when pasturing on this rape, I do not leave out entirely the corn ration, as this pasture alone is not a well-balanced feed. When this rape is grown near the house it is astonishing to see how much the chickens will pick at the rape the whole day long. They appear to like it as well as they do cabbage in winter, and I am confident that it is a good feed for them as well as for hogs.—R. B. Rushing.

High-grade Pianos and Organs.

The Cornish plan in selling pianos and organs is to sell direct to the farmer and as low as to a dealer, and then to extend most favorable terms, giving a reliable purchaser all the time necessary to pay without inconvenience. The firm has been in business fifty-six years. Mention this paper and you will receive the Cornish Book and the very best price and terms. Address, Cornish Company, Washington, N. J.

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

95 Cents Per Roll 108 Sq. Feet

Ready Roofing Galvanized RUBBER and ASPHALT

An entire lot of factory 'mill ends' of prepared roofing, strictly high grade, brand new at less than cost of manufacture. Two or three pieces of galvanized rubber or asphalt roofing in each roll of 108 square feet. This is $2 and $3 grades of roofing; it is made of wool felt, thoroughly saturated with water-proof composition of rubber, after which it is coated with hard rubber composition and galvanized between heavy iron rolls. It is suitable for all climates, all ready to lay. Only tools needed a hammer and jack-knife. This roofing will impart no taste to rain water and can be laid over old shingles. We guarantee every roll as represented, or money back.

Steel Roofing Only $1.50 per 100 Square Feet

We have 50,000 squares of Steel Roofing, size 2 feet 6 inches wide by 5 feet 6 inches long, (30 inches by 66 inches) at this price. These sheets were used about 30 days in connection with the manufacture of soap. They were never exposed to the weather or nailed.

Every sheet is clean and free from nail holes, and practically as good as new. It is extra heavy, from 24 to 24 gauge.

Every sheet is given a coat of our red "Gelatine" on both sides. It is a new discovery in paints and prevents rust.

Flat, per 100 square feet....$1.50 Corrugated, per 100 square feet.... $1.75

Will last longer than light weight Galvanized Roofing. Just the thing for Barns, Warehouses, Factories, Sheds and Buildings of all kinds. Also for ceiling and siding. Satisfaction guaranteed or money back.

PLUMBING AND HEATING MATERIAL Direct to the Consumer at Factory Prices.

Alfalfa.

Alfalfa experts do not agree as to which is the best variety of alfalfa seed to plant in various localities. Some prefer the Montana-grown seed, some from Turkestan, imported from Asia, and others claim that the Grimm or Everlasting Alfalfa is the hardiest and most productive variety.

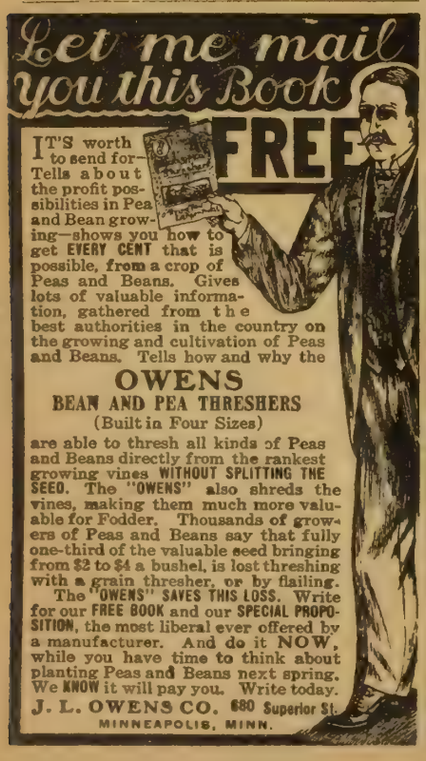
The merits of these varieties are thoroughly discussed in the handsome Twenty-fifth Annual Catalogue of Northrup, King & Co., Seedsmen, 227 Bridge Square, Minneapolis, Minn.

This catalogue will be sent without charge to anyone who will write for it. It contains also a complete assortment of the best varieties worth growing, grass seeds, clover seed, seed potatoes, oats, barley, wheat, etc.; vegetable seeds, flower seeds, garden seeds, seed corn, garden tools, etc.

Never Yet Failed.

I have used your Gombault's Caustic Balsam for over ten years and have never seen it fail. It is the best remedy for sprains, sweeny and ringbone. I have never had it fail on anything.—M. M. BROWN, Cassville, Mo.

Let me mail you this Book FREE



IT'S worth to send for—Tells about the profit possibilities in Pea and Bean growing—shows you how to get EVERY CENT that is possible, from a crop of Peas and Beans. Gives lots of valuable information, gathered from the best authorities in the country on the growing and cultivation of Peas and Beans. Tells how and why the

OWENS
BEAN AND PEA THRESHERS
(Built in Four Sizes)

are able to thresh all kinds of Peas and Beans directly from the rankest growing vines WITHOUT SPLITTING THE SEED. The "OWENS" also shreds the vines, making them much more valuable for Fodder. Thousands of growers of Peas and Beans say that fully one-third of the valuable seed bringing from $2 to $4 a bushel, is lost threshing with a grain thresher, or by flailing.

The "OWENS" SAVES THIS LOSS. Write for our FREE BOOK and our SPECIAL PROPOSITION, the most liberal ever offered by a manufacturer. And do it NOW, while you have time to think about planting Peas and Beans next spring. We KNOW it will pay you. Write today.

MINNEAPOLIS, MINN.

Wood Ashes a Good By-product.

In every industry or line there is a waste or by-product, and the farm is no exception; but we further find that nearly all of the by-products are being used and turned into a profit. In the great slaughter houses every part of the animal is used, all the waste is turned into a valuable fertilizer and returned back to the soil from whence it came.

All of the farmers that burn wood have a by-product left in the ashes, and we will burn wood as long as we can get it, as it is the best kind of fuel, when all things are considered.

Many have been burning the wood all their life and have never thought of the value there is in the ashes when properly used. We cannot afford to allow anything to go to waste on our farms, and there is no need for it. Most everything can be turned back to the soil, and increase it, and gotten out of the way. These little wastes are what cut down our profit, and we should look out for them more.

Many have a place to dump the ashes from the stoves, and there they have been dumping them for a generation, and the only use they got from them was what the chickens and pigs picked up in the charcoal, and that much was good. The land that they have been thrown on has been ruined, as it was put there too thick to even do the land any good. We had just as well put them where they will do some good, and this can be done as easily as not.

Wood ashes are valuable as a fertilizer to most all crops and trees. Of course, it helps some more than others, owing to that some crop needs the potash found in the ashes more than other crops. I have put ashes on corn land, and could hardly notice much good that it did, but the following year, when the land was in oats, I could see a great difference in favor of the ashes as a help to oats, and the next year, when I seeded to clover, I could see a still greater difference. I would not be afraid to put them on any land, and believe that it will always help.

Ashes are fine for fruit trees, and I find a good plan is to dump the ashes around the fruit trees each time we empty the ash-pan. Why not teach the boy to put and scatter around a different tree each time he carries them out? Very likely we have some trees in the chicken yard, and, if not, we ought to have, and it is a good plan to put some around these trees. Throw some among the berry bushes, and note the effect.

If we dump the ashes out of doors on a pile and haul off and scatter on the field once or twice a year, we get but little good from them, for the rains have washed the best from them. These leached ashes are worth something, but not near as much as if they had been kept in the dry until scattered on the land.

It is a good way to keep in barrels until spring and then put on the land; but in doing this, beware of fire. We have kept the ashes in barrels down cellar by the furnace until spring and then hauled out, which is a good plan.

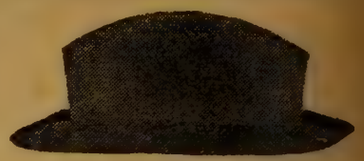
We want to keep the wood ashes dry until we scatter them on the land, whatever time that is. The farmer is probably the most wasteful of all men, and the farmers who are utilizing these wastes are getting the most out of their farms. Turn everything back to the soil that will add fertility and build up a farm that you will not be ashamed to hand down to the next generation. Do this by turning the wastes into fertilizer, and place it where it will help the crops.—E. J. Waterstripe.

Grain Growing Declining.

A correspondent at Bristol, Grundy county, Illinois, sounds the right warning when he said that grain growing is declining since farmers in that section quit raising and feeding cattle.

That is precisely the situation in many sections in Illinois. For six years there has been a gradual falling off in stock operations and lands have been put into grain crops. Raising and fattening stock, where all the grain is fed upon the farm, conserves to that farm all the necessary plant food for grain crops. But when the grain is sold off, there has been no system of farming devised whereby continuous grain farming can be carried on without some additions of plant food. Clover properly handled will keep up the supply of nitrogen needed for grain crops, while manure properly cared for and distributed will help out the other essential plant-food element. But grain selling gradually uses up the phosphorus and potassium, both of which are essential for growing all grain crops. While it is hardly probable that these elements have been exhausted, yet weak straw and poorly-filled heads warn us that more plant food is necessary.—L. C. Brown.

The Association of American Portland Cement Manufacturers, Land Title Building, Philadelphia, Pa., is issuing some very useful booklets. No. 20, entitled "Mixing and Placing Concrete by Hand," is the very A, B, C of concrete construction. Interested people may obtain a copy by writing.



A MAGNIFICENT PREMIUM.

The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color. A million and a half of these hats have been sold. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Don't drive a blind horse—**cure him** before he goes blind. If you knew for a certainty that for $2.00 you could cure the worst forms of eye troubles in your horses, wouldn't you spend the money gladly? And if you could buy the remedy that would do this with a positive guarantee of no cure no pay, would you hesitate to order the remedy and give it a trial? You would not, if your horse was worth his feed. **"Visio,"** a wonderful discovery, actually cures all eye diseases, and it is sold on just such a broad guarantee. You can use it yourself without trouble. Write to-day to Visio Remedy Association, Dept. C, 1933 Wabash Ave., Chicago, Ill., for more particular information about their remedy.

Plant THREE In a Hill with the New Deere No. 9 Corn Planter

THE great accuracy of drop is what naturally interests you most. **Deere** genuine edge selection of corn gives the highest accuracy of drop attainable. Repeated tests show ten to fifteen bushels per acre in favor of accurate planting. This, combined with many other exclusive, desirable features, makes the **No. 9** a profitable investment. You profit by the increased yield due to perfect stand, by the additional years of service and freedom from break down.

Most progressive farmers and planters **won't have** any other. Best informed dealers refuse to consider handling any other. Investigate the time saving and profitable reasons why.

Main seed shaft driven directly by traction wheels takes all the strain from check wire, and avoids side draft. Compensating valves insure perfect check regardless of team speed.

Instantly changed from check to drill drop. Tip-over hoppers—very convenient in changing plates. Plates for all kinds of corn. Five sets always furnished. Standard runner, stub runner, or single disc furrow openers, as ordered. Concave or open tire wheels. Fertilizer attachment that hills or drills, furnished extra. **Every** detail worked out in best possible manner.

"Write a Postal to Deere" and get posted. We have but briefly mentioned some of the strong features above. Just drop us a post card, and we will promptly send detailed **proofs** free. Deere goods are of the highest standard, and satisfy the most exacting. Ask for our latest **corn book.** The whole subject of gathering, selecting, curing and testing the seed, as well as planting, treated in a small space. **fully illustrated;** a book for the man who wants better corn. Handsome pocket ledger free if you will do us the favor of **mentioning this paper.**

Write Johns-Manville Co., 501 North Third street, St. Louis, Mo., and mention The National Farmer and Stock Grower.

How to Beautify the Yard.

Each year as I pore over catalogues and make out orders I think this will surely be the last time that it will be necessary to spend hours and even days in such work as well as fill out a number of postoffice orders for an aggregate sum that is needed elsewhere. The place is certainly stocked to repletion, I think, and, besides, I have everything except the usual novelties that appear regularly each spring; yet when catalogue time comes around again I find myself in the same thrall of fascination as before, and before I am released the order list shows about the same length and value. I am now realizing that I have simply been following a natural law of progress and that as long as I own a piece of soil, this annual buying and planting will continue; therefore I have resigned myself and have taken time to remind others of their duty.

Every owner of a farm or town lot should realize that he can add considerably to its cash value as well as assist in making the neighborhood more beautiful, attractive and wholesome for himself and family to live in, by availing himself of this present opportunity to patronize the nurseries and enlarge his store of trees, shrubs and flowers. Do not let the birth of the new year, the real resurrection of all plant life, pass without thanksgiving offering to Nature. There are few yards, fewer gardens, and still fewer fruit farms that cannot afford room for another plant. If your town lot is unimproved, it is only common business sagacity to plant a row of shade trees in front of it. If it is improved, and you have still neglected to do this, you have failed to perform one of the elementary duties of good citizenship; the same assertion holds true of country property. The trees should come first and next the yard. A good sward of grass is easily created and in this must be chosen the sites of the flower beds. Around the sides of the house may be planted roses and low-growing flowers. About the porch should be vines to ward off the summer heat and to display their flowers and give fragrance to the air.

All this will be a labor of love to those who have discovered the wholesome and never-palling pleasure of working in the fresh soil in the dewy mornings of spring, and of so easily calling into existence beautiful creations of plant life. Better than any form of drug tonics would be an hour of this recreation before breakfast for the business man, nor would he be so apt to complain of the cook.

Shrubs, vines and flower seeds are cheap these days and call for but a trifling outlay. There is no sounder investment than buying hardy perennial shrubs, which, once planted, will continue to emerge into bloom each year without replanting and little care of any sort. A Lilac, Spirea, Weigelia, Deutzia, Althea, Syringa and the indispensable Hydrangea, will give color and refinement to any yard for perhaps a generation. Herbaceous perennials rank next, and promient among these we chose the Peony (recently developed into the grandest of flowers), Phlox (of infinite colors), Iris (a large family), hardy Chrysanthemums and Cannas. Then there are our old but never-fading friends, the Lily, Columbine, Bleeding Heart and Pink family, which, once given a home, will greet us each spring, costumed in their brightest colors. Then there is a host of annuals among which the most fastidious taste may please itself. Do not overlook the roses and climbers. Among roses, plant American Beauty, Paul Neyron, the largest of all, Kaiserin Augusta, Maman Cochet, a rose you will never cease admiring, La France, Perle des Jardines, Etoile de France, Meteor, Clothilde Soupert, Etoile de Lyon. These are divided among the white, pink, yellow and crimson.

Don't omit to plant vines in generous manner about the porches and back yard. Two or three vines aptly placed in this latter will go far to banish its plainness, lack of color, and even ugliness and disorder, if unfortunately these last two be present.

The family of climbers I approach with pleasure on account of a comparatively new member; that is, the Clematis Paniculata, which, all qualities considered, is quite superior to all others. Here are some of them which mark it as the King of Vines: It is the easiest grown, adaptable to any soil and situation, perfectly hardy, of great vigor, with pretty leaves covering a dense mass of vines that exclude the hot sun, and, beginning in August, when there is a dearth of flowers, robing itself in a sheet of snowy blossoms that delight the eye and scent the air with a delicate perfume; even then it is not done with its gifts, for the fall of its flower petals is followed by a wealth of red seed pods to which are attached long, downy, white plumes, which endure till winter and are only less attractive than the real blossoms; finally, this grand vine is the cheapest of its family, being within the reach of all. Of course, there are a number of other handsome climbers, some of which are annuals, and can be had in full growth the first season from the seed packet, such as the Cypress and the Moon Flower.

If your stock laws permit you to replace the fences with a hedge (and this one is much cheaper and sightlier), by all means plant the California Privet. It is becoming vastly popular, and deservedly so. It is cheap, and, once started, can be multiplied most easily by cuttings. Its foliage is of the deepest richest green, that persists till far into the winter. It is a rapid grower, that doesn't keep you waiting long for results; will grow in poor soil and in the shade; takes root easily, and is no trouble to prune, being thornless. It makes a fine border for a roadway or path or a mark for a division line.—L. R. Johnson, Cape Girardeau, Mo.

$4.24 Paints this House with "Tower" Paint

Best Paint in the World Body and trimmings, two coats. Your choice of colors. Then you will not need to paint again for about 8 years. That is 53 cents a year for improving the looks and value of your property. This low priced and long lasting paint is only procurable of us. It is the highest grade paint in the world. We have other paint much cheaper than this and much cheaper than any other house can sell, as low, in fact, as $2.50 for a house like this. But it will not look as good nor last as long as our reliable "Tower" paint at $4.24, though fully as good as other firms sell for their best paint at a much higher price.

Before you buy get our big 1909 Paint Book and Color Card
It tells you how to estimate cost of paint for any building, how to combine colors, how to save money and do the job right—in fact what you ought to know about buying and using paint. Color Card shows about 125 actual samples of our paint.

What Size Building Are You Going to Paint? Let us tell you in dollars and cents our low price for paint enough for body and trim two coats, to do the job in a perfect manner and at least cost. We make no charge for this information.

Get Our Paint Book Now. Figure out the cost, best colors, etc. A copy will be sent free. Just write us a postal card or letter and say: "Send me your new House and Barn Paint Book and Color Card," or cut out this ad., write your name and address on the margin and mail to us.

"YOU PAY FOR RESULTS ONLY." $2.00 per bottle, postpaid on receipt of price.
Visio Remedy Ass'n Dept. C. 1933 Wabash Av Chicago, Ill.

Fast-growing and Slow-growing Plants.

Every condition has its advantages and its disadvantages. If we gain in one direction we lose in another.

I have often been reminded of this truth when I have observed the results coming from orchard treatment.

I remember one variety of apples that grew in sod ground and some in tilled ground. The sod ground was every year mowed and was unmanured. The tilled land was every year given a good dressing of manure.

The apples that were produced on the sod ground were longer keepers. They grew to their full size but slowly and were hard at picking time. The apples that grew on the cultivated ground were short keepers and had to be disposed of at an early date or they would be a mass of rot.

But, on the other hand, the apples grown on the cultivated ground were in great demand and sold readily at a high price. The other apples brought a medium price. For quick marketing, the apples grown in tilled soil were best. For keeping in the cellar for family use, the apples grown in the sod were best.

So it is impossible to name any particular condition of growth and say that that is best. Its value depends on what you want to do with the product.

A florist was recently telling me of his experiences with carnations, some of which were grown under cool conditions and some under warm conditions. The flowers developed under high temperature were brought to the blooming point very much quicker that the ones grown in a cool temperature. Yet when he put those flowers on the market he charged more for the slowly-developed ones than for the ones that had been grown rapidly.

Buyers of the flowers could see no difference in the bloom and wondered why the producer made a difference in the price. But the grower had spent more time and effort on the slowly-grown flowers than on the quickly-grown ones, and he knew that the slowly-grown ones would keep days longer than the others.

This is the eternal law of recompense. It applies to all forms of life. The pear tree that grows rapidly is more likely to blight than the slow-growing pear tree, because the wood-cells of the fast grower are softer and the more readily allow the penetration of the spore of the blight fungus.

The larch is a wonderful tree in Europe, but in this country it has failed to receive much attention. Years ago it was imported to this country and planted extensively on our richest lands. On its native mountains in Europe the growth is so slow that the wood formed from a year's growth is as thick only as a sheet of paper, and the hundred-year-old tree is a small one. But the wood lasts indefinitely.

The same tree grown on our prairies had thick annual rings and the good-sized tree made timber with little lasting ability, The planters of the larch were therefore vastly disappointed at the results of their labors. They had ignored the law of compensation. It is probable that if we will grow the larch on the thin soil of our mountain summits it will produce a wood that will be extremely valuable, but it will be the successive generations that will profit by it and not our generation.

Country School Grounds.

Arbor Day in the various states has served to call attention to the condition of country school grounds.

The plantings that have been made on such grounds have been sometimes good and sometimes bad.

This is due to the fact that the people having charge of such plantings have sometimes been people having a knowledge of how plantings should be made, and have at other times been people knowing nothing about such matters.

The writer saw one good-sized school ground that had been planted in a way to spoil it. The trees had been run in straight rows like a cherry orchard.

The trees planted were forest trees, and in few years would grow up into a solid mass in front of the school house and would ultimately have to be cut down.

This is labor for nothing. Worse than that, it brings disappointment to the people that have assisted in the planting.

In such plantings the matter should be placed in the hands of some one knowing the requisites of getting good effects from properly-planted trees.

Why should the city school girl that goes into the country to teach school be expected to understand all the laws of tree planting?

The first thing to do in preparing to plant school grounds is to find out what trees should be planted and how they should be placed on the grounds. If someone knowing the art is not at hand, the State University is available for consultation. A letter directed to the State University will bring information on the subject.

In some states, the universities have already taken up the subject of the planting of school grounds and have printed bulletins on the best possible methods to be followed, which bulletins can be had for the asking.

They will also advise as to the time of planting each variety, whether in the fall or in the spring.

One Board of Education bought a lot of stuff and had it set out in the fall, against the advice of some that thought the planting should be done in the spring. The stuff planted all died within a year. This occurred in a Northern State, where the winter conditions are severe. It would not indicate anything as to what would occur in a warmer state.

Many of the school grounds are too small for the best results to be obtained in the planting of trees and shrubbery. They should be larger, and every School Board in the country can afford to have all the ground its school needs.

In the cities, ground for schools often costs over $10,000 per acre, yet the sites are purchased. In the country land may be had at $50 to $100 per acre, and the expenditure of a few hundred dollars for land is a wise one.

As a matter of fact, many of our city schools have more land than the country schools. The very abundance of land in the open country has been the cause of this neglect.

But land in the country is now rising in value, and the sooner the public secures what it needs the better it will be.

Country school grounds cannot be much improved so long as they are cramped in area.

Nut quotations at St. Louis, close of February: Western pecans, 8½ cents a pound; Texas, 8¾ and 9 cents; hazelnuts, 3½ cents a pound; hickory nuts, 85 cents per bushel for shellbark, and 40 cents for large; black walnuts, 35 cents a bushel.

Pat. Dec. 4, 1906. Others pending.

Wear STEEL SHOES!

Absolute Protection Against
Colds, Rheumatism, Stiffness, Discomfort
No More Blistered, Aching Feet
GOOD-BYE to CORNS and BUNIONS!

Three to Six Times More Wear Than the Best Leather Shoes You Can Buy!

These wonderful shoes actually save at least $5 to $10 of your shoe money every year. They're the strongest work shoes in existence. If you wear **Steel Shoes** you will never suffer from sore, blistered, aching, feverish feet. Nor will you catch cold or get rheumatism or stiff joints. For these comfortable, steel-bottomed shoes with waterproof leather uppers keep your feet so warm and dry that you can work in the worst kind of weather without danger of "catching cold." You can work, dry shod, in soft mud or wade in water, for they are as **waterproof** as rubber boots. But, unlike rubber boots, Steel Shoes don't heat or sweat the feet. Nor do they get water-soaked, warped and twisted, for light, thin steel soles **compel** the uppers to keep their shape.

FREE

Write for book, "The Sole of Steel" or order a pair of Steel Shoes on blank below.

STEEL SHOES are Health and Money Savers!

The Saving in Doctors' Bills Alone Much More Than Pays for Them

No Colds! No Corns! No Repairs! No Leaks! No Slipping! Just SOLID COMFORT!

Throw away your old rubber boots—your rough, hard, twisted, shapeless leather shoes—and wear Steels instead. Then you will not be troubled with sweaty, blistered, tired, aching feet or tortured by corns and bunions.

How Our 1909 Model Steel Shoes are Made

The soles and an inch above, all around the shoes, are stamped out of one piece of special fine, thin, seamless steel. This sole is as light as a leather sole and so much stronger that there is simply no comparison.

It gives the best foot protection of any shoe on earth. It is studded with Adjustable Steel Rivets, which give you a sure footing and save all wear on the sole. When Rivets become worn, you can replace them **instantly** with new steel rivets. 50 Extra Steel Rivets cost but 30 cents **and will keep your shoes in repair for at least two years.**

The uppers are made of the best quality of soft, pliable, waterproof leather that money can buy. They are **double thick** where riveted to the steel bottoms and **reinforced** at the seams.

Comfortable Hair Cushions

The thick, springy, **Hair Cushions or Insoles** inside the shoe absorb all the perspiration and odors. You can easily take out, clean and dry the Hair Cushions each night. These Cushions prevent the jars of walking and keep corns and callouses from forming.

Not only will Steel Shoes give greater **foot comfort** than you have ever known before, but they will pay **for themselves** over and over again in the saving of medicine and doctors' bills.

They Take the Place of Rubber Boots

A man who wears Steel Shoes doesn't have to own three different styles of working shoes. No arctics or felt boots necessary.

Rubber boots keep the feet hot and sweaty and make them very tender. They are positively injurious to health. Steel Shoes, with waterproof leather uppers, give you the same protection as rubber boots, without sweating your feet. One pair of Steel Shoes will outwear at least three pairs of rubber boots.

See How Much Cheaper Than Leather Shoes!

Made in Sizes 5 to 12—6-in., 9-in., 12-in. and 16-in. High

Our $2.50 Steel Shoes, 6 inches high, are better than the best $3.50 all-leather shoes.

Our $3.00 Steel Shoes, 6 inches high, of **extra fine leather,** are better than the best $4.50 all-leather shoes.

Our $3.50 Steel Shoes, 9 inches high, are better than any $5.00 all-leather shoe made.

Our $5.00 Steel Shoes, 12 inches high, are better than all-leather shoes that sell for $6.00.

Our $6.00 Steel Shoes, 16 inches high, are worth more than the best all-leather shoes you can buy at any price.

One pair of Steel Shoes will outwear from three to six pairs of all-leather shoes.

"Steels" are the Workingman's Favorite

These shoes (either the $3.50 or the $3.00 pair), give the best possible service for general use. We cannot recommend them too highly.

Order a Pair—Sizes 5 to 12
Money Back if Not O. K.

Send us $3.00 for 6-in., or $3.50 for 9-in. pair of Steel Shoes, **state size shoe you wear,** and we will send you, by express, the best and most comfortable work shoes you ever slipped on your feet.

You are perfectly safe in sending to us for a pair of Steel Shoes, as we agree to refund your money promptly and freely **if you are not satisfied when you see the shoes.** The editor of this paper will tell you we are thoroughly reliable. Money cannot buy better working shoes than either the $3.00 or $3.50 style. You get more foot comfort and health protection, longer wear and greater satisfaction in a pair of Steel Shoes than money can buy elsewhere. **So why not send for a pair today?**

RURAL TELEPHONES.

The Advantage and Benefits to Farmers and All Open-country Residents.

One of the papers read before the Commission on Country Life was by Mr. Starkweather, as follows:

"Good roads, rural free delievry and the rural telephone, as benefits to the farmer, can hardly in equity be compared, as they are not in competition with each other. Good roads have always been a benefit. Rural free delivery from its start in 1897 has been a great help to the farmers, and in eleven years, according to the report of the Auditor for the Postoffice Department, has grown to a total of 40,000 carriers. But the rural telephone, starting since that time, is already outstripping both of these in the number of farmers it is reaching and the ways in which it is benefiting them.

"The rural free delivery carrier's route rarely exceeds twenty-four miles in length and serves on an average about seventy farms. A rural telephone will operate as far as forty miles with as many as thirty or forty telephones on the line. Of course in the well-settled states the farmers have both, but in the vast sections of open country it is obvious that it will be some time before rural free delivery can reach as many farms as the rural telephone.

"The low first cost of the rural telephone puts it within the reach of all. On lines less than twelve miles long the cost is $4.94 per mile, not including poles—the latter to be cut and furnished by the farmer himself. On lines over twelve miles long the cost is but $6.87 per mile; same arrangement about the poles. In either case, the cost of his telephone set complete is $13. The above figures represent standard "ground" one-wire construction and long-distance telephones. It is a simple matter to build the line and no operator is required. The annual maintenance expense is not over 75 cents—the renewal of the dry batteries in the farmer's telephone. In addition the farmer can run the line to a neighboring town and there connect with the town exchange and long-distance service to the rest of the country.

"The rural telephone in sickness or emergency enables the farmer to summon immediate aid. It enables him to learn the latest market prices and so get more money for his products. It removes the isolation of country life; it improves the conditions surrounding the farmer's wife. During the day and evening it is used a great deal for social intercourse, everybody being able to 'get in' on the line at the same time if they desire.

"Down South it is the white man's protection in the country districts. In many sections of the United States where rural telephone lines exist it is customary to furnish weather bureau reports over them each morning. For instance, at nine o'clock in the morning the telephone company in town will give three long rings over each rural line entering its exchange, and those who desire may, on taking the receiver off the hook, hear the operator read the weather bureau report. The companies often also give out at the same time the prevailing market quotations.

"The rural telephone certainly is the farmer's greatest servant. In using it to do errands, it saves him time. In dry seasons he may be promptly notified of the approach of prairie or forest fires, of not infrequent occurrence if his farm adjoins a railroad, or in case of fire in his own home he can summon aid without leaving the farm himself. It is hard to say in what way it helps him the most on the various things mentioned above. Wherever he is, ask him if he would be willing to do without it, and his answer is 'No!'

"In the vast section of open country, away from schools, churches and other conditions improving country life, the rural telephone is fast reaching out and removing one of the greatest disadvantages of living in the country, namely, that one must travel a considerable distance to reach a market or talk with a neighbor.

"It is estimated that there are about 7,000,000 farmers' families in the United States to-day, taking the word farmer in its broadest sense and including all families living in the open country. Of those it is estimated that in the few years since the rural telephone has been considered seriously, more than 2,000,000 adopted it and it is rapidly being extended.

"The rural telephone, born of necessity and of vital benefits to the farmer, has as its further recommendation its accessibility to the entire population of farmers, many of whom cannot be reached by rural free delivery or good roads for generations to come."

The Telephone, the Trolley and the Rural Mail Delivery bring you everything you need from the city except

entertainment

By entertainment we do not mean that which you obtain from books, magazines or pictures. We mean the kind offered by the theatre, the concert or the opera.

You get such entertainment occasionally, but you go a long way for it, you pay a good price for it, and you often find that it is not worth the time, the price or the effort

You work in the country and it is usually long hours. The time you have for entertainment is short, or at least made up of short intervals.

At night, for instance, there is an hour or two between supper and bedtime. You can go out; you can go to a neighbor's or you can go to town.

But you generally go to bed; not that you need this extra hour or two of sleep, but because there is nothing entertaining, diverting or informing that you can enjoy without more effort than you care to exert.

If at such times you could put on your slippers, light your pipe, lean back in your chair and listen to good music, a good song or an amusing story, wouldn't it be worth while?

That is the idea back of the Edison Phonograph. It collects the songs of the best singers and the music of the best bands and orchestras and spreads them broadcast throughout the homes of the country.

The EDISON PHONOGRAPH

is a wonderful thing. It seems commonplace because it is no longer new, but it does what no other instrument does. It carries the talent of the world's greatest artists into the home and places it at the disposal of whoever cares to listen.

The Edison Phonograph is Mr. Thomas A. Edison's development of the sound-reproducing idea which he invented. It is made under his personal supervision and has the benefit of all of his improvements.

Among its exclusive advantages are its indestructible reproducing point which never needs to be changed; its long-running, silent steel spring motor, most essential to brilliant work; its sensitive cylinder Records, famous for their sweetness and richness of tone and for their faithful reproduction of a singing voice or the notes of instruments; its large, specially made horn, which brings out every note or word with great force and clearness; and its new Amberol Records, playing twice as long as the regular Edison Records and offering selections heretofore impossible because of their length.

The dealer in the city where you trade will gladly demonstrate the Edison Phonograph if you will call, or send you a catalogue giving styles and prices if you write.

We will send you this book free on request

A home is a home whether it is in the city or the country. We have prepared a handsomely illustrated booklet called "The Edison Phonograph and the Home." It tells what the Phonograph brings into a home—your home

We Want Good Live Dealers to sell Edison Phonographs in every town where we are not now well represented. Dealers having established stores should write at once to

National Phonograph Company
168 Lakeside Ave., Orange, N. J.

SICKNESS AMONG HORSES

In this era of high values proves at all times very serious. Distemper, coughs, pinkeye, and the influenza troubles are to be guarded against constantly in midwinter. A tonic which keeps away the germ troubles such as Craft's Distemper Cure, sold generally by druggists, should be given regularly to horses of all ages with the food. If the trouble is neglected, the remedy is guaranteed to cure or money paid for it will be refunded on request. Horsemen so situated as not to buy conveniently of the trade may order direct at the regular price prepaid from the Wells Medicine Company, 17 Third street, Lafayette, Ind.

At the close of February, sorghum was selling in St. Louis at 35 to 40 cents per gallon.

Piles Quickly Cured at Home

Instant Relief, Permanent Cure—Trial Package Mailed Free to All in Plain Wrapper.

Piles is a fearful disease, but easy to cure if you go at it right.

An operation with the knife is dangerous, cruel, humiliating and unnecessary.

There is just one other sure way to be cured—painless, safe and in the privacy of your own home—it is Pyramid Pile Cure.

We mail a trial package free to all who write.

It will give you instant relief, show you the harmless, painless nature of this great remedy and start you well on the way toward a perfect cure.

Then you can get a full sized box from any druggist for 50 cents, and often one box cures.

Insist on having what you call for.

If the druggist tries to sell you something just as good, it is because he makes more money on the substitute.

The cure begins at once and continues rapidly until it is complete and permanent.

You can go right ahead with your work and be easy and comfortable all the time.

It is well worth trying.

Just send your name and address to Pyramid Drug Co., 92 Pyramid Building, Marshall, Mich., and receive free by return mail the trial package in a plain wrapper.

Thousands have been cured in this easy, painless and inexpensive way, in the privacy of the home.

No knife and its torture.

No doctor and his bills.

All druggists, 50 cents. Write to-day for a free package.

CEMENT WORKERS' HANDBOOK.

This book is designed to teach farmers how to work with cement; how to build walls, floors, ceilings, troughs, tanks, etc. It is a handy little cloth-bound book of one hundred pages. We use it as a subscription premium. For $1.00 we will send The National Farmer and Stock Grower for three years and a copy of the Cement Workers' Handbook. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Stomach Troubles Vanish Like Magic

Would you like to eat all you want to, and what you want to, when you want to, without a chance for trouble in your stomach?

Would you like to say **farewell** for the rest of your life to Dyspepsia, **Indigestion**, Sour Stomach, Distress after eating, Nervousness, **Catarrh of the Stomach**, Heart Fluttering, Sick Headache and **Constipation?**

Then send me 10 cents to cover cost of packing and I will mail you absolutely free one of these wonderful Stomach Drafts. They regulate the bowels, relieve soreness, strengthen every nerve and muscle of your stomach, relieve you at once and make you feel like a new man or woman. So write today enclosing 10 cents for the postage, etc., and get one of these wonderful Stomach Drafts that **are celebrated** because they **cure** where medicines fail. Write Dr. G. C. Young, 304 National Bank Bldg., Jackson, Mich.

GALL STONES or any LIVER DISEASE. Write me ALL about it. Will tell of a cure FREE. Address EDS. C. COVEY, R. 5, Lansing, Mich.

The Cur-dog Industry.

It is understood that when the Commission on Country Life issues a final report it will be able to make a splendid showing for the cur-dog industry. It is said that one of the remarkably successful farm industries is the raising of cur dogs. In some counties in Western Kansas the sheep would thrive and overrun the country almost like rabbits in Australia if it were not for the sheep-killing dogs. When the country was first opened up to settlers the people depended upon the wolves to keep down the sheep, but as the cities grew up and the farms and pastures were fenced in, the wolves gave up the contract. In this emergency the farmers of Kansas had to turn to "man's best friend, the cur dog," and it is discovered that one first-class sheep-killing dog is worth a dozen wolves. In early days, after a good night's prowling, when daylight came the wolf used to skip out and sometimes did not come back for more than a week, therefore his services were irregular and unreliable. Not so with the cur dog. Not being considered an outlaw as the wolf was, but as a friend of the family and petted by the children, he can be relied upon to prowl around amongst the neighboring farms day and night and not fail to catch any stray sheep that may invade the state or the county. So successful are these dogs that in one county in Kansas 1,774 dogs are successfully raised and the sheep reduced to 142. In the census year the same county had 5,599 sheep. In Arkansas it is also understood that the cur-dog-raising industry is flourishing. At Fayetteville, where they have an Agricultural College supported by state and federal government in order to show the farmers how to make money on their farms, they had the audacity to start a flock of sheep for experimental purposes; but the sheep-killing dog objected, and now the college flock of sheep is no longer in existence. The cur-dog industry won out.

We understand also that there are people who believe that a sheep is worth more to a farmer than a sheep-killing dog; they have also heard of a Collie dog that is worth a hundred cur dogs, that, instead of killing sheep, the Collie dog drives, herds and protects them. The cur-dog owners may never be brought to believe that a sheep is as good as a dog, but they may be brought to believe that a Collie is more useful than a mongrel. If the Commission on Country Life does not devote a goodly portion of their report to the cur-dog industry we will come to the conclusion that it missed a great opportunity.

Sheep Notes.

The Drovers' Telegram of Kansas City mentions George Widmier, of Braymer, Mo., as having purchased a load of wethers weighing 91 pounds at $4.40 per 100 pounds, and after feeding them a month, took them back to market weighing 101 pounds and sold them for $5.65 per 100 pounds. He feeds ground corn, cob and all, and handles large numbers of sheep in a very successful manner.

Sheep raisers in the Boise National Forest, in Idaho, have organized under the name of the "Boise National Forest Wool Growers' Association." The purpose is to promote the sheep industry, to secure equitable and fair regulations between the sheep men and the forest administration, and to work in harmony with the forest service for the protection and economical use of the grazing land. W. S. Lee, of Mountainhome, was elected President; Joseph Kent, of Boise, Vice-President; and Samuel Ballantyne, of Boise, Secretary and Treasurer.

Weight of Top-priced Hogs.

At the St. Louis National Stock Yards, during the last few days in February, the top-priced hogs weighed from 222 to 291 pounds. This gives an idea of favorite weights under present circumstances. J. H. Ryan, of Macoupin county, Illinois, marketed hogs averaging 222 pounds; R. H. Andrews, of Fulton county, Illinois, marketed hogs 226 pounds; Danner & Co., of Fulton county, Illinois, 225 pounds; Bailey & Cole, of St. Clair county, Missouri, 244 pounds; G. D. Cooper, of Pike county, Illinois, 258 pounds; Danner & Co., of Fulton county, Illinois, 291 pounds; Chas. Campbell, of Jersey county, Illinois, 242 pounds; P. J. Achenbach, of Greene county, Illinois, 254 pounds; Griffiths & Arening, of Page county, Iowa, 236 pounds; Teagarten & Pray, of Wayne county, Iowa, 231 pounds; Probst Bros., of Adair county, Missouri, 234 pounds; J. R. Stone, of Page county, Iowa, 243 pounds. All these hogs were tops on the day when sold. The average of all the loads is 245 pounds.

CORNISH From Factory to Home On a Year's Free Trial

Two Years' Credit If Needed — **Easy Terms**

Why Shouldn't You Buy As Low As Any Dealer?

Buy On The Cornish Plan which, in brief, places a strictly high grade piano or organ in your home, freight paid if you wish, **a rock-bottom factory price, upon terms of your own choice,** giving you 1 year to test the instrument before you need decide to keep it and **we give you an Ironclad Bond of Indemnity** which holds us to this offer and also insures instrument against defect for 25 years.

Send For The New CORNISH BOOK

The most beautiful piano and organ catalogue issued; it shows the choicest of our 50 latest styles and explains things you ought to know whether you buy from us or elsewhere. The book is yours for the asking. Write for it now.

We save you $100 and more on the purchase of a piano.

direct from our factory at actual factory prices. No stove or range has a higher reputation or gives better satisfaction. You run no risk. You save all dealers' profits. We pay the freight.

Send Postal For Catalog No. 328

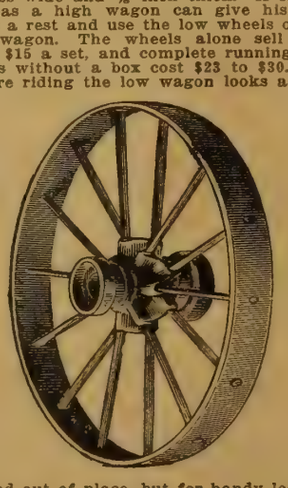
and see list of towns where we have satisfied customers.

Kalamazoo Stove Company, Mfrs., Kalamazoo, Mich.

Our patent oven thermometer makes baking and roasting easy.

THE LOW-DOWN STYLE OF WAGON.

Low-down is not a term of reproach when applied to a wagon. The low-down wagon has come into use on its merits. The low-down wagon and broad tire are companions, and, being of steel, not much reconstruction is necessary. The popular Low-down Handy Wagon has wheels 26 inches in diameter in front and 32 inches in the rear; the tires are 4 inches wide and ⅝ inch thick. A farmer who has a high wagon can give his high wheels a rest and use the low wheels on the same wagon. The wheels alone sell from $10 to $15 a set, and complete running gear wagons without a box cost $23 to $30. For pleasure riding the low wagon looks a little



odd and out of place, but for handy loading, unloading and hauling there is a saving of muscle that counts. Wheels are made to fit any style of wagon. The Missouri Agricultural Experiment Station was one of the first to make comparisons of the broad tire against narrow-tired wagons. On macadam the advantage was 2,518 pounds, against 2,000 pounds in favor of the wide 6-inch tire as compared with 1½-inch tires; on gravel roads, 2,482 pounds, as compared with 2,000 pounds; on dirt roads, 2,530 pounds, against 2,000 pounds, and on clay roads, mud deep, the difference was 3,200 pounds, against 2,000 pounds in favor of the wide tire. Several factories manufacture the low-down wagon, but the only one we have any interest in at present is the one made by the Electric Wheel Company, Box 222, Quincy, Ill. A catalogue can be had—a beautiful, artistic catalogue—by asking for it.

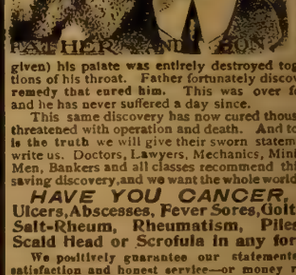
GOLD SPECTACLES FREE.

One-hundred-thousand pairs of the Dr. Haux famous "Perfect Vision" Spectacles are being given away free to genuine bona-fide spectacle-wearers as an advertisement, by the Dr. Haux Spectacle Company of St. Louis, Mo. Every one of our spectacle-wearing readers (no children) should write them at once for full particulars.

The sad story of MY FATHER'S GREAT SUFFERING FROM CANCER

Read the following and be convinced

WE CAN CURE YOU.



FATHER AND SON

Forty-five years ago my father who was himself a doctor, had a vicious cancer that was eating away his life. The best physicians in America could do nothing for him. After nine long years of awful suffering, and after the cancer had totally eaten away his nose and portions of his face (as shown in his picture here given) his palate was entirely destroyed together with portions of his throat. Father fortunately discovered the great remedy that cured him. This was over forty years ago, and he has never suffered a day since.

This same discovery has now cured thousands who were threatened with operation and death. And to prove that this is the truth we will give their sworn statement if you will write us. Doctors, Lawyers, Mechanics, Ministers, Laboring Men, Bankers and all classes recommend this glorious life-saving discovery, and we want the whole world to benefit by it.

***HAVE YOU CANCER,* Tumors, Ulcers, Abscesses, Fever Sores, Goitre, Catarrh, Salt-Rheum, Rheumatism, Piles, Eczema, Scald Head or Scrofula in any form.**

We positively guarantee our statements true, perfect satisfaction and honest service—or money refunded.

It will cost you nothing to learn the truth about this wonderful home treatment without the knife or caustic. And if you know anyone who is afflicted with any disease above mentioned, you can do them a Christian act of kindness by sending us their addresses so we can write them how easily they can be cured in their own home. This is no idle talk, we mean just what we say. We have cured others, and can cure you. Forty years experience guarantees success. Write us today; delay is dangerous. Illustrated Booklet FREE.

DRS. MIXER, 602 State St., HASTINGS, MICH.

Pimples Cannot Live

When The Blood Is Purified With Stuart's Calcium Wafers.

Trial Package Sent Free.

Pimples, blotches, eruptions, etc., simply disappear like magic when you shut off the supply of impurities which cause them.

Stuart's Calcium Wafers go into the blood through the same channel as food. They stimulate and nourish it. They destroy foreign and unnatural bodies found there and remove all impurities very quickly.

In many cases pimples and eruptions disappear from the skin in five days.

These little wafers are so strong that immediately after they go into the blood their beneficial effects make themselves known. The blood is cleansed rapidly and thoroughly, the impure is separated from the pure blood and the waste matter and poisons are carried from the system.

The person who suffers the humiliation of pimples, blotches and eruptions should know and feel that the blood is in bad condition and delay is quite dangerous, and is liable to affect many organs quite seriously.

Purify your blood and you give nature the means to successfully fight all manner of disease. Calcium Sulphide is one of the ingredients from which Stuart's Calcium Wafers are made, and it is the strongest and most powerful blood invigorator known to science. This wonderful purifier is endorsed by the entire medical profession and is generally used in all doctor's prescriptions for the blood and skin.

Stuart's Calcium Wafers peculiarly preserve the strength of Calcium Sulphide better than other methods—thus giving the most rapid cures owing to the purity of the ingredients and their freedom from decay, evaporation and chemical weakness caused by many latter day modes of preparation. Stuart's Calcium Wafers are sold by every druggist. Price, 50c., or send us your name and address and we will send you a trial package by mail free. Address F. A. Stuart, 175 Stuart Bldg., Marshall, Mich.

THE WONDERBERRY
A Luscious Berry Ripening in Three Months from Seed.
Luther Burbank's Greatest Creation.

FRUIT blue-black like an enormous rich blueberry in looks and taste. Unsurpassed for eating raw, cooked, canned or preserved in any form. The greatest garden fruit ever introduced and equally valuable in hot, dry, cold or wet climates. Easiest plant in the world to grow succeeding anywhere and yielding great masses of rich fruit all summer and fall and all winter in pots.—(As a pot plant it is both ornamental and useful.) The greatest boon to the family garden ever known. Everybody can and will grow it. We are the sole introducers in all parts of the world and offer thousands of dollars in cash prizes for which see Catalogue.

Seed 20c. per packet, 3 packets for **50c.**,
Also our Great Catalogue of Seeds, Bulbs, Plants and New Fruits for 1909, *free.*
JOHN LEWIS CHILDS, Floral Park, N. Y.
Please mention Nat. Farmer and Stock Grower.

Farm Forestry.

Most farms have on them small or large areas that can be utilized for forestry better than for anything else.

On many farms such areas are now covered with trees that have come up themselves and which are of a character that makes them of little value for anything.

Why not cut off these worthless varieties of trees and grow better varieties? Then every year the tree growth will represent an increase in money value.

Forests are produced by growing the trees close together and allowing the strong trees to kill off the weak ones. There is no other way of getting straight boles fit for timber.

Trees for timber and trees for nut producing cannot be grown in the same place at the same time, for if a tree is good for one thing it is not of much value for the other.

If a tree is to be grown to produce nuts, it must be planted by itself and given light and air on all sides. It will then branch widely and will produce the foundation for nut growing, namely, numerous twigs and buds.

In the making of timber, the bole of the tree is the principal thing. It is desirable to have it grow straight and tall, and the tuft of branches at the top are the means of elaborating the food that goes down and enlarges the bole.

A good forest gets its light and air at the top and not at the sides. Consequently its relative leaf area is small and growth is slow.

This is also the way to make fence posts. The writer a few years ago saw a forest of elms that had been grown for fence posts. They had been set out in rows six feet apart and four feet apart in the row.

This gave 1,815 trees to the acre. In ten years the trees had reached a diameter of four inches and were ready to be cut for fence posts worth ten cents each, or over $181.50 for the acre. This was an annual profit of over $18.15 per acre. This was not a bad return, when it is remembered that it was without cost for annual culture, and, moreover, was on cheap land in a semi-arid region.

The planter told the writer that he had made the mistake of not planting four feet apart each way. The extra space given had led to some branching, which was not a gain. The four-foot planting would have given sixteen square feet to each tree and 2,660 trees to the acre.

Each tree would have had as large a bole as with the wider planting, but would have had fewer branches, which would have been an advantage. The annual profit per acre would have been $26.60.

This is a very large profit for cheap land, and in many cases would represent more than its first cost.

The widening market for fence posts and for railroad ties makes it advisable to grow trees that will be valuable for as many things as possible.

Where hoop-poles are still marketable, there is room for growing immense numbers of trees on every acre of land and have them ready to turn into money in a few years.

Much of the hoop-pole supply has come from sowings made by nature and not by man. The writer has helped cut hoop-poles from these natural plantings where the available poles stood so close together that probably 10,000 could be counted on an acre.

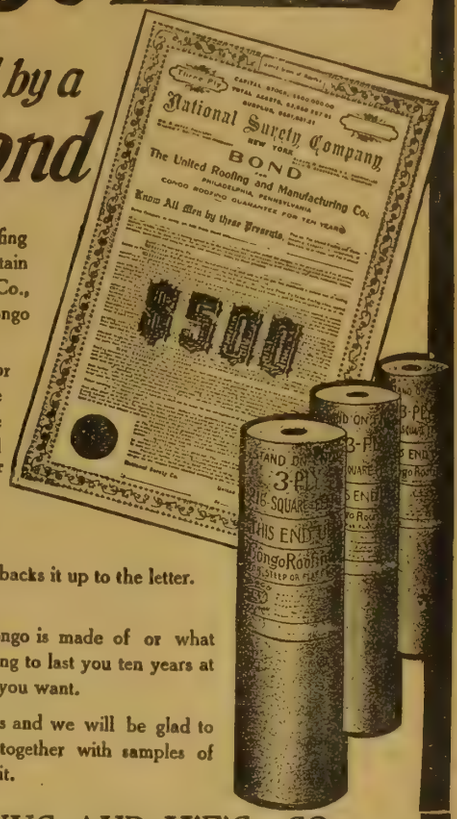
The demand for forest products of all kinds is increasing, and nearly every farm can profitably supply some of the material required.

Turning Under Weeds.

A Ford county, Illinois, correspondent asks what is the best thing to do with a very weedy stubble field which is to be plowed this spring for corn—burn it off before plowing or turn under the weeds.

As a general propostion, I believe in turning under all stuff whenever possible, as it adds humus to the soil. It is much better to fall plow such fields and get the trash under and out of the way of the cultivators. When corn stalks or weedy stubble fields are turned under during the spring they are likely to interfere with cultivation and, should the season be a very dry one, they would seriously interfere with the capillary action of the soil. To show what value is placed upon weeds and trash by scientists I want to cite a recent damage claim brought by a Putnam county, Illinois, farmer against a railroad for setting fire to and burning off his stubble field. It was claimed that the value of the stuff burned was equal to $3.00 an acre. The claim was settled upon that basis. If the stubble and weeds are actually worth $3.00 per acre, better turn them under, and do a good job—put them under far enough so that they will not interfere with the cultivators.—L. C. Brown.

CONGO ROOFING
Backed by a Surety Bond



Hereafter every roll of Congo Roofing which we sell will be found to contain a Bond of the National Surety Co., guaranteeing the durability of Congo Roofing.

Our 3-ply grade is guaranteed for *ten years* and provides that if the roofing fails to give satisfactory service during that period, you are entitled to a complete new roof *free of charge.*

We cannot dodge this guarantee.

The Surety Company's capital backs it up to the letter. It gives you absolute protection.

You don't need to know what Congo is made of or what it looks like; you know that it is going to last you ten years at least, and that is the kind of service you want.

Let us have your name and address and we will be glad to send you a copy of the guarantee, together with samples of Congo and booklet telling all about it.

Rheumatic Pains

"My mother is a great sufferer from rheumatism, and Dr. Miles' Anti-Pain Pills is the only remedy that relieves her."

MRS. G. DAVENPORT,
Roycefield, N. J.

The pains of rheumatism are almost invariably relieved with Dr. Miles' Anti-Pain Pills. They also overcome that nervous irritation which prevents sleep because they soothe the nerves. To chronic suffers they are invaluable. When taken as directed, they relieve the distress and save the weakening influence of pain, which so frequently prostrates. Many sufferers use them whenever occasion requires with the greatest satisfaction, why not you? They do not derange the stomach nor create a habit. Why not try them? Get a package from your druggist. Take it according to directions, and if it does not benefit he will return your money.

CATARRH MEDICINE FREE

If your Ears ring or roar, or your hearing is affected, if Eyes ache, water or burn, or sight is failing, if you K'hock, spit, cough or have bad breath, scabs in Nose, Irritation in Bronchial Tubes, Lungs or Stomach, your name and address will bring to you **absolutely free** a 32 days course of medicine prescribed to meet your **individual** requirements and complications.

We have cured many who have tried various so-called Catarrh cures with little or no benefit, and we make you this liberal offer to introduce our splendid treatment in your section.

REMEMBER send only your symptoms, name and address, **NO MONEY**—and without cost you will receive a 32 days course of medicine prescribed especially for you.

Work and Health.

It has been well said that one had better work than rust; but occasionally one sees some rare burst of industry which verges on foolishness. Work done at the risk of health is never a profitable venture. And while there are some who philosophize on this point to an extent that brands them as lazy by the enterprising, others take needless risk in the opposite direction.

Recently in passing a prosperous farm home in mid-winter, with the mercury well down toward the zero point, the writer was astonished to behold the woman of the house on the porch washing. The house was of sufficient size that lack of room indoors could not be offered as an excuse. Whether she wished to avoid steam in the house or was practicing a fresh-air fad, the process seemed risky, to say the least. No one can work over a steaming tub and not be rendered more susceptible to cold; and the work alternating from hot water to cold air must have a tendency to produce chapped hands, if not to induce cold and grippe. To us it seemed as if the better way to secure fresh air would have been to bundle up properly and run a few times around the house, chasing imaginary chickens from the garden; but, too, keep the wash-tubs indoors while the work over them was being performed, having the rooms well ventilated by opening the window from the top.

In this respect the closed washing machine has a value too little appreciated until tried. No matter how hot the water, the steam is all kept inside, doing double duty in the cleansing process and dispensing with the unpleasant vapor in the room.

Again, memory goes back to a railway ride in which a fellow-passenger, as soon as settled in her seat, whipped out a piece of pointlace, upon which she worked most industriously during her two-hour ride. There are several good pleas for work when riding. Some are forced to put in every minute of time. Some are familiar with the road, so care nothing for the scenery, and are happier at work. The first explanation evidently did not hold good in the case quoted, else the work would have been of a different nature. The second might have excused it had the work been suitably chosen. But pointlace work is one of the most trying occupations to the eyes which can be found. Close work when riding is equally injurious. In this the woman had put two evils together, and that she would soon pay for this double abuse of her eyes cannot be doubted. How much better to have chosen some plain knitting or crocheting, that could be easily done without any close looking.

Almost all work may be done at a special advantage. It is our duty, as it should be our pleasure, to hunt the easiest and at the same time the most efficient way; to save ourselves wherever it is possible. It does not pay to try house cleaning in the midst of a cold storm; or to weed the garden at noontide on a hot July day, if one can possibly arrange to do this work in the cool morning or near the close of day. Neither does it pay to needlessly expose the body in the middle of winter to perform work out of doors that should be done inside, just to save a little muss in the house.—Bessie L. Putnam.

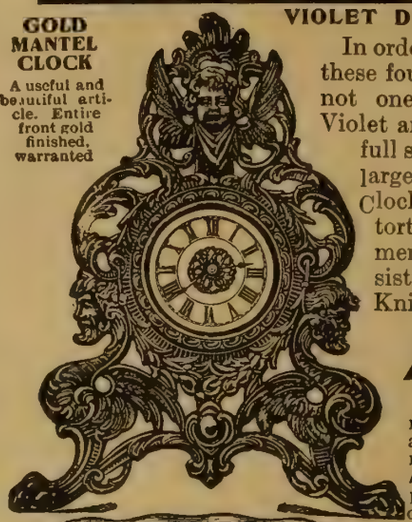
A Farmer's Wife Saved $10.00 Easily.

The card of Larkin & Co. on page 27 is especially interesting to farmers' wives. The chair illustrated in that advertisement is given away to anyone purchasing $10.00 worth of Larkin family supplies. The writer of this article has seen and examined the chair; has been through the Larkin factories from the basement to the top story. The supplies are laundry and toilet soaps, tea, coffee, spices, baking powder, etc., all first-class. We consider the Larkin proposition remarkable and beneficial to every country family. Sign the coupon in the advertisement and send it to Larkin & Co., at Buffalo, N. Y., or at Peoria, Ill. You will then receive catalogues that will please you very much.

GREATEST PREMIUM OFFER

VIOLET DINNER SET

GOLD MANTEL CLOCK
A useful and beautiful article. Entire front gold finished, warranted



In order to introduce my business, I am offering these four very beautiful and useful premiums—not one, **but all four.** This 31-Piece Violet and Gold Decorated Dinner Set, all pieces full size and carefully first selected china; the large size, Gold Plated and Warranted Mantel Clock; this 3-piece Side and Back Comb Set tortoise shell pattern, handsomely ornamented; and this 3-piece Kitchen Set; consisting of Wave Edge Bread Knife, Carving Knife and Paring Knife, warranted best steel

ALL FREE

This is unquestionably the greatest and most liberal premium offer ever made, but I am determined to double my business in 19 regardless of expense, and therefore offer **ALL FOUR** of these magnificent premiums on practically the same basis as heretofore only offered one of them. Any woman can go a long ways towards furnishing her home free at my expense.

All these premiums are first-class, guaranteed goods, and I will send you over one thousand references as to my reliability and standing. I have arranged to cover all freight charges on the fine, elegant premiums, so you are out just one cent of expense yourself. Read my offer below.

BEAUTIFUL COMB SET

FREE OFFER

Any lady sending me her name will be sent sets of my new Transfer Patterns, postpaid, at once. You hand out these 24 pattern sets free on a remarkable 25-cent proposition. Then the four premiums, the Dinner Set, Gold Clock, Comb Set and Kitchen Set will be shipped you. I can explain what this 25-cent proposition is now, everyone you show it to will be glad to accept as it is so attractive, and then you also give of the Transfer Patterns free. These Transfer Patterns enable anyone to transfer directly to the cloth an embroidery or dress pattern, and women are delighted with them.

If my Transfer Pattern sets and proposition do not go easily for 25 cents, and you find you do not care to help me for these premiums, I will send postage at once for return of goods without fuss or question, and also give you a premium just for investigating this offer in good faith. Could anything be fairer? Just send me your name today. Only one woman in each neighborhood selected. Remember, I arrange to cover the freight charges and give all four premiums for distributing only 24 (no more) of the Transfer Pattern sets on my 25-cent proposition.

Gold Spectacles Free

Write and Get a Handsome 10-karat ROLLED GOLD Pair Of The

DR HAUX FAMOUS PERFECT VISION SPECTACLES

Not Only For Trial—But to Keep Forever.

DON'T SEND ME A CENT

as I am going to give away at least one-hundred-thousand pairs of the Dr. Haux famous "Perfect Vision" Spectacles to genuine, bona-fide spectacle-wearers in the next few weeks—on one easy, simple condition.

I want you to thoroughly try them on your own eyes, read and sew with them and put them to any test you like in your own home as long as you please.

Then after you have become absolutely and positively convinced that they are really and truly the softest, clearest and best-fitting glasses you have ever had on your eyes, you can keep them forever without a cent of pay, and

Just Do Me A Good Turn

by showing them around to your neighbors and friends and speak a good word for them everywhere, at every opportunity.

Won't you help me introduce the wonderful Dr. Haux "Perfect Vision" Spectacles in your locality on this easy, simple condition?

If you are a genuine, bona-fide spectacle-wearer (no children need apply) and want to do me this favor, write me at once and just say: "Dear Doctor:—Mail me your Perfect Home Eye Tester, absolutely free of charge, also full particulars of your handsome 10-karat ROLLED GOLD Spectacle Offer," and address me personally and I will give your letter my own personal attention. Address:—DR. HAUX, (Personal) Haux Building, St. Louis, Mo.

NOTE:—The above is the largest Mail Order Spectacle House in the world, and is perfectly reliable.

SELECTED POETRY.

THE WIDOWER.

Home's not the place it used to be
  Since she ain't here no more;
The house is darker, seems to me,
  And damper than before;
And still—O Lord, how still it's got
  Since she's been took away!
I used to think she talked a lot,
  With nothin' much to say;
I had a notion that her voice
  Rasped on my nerves, somehow;
But, cracky, wouldn't I rejoice
  If I could hear her now!

It's strange how folks drift on in life;
  I'd got so used, I guess,
To havin' her here as my wife
  That all her loveliness
And all the goodness that she had
  Got sort o' commonplace;
It didn't make me proud or glad
  To look upon her face.
And when she'd touch me with her hand
  I'd never feel a thrill;
I didn't seem to understand
  That she was charming still.

But since she's gone I've learned to gaze
  Back on the long ago;
I call to mind the cheerful ways
  That made me love her so;
I see her as a girl again,
  With blossoms in her hair,
And smiles like sunshine after rain,
  Her heart without a care;
I see her glad and slender yet,
  With eyes undimmed by tears,
And hear her laughing and forget
  The joyless later years.

Home ain't the place it used to be;
  I've wakened up at last,
And learned how dear she was to me—
  But what is past is past!
I seem to have the hopes I had
  Back yonder, as a boy;
And old dreams come to make me glad,
  The old songs give me joy.
I wonder if it's not a sign
  That when I go to woo
And with her back again as mine
  I shall be youthful, too?
—Chicago Record-Herald.

LONG AGO.

Oh, those were glorious days, indeed,
  The days of long ago,
When straight as arrow and lithe as reed
  We laughed at winter's snow.
When over the frozen creek we sped
  Or hunted the sly raccoon,
Then, gathered about our campfire red,
  The night passed all too soon.
Aye, those were glorious days, indeed,
  Those days of long ago,
When straight as arrow and lithe as reed
  We laughed at winter's snow.

Those were the merriest days, indeed,
  The days of long ago,
When hours passed and we did not heed
  Time's ever onward flow.
When spring in all her glory came,
  When flowers were fresh and sweet,
And never a bird but was gladly heard
  As we hastened dawn to greet.
Aye, those were merry days, indeed,
  The days of long ago,
When hours passed and we did not heed
  Time's ever onward flow.

Never were happier days, indeed,
  Than days of long ago,
When summer met our every need
  On hills or meadows low;
When, ever ready, whate'er the call,
  We sped through brake and brier.
We recked not though the sky might fall,
  We followed our heart's desire.
Never were happier days, indeed,
  Than days of long ago,
When summer met our every need
  On hills or meadows low.

More full than all, the days, indeed,
  Those days of long ago,
When autumn withered every weed
  And hinted of the snow.
The nutty harvest claimed our time,
  The rabbit snares were set,
No bee tree that we could not climb,
  No prize we failed to get.
More full than all, those days, indeed,
  The days of long ago,
When autumn withered every weed
  And hinted of the snow.
—Charles Conrad Abbott.

LINES TO A WOMAN.

When milady reads a book.
By milady's face and look
One can tell, as sure as sin,
Just what chapter she is in.

Rapt expression, frequent sighs,
Heaving breast and languid eyes—
(Signs, as sure as saints above,
Characters are making love).

Fierce expression, lightning darts
From her eyes, her mien imparts
Something that betokens shock—
(Villain's getting in his knock!)

Then a look of fear and dread!
Pulling at a vagrant thread,
Quite unconscious I am here!
(Lover's fate in doubt, I fear.)

Now a look intense and bright,
Exclamation, muffled quite,
See, a tear her cheek has soiled—
(Ah, at last the villain's foiled!)

Now a lapse, a smile, a sigh,
Swift the chapters hurry by—
All her fears and dreads are gone—
(Game of love is getting on.)

Loudly ticks the clock and slow.
Time is going—let it go!
Lady will not go to bed
Till her paper lovers wed!
—Buffalo News.

THE BOY I USED TO BE.

I'm going home to see the folks,
  Just one week from to-day.
I know just how the place will look
  And know just what they'll say.
I'll sleep in my old, wooden bed
  And I'll wake up, at light,
To find the Boy I Used To Be
  Has come back, over night.

I'll lie till mother calls: "Will, boy!"
  And, "Billy!" father'll yell,
"Say! Breakfast's ready—hustle, now!
  "What ails ye—can't ye smell?"
That will be Sunday morning, so
  We'll go to church, we three,
Dad marching on a bit ahead
  And ma behind, with me.

There'll be a straight-out sermon preached,
  No paltering with The Book—
And dad will drink it in, and wear
  His stern old "Sunday" look.
But mother, if I catch her eye,
  She'll half smile back at me,
And slide along a gum drop to
  The Boy I Used To Be.

I reckon if it comes to pass—
  That Judgment they foretell—
I'll plead three things: I was her boy,
  And that she loved me well;
And that I kept my lifetime clean,
  (So far as lay in me),
That, yearly, I might chum with him,
  The Boy I Used To Be.
—Ines G. Thompson.

How I Saved $10.00

The Story of a Farmer's Wife.

Larkin Co.

Gentlemen:—We read your advertisement in our farm paper and wrote you for your Catalogue. We ordered, on thirty days' free trial, $10.00 worth of Soaps, Tea, Coffee and other things we must have for family use. We also chose a Morris Chair which you give free with $10.00 worth of your goods. Everything came as ordered.

We could not have bought the Soaps and other articles for less than $10.00 anywhere else. The chair is handsome and very comfortable—just what we wanted, and is easily worth $10.00, as you claim, so we have received $10.00 worth of Soaps and other things we need everyday and and a nice Chair we could not buy for less than $10.00 anywhere. The whole lot only cost us $10.00 so we have saved $10.00. We will want another lot of your goods in a little while.

Sincerely yours, MRS. ELMA HAYWOOD.

Given Free with $10.00 worth of Larkin Family Supplies.

$20.00 Worth of Retail-Value for $10.00

CONSOLATION.

O, deem not they are blest alone
  Whose lives a peaceful tenor keep;
The Power who pities man has shown
  A blessing for the eyes that weep.

The light of smiles shall fill again
  The lids that overflow with tears;
And weary hours of woe and pain
  Are promises of happier years.

There is a day of sunny rest
  For every dark and troubled night;
And grief may bide an evening guest,
  But joy shall come with early light.

And then, who o'er thy friend's low bier
  Dost shed the bitter drops like rain,
Hope that a brighter, happier sphere
  Will give him to thy arms again.

Nor let the good man's trust depart,
  Though life its common gifts deny—
Though with a pierced and bleeding heart,
  And spurned of men, he goes to die.

For God hath marked each sorrowing day
  And numbered every secret tear,
And heaven's long age of bliss shall pay
  For all his children suffer here.
—William Cullen Bryant.

WHICH WILL YOU HAVE THIS ? YEAR

We Want to Send You

10 Packets

of High Grade

Flower Seed

That You May Have

THE PRETTIEST HOME IN YOUR NEIGHBORHOOD

WOMAN'S WORLD, Seed Dept. 451, 46 W. Monroe Street, CHICAGO, ILL.

Fat is Dangerous

It is unsightly, uncomfortable, spoils the figure, causing wrinkles, flabbiness and loss of vigor.

Let me send you my Proof Treatment absolutely Free; you can safely reduce your fat a pound a day.

Note what my treatment has done for others:

Mrs. Eva M. Reynolds, Box 114, Lehigh, Webster Co., Iowa, writes: "When I commenced your treatment I weighed 285 pounds. I now weigh 165 pounds, and never felt better in my life."

Mrs. W. D. Smith, Box 34, Abbott, Me., writes: "I have lost 51 POUNDS by your treatment. I used to have heart trouble and shortness of breath; now I am well and can walk and work with ease."

Miss Dicie Wilson, Box 78, Franklin, Tenn., writes: "I have lost 69 POUNDS by your treatment and I feel like a new person."

I could fill every page of this journal with testimonials from grateful patients.

It is dangerous, unsightly, uncomfortable and embarrassing to be too fat. Excess fat weakens the heart. The liver, lungs, stomach and kidneys, become diseased, the breathing becomes difficult and the end comes in HEART FAILURE and sudden death. You can save yourself from these **DANGERS.**

I want to prove to you that my treatment will positively reduce you to normal and no matter where the excess fat is located, stomach, bust, hips, cheeks, neck, it will quickly and safely be reduced without exercising or dieting. **Your figure will be beautified; flabbiness and wrinkles disappear.** Rheumatism, asthma, shortness of breath, kidney and heart troubles leave as the fat goes away. I will send you without a cent of expense on your part, my PROOF TREATMENT FREE. It reduces fat at the rate of a pound a day and does it safely and permanently.

FREE

Don't miss this offer. My PROOF TREATMENT is FREE. It will make you feel better at once. I will also send you **Free** my **new book of advice,** together with testimonials from many well known people. **Write to-day.**

DR. M. NEY SMITH, 814 Pine St., St. Louis, Mo.

Please mention Nat. Farmer and Stock Grower.

NEW CHIEF OF THE DAIRY DIVISION.

The Secretary of Agriculture has appointed Mr. B. H. Rawl as Chief of the Dairy Division of the Bureau of Animal Industry, to succeed Prof. Ed. H. Webster, who resigned some weeks ago to accept the position of Dean of the State Agricultural College at Manhattan, Kas. Mr. Rawl has heretofore had charge of the dairy farming investigations of the Dairy Divisions. He is a graduate of the Agricultural and Mechanical College of North Carolina, and has pursued special courses at the Pennsylvania State College and the University of Wisconsin.

GRAND SWEEPSTAKES WHITE CORN.

Liberal Corn Prizes Offered by The National Farmer and Stock Grower of St. Louis, Mo.

The best corn-growing farmer in the United States of America is Mr. L. B. Clore, of Johnson county, Indiana. His reputation has been made, sustained and become illustrious by the exhibits of Johnson County White Dent Corn of his own breeding and raising.

Mr. L. B. Clore makes no pretense that he is any better or more capable than any other corn-growing farmer, but when he makes an exhibit for a grand prize he gets it. He won the grand sweepstakes at the National Corn Show in 1908, also in 1909.

Mr. L. B. Clore has placed a certain amount of his Grand Sweepstakes White Corn at the disposal of the editor of The National Farmer and Stock Grower, to be used as subscription premiums.

Therefore, anyone who will send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower can select one pound of Clore's Grand Sweepstakes White Corn, and we will send it postpaid by mail as a free premium.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a free premium and exhibit the same at their own State Fair—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, provided that these prizes are won during the year 1909 with corn grown by our subscriber from the seed corn furnished by us to him as a free premium.

These prize offers are good in every state where a State Fair is held, and are also good at any Interstate, National or International Show. If any of the premiums are won at the National Corn Show of 1909, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00; and if winning a sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive fifty dollars additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn. Mr. Clore did it from his own seed corn, and our readers will be furnished seed of the same family and breed of corn from which all the Clore premiums have been won. We are also offering a similar line of premiums for yellow corn, which will be found in another column.

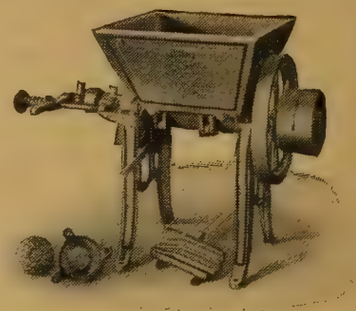
That Road Drag.

I have been traveling the past week in Henry and Putnam counties, Illinois, where farmers are prosperous, and where many find time to put in a half day now and then on the roads. Road work is much like field work—there is a right and a wrong time to do it. The best-kept roads which I have seen are those which are worked with the split log either when the top soil has dried off, say, two or three inches, or when the road is very wet. Either method will leave a smooth bed. This road problem would not be a hard one if all farmers along a stretch of road would do their share. But it happens usually that one or more farmers do not think the work worth while, and the road-making is left to those who believe in it. Right now, when the roads are thawing and the ground is settling, is a good time to put them in good condition for the heavy spring rains. Keep out the split logs. A few times over the road now is worth ten times as much as the same amount of work later in the season.—L. C. Brown.

USERS OF LIGHT POWERS

On the farm should be interested in the cut which is shown herewith. While this mill has just recently been put on the market, it is in no wise an experiment, but a new size of a well-known Bowsher "Combination" line. It was built in response to a call for a smaller machine which could be run successfully with very light and medium powers, feed itself on ear corn, and also be first-class on small grain.

This machine is not built simply with the idea of getting out something cheap, but embodies in general respects the features of superiority characteristic of the Bowsher line, including the conical-shaped grinders. A suitable sacking elevator is furnished if desired. In fact, The Bowsher Company figure that they could ill afford to offer anything that would detract an iota from the reputation which twenty years of good performance and superior qualities of their goods have built up.



There have been some very gratifying reports from users of this new size, of which the following from a Michigan party is a sample: "We have showed the miller in town a sample of our work and he pronounced it good, both in quantity and quality. Could find no fault at all."

As many of our readers already know, this firm makes a full line of mills to be operated by from two to twenty-five horse power, also sweep mills for either two or four horses. Full descriptive circulars will be gladly sent to anyone who is sufficiently interested to write The L. N. P. Bowsher Company, South Bend, Ind.

PRACTICAL FARMING AND GARDENING.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, hog, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you Practical Farming and Gardening, postage paid, and The National Farmer and Stock Grower for one year. This is a grand offer. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

FREE BOOK ABOUT CANCER.

CANCEROL has proved its merits in the treatment of cancer. It is not in an experimental stage. Records of undisputed cures of cancer in nearly every part of the body are contained in Dr. Leach's new 100-page book. This book also tells the cause of cancer and instructs in the care of the patient; tells what to do in case of bleeding, pain, odor, etc. A valuable guide in the treatment of any case. A copy of this valuable book free to those interested. Address, Dr. L. T. LEACH, Box 91, Indianapolis, Ind.

Don't Sell Your Eggs

When they are cheap; pack them with my new method—will keep two years—will be as fresh as new laid eggs. No special place required to store them. Cost only ½c. per dozen to pack them. Write me for circular.

MRS. B. F. WILCOXON, Ft. Des Moines, Ia. Box 50.

Useful Helps For the Kitchen.

A great convenience to have in the kitchen is a cigar-box with a cover, in which to collect odds and ends of string. Tie the strings in hard knots and wind them into little balls, and they will be ready for instant use, and if such a box is kept in a handy corner it will always be found a boon.

When heating milk for toast, there will be no danger of its sticking to the bottom of the pan or scorching if an asbestos mat is put on the stove under the pan in which you cook oatmeal or custard, if you do not have a double boiler and save scorched or burned food, and these useful mats can be bought for a few cents apiece..

If your stove is washed every time you wash dishes you will not have to blacken it so often, especially if it is given a thorough rubbing with old, soft newspapers. The polish will not burn off, as it sometimes does when the stove gets red hot, if a little sugar is added to any bought stove polish and then mixed with soap suds; and, if you want an extra shine, add a few drops of turpentine and some coffee.

An orderly, clean, yet well-equipped kitchen work table always denotes a good housekeeper, and if the biscuit-board, rolling-pin and tables are scrubbed at least once a week with a strong, hot Pearline suds, they may be kept white and clean without hard work; but in order to keep them in this condition, have the place most used around the table covered with mats, and make covers for the board and rolling-pin. The same suds is excellent for keeping the kitchen floor clean, and the tinware may be kept bright and shining by washing often in the suds.

When washing with hot suds fails to remove the stains from enameled sauce pans, a piece of cut lemon dipped in salt and rubbed over the stain will generally prove effectual.

When eggs are scarce, corn starch may be substituted for part of the eggs in custards or other dishes where milk and eggs are called for, and a teaspoonful of corn starch is equal to one egg.—M. A. T.

Music on the Farm.

Again we take pleasure in inviting attention to the card of the National Phonograph Company, which will be found on page 23. The Edison Phonograph is a great entertainer. It is greatly improved. The new Amberol Records play twice as long as the old records, and the new specially-made horns bring out every word with great force and clearness. A farm with music is worth a dozen farms without. Write for booklet entitled "The Edison Phonograph and the Home." Address, National Phonograph Company, 168 Lakeside Ave., Orange, N. J.

Kitselman Bros., fence manufacturers, Muncie, Indiana, report their sales larger this year than ever before. They sell fence for 15 cents a rod up. It will pay you to get their free catalogue. See their ad. in this issue.

PRACTICAL BARN PLANS.

This is the great book we have advertised for a year. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor. There are 156 pages, 8x10½ inches. The publishers claim that the first copy cost $5,000. The price of this book is One Dollar, out of which we are allowed a small commission, and for this we will credit one-year's subscription to The National Farmer and Stock Grower. Send in One Dollar and we will send you a copy of the book post free, also the paper for one year. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

A Bird Census.

Through the energy of the Audubon Society it has been arranged to have a bird census taken as the only means of protecting some of our most useful feathered friends. This may seem at first thought as a trivial matter, yet those who have given it most careful study find that the subject is one of grave importance. It will benefit all of the human race within its limits if it aids in the protection of the birds. But, more than all others, will it directly affect the culturist.

We fight the army worm most feebly in comparison with what an army of robins would do on the same ground. Yet after the robin saves for us bushels of apples from the canker worm in spring, it is growled at, if not shot in summer or fall, because it happens to appropriate a few cherries or apples.

Three-quarters of the bluebird's food consists of the grasshoppers, crickets, caterpillars and various insects with which farmers must be eternally at war. If the other fourth is fruit, why not provide plenty of cherries, chokeberries, dogwood, huckleberry, Virginia creeper and the other wild berries which it loves? Most of these have a direct value or beauty for man.

The swallows are strictly insectivorous birds, and live largely upon the flies that torment the stock.

The gay Baltimore oriole has a marked fondness for caterpillars, and the click beetle, adult of the wire worm, is for it a most delicious morsel.

A prominent ornitholgist writes: "Few birds do more good and less harm than our orchard oriole, especially to the fruit grower. The bulk of its food consists of small bettles, plant lice, flies, hairless caterpillars, cabbage worms, rosebugs and larvae of all kinds, while the few berries it may help itself to during the short time they last are many times paid for by the great number of noxious insects destroyed."

The friendly chickadee, which is grateful for a few crumbs in winter, is busy most of the time in the orchard, seeking out the eggs and insects hidden in the bark. During the summer it is estimated that in the twenty-five days allotted to the canker worm moth the chickadee would destroy 138,750 eggs. And it has been noticed that orchards previously infested with this pest and the tent caterpillar could be practically freed from the pests by attracting the chickadee with suet and other food.

The kingbird, known locally as the beebird, and shot at sight for depopulating the hives, rarely does material damage there, its attacks being mainly upon the drones. At least 90 per cent. of its food has been proved to be other insects, among them that pest to domestic animals, the gadfly.

When we see the great flocks of blackbirds light upon the corn fields in autumn, it is only just to recall as we drive them away the help they gave in early summer in protecting this same corn from grasshoppers, crickets, cutworms, army worms and a host of allied forms. Even when we think its sole object is to feast on grain, it has a keen eye for the countless insects taking refuge among the husks.

The song of the meadow lark, poured forth when on the wing, gives joy to all hearers; but its work when on the ground should entitle it to complete protection by the farmer. As a grasshopper destroyer it is almost without a peer, and its love for insect food extends to May beetles, caterpillars, curculios and various other noxious insect forms. Prof. Beal regards it as "one of the most useful allies to agriculture, standing almost without a peer as a destroyer of noxious insects."

Much has been said for and against the English sparrow, but whether it is a help or a hindrance, there is no question but that two of its near relatives, the door-yard "Chippy" and the song sparrow, earn their way many times over in the destruction of insects. Not every bird will devour the cabbage worm; and with the raid on cutworm, rosebug and gypsy-moth caterpillar, surely these birds are entitled to our friendship.

Some of the woodpeckers have been much maligned, but experts have proved that even the "sapsucker" would starve on vegetable food alone, and that many insects are unearthed from the bark of trees by them. Someone estimates every quail as worth five dollars to the farmer as a weed and insect destroyer. Even the hawks and owls are friends instead of foes. And with the birds diminishing and the insects increasing, does it not behoove the farmer to take a hand in this bird census?—Bessie L. Putnam.

Heiskell's Ointment and Medicinal Toilet Soap

Do skin eruptions, pimples and blotches spoil your good looks and make you unhappy?

HEISKELL'S OINTMENT will cure such troubles, and when they're cured HEISKELL'S MEDICINAL TOILET SOAP, used daily, will keep your skin like a baby's.

Both are vegetable compounds—one a healer, the other a preserver.

Send a postal for a new booklet of general interest.

JOHNSTON, HOLLOWAY & CO., 555 Commerce St., Phila., Pa.

The tendency of the times is to condemn everybody and everything connected with the milk supply, but it is very likely that the feature which is most deserving of condemnation is stringent law making upon insufficient information.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done, absolutely free of charge. Send your name and address to Dr. J. H. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay, but write to-day.

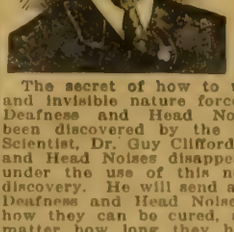
DEAFNESS CURED By New Discovery



"I have demonstrated that deafness can be cured."—Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered by the famous Physician-Scientist, Dr. Guy Clifford Powell. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they can be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous Treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators are astonished and cured patients themselves marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today to Dr. Guy Clifford Powell, 4393 Bank Bldg., Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free.

THE SUBSCRIPTION EDITOR.

Uncle Piper Going to Texas—Another Item Concerning Delinquent Subscribers—New Premiums Added to The National Farmer and Stock Grower List—A Battle Royal Over National Farmer Hats.

Every few weeks the boss editor hands over to Uncle Piper, subscription editor, something new in the line of clap-trap concerning delinquent subscriptions. Uncle Piper keeps a collection of that kind of stuff, but he says very few of the items are written by the people who know anything about subscription work. Uncle Piper says that a subscriber cannot be delinquent unless he has ordered the paper sent to him and then failed to pay for it—and there are not enough of them to fill a cage. However, a story is published over the initials E. A. H., in Lippincott's Magazine. It is as follows:

"The soul of an editor who had died of starvation was being conducted to the Elysian fields. As they passed the portals of the infernal regions, he asked his guide if he might not go in and look around. The guide consented, but warned him to stay but a few minutes, as he could not wait long. A long time passed, and the editor had not returned; so the guiding angel went in search of him. He found him before a cage in which a number of doomed wretches were being toasted on red-hot griddles. Over the cage was the sign 'Delinquent Subscribers.' 'Come,' said the guide; 'we must be going.' 'Don't wait for me,' replied the editor. 'I'm not coming. This is heaven enough for me!'"

When Uncle Piper was trading with the Indians, many years ago, he found that the custom was to sell an Indian a yard of cloth and then to give him a few apples or crackers as a present. The Indians called it "tail," and very probably it is the origin of the saying that the "tail is bigger than the hide," and many a beef and buffalo hide was sold to Uncle Piper by the Indians. Uncle Piper's habit of giving presents to Indians was continued when he came into the newspaper business, and it keeps the boss editor kicking all the time. Uncle Piper is naturally very peaceful. An old frontiersman who has been in many a skirmish and "whipped his weight in wild cats," is not disposed to be offensive to a little, fat farm-paper editor, but he is engaged to fight a "battle royal" whenever he is requested to buy cheap, no-account goods as premiums. When a few men fight together and hit whenever they can, it is called a "battle royal;" the only difference is that Uncle Piper has to fight both the editor and the business manager. It is the National Farmer hats that are again causing trouble. The business manager says that the more hats go out the less money the office takes in, and the boss editor says that it is a disgraceful thing to have to sell a hat and throw in the paper. Uncle Piper says that the boss editor would go down to his grave in deepest poverty if he, the subscription editor, did not find something that interests the people. And so they nag at one another; but Uncle Piper is the victor, and the hats go out just the same.

Uncle Piper.

Uncle Piper intends to take his annual holiday this year in March and circulate among the Texas cattlemen. Uncle Piper obtained his first subscription experience in Texas. In an early day, say 1871 to 1873, Uncle Piper was traveling for the Family Story Paper, and he carried with him a premium picture entitled "Rock of Ages." Well, these pictures are pasted up somewhere even to this day. In frontier towns and communities such as Mobeetie, Tascosa and Clarendon, in Seymour, Jacksboro, Graham and Fort Belknap; and at Fort Griffin, at Phantom Hill, Fort Chadbourne and San Angelo down to Fort McKavitt and Fort Mason, thence to old San Antone, to Victoria and to the old washed-away town of Indianola, all the way from Fort Dodge to the gulf coast, Uncle Piper was a welcome guest, and he always got a dollar, his lodging and a feed for his horse, notwithstanding in those days they picketed their own horses out because crops were mighty few. Uncle Piper had the best there was, and even now has old friends write saying: "Come back and starve with us."

In the Panhandle of Texas at that time ranchmen were mighty few. Charley Goodnight was just digging his way down to Palo Duro canyon. The main population was centered upon the Cantonment afterwards called Fort Elliott. Uncle Piper rode with Jack Stillwell and with Kilmartin, the scout, from Fort Sill to Fort Richardson, Texas, stopping for the night at Whalley's Ranch, the Western white man's habitation in the Indian country. He counted among his friends Uncle Kit Carter, of Palo Pinto county; Parson Slaughter and Judge Stribling; he also knew Denny Murphy, who, although now forgotten, was for many years the largest cattle owner and contractor in Western Texas. Uncle Piper knew a fair-haired boy named Will Curtis in Jacksboro, who afterwards became the most popular cowman in Texas, and he camped night after night with the Millett & Mabry outfits in Bayler county, and in those days he knew every store belonging to York, Parker & Draper from Fort Griffin to Ogallalla. He camped with Roland Johnson and his goats at Fort Belknap in 1872, and he rode stage from Fort Concho to Weatherford with John Campbell and Pete Collins, two notorious prevaricators, who nearly scared him to death, and he was the familiar friend of old John Hittson, the pioneer cattleman, and fed with him at Mammy Sikes' at Weatherford, Texas. Although the relentless hand of time has taken away many of the old frontiersmen, Uncle Piper will find a few left who were on the trail when there was not a fence line in existence between Corpus Christi, in Texas, and the Rosebud Agency, in Dakota. No matter where he goes on his holiday, Uncle Piper will pick up a few subscriptions, and sometimes more than a few.

Holstein cows being tested for admission to Advanced Registry to the number of 147 head averaged 26 quarts of milk per cow per day, from which was made 15 1-5th pounds of commercial butter a week. The per centage of butter-fat was 3.40.

Avoid explanations. Your friends don't need them and won't believe them.

I WILL HELP YOU CURE YOURSELF OF KIDNEY, BLADDER OR RHEUMATIC TROUBLE, FREE

I will send you free treatment and give you simple instructions how to cure yourself in your home, without cost. Write me today.

MRS. WALKER

DR. LYNOTT

MR. MERRICK

Dr. Lynott's great medical book, describing these diseases, as well as the addresses of several hundred of his cured patients, are also sent free to all who write him.

So that all who suffer from kidney trouble, bladder trouble or rheumatism may know without expense that at last a genuine and reliable cure for these diseases has been found, I will send to any victim of these ailments a free treatment and such simple instructions that anyone can cure himself at home, free. I say free and I mean free. I will make no charge; you have only to write me a letter giving me your symptoms and telling me how you feel and I will do as I promise.

To give free treatment is the best way to prove my claims. I bear the expense. You have simply to take my treatment as directed and you will know I can cure you. You will owe me nothing now or later when cured. It is my free gift to the thousands of uric acid sufferers, and I want all to take advantage of it. I have devoted my life to the cure of these diseases. I am in a position to help you and my help will cost you nothing.

Write me a letter today, describing your condition in your own words, and I will send you a free treatment for it. Some of the leading symptoms of a kidney, bladder or rheumatic disease are:

1. Pain in the back.
2. Too frequent desire to urinate.
3. Burning or obstruction of urine.
4. Pain or soreness in the bladder.
5. Prostatic trouble.
6. Gas or pain in the stomach.
7. General debility, weakness, dizziness.
8. Pain and soreness under right ribs.
9. Swelling in any part of the body.
10. Constipation or liver trouble.
11. Palpitation or pain under the heart.
12. Pain in the hip joint.
13. Pain in the neck or head.
14. Pain or soreness in the kidneys.
15. Pain or swelling of the joints.
16. Pain and swelling of the muscles.
17. Pain and soreness in nerves.
18. Acute or chronic rheumatism.

You can describe your condition in your own way or you can give the numbers of the symptoms in the coupon and send the coupon to me and the free treatment and instructions will be sent you just the same. My address is Dr. T. Frank Lynott, 2584 Occidental Building, Chicago, Ill.

I am asking you for no money. All I ask is the privilege of proving to the afflicted that I can and will cure kidney, bladder and rheumatic trouble in a simple, scientific, painless way; that I can stop the painful backache, the swelling flesh, the inflamed bladder, the torturing rheumatism. I am successful with old and young, those who have just become sick and those who have suffered for years.

Since I ask for no money write me today and you will be surprised to see how easy it is to cure you when the right remedies, whose purity I have vouched for to the U. S. Government, are sent you, and when a doctor gives you the right advice. I will give you the right remedies and right advice and charge you nothing, so correspond with me today.

Write a letter or send the coupon, or do both.

Dr. T. Frank Lynott,
2584 Occidental Bldg., Chicago.

A New Cure Found For Consumption

By Dr. J. Lawrence Hill, That Actually Cures Consumption, Bronchitis, Catarrh, Asthma, and All Throat and Lung Troubles.

He Gladly Sends A Trial Package Free By Mail To Prove That Even the Worst Cases of Consumption Can Be Quickly Cured At Home.

Jackson, Mich., Special.—A remarkable announcement, based on innumerable authentic proofs, has been made by

This is Dr. J. Lawrence Hill, the Man Who Has Actually Cured Consumption.

Graduate Edinburgh University, Scotland; Chicago Homeopathic Medical College; Northwestern College of Ophthalmology and Otology; Chicago Eye, Ear, Nose and Throat College; and Special Course Instruction under Professor Ludwig Hektoen M D, formerly Professor of Pathology in the College of Physicians and Surgeons, Chicago, now of the Rush Medical College; also under the late Prof. J. S. Mitchell, A. M., M D., Specialist in Diseases of the Respiratory Organs; Special Post Graduate Courses in the World's Leading Colleges and Hospitals.

one of the foremost scientists and physicians in this country, Dr. J. Lawrence Hill, 249 Hill Building, Jackson, Mich.

Everyone who has Weak Lungs, Catarrh of the Bronchial Tubes or Catarrh in any form, Chronic Bronchitis, Asthma, Chronic Hacking Cough, Loss of Flesh, Night Sweats, Hemorrhages, Soreness or Pain in the Chest or under the Shoulder Blades, or any other Deadly Symptom of Consumption, should send their name and address with twenty cents in stamps or silver to help pay packing, etc., for a Free Package of Dr. Hill's New Rational Remedy. This treatment checks at once further progress of the disease, develops atrophied cell tissues and brings on new resisting power, appetite, flesh and good health. All throat and lung sufferers should send at once for a free package which the Doctor sends by mail prepaid.

FREE — STUART'S ADHESIVE PLASTER-PAD — TRADE MARK REG'D — PATENTED SEPT 12 1908

RUPTURE CURE.

Stuart's Plaster-Pads are different from the painful truss and being self-adhesive they hold the rupture in place without straps, buckles or springs—cannot slip, so cannot chafe or compress against the pelvic bone. The most obstinate cases cured in the privacy of the home. Thousands have successfully treated themselves without hindrance from work. Soft as velvet—easy to apply—inexpensive. Guaranteed in accord with National Drug Laws. Write to-day and "Trial Treatment," with interesting book will be sent FREE.

Address STUART PLASTER-PAD CO., Block 57 St. Louis, Mo.

Please mention Nat. Farmer and Stock Grower

GROWING STRAWBERRIES.

One-acde Experience in Southern Illinois—Cultivation Explained.

I have grown strawberries successfully for several years. However, I have never had more than one acre. I dispose of the fruit here in my home market at a good price, as the supply seldom exceeds the demand. I plant only the very best varieties procurable, and have never failed to produce large, handsome berries of best quality. Last season I sold 296 twenty-four-quart crates of berries from my patch of one acre, which averaged $1.80 per crate. The only expense was for picking and crates.

The varieties I have been most successful with and the ones I am now growing are the Warfield, Bederwood and Splendid. The Warfield is a dark-colored berry of good quality, and never fails to command a good price, but must be properly fertilized and thinned, else the fruit will be of an inferior quality. The variety I prefer as a fertilizer for the Warfield is the Bederwood. While the Bederwood is a rather light-colored berry, it has never failed to give the best of satisfaction and always yields a good crop. It is a vigorous grower and an excellent plant producer. The Splendid, which I regard as being the most reliable of these three varieties, is a large, well-colored berry, and is of the best quality. It is a good fertilizer and a good plant-maker.

In planting strawberries, I put them eighteen inches apart in rows four feet wide. I always plant in the spring, just as soon as the ground can be worked well. The soil is thoroughly pulverized and the plants put in with the roots properly spread.

When I plant pistillate varieties I always plant good fertilizers on each side.

In cultivating, I use a twelve-tooth cultivator between the rows and hoe between the plants. When the runners begin to appear and new plants start, I carefully place the runners so as to make the plants root about six inches apart. I allow the rows to get about one foot wide. When there are plants enough, I throw dirt over the runners so as to check further making of plants. I have found that much after labor will be saved if the weeds are all killed and the soil is in good condition when the new plants begin to start.

In hoeing the first time, I carefully notice to see if a plant has been too deeply set, or to see if the rain has washed the earth over the crown. If the rain has washed the earth over the crown, the earth must be removed so that the crown will be free. If a plant is too shallow, so that the roots are exposed, the earth must be drawn around it.

I remove all blossoms the first year, as the production of fruit taxes the vitality of the plants. My principal aim is to produce strong plants in sufficient number to give a good crop of fruit the next year. I exercise special care to keep all weeds destroyed, for they will take possession of the crop before it is picked if let go

After picking the berries, I mow the patch, burn the rubbish, cultivate the space between the rows, hoe out two-thirds of the plants in the row, leaving the plants ten inches apart in the row. I then keep them well cultivated the balance of the season with a cultivator having three-inch shovels, followed by a cultivator which has smaller shovels, and then with a common harrow. This mode of cultivation keeps the soil in good condition.

As to how long it will pay to keep land in strawberries before plowing up, no definite rule can be given. However, I have run a patch for four years, but the fourth crop of fruit was very unsatisfactory.

I wish to say to those who intend planting strawberries this spring, that while it is important to plant good varieties, it is equally important to plant good plants of those varieties. Poor plants of a famous kind will not do, and good plants of a poor kind will not do; but they should be fine, well-grown plants of a reliable variety well adapted to the soil and climate in which they are to be grown, and then the chances of success are assured.—Wm. H. Underwood.

Children's Parties.

By all means, if possible, let the children have a party now and then. Let the birthdays be marked by little social gatherings. In the years to come they will look back to the good time they had at home. The writer has grown children, but to this day she cannot get over the fact that she never had a birthday party. A handsome home, with everything to make it pleasant, and yet the one little thing she most desired was denied her. It was too much trouble and children mussed up the house so much.

A description of a birthday party given for a little eight-year-old girl, may serve to give other mothers ideas. As the refreshments are one of the features, we will describe them first. A Dennison crepe-paper lunch set was used. It was decorated with bright pink roses and a roll of crepe paper, the shade of the flowers, was also purchased.

From cardboard two round baskets were made, each being ten inches across and three inches high. These were covered in the following manner with the pink paper: A strip five inches wide and half as long again as the length around the basket was gathered with a stout thread and glued even with the bottom of the basket. Around the center of the basket was placed a roll of cotton to hold out the puff of paper.

One inch from the top the paper was gathered and drawn down to fit the top of the basket. The heading that stood up was pulled out gently to form a fluffy ruffle.

The handle was covered first plainly, then with a two-inch strip of crepe paper gathered in the center. A little twist of the paper covered the stitches at the top and bottom of the basket, and a big bow was tied to the center of the handle.

After the table had been spread with the paper lunch cloth, a basket was placed near each end, one being filled with green apples and the other with popcorn balls. In the center was the birthday cake, a layer cocoanut cake, with eight little pink paper roses on it.

On each side of the table were plates of tiny sandwiches, tied with strips of pink paper. As many of the crepe-paper napkins as there were children had a large handful of candy placed in the center, the ends gathered up and tied with strips of pink paper. One of these was at each plate.

A plain ice cream was served in such dainty cups. Two-inch circles of cardboard were first cut out, then large rose petals of the pink paper were pasted around them to form large roses. Two rows of petals were used, and they were carefully pressed and pulled into proper shape.

A stem and three leaves finished the cups. Not having any little paper cups, little tiny patty pans were placed inside the roses to hold the ice cream.

The children carried home the roses and the doilies, and were loud in their praises of Maude's mother.

With a few rolls of crepe paper and a lunch set in any one of the many beautiful designs a table can be made very attractive. Tiny baskets for the candy could be made and covered like the big baskets mentioned, or little round boxes can be placed inside of roses instead of the patty pans.

The children always like to have something to carry home. At a child's party given between Christmas and New Year, the candy boxes were two by three inches and five inches high. They were plainly covered with crepe paper and lined off to look like brickwork with very narrow strips of white paper. Beside each box, which was supposed to represent a chimney, was a figure of Santa Claus, cut from decorated crepe paper, and mounted upon thin card.

It takes so little to make the children happy that it is surely worth our while to give them a party now and then.—Mrs. H. L. Miller.

Deaf People Now Hear Whispers

Listening Machines Invented by a Kentuckian.

Invisible, When Worn, but Act Like Eye-Glasses.

Ever see a pair of Listening Machines?
They make the Deaf hear distinctly.
They are so soft in the ears one can't tell they are wearing them.

And, no one else can tell either, because they are out of sight when worn. Wilson's Ear Drums are to weak hearing what spectacles are to weak sight.

Because, they are sound-magnifiers, just as glasses are sight-magnifiers.

They rest the Ear Nerves by taking the strain off them—the strain of trying to hear dim sounds. They can be put into the ears, or taken out, in a minute, just as comfortably as spectacles can be put on and off.

And, they can be worn for weeks at a time, because they are ventilated, and so soft in the ear holes they are not felt even when the head rests on the pillow. They also protect any raw inner parts of the ear from wind, or cold, dust, or sudden and piercing sounds.

* * * *

These little telephones make it easy for a Deaf person to hear weak sounds as spectacles make it easy to read fine print. And, the longer one wears them the better his hearing grows, because they rest up, and strengthen, the ear nerves. To rest a weak ear from straining is like resting a strained wrist from working.

Wilson's Ear Drums rest the Ear Nerves by making the sounds louder, so it is easy to understand without trying and straining. They make deaf people cheerful and comfortable, because such people can talk with their friends without the friends having to shout back at them. They can hear without straining. It is the straining that puts such a queer, anxious look on the face of a deaf person.

* * * *

Wilson's Ear Drums make all the sound strike hard on the center of the human ear drum, instead of spreading it weakly all over the surface. It thus makes the center of the human ear drum vibrate ten times as much as if the same sound struck the whole drum head. It is this vibration of the ear drum that carries the sound to the hearing Nerves. When we make the drum vibrate ten times as much we make the sound ten times as loud and ten times as easy to understand.

This is why people who had not in years heard a clock strike can now hear that same clock tick anywhere in the room, while wearing Wilson's Ear Drums.

Deafness, from any cause, earache, buzzing noises in the head, raw and running ears, broken ear-drums, and other ear troubles, are relieved and cured (even after ear doctors have given up the cases), by the use of these comfortable little ear-resters and sound magnifiers.

A sensible book, about Deafness, tells how they are made, and has printed in it letters from hundreds of people who are using them.

Clergymen, Lawyers, Physicians, Telegraph Operators, Trainmen, Workers in Boiler Shops and Foundries—four hundred people of all ranks who were Deaf, tell their experience in this free book. They tell how their hearing was brought back to them almost instantly, by the proper use of Wilson's Ear Drums.

Some of these very people may live near you, and be well known to you. What they have to say is mighty strong proof.

This book has been the means of making 326,000 Deaf people hear again. It will be mailed free to you if you merely write a post card for it today. Don't put off getting back your hearing. Write now, while you think of it. Get the free book of proof.

Write for it today to the Wilson Ear Drum Co.

KIDNEY AND LIVER TROUBLES
Stomach and Lung Troubles
Or a Weak Circulation of the Blood Can Be Cured Without a Drop of Medicine

Magnetic Shields Make the Blood Circulate
We Prove it to You

We Prove Every Statement We Make. We Do Not Ask You To Take Our Word for It.

We simply want you to give us a chance to prove the truth of the claims we make for the curative value of MAGNETIC SHIELDS.

We guarantee our shields to be perfect in every respect, and to retain their power. We show you they have cured hundreds of cases where medicine had failed to do any good. They have cured these cases after they had been given up to die. Give us a full statement of your case today, and we will advise you FREE OF CHARGE just what can be done, and will show you cases like yours that have been cured by MAGNETIC SHIELDS after medicine had failed to do any good.

It is your duty to investigate. If we prove our claims, YOU WILL WANT MAGNETIC SHIELDS. We give the proof. YOU ARE TO BE THE JUDGE.

Hardening of the Liver—Complicated with Severe Stomach Trouble—Completely Cured and Forty-three Pounds of Flesh put on in Six Months.

THACHER MAGNETIC SHIELD CO., Chicago, Ill.

Gentlemen: I feel that I have a duty to discharge in giving my experience with the use of your Magnetic Shields for the cure of a most serious complication of Stomach and Liver trouble, that very nearly proved fatal to me, feeling that the cure in my case should be classed as simply wonderful.

While traveling on the road as wholesale dry goods salesman, I was taken seriously ill with a terrible distress in the pit of my stomach. I employed the most skillful medical talent for about two years, and under the best treatment in this line, continued to grow worse, until the physicians considered my trouble an incurable case, and did not anticipate I would live more than three months. My former weight had been 190 to 195 pounds, and I was reduced to a living skeleton, my color being a dirty yellow, and having a general mummified appearance. Fortunately at this time, about the 1st of December, I met a gentleman who had been cured by using your Magnetic Shields, and on his recommendation purchased the Shields and wore them faithfully. In thirty days I had gained ten pounds in weight, and by the first of July I had gained forty-three pounds and weighed 170 pounds.

I took no medicine whatever after applying the shields, and have not had a sick day since, nor even an ache or a pain, and eat and digest any and all food my appetite may crave. I am now past seventy years of age and enjoy as good general health as when a boy of ten. My case has attracted great attention here in Danville, where I am well known.

My confidence in Magnetic Shields is so great that I recommend them to every person who is not enjoying perfect health, and you have my permission to refer any one to me who wishes to know more fully the details of my case. I am

Very truly yours,
JOS. R. PATTON,
Danville, Pa.

If you are so skeptical you must have proof on your own body before you can believe, try a pair of our foot batteries. They will convince you.

OUR NEW BOOK FREE
"A Plain Road to Health"

It tells the cause and cure for every form of disease and gives the most valuable information on the subject of Magnetism. Simply send a statement of your case. We will send the book free with our letter of advice.

We Make Shields for Every Part of the Body for the Treatment of Every Form of Disease.

The accompanying cut shows how Magnetism is radiated from the Lung Shield, Belt and Lower Leggins into all the vital organs, as well as lower extremities, giving new life and activity to the circulation from head to foot, thus strengthening all the vital organs and large nerve centers and assisting nature in the work of eliminating diseased conditions by reason of the better circulation of blood that is established as soon as the Shields are applied. This set of shields contains over eight hundred powerful Magnetic Storage Batteries, that are guaranteed to hold their power and will never have to be recharged.

Serious Complication of Lung, Stomach and Kidney Trouble. A Marvelous Chicago Recovery.

DR. THACHER.

Dear Sir: It gives me great pleasure to testify to the perfect cure I have gained by using your wonderful Shields. After suffering fifteen years with stomach troubles, although doctoring the greater part of the time, I kept getting worse, until I was the victim of a severe complication of stomach and kidney trouble, which a year and a half ago all seemed to go to my lungs. Had dreadful pains, lost my appetite, could not sleep, became so very weak I could hardly walk across the floor, and not able to do my work. At times when my pains were not so severe I would try to read, but could not for more than five minutes at a time, as I was very nervous. My family and friends thought I could not live another month. I was getting tired of taking medicine. Nothing helped me. I happened to see your advertisement in the paper, which read, "Magnetism Cures Without Medicine." I thought "While there is life there is hope." So just one year ago today I put on your wonderful Magnetic Vest, Leggins and Insoles. The result was a miracle, for in two days I felt relieved; in a week, very much better; in three weeks entirely cured.

Words can not express how thankful I am to you for your kind advice; also for the treatment, to which I owe my life. May you live long for suffering humanity's sake. May your great and sure cure be known a great deal better than it is today.

Yours respectfully,
MRS. O. RAY,
654 Hirsch St., Chicago, Ill.

WARM  FEET

The greatest comfort and luxury of modern days; magnetic fire under your feet. The greatest life protector known; your feet keep warm all the time, even in the coldest weather. A sensation of life, warmth and comfort that you have never experienced before. A pair of our **Magnetic Foot Batteries**, the smallest shields we make, worn in the shoes, will convince the most doubting skeptic of the curative value of Magnetism. If you want evidence that speaks louder than words—if you want positive proof, get a pair of the Foot Batteries today and insulate your body against the cold, damp earth. They are worth ten times their price for this insulation alone. The Single Power Foot Batteries are $1.00 a pair or three pairs for $2.00. The Double Power, or the Compound Foot Batteries, are $2.00 a pair, or three pairs for $4.00 postpaid. Send size of Shoe when ordering Foot Batteries.

Thacher Magnetic Shield Co., Inc. Suite 272, 169 Wabash Ave., CHICAGO, ILL.

The picture presented herewith was taken upon the farm of Mr. E. D. Funk, of Shirley, Ill., and represents a car-load of champion Chester White hogs. See article by Mr. Funk in this paper.

The St. Louis Hog Market.

The activity of the St. Louis market for hogs is the topic of the day in live stock circles. With a record of two millions and a half hogs received and sold in the year 1908, this year the market starts out with a prospect of another record breaker. Increased shipments are induced by the splendid service of the St. Louis market, and it is our pleasure to invite attention to the pertinent facts as relating to the prices realized at the different market centers.

A careful tabulation of prices paid at various markets during the month of March shows the St. Louis market to average a fraction higher than Chicago, 13 to 25 cents per 100 pounds higher than Kansas City, 25 cents per 100 pounds higher than Omaha, and 16 to 21 cents per 100 pounds higher than St. Joseph. This is a comparison of averages covering a total of 1,750,000 hogs. As a matter of fact, this only gives a general idea of the difference. On the last day of March, Kansas City did not sell a hog above $6.95, whereas St. Louis sold fourteen loads at $7.00 to $7.10. The bulk of the good, heavy hogs at Kansas City sold at $6.70 to $6.85, and at St. Louis sold at $6.85 to $7.00. At $6.50 to $6.65 Kansas City sold the bulk of the light hogs, and at St. Louis the bulk sold at $6.70 to $6.80. This is doing full justice to the Kansas City market. The official tabulation shows an average whereby hogs sold at St. Louis in the month of March brought $20 to $40 a car more for the same class of hogs shipped to Kansas City or, for that matter, to either Omaha or St. Joseph. St.Louis is doing splendid service. All hogs should be consigned to a commission firm doing business at the National Stock Yards.

St. Louis Horse and Mule Market.

The largest number of horse and mule buyers ever known to be assembled at one market are now purchasing horses and mules at the St. Louis National Stock Yards. Auction sales of horses are conducted on Monday by the McFarlane Commission Company; on Tuesday by the Western Sale Stables Company; on Wednesday by Campbell & Reid; and on Thursday by Holland & Nugent Bros. Whenever there is a surplus of horses for sale the auctions are held at night and on Friday and Saturday. Mules are sold by these same firms. These auctions are conducted by first-class business men, who are renowned for honorable methods combined with great enterprise. By them the greatest market in the world has been built up. Shippers to the St. Louis market are specially notified to bill their horses and mules to one of the firms mentioned at the National Stock Yards in order to insure safe and speedy delivery. Don't bill to East St. Louis. The market is at the National Yards.

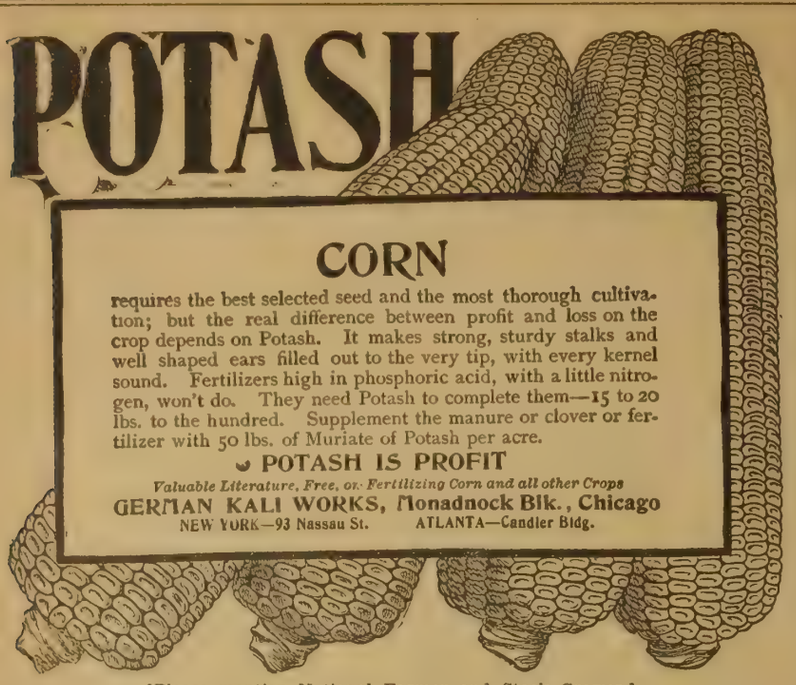
Stock and GROWER



POTASH
CORN
requires the best selected seed and the most thorough cultivation; but the real difference between profit and loss on the crop depends on Potash. It makes strong, sturdy stalks and well shaped ears filled out to the very tip, with every kernel sound. Fertilizers high in phosphoric acid, with a little nitrogen, won't do. They need Potash to complete them—15 to 20 lbs. to the hundred. Supplement the manure or clover or fertilizer with 50 lbs. of Muriate of Potash per acre.
POTASH IS PROFIT

Sod and Mulch Versus Cultivation For the Orchard.

The very successful results which have attended the sod-mulch system of orcharding as conducted by a small number of fruit growers scattered over the country, have drawn to it the general attention of horticulturists and excited at times lively discussions in the farm press. The preponderance of sentiment seems to be unequivocally against it, however, and to regard it with suspicion and distrust. Even science, while calmly weighing its merits, appears at times inclined to condemn it with impatience as an insidious method by which to seduce the orthodox believer from the safe path by holding out the prospect of less work and easier methods. The system of cultivation which horticultural scientists concur in recommending and which is faithfully followed by the great majority of fruit growers from the New England States to the Pacific Coast is briefly this: The orchard is plowed shallow or deeply disced in early spring. It is then cultivated regularly till some time in July and is then sown in some cover crop which is left undisturbed until the next spring. This is the method which is being pursued in the commercial orchards all over the country except in the irrigated regions of the West, where cover crops are not so essential. It is being demonstrated, however, by Hitchings, of New York, and Vergou, of Ohio, as well as quite a number of others, that the finest and most perfect fruit of which the land is capable may be produced by the sod-mulch system, while the arguments in its favor are so numerous and so rational that there is a general disposition to give it an extensive test. The one serious criticism to the present system is that cultivation, continued through the spring and more than half the summer, tends to exhaust the humus of the soil at a rapid rate while the loose surface is at the mercy of the heavy spring rains which, unless the land be quite level, are apt to wash it disastrously. Once begun, cultivation must be kept up at regular intervals and the crust formed after every rain must be promptly broken. Another criticism is, that in dry summers cultivation must be stopped too early for the best good of the heavy crop of maturing fruit in order that the cover crop may be sown in time for it to make a good growth.

On the other hand, the strongest point advanced by the advocates of the sod-mulch is, that it is a natural method that follows the example of nature as closely as possible and therefore insures better and more regular crops and longer-lived trees, while there is a steady improvement in the fertility of the soil. Experiments undertaken to test the system have in several instances failed and thereby discouraged its adoption, but from reports of these it seems that they did not take into account certain requirements that were essential to their success. Unfortunately, these requirements do not seem to have been pointed out and emphasized as vital factors of the system by its advocates, and its detractors are suffered to issue their condemnation without reply. Let us briefly examine the sod-mulch system. The young trees are either planted at once in a grass sod or cultivated in the usual way until they come into bearing, when the land is then sown down to grass. Whenever the grass is high enough to cut, it is mowed down; if the trees are young, it is raked and thrown around them as a mulch; if they are full grown, it is suffered to lie where it falls. In the unsuccessful trials mentioned above, this was as far as the experiment was carried, and to those familiar with the sod-mulch system, failure could have been predicted from the first, for the vital point of the whole theory was omitted, which is, that at all times a mulch must be supplied to every tree in a radius as far as the sweep of the limbs and heavy enough to smother out all growth of grass and weeds. It is the virtue in this mulch that makes the system possible and successful. The mulch is generally recognized as the equal in results of cultivation. What is its principle? To keep the earth cool, to keep it moist and to feed it with a constant supply of humus full of available plant food. The tests of this system that failed relied upon what grass was cut from the middles, which is not usually sufficient.

Enough straw or other good mulching material must be brought in to fulfill the conditions of the suppression of all growth under the tree and an adequate supply of humus. Combined with this must go the regular cutting of the grass and weeds before they ripen their seeds and the never-to-be-violated condition that under no circumstances must any grass be removed for hay, no matter how luxuriantly it may grow. Again, if the soil be too thin to form a heavy sod and a vigorous growth of the trees, top dressings of stable manure must be given annually until the requisite vigor be secured. In addition to this, phosphoric acid and potash must be supplied if the appearance of the fruit bespeaks their need. Condensed, here are the main conditions of successful sod-mulch culture: A strong, well-drained soil for a foundation; trees planted directly in the sod or cultivated until ready to bear, and the land then sown; just as soon as the trees are planted, and at all times thereafter, the application of a mulch heavy enough to suppress all growth under the circumference of the limbs; mowing down all growth once or more times a year and allowing it to remain or used as a mulch under the trees; supplying enough stable manure and commercial fertilizers to keep the trees in vigorous growth and enable them to make perfect fruit.

Condensed, here are the advantages of the sod-mulch: Tree roots never disturbed by the plow or cultivator and enabled to feed up to the very surface; the sod preserves the soil at a cool, even temperature; its decay supplies a constant source of plant food to the feeding roots from row to row; the mulch under the trees insures coolness, a steady decomposition of organic matter that feeds the roots at all seasons, and a supply of moisture that makes this constant production of food soluble and therefore available. The mulch and grass provide a soft bed on which the windfall fruit strikes without injury and is therefore in a much greater per cent. salable; the heavy sod makes a firm bed at all seasons for the entrance of horses and wagon to spread manure, to haul away the fruit and especially to spray in the early spring, when cultivated orchards are seas of mud; and lastly, the trees are more fruitful, hardier and longer lived because grown under natural conditions.—L. R. Johnson.

Arkansas Cattle as Natives.

According to latest regulations of the United States Bureau of Animal Industry, the cattle from Carroll, Randolph, Lawrence, Clay and Greene counties, Arkansas, can be shipped to the St. Louis market and be classed and sold in the native division. Cattle from Washington county, part of Fulton county east of Spring river, and part of Sharp county north of Strawberry river can be yarded in the native division if the cattle are certified by proper authority to be free from ticks. From all the balance of the state the cattle have to be yarded and sold in the quarantine division.

Onion sets are selling at St. Louis at $10 per 100 pounds for tops and $4.00 to $5.00 per 100 pounds for bottoms.

You Can INCREASE Your Corn Crop 30%

or more by using only such seed as has been carefully graded. You will also get far better corn. Government tests have proved that the main cause of *small* crops is an uneven stand. No corn-planter, whatever its merits, can drop seed evenly, *if the seed be carelessly graded or of all sizes that come from the ear.* But, *with seed carefully graded to a uniform size,* any good corn-planter can be depended upon to drop every grain just where you want it and thus make every inch of your ground do the service that it should. Government tests also have proved that the main cause of *poor quality* in corn is the planting of seed *not well selected.*

$1,000 PRIZE EAR OMAHA EXPO.

Careful Grading, Therefore, is at the Very Basis of All Richly Successful Corn Production.

$1 The Simplex All-Steel Seed Corn Grader $1

easily and quickly separates, in a new and scientific way, the *full, perfect, evenly-shaped* grains from the large, irregular, unshapely grains. Money back if not delighted.

Grades more corn and grades it better than any other device on the market, *regardless of price.* Capacity, 10 to 15 bushels per hour. A boy can work it. No machinery to get out of order. *Made entirely of steel*—nothing to wear out or rot—will last a lifetime.

Simply slip a dollar bill in a letter and mail to us. *You will never invest a dollar that will bring you greater returns.* Grader will reach you promptly. If you don't find it is worth its weight in gold, return it and get your money. Thousands in use. Order today, and we will send with Grader, booklet—"BUMPER CORN CROPS—HOW TO SECURE THEM."

FORTUNES IN ARKANSAS RICE
Do you know that you can earn $50 to $100 per acre from rice on the prairie lands of Arkansas—land that is to-day selling at about $40 per acre?
Do you know that rice is more staple than wheat—that the supply doesn't half equal the demand—that its price is always around $1 per bushel?
Mr. Roy Kleiner of Stuttgart, Ark., last year planted 49 acres which threshed out 4,336 bushels and sold at the Stuttgart mill for $4,285.57. His entire expenses, including feed for teams, was only $666.40, leaving him a net profit of
$3,619 from 49 acres
And he had never raised rice in his life before. His experience is not exceptional. The lowest single yield—not the average yield—of any rice grower in Arkansas County was 45 bushels per acre, netting over $30. Will wheat bring you that much?—will corn?—will hay?—Will any crop that is as easy to raise bring you half so much? Twice as profitable as wheat and easier to raise.
Send a 2 cent stamp to cover postage for copy of our booklet "Arkansas Rice" which tells you all about the big profits and of the fine climate there. Write to-day.

Farm Management.

Careful observation makes it very plain to me that there is a great deal of difference in the way different men manage their farms. It seems that some men are exceedingly slow in learning. Each succeeding year only convinces me the more of the fact that the farmer who makes the best use of manure and fertilizers in general is the man who steadily forges ahead.

I have watched the fellow who is careless and indifferent about the manure question. He, of course, avoids a lot of hard, disagreeable work, but he never makes any headway, and I feel safe in saying that in most cases he is going backward, while his more industrious neighbor is working ahead in a way that is really pleasing to the individual who is always glad to see his friends and neighbors progressing.

Just why it is that some men will persist in their shiftless, careless way is not very easily understood. I find certain farmers who are very careful in their management. They find it absolutely necessary to keep some stock, not too much, however, for the land they possess, but just as much as they can keep profitably. They don't keep this stock simply for the milk and butter, and cash that may be realized from the sale of the stock and their products. They have some other reason, and a very important one, for keeping live stock. The roughage that is produced on the farm must remain there to be returned to the soil. But this vegetable material must pass through a certain process that renders it more suitable for the requirements of the soil and the crops that are to be grown there in the future, and also that a profit may be realized from the feeding process also.

Every good farmer has learned to place a high value on barn yard manure. He knows that it is the basis of good profitable farming. He also knows that if he can grow double the crop on an acre of land that his neighbor produces, that he will outstrip his neighbor by at least one-half.

Most of us do not farm just for the fun there is in it, but rather for what we can get out of it in the way of making a living and providing ourselves with the various things that are required to make life more pleasant and satisfactory. It is always a great pleasure to know that in whatever we have undertaken we always did the very best we could. It is worth something to know that we have tried to be the very best farmer we possibly could be. If we do our level best at anything, and yet fail, we can look the world bravely in the face, for no man is expected to do more.

But what about the negligent, indifferent fellow who is trying to farm in such a careless way? His farm is becoming less productive each succeeding year, yet he can't see why he doesn't raise as good crops as his neighbor gets.

The neighbor has made it a rule to act on the principle of giving his land a square deal; the other man will not do this. He takes all and gives back nothing, and finally it is practically nothing all around.

Make the farm productive and we have every assurance of abundant harvests.

If we plant in fertile soil, insects or unfavorable weather may cut our crops short, and lack of proper preparation or after cultivation may produce the same results; but the chances are far greater than would be otherwise.

But when we plant on soil that we know is entirely exhausted there is no good reason why we should expect a coming harvest. It seems that some men persistently invite failure in their farming operations. Why should men do this?

First see to it that the soil is in a suitable condition for the production of crops and then give them the attention that should be given and the harvest is almost sure to follow.—R. B. Rushing.

Rate of Planting Corn.

Many regulate the rate of planting according to the viability of their seed. This is wrong. In the first place all seed should be thoroughly tested before it is put into the planter boxes. This thing of putting in enough more seed, to make up for any that fails to grow, is largely responsible for so many uneven stands. The rate of planting should be regulated by the habits of growth of the variety planted. For instance, Reid's Yellow Dent makes an unusually heavy growth of stalk, so that best results from it come from two and three kernels in each hill. Two in each hill would be ample, could seed be so evenly distributed. Silver King is a variety which makes a rather light growth of stalk and leaves, and for this reason that variety can be planted much thicker than Reid's. When thick planting is done it is essential that the ground contain sufficient plant food to sustain stalk growth throughout the season, and sufficient grain-making material to meet the heavy demands of the thick-planted crop.—L. C. Brown.

The National Corn Association has selected December 6 to 18 as the dates for the National Corn Exposition of 1909. It will be held at Omaha. The date will permit all the exhibits at the State and County Fairs to be concentrated at the National Show. Business men of Omaha will subscribe $100,000 to promote the show of 1909.

Buy a Freight-Paid BUGGY $51.95

A rig laid-down at YOUR railroad station. You know the exact cost—no figuring—no guessing—easy to compare prices with your home dealer—no chance for argument. The buying simplified and with it Ward Quality.

Delivered to your station in Indiana, Illinois, Michigan and Ohio.

Genuine hickory ¾-inch wheels. Long-distance axles. Oil-tempered, Elliptic springs. Steel Bailey loop. Full under-circle anti-rattling fifth wheel. Double-braced, full ironed hickory reaches. 24-inch hardwood frame body. Triple-braced, solid panel seat back. Auto high seat sides. Special "Ward" seat ironing. Leather quarter top. Heavy rubber side curtains. Solid board boot. Steel frame leather dash. Double-braced hickory shafts. Body painted black, all hand work. Gear Brewster green, red or blue, all hand work. Auto cloth upholstering. Furnished complete with carpet, storm apron, side curtains, anti-rattlers, **Warranty Against Defects** and a **Guarantee of Satisfaction**, at the prices named below. **Delivered at your railroad Station.** Order No. J 111—Illinois, Indiana, Michigan and Ohio **51.95**

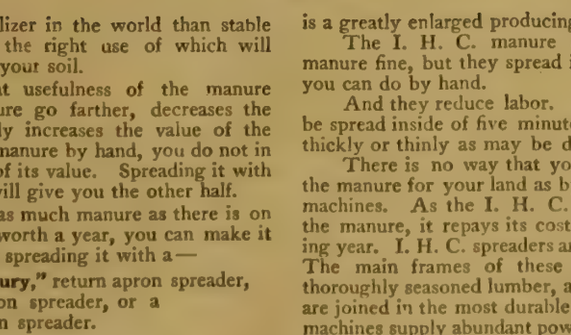
MAKE THE MOST OUT OF THE BARNYARD MANURE



THERE is no better fertilizer in the world than stable and barnyard manure, the right use of which will keep up the fertility of your soil.

Right here lies the great usefulness of the manure spreader. It makes the manure go farther, decreases the labor of spreading, and greatly increases the value of the manure. If you are spreading manure by hand, you do not in reality get more than one-half of its value. Spreading it with an I. H. C. manure spreader will give you the other half.

If you have on your farm as much manure as there is on the average farm, say $100.00 worth a year, you can make it worth an additional $100.00 by spreading it with a—

"Kemp's Twentieth Century," return apron spreader,
"Corn King," return apron spreader, or a
"Cloverleaf," endless apron spreader.

An I. H. C. manure spreader makes the manure go farther because there is no waste. The manure is spread evenly and before it deteriorates in value. It is not dried out, leached out or washed away as it is when thrown out in piles on the ground, and afterwards spread by hand.

The manure is pulverized and made fine when it is spread. The spreader puts it into a form so that it is available for plant food. It leaves the spreader beater in so fine a condition that the first rain washes every particle into the soil and the plant roots get the benefit. The effects of applying manure to the land in this condition are immediate and there is a greatly enlarged producing capacity given to the soil.

The I. H. C. manure spreaders not only make the manure fine, but they spread it evenly—far more evenly than you can do by hand.

And they reduce labor. The largest load of manure can be spread inside of five minutes, covering the ground just as thickly or thinly as may be desired.

There is no way that you can get so much value out of the manure for your land as by spreading it with one of these machines. As the I. H. C. spreader doubles the value of the manure, it repays its cost the first year and each succeeding year. I. H. C. spreaders are very substantially constructed. The main frames of these machines are made of heavy, thoroughly seasoned lumber, and the cross sills and side sills are joined in the most durable manner. The wheels on these machines supply abundant power in all conditions of spreading. The beaters are made of strong wood cross bars provided with long steel teeth so arranged that manure in all conditions is correctly spread. The aprons are made of wood slats that are attached to chains that have been thoroughly tested before they leave the factories. These machines are convenient to operate, light in draft, and do excellent work in spreading all kinds of manure.

The International local agent in your town will supply you with catalog and give you all particulars on the I. H. C. spreader he sells. Take the matter up with him or write direct to the home office.

How to Grow Sweet Potato Plants.

Prepare a hotbed by using fresh manure from the horse barns. Add about one-third to one-half straw or bedding material and mix thoroughly. This mixture should be packed in the bed to a depth of twelve to eighteen inches. A convenient width for a hot bed is six feet; they can be made as long as desired. The mixture should then be thoroughly moistened but not made wet; too much water will retard the heating process caused by the fermentation of the manure. Let this mixture stand in the bed for three or four days, by which time it will have reached its highest degree of heat. At this time the bed should be carefully examined to see that there are no dry spots. The mixture should be kept well moistened. The frames that are to support the covering of the bed should then be placed on top of the bed of manure with the slope of the top to the south. Two or three inches of soil should be spread over the mixture and the sweet potatoes carefully placed on the surface and covered with an additional layer of soil to a depth of two or three inches. Sandy soil is best for this purpose. Keep this soil moist throughout the entire period of plant growth.

The potatoes should be carefully distributed over the bed and no two potatoes should lie against each other, but they need not be more than one-half inch apart. The potatoes that are more than two and one-half or three inches in diameter should be split lengthwise, and the cut surface placed down in the bed; smaller potatoes may be placed in the bed whole. The potatoes should be placed in the bed about six weeks before the first plants are to be transplanted to the open field. If care is exercised in pulling the plants, a second crop of plants will be produced in about two weeks, and a third and much lighter crop will be produced about two weeks later, during which time a good bed will produce from 100 to 150 plants per square foot.

The plants should not be placed in the open field until the soil is quite warm and all danger of frost is passed. In the central part of Oklahoma transplanting can be done in May, while in the southern part of the state it can frequently be done with safety during the later part of April. In the northern part of the state transplanting should be done after the middle of May.—From bulletin issued by Oklahoma Experiment Station.

Supplying Humus to the Soil.

Mr. Henry Wallace says: "The greatest need of the Southern farmer is humus." He also says to supply our farms with humus is our greatest task. Every word of this message is a sermon, and a true one, yet the message is nothing more than what has been persistently preached by the agricultural press.

It is absolutely essential to have an abundant supply of humus in order to get a successful crop yield. I have found this especially true in a drouthy year. There was one time that we could not get a large yield in a drouthy year; but at that time our farm was not well supplied with humus; but since supplying it with the above we no longer fear a dry year. We have supplied humus to our soil first by increasing the depth of plowing from five to nineteen inches, making this increase gradually by subsoiling. Second, we have carefully saved and applied all manure as well as applied many hundred loads of straw and leaves used mostly in bedding for stables and mulching for potatoes. Third, we have not robbed the soil by burning the corn stalks and other accumulations which it should receive. Fourth, we have practiced a rotation that gives us from two to three crops on our land each year, also from one to two leguminous crops on our land each year. This rotation also keeps a cover crop on our soil almost the entire year. The rotation in brief: First year land gets cotton with crimson clover sown in cotton after last plowing; where clover fails, rye is sown. Second year, corn with cowpeas sown alone at last working of corn or cowpeas and crimson clover sown together, three-fourths bushel peas, ten to twelve pounds crimson clover seed per acre. Where wheat is to follow corn, cowpeas are sown alone; where potatoes are to follow corn, clover and peas are sown together. Third year, either wheat or potatoes with cowpeas sown alone at rate of two bushels per acre after wheat harvest and followed with rye in fall or cowpeas and crimson clover sown together after wheat harvest. When potatoes are grown, the cowpeas and clover are also sown together or alone after potato harvest, unless the second crop is to follow on same land where first crop grew, then rye is sown after second crop harvest.

The above methods have abundantly supplied our farm with both humus and fertility and I am sure it will for others.—W. C. Crook, Huron, Tenn.

World's Record Sale.

At the sale of jacks and jennets held March 3d by Monsees & Sons, Smithton, Mo., sixty-five head sold for an average of $534.61. The thirty-one jacks averaged $870, and the thirty-four jennets averaged $228.82. Limestone Wonder sold to D. J. Griffith, of Jaudan, Mo., for $2,810. Eight other jacks sold from $1,000 to $1,525. The top price for a jennet was $400, paid by Neel Bros., of St. John, Kas. It was a record sale, the total being $34,750.

A FINE KIDNEY REMEDY.

Mr. A. S. Hitchcock (clothing dealer), 890 Carrier Building, East Hampton, Conn., says if any reader afflicted with a kidney or bladder trouble will write to him he will direct them to the splendid home remedy he so successfully used. He is glad to do this, and does not wish you to send him money.

WHITE HULLESS BARLEY.

Stock raisers are being especially impressed with the merits of White Hulless Barley. This wonderful grain is not only hulless, but beardless, and makes a very valuable feed for horses, cattle, hogs and other live stock. It is so early that it may be profitably grown as a catch crop, maturing in from sixty to ninety days. It yields enormously—thirty-five to eighty bushels to the acre. Its feeding value is very great, and half as much can be used as oats. It also makes excellent hay.

Further particulars of this valuable grain may be learned by sending for the handsome Twenty-fifth Anniversary Catalogue issued by Northrup, King & Co., Seedsmen, 190 Bridge Square, Minneapolis, Minn. This catalgoue is sent without charge to those who write for it.

SEED CORN GRADER.

The attention of every progressive farmer is called to the advertisement of the Edwards Manufacturing Company, found on another page of this paper.

This Corn Grader saves many times its cost the first time it is used and starts right then rolling up money for every year afterwards of its long life.

It is endorsed by the government, has been adopted by the government Experimental Stations, and is used by the most progressive, up-to-date farmers throughout the country. There is no wear-out to it and can be used year after year.

Even with the strong endorsement of the government, the manufacturers will instantly and without question return the price paid if it is not found satisfactory and as represented.

Address, Edwards Manufacturing Company, 823 to 863 Lock street, Cincinnati, Ohio.

DES MOINES INCUBATOR.

A big book full of information and value for poultry raisers is the new 1909 catalogue just issued by the Des Moines Incubator Company. This company, now generally recognized as one of the largest manufacturers of incubators and brooders, has been foremost for years in the perfection of machines and supplies, and it would be difficult to conceive of a greater line of proven worth.

The days of doubtful experimenting are long past, so far as the Des Moines Incubator Company is concerned. Its incubators and brooders, made in a great variety of sizes and styles, though all following the same general design, are known the world over for their excellent results.

There are so many features of interest regarding the Successful and Eclipse Incubators and Brooders, the Sanitary Metal Brood Coop and other products of this company that space does not permit us to speak of them in detail at this time, but we want to urge our readers to write the Des Moines Incubator Company, Des Moines, Iowa, now while the season is early, for this most interesting poultry book and catalogue.

Address, Des Moines Incubator Company, 161 Second street, Des Moines, Iowa.

Growing Watermelons.

I have been very successful in growing watermelons. My method is to subsoil the land thoroughly and sow cowpeas the summer preceding, first giving the land a top dressing of acid phosphate, 200 pounds per acre. This is done after subsoiling. In summer, top dress the land with air-slacked lime, 500 to 700 pounds per acre, and turn the pea growths under. I prefer to turn them when the vines are in stage for hay. In September I top dress the land with barn-yard manure, twenty to thirty two-horse loads per acre, and sow rye or crimson clover. This is cut with the disc plow in the spring, land turned and subsoiled again, surface harrowed until in ideal shape for the melon seed. In the latter part of April to last of May or 1st of May, land is checked off ten feet each way and eight to twelve seeds of the Kleckley Sweet variety are planted in each hill. At one time I would dig an excavation two and one-half feet in diameter and one foot in depth, and fill this with manure, but have found by subsoiling pea sowing and applying manure as a top dressing to rye or clover, I get much better results. The manure is then thoroughly mixed with both top and subsoil; the decayed green manure crop has also furnished humus and vegetable matter sufficient to utilize it to a good advantage.

By this method I have melon vines that begin to bear very early and continued to bear until frost. By the old method I got one very good crop and then the vines would turn yellow and soon die.

I begin to cultivate as soon as the vines are up well and continue to cultivate very shallow and often until they begin to run. At this stage I lay them by and sow cowpeas at the rate of three-fourths bushel per acre. These help the land to retain moisture, also keep down young grass and weeds as well as protect the melons from the sun. One can also pick the seed and realize a neat sum from them. For bugs, I spray the young vines with a liquid made from cow manure. This is one of the best bug preventives I have ever used. It also gives the young melon vines such a rapid growth that they will soon reach a stage that the bugs can do very little injury to them.—W. C. Crook, Huron, Tenn.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of The National Farmer and Stock Grower will be glad to furnish the paper three years for **One Dollar**, the same to be payable at **the end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

Wheat Prizes Awarded.

At the National Corn Show of 1909 the tests of wheat exhibited occupied sixty days. The prize awards were as follows:

Nebraska won first place at the National Corn Exposition for the best wheat for light bread flour—a sample of spring wheat; the first prize for the best wheat for cracker flour went to Missouri and the first award for the best wheat for pastry flour went to Minnesota.

These awards were made after a milling test had been made by one of the largest milling companies in Minneapolis and the flour baked to ascertain the size and quality of the loaves, the quality of crackers and pastry made from samples in those classes. The samples were also tested in the chemical laboratory of another company and the scores given on the following basis:

	Points.
Yield of flour	20
Texture and color of loaf	15
Size of loaf	30
Absorption	10
Soundness and flavor	15
Percentage and quality of gluten	10
Total	100

When the total scores on this basis were the same, the samples scoring the highest in quantity and quality of gluten and absorption were awarded the premiums by the judges, these points being considered the most important.

The following are the winners in the three classes which were given the milling test, the amount of premium and score given each sample:

Premium No. 123, Wheat Milling Special, open to the world—for best wheat for light bread flour:

First—W. D. Stelk, Grand Island, Neb., score 94; premium, $300.

Second—John Cheney, Warren, Minn., score, 82; premium, $100.

Third—J. W. Bonnall, Woodbine, Ia.; score, 82; premium, $95.

Fourth—R. H. Thompson, Rifle, Colo., score, 81; premium, $5.

Premium No. 124, open to world for best sample of wheat for cracker flour:

First—Ernest L. Hughes, Glasgow, Mo., score, 82; premium, $135.

Second—J. W. Beckman, Cokato, Minn., score, 82, premium, $35.

Third—Newton B. Ashby, Des Moines, Ia., score, 80; premium, $35.

Premium No. 125, open to the world for best sample of wheat for pastry flour:

First—L. Lambertson, Warren, Minn., score, 79; premium, $90.

Second—Carl Westensen, Olathie, Colo., score, 77; premium, $20.

In the contest for the best light bread flour eighty-four entries were made, samples from widely separated sections of the country. Thirty-one of these scored above seventy points, five of which were entered from Iowa; three from Nebraska; four from Illinois; four from Minnesota; three from Colorado; one from Kansas; one from Michigan; two from Wyoming; one from Wisconsin; one from Indiana; five from Idaho and one from South Dakota.

Special emphasis is to be put on the importance of small grains at the National Corn Exposition to be held in Omaha in 1909. New classes will be created; larger premiums offered and the same rigid tests used in awarding prizes which have been found satisfactory this year, being original with the 1908 corn show management.

SEND FOR THIS BOOK.

All of our readers who are thinking of buying anything in the buggy or harness line should write the Elkhart Carriage and Harness Manufacturing Company at Elkhart, Ind., and ask for one of their 1909 catalogues. It is an interesting book and will certainly be the means of saving you some money on your purchases, because they sell direct to the user at factory prices, which means the actual cost of the material and making plus their small profit. For thirty-six years this company has sold on the direct-to-the-user plan. Their success has been wonderful, but it only goes to show that honest goods and honest prices are always appreciated. Our readers are as safe in doing business with the Elkhart Carriage and Harness Manufacturing Company as with their own bank, for they are absolutely reliable and will positively do just what they say they will. They ship for full examination and approval, and you you are nothing out if not satisfied as to style, quality and price. They also have a large line of pony vehicles and harness and one of the best motor buggies on the market. Send for one of their books before you buy elsewhere anyway.

It Costs You Absolutely Nothing to Try the White Lily Gasoline Engine.

We take all the risk, and we guarantee that our engine will satisfy you. Write today for our free trial proposition and full information about the White Lily Engine. Let us tell you how little it costs to run your separator, your pump, your grinder, or your corn sheller; in short, all of your light farm machinery, with a White Lily Engine. And let us tell you how well it is built, strong but light, simple but powerful, and, best of all, air-cooled. Don't buy an engine until you have tried the White Lily at our expense. Write to-day for particulars. White Lily Manufacturing Company, 1570 Rockingham Road, Davenport, Iowa.

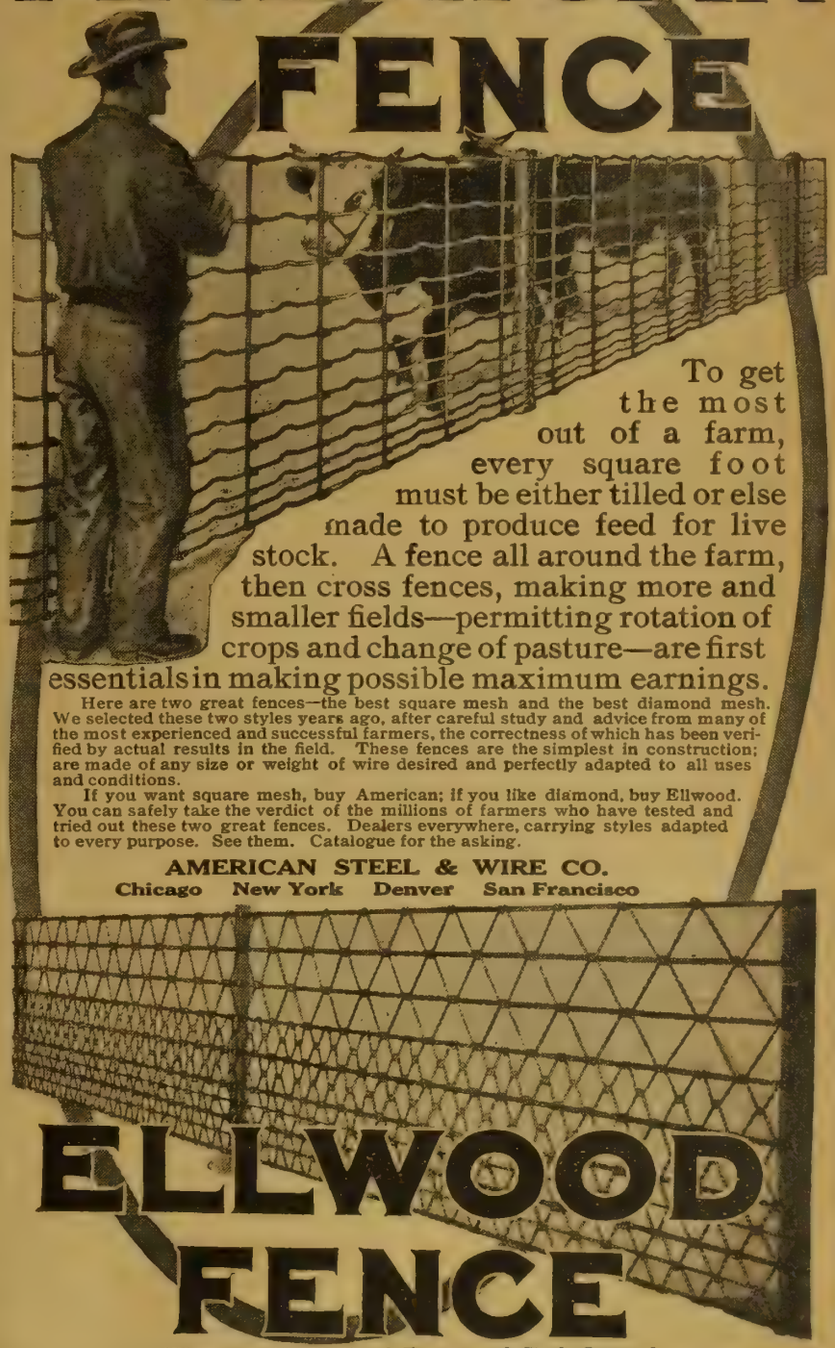
A SURE WATER SUPPLY.

Every farmer and many villagers are interested in an increase in the quantity and the quality of the water supply. This calls for deep wells penetrating below the solid rock to obtain never-failing, pure water. Irrigation calls for handling water on a large scale. An opportunity to do profitable work in drilling, pumping and other kindred lines of labor is offered any of our readers by the advertising of the American Well Works, who have general office at Aurora, Ill., and several branch offices throughout the country. Correspondence should be addressed to the home office at Aurora, Ill., where catalogues and other information will be furnished on request.

MACHINE SUPPLY CATALOGUE.

This catalogue is for the thresherman, sawyer and machinist. It contains belting, pulley coverings, lace leather, rubber hose, packing, wire rope, lubricators, oil pumps, oil cups, oils, jacks, batteries, steam gauges, wrenches of all kinds, bolts, pulleys, etc. Write to Weber Implement Company, 413 North Main street, St. Louis, Mo.

AMERICAN FENCE



To get the most out of a farm, every square foot must be either tilled or else made to produce feed for live stock. A fence all around the farm, then cross fences, making more and smaller fields—permitting rotation of crops and change of pasture—are first essentials in making possible maximum earnings.

Here are two great fences—the best square mesh and the best diamond mesh. We selected these two styles years ago, after careful study and advice from many of the most experienced and successful farmers, the correctness of which has been verified by actual results in the field. These fences are the simplest in construction; are made of any size or weight of wire desired and perfectly adapted to all uses and conditions.

If you want square mesh, buy American; if you like diamond, buy Ellwood. You can safely take the verdict of the millions of farmers who have tested and tried out these two great fences. Dealers everywhere, carrying styles adapted to every purpose. See them. Catalogue for the asking.

Corn Cultivation.

In the first place, one should begin to cultivate the corn, or the ground rather where the corn is to be planted, before the corn is planted.

The ground should be plowed six or eight inches deep and then harrowed and dragged until you have a firm seed bed with three or four inches of loose, mellow soil on top to plant the seed in. After the corn is planted it is a good plan to run over it with a drag to blot out the planter tracks in order to keep the crows from going along and taking it up after planter.

In case it should rain and bake the ground before the corn comes up, a light harrow should be run over it to break the crust.

Then after the corn comes up it should be harrowed again to kill all the weeds that may have sprouted. As soon as the corn is large enough the cultivator should be started and kept going until the corn gets too large for the cultivator to straddle.

In plowing corn for the first two times the shovels should be set to go rather deep and then after that the ground should not be stirred quite so deep.

I hear a great deal about surface cultivation for corn. I believe in surface cultivation in a way, but do not think that surface cultivation should be run to the extreme. The corn plant is a heavy feeder and should have a good foundation in order for it to make the greatest development.

If the corn land is just rather scratched, the roots will run out over the surface and not go very deep and consequently not have sufficient foundation to make proper development. My experience has been that until the plant is getting rather large, at least the first two plowings should be rather deep, and even after that, if the land is stirred frequently before the little feeding roots have become established, I plow rather deep and then after the plant is getting rather large it is then time enough to just have the surface scratched, which will keep a soil mulch and that plant will then make a good development.

After my corn gets too large to go through with the cultivator, I always go through with a one-horse drag or a mowing machine wheel to level it down and to kill all the weeds that have sprouted.

By this way of cultivating I am sure you will have but few weeds to bother at gathering time, or cutting time, or when you cut it for siloing.

Of course there is a great difference of opinion among men in regard to the best way of cultivating corn, and in a sense there should be different methods. Some soils will naturally need deeper cultivation than others. In all cases, however, thorough tillage is absolutely necessary to secure the best results. Some will say, as I have often heard the expression: "I just plowed my corn twice, and I made good corn, and therefore know that it is not necessary to do so much cultivating." This may be true. I have seen corn made with just two plowings, but I am confident that that same corn would have been much better had it been better cultivated.

A piece of land that is very rich and in good physical condition might make very good stuff under such conditions; but on soils that must be worked to have them to give forth their store of plant food, such cultivation would avail nothing. Therefore it is absolutely necessary to know the character of the soil, and then apply the method which will yield the largest returns, and this can only be done when the soil is made a study.—R. B. Rushing.

The Valuable Soy Bean.

I find the soy bean very valuable as a hay plant, soil renovator, as well as a money crop. We find but few forage plants its equal. For hay we sow them at the rate of one bushel per acre after wheat and oat harvest. We sow at this rate when sown alone. When sown with crimson clover we only sow three-fourths bushel of soy beans and ten or twelve pounds clover seed per acre. We cut for hay when the pods are well filled and some beginning to yellow, cutting after dew is off and raking into small tall heaps the second day, letting it remain so until no sap can be detected when the vine is twisted. At this stage haul and pack away as tight as possible in a close barn and let it remain so until ready for feeding. While in the barn the hay is sure to get very warm, if it does just rest easy, and let it alone and you will have a nice, bright hay.

On feeding the hay one must feed very carefully until stock gets accustomed to it, as an overfeed at first is almost sure to produce fatal results. In feeding value it is almost equal to the peerless peavine hay. We find soy bean meal one of the most rapid pork producers known. We are also able to sow the soy bean in our corn land at last plowing of corn and get splendid results from this sowing. We get from fifteen to thirty bushels of seed per acre. These are in demand at $1.25 to $1.75 per bushel.

We find as a soil renovator they are fully equal to any other leguminous forage plant we can grow. When drilled, we have rows thirty inches apart and drill eight inches apart in drill.

We find them hardier than the cowpea and feel sure our friends who cannot grow the cowpea on account of the cold could profitably grow the soy bean.—W. C. Crook, Henderson county, Tennessee.

In view of the recent decision of the Board of Food and Drug Inspection of the United States Department of Agriculture relative to the use of benzoate of soda in food products, the meat-inspection regulations of the Bureau of Animal Industry have been amended so as to permit the addition of this preservative to meats and meat food products, provided they bear approved labels plainly showing the presence and amount of benzoate of soda.

A Cure for Leaky Roofs

DON'T waste time trying to patch a leaky roof! A roof which leaks in one place is generally on the verge of leaking in *many other places*.

The cheapest method of repair is to *cover the whole roof with Amatite*. Amatite costs so little that the entire job can frequently be done for the expense of caring for a leaky roof. After the old roof is covered with Amatite you will have no further worry or expense.

Most ready roofings require a coat of paint *every two years* to keep them in order. But Amatite is not the *ordinary* kind of Ready Roofing. Amatite has a *real mineral surface* firmly imbedded in the Coal Tar Pitch waterproofing. This surface resists the attacks of the elements like a stone wall. It demands no additional protection or covering, such as a coat of paint.

Buying Amatite is the same as buying an ordinary ready roofing with an agreement from the dealer to keep it painted free of charge. Such an agreement on the ordinary roofing would double its value. You practically get such an agreement with every roll of Amatite; yet the price is no greater than that of the ordinary kind.

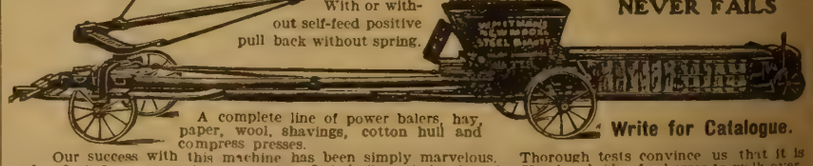
Send us your name and address, and we will forward you by return mail a free sample of Amatite, and you can see how tough, durable and substantial it is. Write to-day to nearest office.

BARRETT MANUFACTURING CO. New York, Chicago, Philadelphia, Boston, Cincinnati, Minneapolis, Cleveland, St. Louis, Pittsburg, New Orleans, Kansas City.

WHITMAN'S NEW MODEL STEEL BEAUTY HAY PRESS

NEVER FAILS

With or without self-feed positive pull back without spring.



A complete line of power balers, hay, paper, wool, shavings, cotton hull and compress presses.

Write for Catalogue.

Our success with this machine has been simply marvelous. Thorough tests convince us that it is **absolutely correct** in principle. It is built entirely of steel. Has low bridge for horses to walk over, and no pull of team in crossing. Has large feed opening and long bale chamber. Warranted in every particular. We also make a full line of Balers. For full information address the manufacturers.

THE WHITMAN AGRICULTURAL COMPANY, 6909 S. Broadway, St. Louis, Mo.

White Hulless Barley

The Best Feeding Barley Grown

NO BARLEY has proved so valuable to the stock raiser as the White Hulless. No other can compare with it in earliness, yield and quality. It is both hulless and beardless. It will mature in from 60 to 90 days. It yields enormously, from 35 to 80 bushels to the acre. As a feed for horses, cattle, hogs, poultry and all kinds of stock it is especially desirable. Makes fine hay and does not lodge. Price: 1 Bu., $1.50; 2 Bu., $2.80: 10 Bu., $13.00.

25th Anniversary Catalogue

Pronounced to be the most informing and complete, as well as the most handsome seed catalogue ever published in America. It offers a complete assortment of the varieties best worth growing: Grass Seed, Clover Seed, Alfalfa Seed, Potatoes, Oats, Wheat, Barley, etc.; Vegetable Seeds, Flower Seeds, Seed Corn, Garden Tools, etc. Every one of the 152 pages is filled with information valuable to seed planters. No farm or garden is so large or so small that this book will not assist to greater profits. It is expensive and cannot be distributed indiscriminately, but we will send it free to those who wish to buy genuine, high-grade seeds.

Selecting the Bull Calf.

I want first, at least two generations, our are better, of strong, vigorous ancestors, backing the calf to be raised If the calf to be raised is to be used to promote the best interests of dairying, its ancestry must have, in addition to size and vigor, a dairy performance that will warrant the trouble and expense of raising this calf properly, as its future usefulness depends largely on the manner in which the calf is cared for.

At birth the calf should be of medium size, vigorous, active and free from deformities. Full, good-sized eyes, with clean-cut features, broad between the eyes, dished out in face below the eyes, broad muzzle, open nostrils, with eight well-developed milk teeth are good points. Rather straight and broad back, with well-sprung ribs, and well proportioned with plenty of capacity are wanted.

Measurement through body, just back of the front legs, should be good, as this is where the heart and lungs are located. They must have plenty of room to do their work if the calf is to prove a vigorous and prepotent animal; which, if he is not, he is a failure. I should like the calf to be a fair representative of his breed as to coloring and markings.

I will give some of my reasons for wanting certain points. Brightness, vigor and activity are the prime requisites for prepotency. Large eyes, clean-cut features and good space between the ribs denote good nerve force, which every good dairy cow must have. Broad muzzle and open nostrils denote good lung power and appetite. The eight milk teeth are the ones on the front of the lower jaw, and, when well developed, denote vitality.

Four fair-sized, well-placed rudimentary teats ahead of the scrotum is considered a good dairy indication. The skin should be soft, mellow and oily with yellow color; the inside of the ear, also, should be oily and rich yellow; this denotes quality in butter fat.—Wm. H. Underwood.

Changing Seed Corn.

A correspondent asks whether it is safe to send from one state to another for seed corn.

It is perfectly safe, providing some well-known principles of plant growth are observed. I should not move corn northward. It is much safer to bring it from a more northern section.

Corn matures earlier on some soils than on others, so when changing seed it is best to get it from a section where soil and moisture conditions are as near like your own as possible. This has been shown conclusively here in Illinois. Illinois-grown seed does well in Indiana and Ohio, while in Nebraska it does not do as well as seed grown in Nebraska.

Another point which should be observed when buying new seed is the habit of growth of the variety. Some varieties can stand thick planting, while others produce a miserable crop when more than two or three grains are planted in a hill.

Machine Milking Proves Successful.

Tests on machine milking covering 20 months with 29 cows, embracing 40 separate trials made by the Wisconsin Experiment Station and reported in bulletin No. 173 just completed, show that machine milking is both practical and economical in herds of 20 cows or more, providing the machine is cared for by an efficient operator. These tests, in charge of Professors F. W. Woll and G. C. Humphrey, were planned to determine the efficiency, economy and the effect of the machine upon the cow. A leading type of the vacuum machine was used. Cows were milked continually by machine for periods of four to sixty-two weeks, or an average of twenty-six weeks.

The effect and efficiency of machine-milking on the cows was in general beneficial, most of the cows standing well and showing little shrinkage from change from hand to machine milking, with practically the same average decrease in production as when hand-milked. Comparison with preceding periods of hand milking for the same after machine-milking was found necessary in most cases.

The economy of machine milking is due to a saving in time and in help necessary to milk a large herd. About five minutes for each cow is saved where four cows are milked at once, and more time when one man operates three machines milking six cows at one time. The cost of operating two machines by electric motor was about four cents an hour.

The bacteriological examinations showed that the germ content was slightly decreased and the keeping quality of the milk was somewhat improved by machine milking. Veterinary examinations showed no appreciable effect on the udders or the general health of the cows as a result of machine-milking.

The experience of 41 dairy farmers covering periods from one month to over two years indicated that a majority of them are favorable to the machine. Some 27 reported favorably eight were undecided, and six were unfavorable.—Wisconsin Experiment Station bulletin.

Dairy and Creamery Notes.

Post-mortem tuberculosis demonstrations conducted by the University of Wisconsin Experiment Station in various parts of the state have been instrumental in awakening the stockmen to the importance of immediate action against tuberculosis. Before demonstrations were made less than 1,000 station tuberculin tests were being made annually. When the demonstration campaign was begun in 1906 the number of tests was increased to 5,000 in 1907 to 11,000, and last year to nearly 30,000.

The Ayrshire cattle breeders are claiming that although the Holsteins and Jerseys produce exceptional milk or butter records for general herd averages the Ayrshire is the producer. A case is mentioned where a Holstein won first, a Jersey won second but in the team of three the Ayrshires were not left out. The three Holsteins gave 269.13 pounds of milk and 10.083 lbs. of butter-fat. The three Ayrshires gave 260.4 lbs. of milk and 9,835 lbs. of butter-fat. The three Jerseys gave 229.11 1-4 lbs. of milk and 9.709 lbs. of butter-fat.

According to our observation, full 80 per cent. of all failures in dairying are due to insufficient feeding. The idea is to expect a large product from little feed. The cows do not get all that is necessary for the food of support, let alone a surplus to encourage milk production.

Your Best Guide to Buying A Cream Separator is Your Knowledge of Your Needs

Frictionless Empire

Empire Disc

OTHER manufacturers have but *one* style to offer you. Don't be talked into buying any *one hobby*. It may not fit your ideas, your needs, your purse.

Come to headquarters where the different standard styles are made and where each style is made better than anywhere else. And we manufacture a full range of sizes in each style, giving you *double the choice that others offer.*

ALL EMPIRES Are Backed by a Guarantee as Good As A Government Bond

Because all are *first grade* machines. They differ in style but not in quality. They differ in price because one style or model, costs less to make than the other.

When a man claims everything for one model, it is because he has no other—he *must* sell you that or none. We make different styles because we have the necessary patents and facilities and the necessary "know-how." Therefore, we *can* and *do* give the unbiased truth about each style, we can afford to give *facts* instead of claims, for we don't care which we sell—suit yourself in *design* and separating method — in *capacity* and *price.*

No matter how few or how many cows you milk, one of the Empires will just meet your needs as to capacity. And any Empire you choose will do the work year after year paying for itself over and over again. Remember that, when considering the so-called "bargain price" of the "little while" separator.

DAIRY BOOK FREE

Write today for the Empire book, the fairest, most impartial cream separator book ever published. As it describes different kinds without prejudice, it will enable you to select the style that will make the most money for you. And our prices and Guaranty will interest you.

The G. D. Sutton Co., Dept. 7 MASON CITY, ILL.

SUTTON'S CORN BOOK

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly.

By THE HALE PUBLISHING CO.

Philip H. Hale, Managing Editor.

Claude A. Coup, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.

Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

We claim for The National Farmer and Stock Grower that no one can read it thoroughly without deriving profit therefrom. The entire science of stock, grain and fruit farming may require some books in addition, but we are willing to furnish these books at very low rates in connection with the subscription price of the paper.

The greatest favor any of our readers can confer upon The National Farmer and Stock Grower is to pass the paper to a neighbor with a recommendation to subscribe. All such favors will be highly appreciated.

The United States Forest Service is reseeding the overgrazed ranges within the national forests. In many sections through overgrazing the grasses are almost exterminated. The experiments will be of high value for the reason that the making of permanent pasture is a great problem upon which farmers and stockmen need the experience which can only be derived from extensive experiments.

Hand Cream Separators.

The cream separator contest is getting rather warm, which is a sign that spring is here and summer is coming. There was a time when the churn that worked by hand was the leading dairy utensil, but it has given way to the cream separator. Under present circumstances, the cream separator is just as necessary as the plow, and the farmer who is unable to place his sweet cream in one vessel and his sweet skim milk in another vessel is so far short of his working tools. Considering the hundreds of thousands of hand cream separators already in general use one would naturally suppose that the end is near, yet we are reliably informed that many farms are yet without them, and that there is a great cream separator campaign now going on. To manufacture butter on the farm, except for home use, or unless the farm is large enough to support enough cows to supply a creamery, is a useless preceeding. The butter-fat sells for considerable more money than the farmer can get for his own make of butter, and there never was a greater blessing created for farmers' use than the hand cream separator. It is also a great blessing to the farmer's wife and all the other members of the family. It is the good fortune of The National Farmer and Stock Grower to advertise the leading makes of cream separators. We have not advertised any that we were not willing to recommend, and we can safely leave the selection to our readers.

The Live Stock Breeders' Directory.

Attention is invited to page 32, containing several advertisements of premium books, also a card relating to the Agricultural Blue Book and Live Stock Breeders' Directory. The editor of The National Farmer and Stock Grower issued the first Live Stock Breeders' Directory in 1887, and since then has published the book twice, the last edition being issued in 1905. Having so many calls for a new volume, we have decided to issue the work at least once a year hereafter. It will be called The Agricultural Blue Book and Live Stock Breeders' Directory, and it will also include the names of manufacturers and business firms who do business with farmers and stockmen. The circular letter on page 32 ought to be interesting to all breeders.

Co-operative Oat Tests.

In the co-operative tests of varieties of oats in various parts of Indiana in 1908 four varieties were included—Great Dakota, Swedish Select, Silver Mine and Great American. These four varieties were included in all cases. Thirty-seven complete reports were received and the average yields in bushels per acre were as follows: Great Dakota, 26.8; Swedish Select, 27.0; Silver Mine, 27.9; Great American, 29.8. The first three of these varieties have been used in co-operative tests for the last three years and have produced the following average yields during this period: Great Dakota, 33.4; Swedish Select, 31.6; Silver Mine, 33.0. This is from a bulletin issued by the Indiana Agricultural Experiment Station, signed by A. T. Wianco, Agriculturist.

CHAMPION CHESTER WHITE HOGS

The Feeding and Record of the Champion Pens Exhibited by Funk Bros. at the Chicago International Show.

Shirley, Ill., March 8th, 1909.

Editor National Farmer and Stock Grower: Dear Sir:—Replying to your favor of February 15th, addressed to Funk Bros., relative to photos and information concerning age and feed of our champion Chester White barrows of 1907 and 1908, I desire to say that the hogs were treated the same both years, so that what is said of one pen applies to both lots each year.

They were, when shown, about eighteen months old, and weighed on an average 420 pounds. They had the run of a blue grass pasture, after cattle on feed, from the time they were weaned until a week before they were shipped. They were not crowded in a close pen and "stuffed," as most show hogs are.

They were fed with one to three carloads of hogs. Their feed was the droppings they picked up after the cattle, and the last two months a little extra ear corn was thrown to them on the ground. There were others in the car-load just as good as they were. The car-load in 1907 won first prize in class at the International Show, but there were too many open sows in the load for the judge to give us the grand championship, so he said. In the single and pen lots our hogs won in every class shown, both alive and dressed, including first in every class over all breeds in the dressed carcass, the middle-weight hog taking the grand championship.

The 1908 car-load we sold on September 23d in Chicago, weighing 302 pounds average, for fifty-six hogs. They sold for $7.60, the highest price paid for hogs since 1903 and the highest price in September since 1902.

In the single lots and pens at the show of 1908, with six hogs, we won nine premiums, including two championships, four firsts, two seconds and one third.

We have to-day, March 8th, 1909, eighteen sows that have 144 living pigs. There is no question about the Chester White hog being prolific, good mothers, gentle, not lazy, easily kept, when the right strains are selected, broad back, strong bone, can see out of both eyes and get out of the way of feeding cattle without getting crippled, and when dressed their skin and meat are as white as it is possible to make them. They weigh well and mature according to the way they are fed.

For crossing on to another breed or using a pure-bred sire onto a mixed lot of sows, there is no other breed that excells them in their offspring. The sire will almost invariably mark his pigs a pure white.

Very Truly Yours, E. D. FUNK.

THE SEED CORN BOOK.

We desire especially to invite attention to the seed corn advertisement of the G. D. Sutton Company. He sells on approval. Test it any way you please for ten days, and if not perfectly satisfactory the money will be refunded. The catalogue includes all the leading breeds of corn and samples. Address, G. D. Sutton Company, Dept. 7, Mason City, Ill.

FREE DEAFNESS CURE.

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh. Address, Dr. G. M. Branaman, 1264 Walnut St., Kansas City, Mo.

ACCIDENTS ARE LIABLE TO HAPPEN!

You should always have handy a good liniment to cure bruises, strains, soreness, stop pains, remove inflamcation or burns, heal a wire cut, wound or scar tissue and heal with hair on and leave no blemish. Absorbine is an antiseptic healing preparation, as well as a resolvent and discutient. It will assist in bringing about a dissolution of the bunch and filling in the underlying tssues, restore the circulation to a normal condition. $2.00 a bottle, at druggist, or sent prepaid. Manufactured only by W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

WESTERN CANADA

More Big Crops in 1908

160 ACRE FARMS IN WESTERN CANADA FREE

60,000 settlers from the United States in 1908. New Districts opened for settlement. 320 acres of land to EACH SETTLER—160 free homestead and 160 acres at only $3 per acre.

"A vast, rich country and a contented, prosperous people." Extract from correspondence of a Kansas Editor, whose visit to Western Canada in August, 1908, was an inspiration.

Many have paid the entire cost of their farms and had a balance of from $10 to $20 per acre as a result of one crop.

Spring and Winter Wheat, Oats, Barley, Flax and Peas are the principal crops, while the wild grasses bring to perfection the best cattle that have ever been sold on the Chicago market.

Splendid Climate, Schools and Churches in all localities. Railways touch most of the settled districts, and prices for produce are always good. Lands may also be purchased from Railway and Land Companies.

For pamphlets, maps and information regarding low Railway Rates, apply to **Sup't of Immigration, Ottawa, Can.,** or to the authorized Canadian Government Agent.

J. S. Crawford, 125 W. 9th St., Kansas City, Mo.: C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

Attention is invited to the cards of all the breeders which appear in this edition, and especially to the card of C. M. Chambers, of Bartlett, Iowa, who has a splendid herd of Red Polled cattle. We have received and read letters from those who have made recent purchases from Mr. Chambers, and he evidently gives his patrons first-class satisfaction.

Champion Ayrshire Four-year-old.

The Ayrshire four-year-old Bessie of Rosemont, 17,904, bred and owned by George H. McFadden, Bryn Mawr, Pa., has completed her year's record under the direction of the Pennsylvania Experiment Station and the Ayrshire Breeders' Association, and been admitted to advanced registry with a record of 14,102 pounds of milk and 675 pounds of butter.

This is the highest official four-year-old record, both in milk and butter, of any Ayrshire four-year-old known to the writer, either in the United States, Canada or Scotland.

She is a large, rangy cow, weighing about eleven hundred, and is a typical Scotch dairy cow, her sire and dam being imported.—C. M. Winslow, Brandon, Vermont.

Condensary Milk Prices.

Under six-months' contracts in Illinois, commencing April 1st, the Bordens Condensed Milk Company is paying an average of $1.18 1-3 per 100 pounds for milk, compared with $1.16 2-3 per 100 pounds in 1908, and $1.11 2-3 per 100 pounds in 1907. The same prices are paid by other large contractors, and farmers have entered into agreement to furnish the supplies. By months the prices are: April, $1.40; May, $1.10; June, 95c.; July, $1.05; August, $1.25; September, $1.35.

Purchased Protein Feeds.

The Milk Reporter, published at Sussex, N. J., said:

"Dairymen need give little attention to purchased feed constituents other than protein. At present prices one pound of digestible protein costs, in oats, approximately 19.5c.; in corn meal, 14.5c.; in wheat bran, 14c.; in hominy chop, 13.5c.; in gluten feed, 6.2c.; in linseed oil meal, 6.1c.; in cotton-seed meal, 4.6c. It will be seen at a glance that corn and oats chop, wheat bran and hominy (stand-bys in many dairies) are very expensive feeds; four to six pounds per day of a mixture of gluten feed, linseed oil meal and cotton-seed meal together with the protein contained in the farm-grown feeds will supply the needed protein to a cow giving a large flow of milk at a cost of 10 cents per day."

Milk Producers' Association.

The next meeting of the Directors of the Milk Producers' Protective Association of Missouri and Illinois will be held at the office of the Secretary, Mr. Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo., on Monday, April 26th, at which time all Directors are requested to attend. Special matters need attention and members who have not paid their dues are requested to make payment to the Delegates or to send same direct to the Secretary.

A Splendid Dairy Book.

The "Business of Dairying" is the title of a new book issued by Prof. Clarence B. Lane, Assistant Chief Dairy Division, United States Department of Agriculture. The price is $1.25 a copy. It is prepared for producers and handlers of milk and all who make dairying a business. It is divided into six divisions and twenty-six chapters. There are 300 pages, 5x7 inches. It is full of instructive illustrations. We earnestly advise all who are interested in dairying to at least send for the full description issued by the publishers, Orange Judd Company, 439 Lafayette street, New York, N. Y.

The packing-house products shipped from Chicago during February, 1909, were 32 per cent. less than February, 1908. This is due to the decreased supply of hogs and to the small export demand.

GRAND CHAMPION YELLOW CORN.

Liberal Premiums Offered by The National Farmer and Stock Grower For the Benefit of Our Patrons.

This picture represents in a reduced size the most famous ear of yellow corn in existence to-day. It was grown two years ago by Mr. D. L. Pascal, of Iowa, and it won the Allee Trophy for the best ear of corn of any variety grown in Iowa. Since then it has been exhibited at two National Corn Shows and is yet the ear which nearer than any other represents perfection in yellow Dent corn.

Mr. Pascal has raised this Reid's Yellow Dent Corn from seed purchased of the originator. Furthermore, this Reid's Yellow Dent Corn has been bred straight for sixty years. Anyone with a single pound of seed has a fair chance of producing champion ears of corn. Ten ears of first-class corn will win a first prize at any Fair. Therefore, anyone who will send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower can select one pound of Pascal's Grand Champion Yellow Corn, and we will send it postpaid by mail as a free premium.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a free premium and exhibit the same at their own State Fair—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, providing that these prizes are won during the year 1909 with corn grown by our subscriber from the seed corn furnished by us to him as a free premium.

These prize offers are good in every state where a State Fair is held, and are also good at any Interstate, National or International Show. If any of the premiums are won at the National Corn Show of 1909 we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00, and if winning a state sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show the exhibitor would receive fifty dollars additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn. Our readers will be furnished seed of the same family and breed of corn from which all the Pascal premiums have been won. We are also offering a similar line of premiums for white corn, which will be found in another column.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will also please send me one pound of Pascal's Grand Champion Yellow Corn as a free premium.

[Please mention National Farmer and Stock Grower.]

Early Corn in the Central Corn Belt.

A correspondent of Coles county, Illinois, writes: "Some of our corn did not get ripe here last season. How would it do to plant one of the early sorts?"

As a general rule I would advise growing the largest variety of corn that will mature in a given locality. This section (Coles county) should mature such varieties as Boone County White or Reid's Yellow Dent, that is, varieties which ripen in 120 to 130 days. I believe that much heavier yields may be had from these varieties than from the early varieties, such as Pride of the North or Silver King. Of course these early sorts would naturally respond to the longer growing season and the size of the ears might be increased in three or four years. But it seems that greater results might be had by selecting for seed the earliest matured ears of the bigger varieties. The trouble over immature corn is general. It has been brought about by selecting the large ears for seed, when the medium size ears, which always ripen in good season, would be much better seed.—L. C. Brown.

The Breeders' Special of Kansas City, Mo., issued weekly by the Breeders' Special Publishing Co. at $1.50 per year, is only a long two-year-old, but it is a first-class exhibit of early maturity in live stock journalism. T. W. Morse, R. F. Howard and Hayes Walker started this publication at a down-hill period in live stock breeding and succeeded in making times better for the interest it started out to serve and represent. Success by persistent, well-directed effort against adverse circumstances is the gratifying record of the Breeders' Special.

The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color. A million and a half of these hats have been sold. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

WOOL MEN!

We can interest you. Do you know that St. Louis is a spot cash market? In 20 years we have handled more separate lots of wool each season, than any other commission house here. Over 40 years' experience in the business, and your shipments receive our personal attention. We guarantee top prices, quick sales and prompt cash returns. Write for our 1909 Wool Circular, giving full particulars and points in regard to the preparation of wool for market. Wool Sacks, Shipping Tags, Market Reports, etc., sent Free upon request. Write what you have to offer.

A. J. CHILD & SONS, St. Louis, Mo.

[Please mention National Farmer and Stock Grower.]

SILOS AND SILAGE.

Article Winning Third Prize in Competition on Above Subject at the National Corn Exposition, Omaha.

Silage is a comparatively new thing to Missouri farmers, so that we have much to learn about it.

To give entire satisfaction, a silo must satisfy the following conditions: 1. The foundation must be solid. 2. The sides and bottom must be air-tight, or nearly so. 3. The interior must have a smooth finish. There will usually be at least 100 tons weight on the foundation, hence the reason for solidity. The sides and bottom must be tight, as the silage will spoil wherever exposed to air. A smooth inside is desirable, to allow settling. Silage should settle well to exclude the air and occupy less space.

There are various types of silos—some good and some bad. Square and octagonal silos have proven unsatisfactory because the silos will not settle into the corners compactly. Round silos give the best satisfaction in this state. They may be classified, according to their construction, into: 1. Stone. 2. Wooden; and 3. Cement.

The stone silo is not very practical on account of the great cost of construction, due, in part, to the smooth inside finish. They are very satisfactory after once built.

The wooden silo is at present the best-known type in this state. Those built of staves and bound with hoops, either of steel or wood, are the most common. These silos are cheaply built. One with a capacity of 125 tons can be put up for $125 to $150. They are easily filled, the silage settles well and they generally give good satisfaction. The principal objection to this type is their short life. Wood subjected to heat and moisture, as in this case, must surely rot out in a short time. They are also susceptible to the attacks of rats and mice, which make air holes, and thus injure the keeping qualities of the silage. This class of silos is hard to repair so that they will be tight and at the same time neat.

The cement or concrete silo gives the best satisfaction in Missouri. It will last a lifetime; is impervious to the attacks of rats and mice, and is unexcelled in keeping qualities. The principal objection to this class is the cost of construction. However, on many Missouri farms this may be cut down considerably by obtaining the gravel and sand from the farm and the farmer doing most of the work. A farmer near here has just completed a cement silo about sixteen feet in diameter with a capacity of probably 100 tons. The cost was $25, exclusive of gravel, sand and labor. The farmer got the gravel and sand from his own farm and did the construction with the help of his regular hired man.

The size of a silo depends upon the number of animals to be fed. A cubic foot of silage is about the average ration for a milch cow. The diameter should be small enough so that a layer over the entire surface can be fed off every two or three days. If this is done the top will not have a chance to spoil. Sixteen feet is the usual diameter for a silo of 100 tons capacity.

The best time to cut corn for silage is just as it is beginning to glaze. At this time it contains the most food material in a succulent and palatable form. Cutting is generally done with a corn binder. This machine makes the bundles of a convenient size to handle, besides doing the work quickly so that the corn will all be at about the same stage of maturity when cut.

The silos in this locality are all filled through a small window in the roof by a wind elevator attached directly to the cutter. The slower the silo is filled the more it will hold and the better it will keep. It is best not to add water, as this tends to impair the feeding value. The top of the silage should be covered over tightly with straw or other suitable material, to exclude the air.

Until recently dairy cows were about the only animals fed silage; but now beef cattle and sheep are being fed on it to advantage. It has not been fed to hogs and horses with success.

On a Missouri general farm, where only a few cattle and probably no sheep are kept, a silo will not pay. If, however, the farmer has fifteen or twenty breeding cattle and a flock of sheep, it will pay to build a silo, not only because it furnishes succulent food so necessary to keep a breeding animal in the best condition through winter, but because it will clear the corn field in time to sow wheat.

On a beef farm, where cattle are fattened, a silo is a good thing. No hay need be fed in connection with silage; but if the cattle are on full feed, some extra grain will have to be used. On a farm like this, silage can be fed much easier and with much less waste than corn fodder.

On a dairy farm of fifteen or more cows, a silo is almost indispensable. Silage undoubtedly keeps the flow of milk up during the winter months and gives the cream and butter a richer color than it would otherwise.

In all cases cattle and sheep will eat more of the corn plant when it is fed in the form of silage than they would if it were fed as fodder.

I believe that in the near future every up-to-date Missouri farmer who keeps enough live stock to justify it, will feed silage instead of the coarser, more wasteful fodder.—E. G. Woodward, Columbia, Mo.

Practical Silo Results.

I have never seen a dairyman who has tried feeding silage who would think of keeping milch cows through the winter without it. I was talking with a dairyman just a few days ago and he said that he built a silo last fall and did not see how he got along without one before.

He said that he had seen several silos; that there had been silos in his community; but to him it seemed something of an experiment.

The cost of building loomed up before him, and he had been too busy to give much attention to the success of his neighbors, who had been using silos for several years.

Then the prospect of losing his feed kept him in dread. But one season's experience showed him that a silo is a great necessity.

The same may be said of the farmer who feeds beef cattle and raises his own feed, and if he does not raise his own feed he cannot very well afford to feed them.

In the first place, you can get more stuff from a given amount of land in corn silage than in any other way. On good land in a favorable season you can get at a very little expense from ten to twenty tons of the best feed per acre planted in corn and peas or corn alone.

The silo is the means of saving every pound of this vast amount of feed in the very best possible manner.

The first silo that I ever built I put it up myself with the help of a hired boy in two days. It did not cost me more than $15—a very small one, of course—eight feet in diameter and thirteen feet high.

I would not think of building another one so small, but that was my first building, and it was more of an experiment.

It was made of 2x4 stuff, undressed. They were simply set up edge to edge without matching or beveling; but it was a success, however. The dampness and heat of the silage closed the cracks, so that they were air-tight, and, as I had but one door, there was only a small quantity of spoiled feed around it, and the necessary loss on top. The remainder of it was as good as I now have in a silo made very large with tongued and grooved staves.

In the silo the feed is practically all saved and utilized. Corn fed under the most favorable circumstances in any other way results in a great loss.

I have fed shredded fodder for a number of years before I built my silo, and found it was a hard thing to avoid a large loss of the feeding value of the stalks and fodder by this method, be-

No Discarded or Abandoned Inventions of its Beaten Competitors are used in

UNITED STATES SEPARATORS.

THE UNITED STATES SEPARATORS ARE IN A CLASS BY THEMSELVES

The United States use inventions of their own **exclusively.**

The United States do not utilize any type of separator ever developed by their **"Would-be Competitors."**

These **"Would-be Competitors"** claim the earth, but "word claims" do not give them the title.

These **"Would-be Competitors"** claim that Dr. De Laval was the inventor of "the first practical continuous flow centrifugal Cream Separator," his application being filed "July 31, 1879, Patent issued, No. 247,804, Oct. 4, 1881." This statement is not true as shown by the records in the Patent Office. Messrs. **Houston & Thomson** (who afterward became famous in the electrical line) **were the first** to be awarded a patent on such an apparatus. Application filed Oct. 29, 1877. Patent issued April 5, 1881, No. 239,659.

This Houston & Thomson Separator was also of the "Bevel Gear" type and was for either hand or power, therefore the claim of our **"Would-be Competitors"** on this point is not correct.

"These are the Rock-of-Gibraltar-like facts against which mere "word claims" by **Would-be Competitors** fade away like the mist of night before the rays of the morning sun."

We could enumerate a lot of things these **"Would-be Competitors"** claim, that are not in accordance with the facts or the records, "that fade away like the mists of night before the rays of the morning sun" of truth, but this is sufficient on this point for the present, we think, to convince all thoughtful readers that "word claims" do not have any weight in face of the facts.

These same **"Would-be Competitors"** claim their Separator is the Standard Cream Separator of the World, but they are not entitled to that "word claim," as the records show that the **United States Separator** beat them in the greatest contests ever held by any **National or International Exposition.**

In other advertisements they claim that "99½ per cent. of all expert creamery men, butter manufacturers, and real separator authorities living today use **De Laval Separators** exclusively, for they have learned by experience that the **De Laval** is the only separator that will save all the cream all the time under all conditions."

Now every reader of intelligence knows that is another "word claim" and is not true, because a very large percentage of the leading breeders, separator authorities, creamerymen and dairymen, use and recommend the **United States Separator** because it proved in the great contest with the **De Laval** and others, that it excelled everything in fifty (50) consecutive runs lasting over one month on ten different breeds of cows; also in every day use it has maintained its superiority.

Please read the following letter and see for yourselves if this looks as though the "99½ per cent. word claim" is correct.

Poughkeepsie, N. Y., May 27, 1908.

In 1899 we introduced farm separators in our cream gathering system. Although we are within six miles of the De Laval Separator's main works where all of their Separators are made, our patrons, after thorough investigation, preferred and purchased the U. S. Separators. There are about three U. S. Separators to every one of the De Laval Separators used. Since we have started we have steadily increased our output. We get good prices for our butter, and feel proud of the record.

LaGRANGE CREAMERY,
H. R. HOYT, President.

Just think of it, **Three United States Separators to every one** of the **De Laval** right under the shadow of their factory. **Why?** Because the United States is superior to all others in every feature of separator practicability. It is **made stronger, runs easier, wears longer, skims closer.**

Fine Plowing

Deere Books Tell How—

You can get them and a 16-page illustrated farm paper free

Don't miss this chance

IF interested in farming, get our farm paper. You can have it one year absolutely FREE. This paper will give you some new ideas. No other paper like it. We will also send you *three mighty nice booklets* which show all kinds of plows at work in the field. There are plows from many foreign lands, also pictures of modern walking plows, sulkies, gangs and immense steam plows that turn forty acres a day. Get posted.

Hired Help Costs Big Money

Your land is high priced and hired help expensive. There is only one way to make big money—use implements that cut down the cost of your crops. Isn't it true that when you break something on a plow it is nearly always a cast part? Wherever strain comes on a JOHN DEERE PLOW there you will find steel—tool steel. Take any plow that has had hard work for five years, put it along side of a JOHN DEERE which has been in service that long—and see the difference. Then there is no paint to cover up poor material. You can see the wear and the defects. The JOHN DEERE will be solid, staunch and ready for the hardest job. Then you begin to know that quality counts.

There is comfort and profit in having good plows. You can take pride in owning a JOHN DEERE—the standard plow of the world for two generations.

We will send you the farm paper and the three booklets free. All you have to do is to write us a postal card and ask for

Package No. 11.

Mention the number of the package then you will get exactly the right stuff.

DEERE & COMPANY, MOLINE, ILL.

cause of both weathering and wastage of the harder parts, for it is almost impossible to get the whole crop properly shredded at the time of the year when it has to be done. But I find that when the corn is put into the silo it is all eaten.

If the silo is properly made and silage properly fed, there need not be a bushel of waste. The corn is cut up in half-inch lengths while it is yet succulent, and even the harder parts of the stalks become soft by the heat and juices of the other parts, and consequently all become palatable food.

The cows will clean up the last vestige of every feed. The succulence of the feed keeps the cows in good condition. The palatability of it gives them a good appetite, and the richness of it does away with having to buy much concentrated feed stuff.

My experience in feeding silage for a number of years has proved to me that I can keep my cows in much better condition and better flow of milk on a ration of silage, with four or five pounds of grain per day, than I can with dry feed, or dry feed cut and mixed with from eight to ten pounds of grain.—R. B. Rushing.

The Home-bred Cow.

Cows purchased from professional breeders are generally good cows, and so are many of the cows bred on the farms. But in the great stock markets of the country we find cows of which no one knows anything, and the man who buys them for milk-producing purposes simply takes his chances on them.

If a man wants a cow that he knows to be a good cow, he should buy from the professional breeder or raise her himself. He may indeed go out into the country and pick up a cow, but in doing this he is taking chances on unknown quantities.

Picking up cows in the country has been going on so long that the country is becoming depleted of its good cow stock. For the most part these good cows have been milked for a few months, and then sent to the butcher, while the process has been continued.

Some of the men who practiced this for a dozen years have now turned to breeding their own cows, for they say they cannot any longer find good cows to buy.

Therefore the home-bred cow is the one on which the farmer of the future must depend. The home-bred cow can be whatever the breeder desires in the qualities she possesses.

For the most part, however, the home-bred cow has been an accidental product. She has been raised from any kind of a mother and from any kind of a sire. Her breeder has usually taken it for granted that the calf is a "gamble," anyway. The poorest cow in the herd is allowed to produce calves for raising as well as the best, and if the calf of the poorest cow happens to be comely in appearance she is reared for milk-producing purposes, while the calf of the best cow is fattened for veal.

It is true that the best cow will not always produce a calf like herself, and it is true that a poor cow will sometimes produce a calf that will develop into a valuable producer of milk, but that is only the result of the operation of the law of chance.

In the main, better cows will result if we make it a practice to use only good cows for breeding purposes when we have in view the production of cows for milk-giving purpses.

We have all seen cows that we do not believe should be used for calf rearing. One of the most objectionable cows is the one that is subject to garget and every now and then gives milk that is ropy and hard.

The next objectionable cow that should not be used as a breeder is the one that is so nervous that she "holds up" her milk at the least exciting occurrence. The writer has in mind one cow that was a large producer of poor milk that would hold up her milk for a half hour if one but spoke quickly to her. It is an exceedingly annoying habit. It should not be perpetuated in the breeding operations.

It will take line-breeding for some generations of bovine life to give us the ideal home-bred cow, because at the present time the common farm cows represent in themselves all kinds of tendencies that have come down to us as a result of indefiniteness in breeding. Yet with a little care we can make rapid progress in the direction of producting better dairy animals.

The Milk Reporter says: "Constipation or costiveness in milch cows can be cured or very much helped by enough old process oil meal to keep the droppings moderately soft, but not necessarily loose. No suggestions that can be offered or any other formula that can be made can be followed to the letter. Feeds vary in their nutritive values, some being better than the average and some not as good, and cows vary in their ability to digest and transform nutriment. These conditions make it necessary for the feeder to use a good deal of 'udgment, and not follow too blindly the suggestions of others."

At St. Louis, late in March, horseradish was selling at $2.50 per barrel.

Other Cream Separators Merely Discarded or Abandoned De Laval Inventions

It is interesting and instructive to know that nearly, if not quite, every cream separator that has ever been made, and certainly all that are being made at this time, are merely copies or imitations of some type of construction originally invented or developed by the De Laval Company, and either not used by it because of something more practical or else discarded and abandoned in the course of De Laval progress and utilization of later improvements.

As earlier patents have expired some of their features have one after another been taken up by different imitators, so that at all times, as is the case to-day, every separator made in the United States or elsewhere in the world, utilizes some type of construction originally owned and developed by the De Laval Company, though some of them have never been commercially used by the De Laval Company because of their inferiority to other types of construction used by it.

All cream separator inventions by others have been of immaterial details or variations, upon which patents have been taken, if at all, more for the sake of the name than by reason of any real value or usefulness attaching to them.

But the De Laval Company has always been forging ahead, with its many years of experience and the best of experts and mechanics the whole world affords in its employ, so that before any expiring patent might permit the use of any feature of construction by imitators the De Laval Company had already gone so much beyond that type of construction that it was then old and out-of-date in the modern De Laval machines.

The first practical continuous flow centrifugal Cream Separator was the invention of Dr. Gustaf De Laval in 1878, the American patent application being filed July 31, 1879, and issuing as Letters Patent No. 247,804 October 4, 1881.

This was the original Cream Separator—of the "Hollow" or empty bowl type—and it has been followed from year to year by the various steps of cream separator improvement and development, all De Laval made or owned inventions, the American patent applications being filed and letters patent issued as follows.

The original hand Cream Separator of the "Bevel Gear" type; application filed October 2, 1886, issuing as Letters Patent No. 356,990 February 1, 1887.

The original hand Cream Separator of the "Spur Gear" type; application filed January 17, 1887, issuing as Letters Patent No. 368,328 August 16, 1887.

The original Steam Turbine-driven Cream Separator; application filed December 8, 1886, issuing as Letters Patent No. 379,690 March 20, 1888.

The original "Tubular" shaped "hollow" bowl Cream Separator; application filed April 19, 1886, issuing as Letters Patent No. 372,788 November 8, 1887.

The original "Disc" bowl Cream Separator; application filed May 12, 1890, issuing as Letters Patent No. 432,719 July 22, 1890.

The original vertical "Blade" Cream Separator bowl, covered likewise by the application filed May 12, 1890, issuing as Letters Patent No. 432,719 July 22, 1890.

The original "Bottom Feed" Cream Separator bowl; application filed July 24, 1889, issuing as Letters Patent No. 445,066 January 20, 1891.

The original series of "Star" or "Pineapple Cone" shaped cylinders Cream Separator bowl; application filed August 24, 1893, issuing as Letters Patent No 521,722 June 19, 1894.

The original "Curved" or "Converging Disc" type of Cream Separator bowl; application filed January 18, 1905, issuing as Letters Patent No. 892,999 July 14, 1908.

The original "Split-Wing" Tubular Shaft Cream Separator bowl; application filed April 29, 1898, issuing as Letters Patent No. 640,358 January 2, 1900—which invention, with a number of later improvements, is the type of bowl construction used in the De Laval machines of to-day, still covered by protectiug patents which prevent its appropriation by would-be competitors.

The patents thus enumerated are but a few of the more important of the more than 500 original Cream Separator patents owned, controlled and developed by the De Laval Company during its thirty years of creation and development of the Cream Separator industry throughout the world. They are recited because they show in the most illustrative and conclusive manner possible De Laval originality and leadership from 1878 to the present day.

In addition to these patent-protected features, the De Laval machines have within two years been mechanically re-designed and re-constructed in every part, from top to bottom, so that the new 1908-1909 line of De Laval machines are to-day, even more than at any past period, fully ten years in advance of any other cream separator made.

These are the Rock-of-Gibraltar-like facts against which the mere "word claims" of would-be competitors fade away like the mists of night before the rays of the morning sun.

JACKS AND SADDLERS. The Cook Farms have 175 head of Registered Jacks, Jennets and Saddle Horses. One hundred head of these must be sold by the 15th of May. If you want a bargain in a good Jack or Saddle Horse, write quick or visit the Cook Farms.

J. F. COOK & CO., Lexington, Ky.

Blooded Stock Notes.

Mr. J. P. Vissering, breeder of Aberdeen-Angus cattle, writes as follows: "I wish briefly to call your attention to some exceptionally fine things I am offering in the line of Angus bulls and heifers. This was not brought about by haphazard breeding but by twenty years of improvement by selection and purchase.. I have sold ninety per cent. of my surplus on a "Make-good-or-your-money back" propostion and have never had one returned to me, neither have I had to summer a yearling or put an Angus on an auction block. Come and see them, and if you do not find them as represented, it will cost you nothing to come here and I will pay your fare way back, too. My prices are in the buyer's favor."—J. P. Vissering, Godfrey, Madison county, Ill.

What is claimed to be the greatest sale of Holstein cattle ever held on this continent took place at Tillsonberg, Ontario, Canada, a few days ago, when George Rice sold out his herds of Holsteins and Ayrshires at record prices. The average obtained for a lot of forty-six females, of which thirty-five were heifers under two years old, was $239. Among the leading sales was a heifer sold for $1,000 to W. A. Matteson, of Utica, N. Y., and another sold to E. S. Middleton, of Cable, Ohio, for $700.

On March 25th, P. P. Hendershot, of Hebron, Neb., sold eleven Belgian and Percheron stallions at an average of $706.81, and sixteen mares at an average of $436.66. The sale included Fripon-Du-Kat, a four-year-old Belgian stallion, at $1,400, bought by W. R. Perkins, of Beaver City, Neb. Imp. Grivois, a three-year-old Percheron, sold at $1,280, going to J. H. Sellick, of Albion, Neb.

Messrs. D. E. Reber & Sons, of Morrill and Hiawatha, Kas., sold thirty-nine head of Shorthorn cattle at an average of $138.20 per head. Thos. Hunt, of Blue Rapids, Kas., paid $255 for the four-year-old bull Scotchman, and R. Tietzen, of Bellvue, Iowa, topped the females by paying $700 for Imp. Ballechin Charming Maid with calf at side. Eight Percheron stallions were sold, averaging $793.12, and twenty three females averaged $433.43. The top-price stallion was the seven-year-old Imp. Botin, sold to Geo. H. Meyer, of Hiawatha, Kas., for $1,750, and $750 was paid by W. S. Corsa, of Whitehall, Ill., for the six-year-old mare Dora.

The Pure-bred Live Stock Association of Oregon has arranged with the Bureau of Animal Industry to apply the tuberculin test to all cattle intended for shipment out of the state. Thus it appears that Oregon intends to send out none except it be entitled to a clean bill of health.

At a sale of light harness horses held at Sedalia, Mo., by W. B. Tayor, ninety-six horses were sold at an average of $336.25. The race mare Early Alice sold at $4,600, and the stallion Bellbar sold for $1,675.

At the Breeders' and Feeders' Show, Fort Worth, Texas, the senior and grand champion Shorthorn bull was Diamond King, exhibited by David Schofield, of Hillsboro, and the junior champion bull was Marquis Pride, owned by David Harvell, of Liberty Hill. The senior yearling heifer was Blythesome Lassie, owned by J. F. Rhea, of Lawn, and the grand champion cow was Sweet Duchess of Gloster, owned by Carpenter & Ross, of Mansfield, Ohio.

At the Breeders' and Feeders' Show held at Fort Worth, Texas, among the Hereford prizes, first place was awarded to O. L. Miles, of Fort Smith, Ark., for the aged bull and for the senior yearling bull. The junior yearling bull prize was carried away by Giltner Bros., of Eminence, Ky., who also captured first on the senior bull calf. The junior bull calf prize was won by McNatt & Hutchison, of Fort Worth, Texas. The aged cow prize was taken by Dorothy Bell, owned by Giltner Bros., while A. J. Goetz, of Tuckerman, Ark., took first with Lary Wilton, in the two-year-old class. The senior yearling heifer prize was won by Phoebe of Point Comfort, owned by O. L. Miles, while the junior yearling heifer prize was taken by Addie's McDonald, owned by Lee Bros., of San Angelo.

At a sale of Hereford cattle at Kansas City, in March, 120 head averaged $108.00. The bull average for forty-eight females averaged $92.39. The March On, 6th, October yearling bull, Onward, 71st, consigned by the Funkhouser Estate, topped the sale at $775, selling to H. D. Cornish, of Osborn, Mo. The top on cows was $200, W. C. Coon, of Fulton, Kas., paying that for Highland May, a five-year-old by Columbus, 47th. Fred Cottrell, Irving, Kas., secured J. A. Gibson's show bull, Captain, by Generous, at $255. The eight bulls in the C. W. Armour consignment averaged $147.50, nearly $30 above the general average on bulls.

A sale of Aberdeen-Angus cattle managed by Hal T. Hooker for the firm of C. D. Hooker & Son at Newton, Iowa, resulted in fifty-six cattle making the average of $137. The top of the sale went to P. J. Donohoe, of Holbrook, Iowa, for $800. The top bull price was $197, paid by Thomas Tyner, of Imogene, Iowa.

At the Texas Breeders' and Feeders' Show, W. R. Clifton, of Waco, won the Red Polled bull championship with Banker, 14,202, and the female championship with his 1907 heifer Babette, 27,726. Cox & Barry, of Walnut Springs; W. C. McKamy, of Renner; and G. O. Creswell, of Oplin, were also Red Polled prize winners.

Frank Wells, of DuQuoin, Ill., is advertising prize-winning strains of poultry. He has eggs for sale from Barred Plymouth Rocks, White Wyandottes and Rhode Island Reds. His prices are very reasonable. See his card.

Mr. D. F. Beauchamp, breeder of pedigreed Poland-China swine at Meredosia, Ill., has made a change in his advertising this month. He has an extra fine bunch of spring pigs, which our patrons may find to their advantage to read about.

Mr. M. W. Magnusson, of Safe, Mo., offers a few tried brood sows and gilts that are bred for spring and summer farrow. Most of them were sired by Charmer's Duke, 27th, 91,877, and are the pick of the 1907 and 1908 crop of pigs. Anyone interested in good Berkshire hogs should inquire, as they will be sold at live-and-let-live prices. He also has some fancy spring pigs that will soon be ready for shipment. His M. B. turkeys are the best yearling Tom, weighing 40 pounds. His Single Comb White Leghorns and Barred Rock chickens are of the most popular strains, and he assures us that they will please his customers. Write him and mention this paper.

E. L. John's Special Bargains

Of pure-bred stock and poultry. He hangs out for sixty days to the farmers and breeders of pure-bred stock a very choice, uniform line of each kind mentioned in advertisement to select from. Spring pigs, young gilts and young bred sows of the most popular families to spare. One extra good Shropshire ram, three years old; has a fine, dense fleece of wool; is an exceptionally good sire; would be suitable for show yard if fitted up a little; will be sold right. Those wishing to purchase pure-bred stock and poultry will do well to correspond with Mr. John if they want the right kind at the right price. Address, E. L. John, Broadway, Maries county, Mo.

SPLENDID FARMING COMMUNITY.

Marinette county, Wisconsin, is one of the few places left in the country where the same kind of farm lands that ordinarily sell at $100.00 per acre in thickly-settled communities can be purchased for as little as $7.50 to $20.00. There the land is perfectly adapted to farming, dairying and stock raising; deep, rich, fertile, clay loam, with deep clay subsoil, with good markets, churches, schools and railroads near by.

Information regarding these lands can be secured from the Skidmore Land Company, Box 256, Marinette, Wis.

FOX AND WOLF HOUNDS

of the best English strains in America; 40 years experience in breeding these fine Hounds for my own sport. I now offer them for sale. **Send stamp for catalogue. T. B. HUDSPETH,**
Sibley, Jackson County, Mo.

BROADWAY HERD OF LARGE ENGLISH Berkshires, Shorthorn Cattle, Shropshire Sheep and Fancy B. P. Rock Poultry of the most popular families. A choice lot of Spring Pigs of the Masterpiece breeding now for sale. One extra good three-year-old Shropshire Ram for sale. A fine breeder. Will price him right if sold at once. Eggs from Fancy Barred Plymouth Rocks for sale at $1.00 for 15, $1.75 for 30, and $5.00 for 100. Mail order business a specialty.

E. L. JOHN, Broadway, Mo.

ENGLISH BERKSHIRE HOGS

That are bred right and will be sold right. Also M. B. Turkeys (Wolf Strain), S. C. W. Leghorns (Whycoff Strain), and B. P. Rock Chickens (Bradley Strain). Eggs in season. A few pairs of Pea Fowls for sale. Address,
M. W. MAGNUSSON, Safe, Mo.

WRITE FOR FREE CIRCULAR. Leading varieties Pure-bred Poultry. Quotes lowest prices on fowls and eggs. Unused Photo Post Card, 5c. postage, from our fowls.
THE L. H. MUELLER POULTRY FARM, Wellsville, Mo.

TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won seven out of nine first prizes at Leyington Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907.
CHAS. FORD,
Mortonsville, Woodford County, Kentucky.

FOR SALE: Registered English Berkshire Hogs, High-scoring Barred Plymouth Rock Poultry. Eggs, $1.00 per 15.
O. E. EGGIMANN, Dutchtown, Mo.

DRAFT and COACH STALLIONS, Also JACKS, for sale, from $300 up.
WALKER BROS.,
Glencoe, Okla.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write me for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

REGISTERED SADDLE STALLIONS and JACKS FOR SALE. Our stock is high-class and of the most fashionable breeding. **COWPEAS** for sale direct from the farm, hand-picked, put up in new bags. The **WHIP-POOR-WILL** variety. They will please you. Price, $1.65 per bu., F.O.B. cars here.

ived voucher and must say that we are
glad to think that your firm is con-
ally on the alert for the welfare of
customers. We did not so much as
w that there was an overcharge by the
oad. Our business that goes north will
ainly go through your firm. Thanks
your trouble in the matter."

W. LEWIS, of the extensive sheep and
le-feeding firm of Clark & Lewis, Phil-
Neb.: "You not only bought our sheep
h the money, but also sold them at
ly satisfactory prices. We secured
ugh your Chicago firm $7.00, the top of
market, for four doubles of yearling
ers on January 18th, which were ob-
ed through your firm at South Omaha
in September at $3.85."

E. BRYANT, Manager of the Bolles
Stock Company, Carlsbad, N. M.:
ing to absence from home, I failed to
nowledge receipt of your letter of
ember 25th, enclosing refund of $90.75
the three cars of lambs. 'Bully for you.'
ought there was something wrong with
freight bill, and even went to the rail-
office, but they assured me it was all
. Many thanks for the very thorough
in which you looked after my
rests."

MER SMITH, Rochelle, Ill.: "Your
of sale of cattle and draft received.
well pleased with the sale."

WEN BROTHERS, Lucon, Ill.: "Re-
ed account of sales for hogs all O. K.
you may rest assured we are well satis-
with the deal."

F. FLYNN, President of the Flynn
Company, owners of the Walnut Hill
Thomas Des Moines, Iowa. "We have
account sales for car of hogs. Am well
ed with the sale, and assure you so
as our interests are as carefully looked
by you as they have been in the past,
there will be no change in our consign-
ments."

ANDREW LOSLEBEN, Essig, Minn.: "I wish to thank you for the kind treatment and good service you rendered me, and I owe special thanks to your salesmen for getting such a good fill. My hogs weighed seventy pounds more at South St. Paul than at loading point."

CHAS. NOBIS, Hanover, Ill.: "Received car of cattle in good shape. They are just the kind I wanted."

COLLINS BROS, Viola, Ill.: "We received your letter and bill for hogs, and we are satisfied with the sale."

HATCHETT & CULL, Harrodsburg, Ky.: "We bought several cars of your firm last season, which proved very satisfactory."

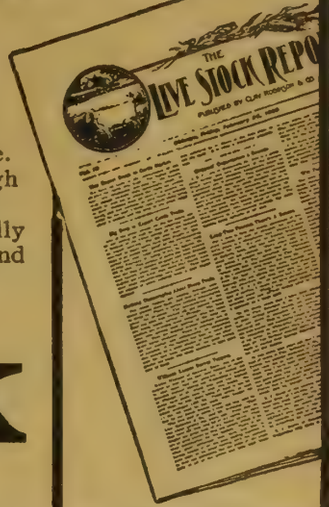
CR LIVE STOCK COMMISSION & CO.

Our Success Depends Upon Pleasing You

"Nothing Succeeds Like Success."

To win lasting success you must deserve it. From a very small beginning 22 years ago we have grown to be the leading live stock commission firm of the country.

Our business has steadily increased. The reason is simple. Year after year our old customers consign to us, and through their recommendations new ones are constantly "trying" us. And if we can get a feeder or shipper to "try" us it usually means a new customer. These new customers in turn recommend others, and so our business grows.



Live Stock

Selling Fat Stock

You have fed, watched and worked with your stock for months, but when it reaches market it's our turn.

We handle your consignment just as we would if it belonged to ourselves. We work hard to get the last cent of price, and the best fill.

We must please you, or we can't expect your future business. If you are a small feeder, that makes no difference. Over half our business comes from small feeders, who ship only one or two cars a year.

We wouldn't be so foolish as to neglect the small customers from whom we get the bulk of our business. Besides, the small shipper often grows into a big one.

Buying Feeding Stock

Do you want cattle or sheep to feed or graze? Let us buy them for you, and save money, time and bother.

Our buyers who fill your orders for stockers and feeders give their time and attention to that branch, and are experts. These skilled buyers become your employes—your special agents—from the time your order is received until it is filled.

You do not need to come to market, as we not only buy the stock for you to best advantage possible, but look after the loading, shipping, etc. So you save railroad fare and hotel bills, as well as loss of time.

Our order-buying departments at the various markets are organized entirely distinct from the selling side of our business, insuring most careful attention to your interests.

Don't fail to write us if you want stockers or feeders.

Lump Jaw

The first remedy to cure Lump Jaw was

Fleming's Lump Jaw Cure

and it remains today the standard treatment, with years of success back of it, known to be a cure and guaranteed to cure. "Don't experiment with substitutes or imitations. Use it, no matter how old or bad the case or what else you may have tried—your money back if Fleming's Lump Jaw Cure ever fails. Our fair plan of selling, together with full information on Lump Jaw and its treatment, is given in

Fleming's Vest-Pocket Veterinary Adviser

Most complete veterinary book ever printed to be given away. Contains 192 pages and 69 illustrations. Write us for a free copy.

FLEMING BROS., Chemists, 218 Union Stock Yards, Chicago, Ill.

Truman's Horse Importation.

On March 25th Truman's Pioneer Stud Farm received the regular importation of Shire stallions. They arrived in first-class condition and they are a grand lot of young horses, the stallions running in ages from three to five years old. The horses were purchased from several of the leading breeders in England, and are well up to the Truman standard. The firm is making special prices for the next thirty days on between sixty and seventy stallions that they have at the present time on hand for sale, consisting of Imported Shire, Percheron, Belgian and Hackney stallions. No better horses were ever offered for sale anywhere. Write to Truman's Pioneer Stud Farm, Bushnell, Ill., for catalogue.

Sore Shoulders, Backs, Etc.

Spring is approaching and the horses will soon be put into the collars for hard work. The shoulders and the neck will be tender, and, as usual, the horse in every respect will be in poor condition to go into the hard work of the soft fields so suddenly. He has probably not been grained much in preparation for his task of putting in the spring crop. His body is covered with a heavy winter coat, which causes him to perspire easily. The first farm work in the spring is the hardest of the year, and at this time a horse is in the poorest condition to do the work without injury to himself. The shoulders, the neck and the back become bruised and sore.

Too much care cannot be exercised in seeing that the collar is a perfect fit. A collar which is too large is more likely to injure the horse than one that is too small. The collar should be scraped each morning and carefully cleaned before it is again put on the horse. Before the spring work begins, it is well to oil the harness and have it soft and pliable. For the first few days of hard work on soft ground, the shoulders of the horse should be bathed in cold water every night after the harness is removed. The horse will be very sore and tired for a few days and should be given every kind of attention. Watch the horses to see that the draft is at right angles with the shoulders. If it is too low, the collar will be constantly "kicking up" at the top and the horse will soon have a sore neck. If the draft is too high, the collar will not rest securely on the lower part of the shoulder, where the horse is best prepared to throw his weight. If there are any calloused lumps on the horse's shoulders or back, they should be carefuly removed during the winter when his services are not much needed. If the collar is put on over one of those "sit fasts," it will have the same result as a man trying to walk with a button in his shoe or a bunion on his foot.

This story is not for the purpose of suggesting treatment for bruised shoulders and sore neck, but just simply to remind you that as spring approaches, an ounce of prevention is (by having the horse and the harness in good condition before beginning the spring work) often worth pounds of cure later on when the horse is disabled and you are deprived of his services, for weeks, right in the busy season.—Geo. H. Glover, D. V. S., Colorado Agricultural College, Fort Collins.

Value of Oat Hay.

Good, well-cured oat hay makes an excellent feed for horses, and also most all other kinds of live stock, as oats furnish the very best of coarse cereal roughage which is very good for their system.

Oats are often fed unthrashed, and usually horses relish them, both straw and grain, and in fact is a very good feed fed in this way, but for feeding both straw and oats I think it is better to cut them rather green and cure as hay. In places this is quite common to sow oats in the spring, and later when the crop is well advanced to cut and cure as hay, the same as one would handle timothy or other hay crops. In this case the crop is not quite so mature as it would be if cut for threshing out the grain. When well cured, however, this makes a bright and very palatable hay.

Naturally the greener the condition of the oats when cut the poorer will be the crop in digestible food. When cut for hay, oats should be mown as any other grass, and treated in a similar manner. Heavy succulent oats may be cut in the morning after the dew is off and then kept stirred to let in the air so as to cure out well. With warm, drying weather this green oats may be cocked up the next day after cutting, and if opened up and exposed the next day to a bright, clear sky, possibly may be hauled in that afternoon. However, the essential thing is to get in the crop free of excess moisture so that it will not mildew in the mow. The time required to do this will of course depend on the condition of the oats. If very heavy, more time will be required, but if rather light they will cure quicker.

I am led to believe that one of the commonest faults in feeding horses is the lack of variety in feed. Taking into consideration the number of different grains and feed stuffs it does seem strange that every team owner should not provide for his animals a ration that would be perfectly acceptable to the system at all times. It is a fact, however, that very few farmers give what might be termed a well-balanced ration.

Many of our farmers still cling to the old ration of corn and hay, which has long since been proved to be expensive and wasteful. If you want the best results feed a ration that contains all the elements of nutrition in properly balanced portion. Corn alone is not a well-balanced grain for feeding, neither is oats nor barley. Barley is rapidly gaining favor as a feed, however, and when properly combined with the other grains makes an excellent ration. When you feed a ground ration, you prepare it for quick digestion. Your animals utilize it more readily and there is practically no waste. It should be remembered that the horse digests the food quickly, and whatever ration you feed should be prepared with a view to supply the nutrition the horse needs. Your horses will work better and keep in better condition on a smaller amount of ground grains of the proper kind, and an abundant supply of good roughage, such as well-cured oat hay, than they will on a ration of whole corn, feed them what you will of it.

Oat hay is not only good for work horses but is just as valuable for young growing animals and they should be supplied with same if the best results are expected from the feeding.—R. B. Rushing.

.22S FOR FINE WORK at the TARGET or in the FIELD

They hit the mark and make world's records. The American team used them exclusively and won the International trophies. Loaded with black or smokeless, they fit all guns and are sure fire, uniform and accurate.

DISTEMPER, OR STRANGLES,

SAVE YOUR HORSES FRAZIER'S DISTEMPER CURE

Is a contagious disease that few horses escape. When the animals are shedding their coats the blood becomes poisoned. There is no telling when your horse may be attacked by this dangerous disease. Buy a bottle of FRAZIER'S DISTEMPER CURE from your druggist and keep it for instant use. Cures the sick and prevents others in same stable having Epizootic, Influenza, Pink-Eye, Coughs and Colds. No Cure, No Pay. $1 bottle holds three 50ct. bottles. If your druggist can not supply you, we will send express prepaid. BINKLEY MEDICAL CO., Nappanee, Ind.

Clip Your Horses in the Spring

It Pays—Clipped horses look better, feel better and do better work—Clip

With the Stewart Ball Bearing Clipping Machine

The only ball bearing clipping machine made. Do not buy a frail, cheaply constructed clipping machine that will last you only a season or two, and give trouble all the time. Every gear in this machine is cut from solid steel bar and made file hard. They all run in an oil bath, so friction and wear are practically done away with. It turns easier, clips faster, and lasts longer than any other clipping machine made.

We Guarantee it for Twenty-Five Years

Price all complete, only $7.50. Get it from your dealer or send $2.00 and we will ship C.O.D. for balance. Write for our big free catalog. Try this machine out side by side with any other machine on the market, at any price, if this is not worth three times as much, send it back at our expense both ways, we will refund every cent you paid. Send today.

CHICAGO FLEXIBLE SHAFT COMPANY, 182 Ontario Street, Chicago

Productive Capacity of Soils.

The productive capacity of soils is not indicated by their ability to produce crops for one year or for five years. A soil may be very low in productive capacity and yet produce good crops for a few years.

In working with reclaimed swamp soils, it has been found that good crops were obtained for a number of years, but that afterward the yields rapidly declined. Thus, on one farm the reclaimed swamp lands produced about forty bushels of wheat per acre for the first few years, and afterwards declined so that in ten years the average yields were only five to ten bushels to the acre. An investigation of this particular farm showed that the field lacked potash, and the reapplication of this element brought up the yields of wheat to about forty bushels to the acre. The point that should be noted is the one concerning the small amount of this element in that field at the beginning. It had in it at first enough of the element mentioned to produce say five crops of ordinary size, and that is why the first yields were good. The using up of a large part of the available potash resulted in making it impossible to thereafter produce good crops without putting the lost fertility back onto the land.

It is thus that one is deceived as to the productive capacity of soil. A soil to have a high productive capacity must be so filled with all the elements of plant food that it will produce good crops for a long period of years.

One may thus be easily misled by the old methods of determining the need of soils, which is to plant something on the soil and see how it grows. This is a safe test only if as much of each element is annually put on as is taken off in the crops.

But usually a man does not try to put on each year as much of each element as is taken off the soil. That would be a scientific way of doing, but most of us are not scientists enough for that. Most people engaged in the tilling of the soil do little in a systematic manner. They fertilize the ground when it seems to demand it and stop fertilizing when the ground no longer seems to demand it.

In a great many cases, one of the elements begins to get low in supply years before it is suspected to be the case. The crops begin to decrease, but the owner thinks it is due to the drouth or oversupply of moisture or insects or something else rather than to decreasing fertility or soil. Not till he has had several years of successive failures does he awaken to a realization of the true condition of things.

Many a farmer has been rendered poor by not keeping up the productive capacity of his farm. Many a locality has drifted from a state of thriftiness to a state of shabbiness because the productive capacity of the soil declined imperceptibly. As a result, old families have been scattered and aliens have come in and possessed the land.

Success or failure on every farm is intimately associated with keeping up the fertility and productive capacity of the land. The productive capacity is more than fertility, because it cannot exist without some things in addition to fertility, such as drainage. Good drainage and fertility form the basis of productive capacity, and are the two things most necessary to receive the attention of the farmer.

Jasper county is the first in Missouri to establish a County Agricultural Experiment Station. The county will expend $500 a year and the state will furnish the additional expense. This is under the Nelson law of 1907. This is also said to be the first County Experiment Station in the United States.

Mrs. W. J. Beggs, now of Seattle, is said to have produced the only rose absolutely without thorns. She was for several years a neighbor of Luther Burbank, in California, where she studied his methods. The bloom of his thornless rose is reported to be of unusual beauty.

The Verdict of Millions of Farmers

YOU might not accept **one** neighbor's verdict as to the worth of a harvesting machine. You might feel some doubt as to the correctness of the opinion of **three** or **four** farmers.

If half a dozen farmers—neighbors whom you know—said this or that machine was the **best machine**—that it did the work right—that it saved money and labor and gave them **all** their crop—you would be likely to believe them.

There can be no reason to question the verdict of **millions** of farmers—practical men like yourself—**millions** of farmers all over America—all over the world, wherever grain or grass are grown—who have given the **real** test to harvesting and haying machines, and have decalered **one line** the best.

THE INTERNATIONAL LINE

Champion McCormick Osborne
Deering Milwaukee Plano

The importance of this verdict is apparent when we stop to consider that over 200 kinds of harvesters—200 different makes—with different names—have been placed on the market during the last half century—that of these 200 not more than ten remain in **any** favor—and that of these few, the six tried and true makes are far and away, almost immeasurably, in the lead in the **number of machines being used.**

Could there be greater proof?

Could it be possible that through half a century of testing, of actual work in the fields everywhere and under all kinds of conditions—millions of farmers could be wrong in their verdict?

These millions of men had no prejudices. They had only one purpose. They had crops to be harvested—they demanded machines that would harvest **all** the crop—with least loss of time—least delay through accidents—least strain on their own strength and their horses—machines that would last and do the very best work season after season, year in and year out.

It was through no favor—no prejudice—that these millions of men came to know that there were six machines which fulfilled their demands: Champion, McCormick, Deering, Osborne, Milwaukee and Plano.

Now, since this is the verdict of the **vast majority** of farmers, is there any reason why **you** should experiment? Any reason why you should sacrifice part of your crop, part of your time, part of your strength—all of which is **money**—trying to find another machine as **good** as these?

It is the time NOW to get ready for this year's harvest. If it seems too early just call to your mind all the work that is to be done before harvest. Very soon that work will be keeping you too busy to allow time for other things.

So get ready for the harvest now. Don't wait until the last minute—select your new machines **now.** Have them on the farm ready for work when the grain and grass are ripe—select machines you can depend on—machines the farmers of the world have found to be **right**—right in design—right in material—right in workmanship.

You can't afford to experiment—You can't afford to take any unnecessary risk—You can't afford to assume any unnecessary responsibility. Why not profit by the experience of others who reap all their harvests and all the profits with one of the six leading lines of machines?

When you go into your harvest field you want to cut your grain without any interruption or unnecessary delays, for when your wheat is ripe, any time that is lost means the loss of money—frequently the loss of a large portion of the crop.

If you have one of the six leading machines, you will have no occasion to worry. Even if the horses should become frightened and run away with the machine and break it, you could still save your crop, because the extra parts that would be needed to repair the machine can be secured from a nearby dealer, who always carries a full stock of repair parts.

Then, too, when you buy one of these machines you buy one in which the materials are right; the workmanship is right; the principle of construction is right; and each machine before being shipped out is tested and retested under far more trying conditions than will ever be encountered in the harvest field.

In view of the foregoing, we suggest that you make the right start by purchasing the right machine.

Then you **will be ready** for a quick harvest, an easy harvest, a full-value harvest.

Write for a catalogue of whichever of our six dependable, durable machines you want. And remember—this is important—that if accidents **should** by chance occur you can always get the needed repairs **near at hand,** without delay—repairs that **fit.**

International agents sell Champion, Deering, McCormick, Milwaukee, Osborne, Plano and International binder twine, made from high-grade pure sisal and manila fibres—the **best raw** materials—made for best service.

To the Best Market, Where Business is on the Up-grade; Where There is the Greatest Competition.

Sale of Pure-bred Cattle.

On May 5th, 6th and 7th, Mr. W. C. McGavock, of Springfield, Ill., will hold a special sale of Aberdeen-Angus, Hereford and Shorthorn cattle in the Grand Pavilion at the St. Louis National Stock Yards. Mr. McGavock is an experienced sale manager, fully understanding the market situation, so far as live stock breeding interests are concerned. Breeders in St.Louis territory having animals of either breed will be able to find a place in the catalogue for a few head, and stock farmers who ought to and intend to improve their herds should write to Mr. McGavock at Springfield, Ill., and ask for a catalogue in time to study it before attending the sale. The breeders who make a practice of contributing a few cattle to these National Stock Yard sales are men of national reputation, whose breeding operations have had an influence in improving the beef cattle offered upon the American cattle markets. We hope to see a first-class attendance at this sale.

Native Beef Cattle.

Representative sales of native beef cattle at the St. Louis National Stock Yards, late in March, include for L. G. Siles, Cooper county, Missouri, nineteen steers, 1,502 pounds average, at $6.75; McBride & Co., nineteen head, 1,364 pounds average, at $6.60; W. O. Mayes, Lincoln county, Missouri, twenty-four head, 1,468 pounds, at $6.75; Sutton & Redman, DeKalb county, Missouri, thirty-two head, 1,412 pounds, at $6.70; Bailey & Co., Bates county, Missouri, twenty head, 1,277 pounds average, at $6.35. All these were good, plain, fat cattle and strictly choice to fancy grades were quotable at $6.85 to $7.25 per 100 pounds.

Light-weight Cattle Wanted.

The St. Louis market has an unlimited demand for light-weight, native beef cattle. A few sample sales towards the end of March indicate this condition. These sales include twenty-one head, 1,144 pounds, at $5.80; twenty-two head, 1,146 pounds, at $6.05; twenty head, 1,187 pounds, at $6.10; twenty head, 1,159 pounds, at $6.20; sixteen head, 1,138 pounds, at $6.25; and ten head, 1,065 pounds, at $6.50—all quotations being at the price quoted per 100 pounds.

Mississippi Cattle at St. Louis.

On March 29th, at St. Louis, eighteen Mississippi steers, 1,096 pounds average, sold at $5.15 per 100 pounds; thirteen steers, 889 pounds, at $4.90; seven oxen, 1,300 pounds, at $4.90; eighteen oxen, 1,078 pounds, at $4.65; and three oxen, 1,000 pounds, at $3.75.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign horses, cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Texas and Oklahoma Steers.

Top sales of Texas and Oklahoma steers, late in March, at the St. Louis National Stock Yards, include for H. A. Pierce, of Waxahachie, Texas, eleven head, 1,250 pounds, at $6.30; eighteen head, 1,202 pounds, at $6.10; Lacy & Ferguson, Texas, 140 head, 1,245-pound steers at $6.25; and for W. G. LaFollett, Oklahoma, forty-two head, 1,249-pound steers at $6.20 per 100 pounds. St. Louis is the great Northern market for Texas cattle, averaging in net results about $2.00 per head more than similar cattle sell for on any other market.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,

Veteran Commission Salesman, General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Do not forget us when you wish to know anything about either the Sheep, Hog or Cattle Market or future prospect.

Don't hesitate to write or ship to

James H. Campbell,

National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

Arkansas Steers at $5.00 to $5.50.

On March 25th, at the St. Louis National Stock Yards, sixteen steers, 885 pounds, sold at $5.00 per 100 pounds; ninety-seven steers, 790 pounds, sold at $5.40; 144 steers, 1,000 pounds average, sold at $5.40; and thirty-nine head, 1,120 pounds average, sold at $5.50. All these were Arkansas cattle. On March 29th another string of Arkansas cattle, 854 pounds average, sold at $4.75; and fifty-four head, 1,005 pounds average, sold at $5.40.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Try us once. We have a great and expanding Market at St. Louis.

Evans-Montague Commission Company

Box 68,

NATIONAL STOCK YARDS, ILL., FORT WORTH, TEX., and at KANSAS CITY.

First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

Kansas Cattle at St. Louis.

Nearly every day in the week there are Kansas cattle at St. Louis, and they sell remarkably well. On April 1st there were several loads of plain, good cattle on sale. P. Paulson marketed seventeen beef steers, 1,317 pounds average, at $6.40; Esch Bros. sold nineteen steers, 1,349 pounds average, at $6.35; J. Moore, fifteen steers, 1,293 pounds, at $6.35; and Hoss & Sons, fourteen steers, 1,010 pounds, at $5.75. They were all from Butler county. It will pay the whole state of Kansas to keep in communication with the St. Louis market.

Clay, Robinson & Company.

This great live stock commission firm has a splendid organization at nine principal markets and during the present year became established at the National Stock Yards and is already taking a strong position in the St. Louis trade. Something of this firm can be learned from the card on page 17 and the testimonials on page 13 This great business is built up on superior service. It begins with their up-to-date method of keeping customers posted. They issue a paper containing a review of all the markets whereby a shipper can act quickly or reliable information, and in every other way of helping their customers they are experts. When the stock is shipped and sold on the market it is handled to the best possible advantage. The entire St. Louis organization of Clay, Robinson & Co. is surprised and delighted at the responsive, competitive features of the National Stock Yards, and they are bringing stock to the market from sections where they never shipped to St. Louis before, and their customers are well satisfied. Stockmen who are interested in the markets will do well to request that the Clay, Robinson & Co. market report be sent them, and fill out the blank on page 13. The address is Clay, Robinson & Co., National Stock Yards, Ill.

The Monday Horse Auction.

Under date of March 30th, the McFarlane Commission Company reported a big run of horses and a good clearance. The good kinds sold as well or better than they have heretofore done at any time. The demand was especially good for toppy drivers, especially if well broke to city conditions. A cavalry-horse contract is taking geldings from 15.1 to 15.3. The circular concludes by saying: "The St. Louis horse market has had more extensive advertising for April than it has ever had since its existence, and we can safely say, without fear of contradiction, that we will have more good buyers on this market in April than have ever gathered on any one market at one time in the United States. We respectfully solicit a consignment from you for any Monday in April. Our market is the best in the world."

Stock Cattle at St. Louis.

As a stock cattle and feeder market St. Louis is gaining ground all the time. Strictly choice native feeding steers on April 1st were selling at $5.00 to $5.25 per 100 pounds; medium to good feeders, $4.25 to $5.00; good to choice stock steers, $4.50 to $5.00; inferior to good stockers, $3.50 to $4.40; good stock heifers were selling at $3.85 to $4.25; medium heifers, $3.25 to $3.75; stock cows at $2.50 to $3.25; milch cattle were selling all the way from $18 to $62 per cow and calf. They were good at $45 and upward.

McFARLANE COMMISSION COMPANY.

HORSE and MULE COMMISSION SALESMEN

AUCTION EVERY MONDAY IN THE YEAR.

These Monday sales at the St. Louis National Stock Yards are the best attended of all sales and produce the most satisfactory results for the shipper.

WE ALSO SOLICIT CONSIGNMENTS OF MULES TO BE SOLD BY THE MOST COMPETENT SALESMEN ON THE BEST MARKET IN THE COUNTRY.

ROAD GRADER AND STUMP PULLER.

Attention is invited to advertisement of C. D. Edwards, of Albert Lea, Minn., manufacturer of ditching machines, road graders, stump pullers, bog land levelers and iron shears. His Rural Road Grader is shipped on trial to prove their worth. The stump puller is made in three sizes. Mr Edwards issues a most interesting and attractive descriptive circular. Write for it and address C. D. Edwards. Albert Lea. Minnesota.

The St. Louis Horse and Mule Market

The Largest and Best in the World.

Also the Greatest Distributing Point For All Classes of Mules.

The Most Satisfactory Market For the Shipper.

Our company controls the two best auction days, Tuesday and Wednesday, the heart of the week.

We sell Mules every day except Sunday.

Every department is in charge of some officer of the company.

The fact that we handle more than one-third of the total receipts of the largest market in the world is sufficient evidence that we please our customers.

Write to us about selling your Horses or Mules.

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.

Spring Lambs at St. Louis.

We note that spring lambs are beginning to arrive in market. Late in March, fifty-five head of good lambs, 85 pounds average, sold at 11 cents a pound; another lot, not quite so good, 90 pounds average, sold at 9 cents a pound. As the season advances and the run is large, buyers will look for lambs weighing 90 pounds or better.

Range Horse Sales of 1909.

At the St. Louis National Stock Yards the sales of Western range horses, conducted by Messrs. Campbell & Reid and Western Sale Stables Company, will commence on Tuesday, June 8th, and continue every other Tuesday for the season until November 2d. The dates are June 15th and 29th; July 13th and 27th; August 10th and 24th; September 7th and 21st; October 5th and 19th; and November 2d. Horsemen having stock to ship will do well to understand that these range horse sales are the most successful of all. St. Louis is in the center for people who can get the horses home, who know how to handle them, fatten them, train them and market them. Thousands of farmers are looking forward to these sales. Horsemen interested should write for further particulars to J. J. Searcy, Secretary, National Stock Yards, Ill.

Good Mules Wanted.

Good, big mules are scarce. During the last week in March, at the St. Louis National Stock Yards, all the mules 15½ hands and up were sold quickly at strong prices, but the smaller, thin, green mules were hard to sell. It is difficult to quote prices, because of the wide difference in the quality and condition of mules of the same height. Fourteen-hand mules are noted at $80 to $150; 14½ hands, $100 to $165; 15 hands, $125 to $200; 15½ hands, $135 to $225; and 16 hands, $150 to $275. Heavy matched teams sell at $450 to $600 a pair.

Colorado Lambs Sell High.

On March 30th, at the St. Louis National Stock Yards, Payne & Romeach, shipping from Colorado, sold 142 head, 69-pound lambs at $6.95 per 100 pounds, and 136 head, 72 pounds average, at the same price, the top price this season.

Heifers at 6 Cents a Pound.

On March 31st, at the St. Louis National Stock Yards, F. H. Smith, of Scott county, Missouri, marketed twenty-two head of native heifers which averaged 697 pounds, and sold to Armour & Co. at 6 cents a pound. These heifers indicate a strong market, but some few of an even better grade sold higher, the top of the market for strictly fancy heifers being $6.75 per 100 pounds.

Horses at St. Louis.

At the St. Louis National Stock Yards, the last week in March, plugs were still quoted at $15 to $40; common Southern horses at $45 to $60; fair to medium, $70 to $100; good to extra, $110 to $160. Drivers were selling at $175 to $225. Eastern chunks were quoted at $110 to $160; extra chunks, $170 to $200; coarse and inferior draft horses, $125 to $150; good draft horses, $165 to $195; and extra individuals, $200 to $225.

The Thursday Auction.

Holland & Nugent Bros., commission salesmen for horses and mules at the St. Louis National Stock Yards, report their last sale in March as being remarkably successful. Draft horses were sold as high as $297.50, and any amount of good chunks from $200 to $275. They had to be fine horses to bring the money. Cavalry horses were selling at $125 to $140. Mr. Holland reports plenty of orders in sight and new buyers coming in all the time. Mr. Holland came here from Kansas City as a pioneer in search of a good horse market center, and he surely found it. A very large majority of his trade used to ship to Kansas City, but now they congratulate him on his discovery of a better market. Messrs. Holland & Nugent Bros. hold auction every Thursday in the year, and sell mules every day in the week.

Mr. Al Keechler of the St. Louis Market

At the National Feeders' and Breeders' Show held at Fort Worth Texas, the grand champion cattle were two-year-old Aberdeen-Angus steers weighing 1,395 pounds. They were bred by James W. Knox, of Jacksboro Texas, and were fed and exhibited by Mr. H. B. Johnson, of Chickasha, Okla. These cattle were consigned to the Cassidy Southwestern Commission Company, and Mr. Al Keechler, of St. Louis, who was attending the show was put to work to sell the cattle. He sold them all at extreme high prices including the grand champions, to Swift & Co., at $8.50 per 100 pounds the highest price ever paid in Texas for a load of cattle.

NOW AT NINE MARKETS.

THE GUIDE POST TO PROFIT

DO YOU SHIP TO

National Stock Yards, Ill.?

(EAST ST. LOUIS.)

OUR House at above market (opened Feb. 8, 1909,) is now in running order and ready to handle your consignments.

A. J. Milton, for a number of years one of our cattle salesmen at South St. Joseph and more recently with us in the same capacity at Chicago, is in charge of our cattle department at East St. Louis, while Bert Johnson, also formerly of our Chicago staff, sells the sheep, and F. E. Berry, formerly of our East Buffalo staff, handles the hog consignments. All these salesmen are thoroughly experienced and capable, and will give you first-class service.

CLAY, ROBINSON & CO.

Spirit of the West says that the famous English harness blacking is made as follows: Three ounces of turpentine and two ounces of white wax are dissolved together over a slow fire. Then add one ounce of ivory black and one drachm of indigo well pulverized and mix together. When the wax and turpentine are dissolved, add the ivory black and indigo and stir until cold. Apply thin. Wash afterward, and you will have a beautiful polish. This blacking keeps the leather soft and is excellent for harness and buggy tops.

Special Sale of Fine Horses.

Messrs. Campbell & Reid and the Western Sale Stables Company, at the St. Louis National Stock Yards, will hold a special sale of harness and saddle horses on April 20th, 21st, 22d and 23d. The sale begins on Tuesday and ends on Friday. Saddle horses will be made a special feature of the sale. The above dates are selected as being the best time of the year. This firm will have splendid offerings for buyers to select from. Catalogues will be issued. Address, Campbell & Reid and Western Sale Stables Company, National Stock Yards, Ill.

Our Seed Corn Premiums.

This is the last month in which we advertise our seed corn premiums. Our readers will do well to take notice of them. Every farmer in the country ought to test the Yellow Dent seed corn grown by D. L. Pascal, of DeWitt, Iowa, and the Boone County White, grown by Mr. L. B. Clore, of Indiana. We offer sufficient seed for experimental purposes and we offer several thousand dollars in premiums in addition for any first, second and third prize won by the corn grown from our seed. Corn that has won championships is the seed that will grow champion corn, and we are offering premium corn furnished us from the fields that have won the most important prizes.

J. F. Cook & Co., of Lexington, Ky., have sold the famous jack Dr. Hartman, to Mayor Fred Busse, of Chicago, who has a fine farm at Fox Lake, Ill. Dr. Hartman was a first-prize winner at the Louisiana Purchase Exposition. Cook's Sampson, another prize-winning jack, was sold to Mr. J. E. Isenhour, of Indianapolis, Ind.

The Illinois Agricultural Experiment Station, Urbana, Ill., has issued Bulletin No. 123, entitled "Ear Rots of Corn," also Bulletin No. 132, entitled "Effect of Selection Upon Certain Physical Characters in the Corn Plant."

Egg Production of Hens.

Farmers have been keeping hens ever since they have been farming, at least on this continent, yet few have any accurate notion of how many eggs a hen will actually produce in a year. One of the most erroneous impressions current is that a hen of a certain breed will produce a certain number of eggs in the course of a year.

Any person that has looked into the matter of egg production will have occasion to marvel at the existence of the tables that purport to tell how many eggs a hen of each breed will produce in a year. Whence came those tables? It is safe to answer: "Out of the pure fancy of some writer."

The tables generally say that the Leghorns will produce 200 eggs each per year. Note also that it does not say how old a hen is that produces that number. As a matter of fact, the number of hens that will produce 200 eggs a year is comparatively small. The writer knows of one man who worked for many years with one of the Leghorn breeds trying to bring up the average production of the laying hens to 200 eggs per year. The best average reached was about 165 eggs per year.

But this is an average much higher than that realized by the ordinary poultry raiser. The writer remembers how surprised he was at the results of his poultry operations for a series of years when he discovered that his laying hens of all breeds had produced but 95 eggs per year on the average, anl the fowls were well cared for and well fed.

In a flock of hens there are many birds of small laying powers. The selected pen of layers is not a fair criterion on which to base egg production. Yet it is the selected pens of laying birds that have furnished many averages that are made to do service for breeds. A man in selecting such a pen is careful to exclude all fowls that are doubtful as to laying ability.

At the Maine Station, one fine-looking hen was found that had never laid an egg and never would. She helped to pull down the average of the flock. Other hens were found that produced only 25 or 30 eggs in a year. Yet those hens were fed under the best system that could be invented or discovered, for the Maine Station has been carrying on poultry experiments for many years. If many of the hens produced so few eggs under the most scientific method of feeding, what would have been the result if they had been left to ordinary farm care?

We are but just awakening to the fact that unproductive hens are very numerous and that the breeding out of that tendency is going to take a long time. Perhaps it can never be entirely bred out. A certain number of birds may always prove infertile. If we are able to eliminate th se from the flocks we can bring up the egg production.

Hens have been known to produce over 250 eggs a year, but, of course, such records are unusual. It represents the other extreme. A bird producing such a number of eggs might thereby be impaired as a producer of progeny of stamina. Overproducing may be a counteracting influence in egg producing. If all the eggs of such a hen were put into an incubator it might be found that many of them would produce no chicks at all, while others would produce weak chicks.

Food For Laying Hens.

A hen in best laying condition has surplus fat. This means that her bodily wants have been supplied and there is some food to spare. She has surplus energy. A very fat hen seldom lays well. A poor hen cannot lay well. The first part of the egg to be formed is the yolk, which contains 30 per cent. of albumen (a form of protein) and 64 per cent. of fat. Food is first used to maintain the body. New growth and production generally come from the surplus, after the bodily wants have been satisfied. Therefore, new eggs will not develop until there is surplus fat to form the yolk. The very fat hen usually does not lay because her condition has become one of debility, and because her tissues are weak and flabby. Fowls are naturally grain-eaters. A large part of their food, therefore, should be the cereals. Note the wide variation in the composition of the various grains, each one of which has its own peculiar flavor and value. Maize (corn) is an excellent grain. It is, perhaps, the grain most relished by fowls. Therein lies the danger. Fowls eat it so greedily that, it being a fattening food, they are likely to become overfat when it is fed too freely. When properly cooked, though fed every day, no evil results would follow. Wheat is, perhaps, the best grain for poultry and its by-products are among the safest and most satisfactory of foods. Heavy oats are, perhaps, next in value; light oats are a delusion. Peas are the richest, and one of the best of poultry foods. Barley is excellent.—Doris Gordon, in Australia Farmer and Grazier.

Poultry Notes.

A story is going about the country of a hen in Wesson, Mass., that has just expired at the extreme age of 17 years. It is stated that she has the record of having layed 3,658 eggs during her lifetime. Special burial services were held and the very profitable old hen was laid to rest in a rosewood coffin. The inscription "May She Lay In Peace" was cut on her tombstone. A large crowd of sorrowing friends, mostly women, attended the funeral. This average of 215 eggs per hen for seventeen years is probably very much overstated. If she did lay that number she was certainly entitled to have her funeral expenses paid.

Poultry beginners who cannot see or understand that incubators are necessary in order to build up a profitable business are reminded that incubation for the purpose of selling and shipping day-old chicks is growing, and it is based upon machine regularity in hatching a good majority of the eggs placed in the incubator.

Mary H. Burnell, of Cumberland county, Maine, sends an account of one-year's laying by 232 pullets and 34 year-old hens, making 266 in all. The year's average was 114 eggs per hen. The sales and surplus amounted to $900.91, she paid $6.60 for eggs to set, and paid $559.67 for feed, and the clear money on 266 hens was $334.64.

Mr. A. F. Hunter, in the American Poultry Advocate, mentions a poultry farm at Pittsfield, Maine, where the incubators have a capacity of 12,000 eggs at one sitting. They have hovers and brooders for 14,000 chickens at one time. There is only one variety in the place and they are Barred Plymouth Rocks.

The daily newspapers are perpetrating a good many poultry jokes on the people concerning wonderful egg-laying exploits. Nevertheless a thousand dollars a year income from a thousand hens is good money, and twelve dozen eggs per year is a splendid average for a mixed lot of hens.

BE A SALESMAN

Traveling Salesmen are the best paid class of men in the world. They earn from $1,000 to $10,000 a year and expenses. Over 500,000 employed in the United States and Canada. We will teach you to be a high grade Traveling Salesman in eight weeks by mail and our

Weeds That Are Traveling.

During the past season a community familiar to the writer has but fairly awakened to the fact that the orange hawkweed is fully estalished in their midst. Though it has been several years since its first appearance through grass seed, ignorance of its nature or indifference as to its habits has allowed it to become firmly established; and now that it has in many places crowded out other plants, people are beginning to ask as to its identity and history.

The wild carrot is a delicate plant, the numerous seeds which are produced in spreading umbels and curl up like birds' nests at once giving a clue to the observing that it is a troublesome plant. The marginal flowers of the umbel are larger than their companions, while the black sterile flower in the center leads us to think that this plant is doubly fitted for securing cross-fertilization, the central flower inviting insect life by its semblance to a six-footed visitor.

But a few days ago my attention was called to a new kind of grass which had appeared in a barnyard where hay had been bought in quantity. It proved to be squirrel-tail grass, Hordeum jubatum, too common in waste lands of the West but a stranger in the vicinity where the stray was located. As it has little to commend it, the long, barley-like beards being ornamental but not healthful to stock, the heads were gathered for a winter bouquet and the remainder of the plants destroyed. While this plant reverses the order of travel, most of our weeds having been introduced from trans-Atlantic shores and going westward, it is none the less worthy of halting.

Several of the bindweeds, cousins to our common morning glory, are among the most persistent of pests and should be regarded with distrust by all. Though the smaller bindweed seems unobtrusive on clay soils, it has proved in sandy locations one of the worst of weed pests. Its cousin, bracted bindweed, with beautiful pink and white morning glory-like flowers, seems to have the faculty of maintaining a position once gained to a remarkable degree, though seldom voluntarily wandering far from its established home. There are farms familiar to the writer upon which it has been a pest for a generation, the broken roots but increasing the number of plants, yet it has never trespassed upon adjoining fields.

Quite different are the methods of White Daisy and Canada Thistle, the light seeds of which are wafted with the wind; or the burs of a dozen tick seeds, clinging to passing objects. Interesting as they prove to the lover of science, they should have an interest quite as strong though of a different nature for the cultivator, and but emphasize the necessity of keeping the eyes open for the proper reception of all new-comers, whether by wind, water or rail, and giving them the reception which their character deserves.—Bessie L. Putnam.

What Makes the Corn Crop?

What's the matter with Illinois and Indiana corn growers? We surely are not living up to our reputation as corn growers. People used to say that lands in Illinois and Indiana were the most valuable corn lands under the sun. We are not holding our own. Connecticut looms up this year with an average yeild of thirty-six bushels per acre for the state, while Illinois, Indiana and Ohio made only about thirty-four bushels per acre. Illinois and Indiana have more corn improvement clubs and more corn growers' societies than all the rest of the country put together, but why are we lacking in results as measured by yields?

Too many have a notion that seed is all that is necessary to produce a yield of fifty to seventy-five bushels per acre. We have been studying about the best strains of yellow and white corn, and have been paying much attention to certain characteristics, of ear and kernel, but we have quite lost sight of the fact that it takes something more than good-looking seed ears to produce seventy-five to eighty bushels of corn. The yield of corn depends more upon the man than upon the variety of corn planted, and wherever we find extraordinary yields we find men who have studied their own individual propositions and have combined good field management with good seed.

If Illinois and Indiana farmers expect to stay at the head of corn states, some vigorous soil work and field management must be put behind their crops. When we read of a good Connecticut farmer getting 123 bushels of corn per acre we wonder what that man could do on our black corn soils out here. The report for last year indicates that corn growing on our black soils, under present soil conditions, has reached the maximum. We are up to a point where some soil building must be done. Some corn-making material must be put back into the soil. We make all sorts of excuses for our poor yield, and so much poor, chaffy corn; but the sensible thing to do is to look the situation square in the face and tackle the proposition right. We have tried rank-growing corn and got an abundance of fodder, but only a moderate amount of ears. We have tried white corn, because it is a common notion that it yields better on thin ground; and we have tried high-yielding strains of corn. What has it all amounted to? The best bred corn in the world will not give much of a yield on thin, weak ground.

In observing the management and crop results of our 100 farms in Northern Illinois, I have found that more is in the man behind the plow than in all other factors combined. If I were to state the factors which go to make a corn crop, I should put their importance in this order: Fertility of soil, mechanical condition, efficient field management and good seed. Without the necessary elements in the soil to produce, say, sixty to seventy-five bushels of corn per acre, no amount of work will secure such a crop; but with a well-filled store-house of plant food, then the size of the crop will depend on the quality of the seed and the effectiveness of the field work.

Increased yields of corn will come as the result of better field work. By all means plant the best seed to be had. Your good seed will be grateful for a well-prepared seed-bed and the plants will prosper in proportion as they are fed.—L. C. Brown.

HOW SALESMEN MAKE MONEY.

The fact that several of Carnegie's millionaires began their business careers with him as traveling salesmen has often been referred to as an evidence of the manner in which drummers can come to the front. Any one with intelligence, perseverance and tact can make money as a salesman. The National Salesman Training Association is sending out a book with hints on the subject, a copy of which will be sent to any reader of The National Farmer and Stock Grower who will write to the association, addressing it at anyone of its offices, either at New York, Chicago, Kansas City, Minneapolis or San Francisco. In asking for the book, write to Department 237 of the association and mention The National Farmer and Stock Grower.

A READY ROOFING THAT NEEDS NO PAINTING.

Farmers all over the country are beginning to wake up to the fact that it is no longer necessary to use ready roofings that require constant painting to keep them tight. The new style of ready roofings with a mineral surface, of which Amatite Roofing is the best known, are becoming very popular and have proven a great success.

The mineral surface of Amatite needs no painting or coating whatever, and after the roofing is laid, there is no further excuse for trouble.

A sample of Amatite can be secured by addressing the nearest office of the Barrett Manufacturing Company, New York, Chicago, Cleveland, Pittsburg, Boston, Philadelphia, Minneapolis, St. Louis, Kansas City, New Orleans and Cincinnati.

Fence users will be pleased with Kitselman Brothers' prices—15 cents a rod up. See ad in this paper and write them to-day for free catalogue.

WHY HORSES SHOULD BE CLIPPED.

Just as you throw aside your heavy overcoat and warm winter clothing in the early spring in order that you can work better, your horse should have his long coat of thick winter hair taken off. If left on, it holds the dirt and sweat, and thus clogs up the pores of the skin, and no horse in that condition can be at his best.

The clipped horse dries out quickly, gets better rest and more good from his food. He comes out refreshed in the morning and better fit for a good day's work.

Hand-power machines for clipping horses are now made extremely well and sell at a low price. What is generally considered to be the best one on the market is the Stewart No. 1, made by the Chicago Flexible Shaft Company, and advertised in another part of this paper at $7.50. Ask your dealer to get one for you, or send to the manufacturers direct. Address, Chicago Flexible Shaft Company, 182 Ontario street, Chicago, Ill.

A $5000. DAN PATCH STALLION FREE

An absolutely Free Hair Counting Contest Without Money or Purchasing Consideration and Open to any Farmer, Stockman or Poultry Breeder

Can you count the number of hairs drawn in a picture of "Forest Patch," sired by Dan Patch, dam by Monaco by Belmont. Write me for one of the Dan Patch Pictures and I will also mail you a photo engraving of "Forest Patch," the Fine Registered Stallion to be given away and ALSO Drawing Showing Hairs To Be Counted and also stating easy conditions. Every stock owner will want to count the hairs on this Splendid $5,000 Dan Patch Stallion because it means a small fortune free for some one. I paid $60,000 for Dan Patch and have been offered $180,000. I would have lost money if I had sold Dan for One Million Dollars.

You may secure this $5,000 Dan Patch Stallion Absolutely Free. "Forest Patch" might make you a fortune of $25,000 to $50,000 as a great stock horse for any community because he will make a 1200-lb. stallion with great style and beautiful conformation.

ROOFING FACTS AND FIGURES IN OUR FREE BOOK

J-M ASBESTOS ROOFING FOR FARM BUILDINGS

show why it will be money in your pocket to lay an ASBESTOS ROOF. The figures prove the economy of it. First, because ASBESTOS is the only *permanently durable* ready roofing. Second, because it is not made to be painted, coated or protected in any way. The Asbestos, being a mineral, is indestructible. Yet it costs no more per roll than some ordinary roofings which cost more to keep painted or coated than they cost in the first place.

J-M Asbestos Roofing

gives real fire protection, too. No other roofing made does this. Don't listen to "claims." Ask for the *facts*. Our facts *prove* our claims. Learn also why Asbestos Roofing keeps buildings warm in winter and cool in summer. Write today for Book No. 61 and samples.

No matter what kind of roofing you want this book will help you choose wisely.

Harrowing Winter Wheat.

The practice of harrowing winter wheat when it has been put in with a drill, as it should be, is now being followed by some farmers. Many, however, are deterred from harrowing, partly because it is an innovation, a departure from their previous methods, and the conservatism of many farmers usually keeps them from adopting any method unless they are shown pretty clearly why it is a good one. Others are deterred because they think that harrowing will probably injure the wheat. Not having been accustomed to cultivate wheat, they are loth to do so. I will state, in the briefest possible space, why wheat should be harrowed.

In many sections of the wheat country the crop is measured largely by the amount of available moisture. If the frost goes out of the ground and the spring rains come a crust is formed on top of the wheat fields. This crust gives the most favorable conditions for the evaportion of moisture. It is brought up by capillary action from far down in the soil, passes out without hindrance, and the result is that the wheat begins to show signs of drouth, often at the critical time when it is finishing up its work. By harrowing the wheat this crust will be broken up, and the evaporation of moisture will be prevented and the moisture will be stored up, so to speak, for use when the wheat is heading out and forming its seed.

Then, too, this crust covering the soil excludes the air. It should be borne in mind that the roots of the wheat as well as the leaves must have air, although not so great an amount. This harrowing aerates the soil and gives much more thrifty growth than it would otherwise attain. Wheat needs harrowing in the spring of the year just as much as corn needs cultivating when a crust has formed over the field after a heavy rain.

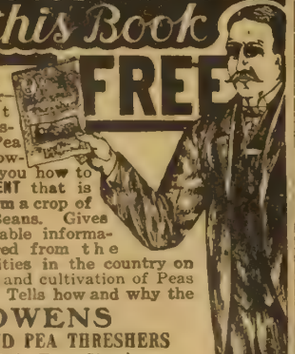
Another reason for harrowing wheat is to secure the proper depth of covering for the grass seed when sown on the wheat stubble. If grass seeds are sown upon this hard crust, a portion of them will probably roll into the cracks and germinate, but on account of lack of aeration of the soil they will have a spindling growth. A large portion of them will lie on the surface of the ground or be insufficiently covered. Hence, the way that will go the farthest to insure a stand of clover is to sow the seed before the wheat is harrowed.

This harrowing must not be done until the ground is in good condition, by which time plant growth will be pretty well established.

The implement to be used will depend on circumstances. Where soils contain considerable sand, one of the most effective and altogether the speediest tool is the weeder, with which from twenty to thirty acres a day can be covered. Where the soils contain considerable clay, and where it has been compacted by heavy spring rains, this will not prove efficient.

The next best tool is a light smoothing harrow, but in the heavier soils this will not be effective, and it will be necessary to use a harrow of considerable weight. One need not be afraid of pulling out the wheat plants by harrowing if the harrowing is done when the ground is in the right condition. Any apparent damage that may be done will disappear in the course of two or three days. While an occasional stalk may be pulled out, the rest will be cultivated and the final result will be a thickening of the stand. One of the strongest arguments for drilling wheat is that drilled wheat can be harrowed with the minimum of danger and the maximum of profit.—Wm. H. Underwood.

Let me mail you this Book FREE



IT'S worth to send for—Tells about the profit possibilities in Pea and Bean growing—shows you how to get EVERY CENT that is possible, from a crop of Peas and Beans. Gives lots of valuable information, gathered from the best authorities in the country on the growing and cultivation of Peas and Beans. Tells how and why the

OWENS
BEAN AND PEA THRESHERS
(Built in Four Sizes)

are able to thresh all kinds of Peas and Beans directly from the rankest growing vines WITHOUT SPLITTING THE SEED. The "OWENS" also shreds the vines, making them much more valuable for Fodder. Thousands of growers of Peas and Beans say that fully one-third of the valuable seed bringing from $2 to $4 a bushel, is lost threshing with a grain thresher, or by flailing.

The "OWENS" SAVES THIS LOSS. Write for our FREE BOOK and our SPECIAL PROPOSITION, the most liberal ever offered by a manufacturer. And do it NOW, while you have time to think about planting Peas and Beans next spring. We KNOW it will pay you. Write today.

MINNEAPOLIS, MINN.

Grafting Old Fruit Trees.

In practically every section of the country too many varieties of all kinds of fruit are grown and the problem that confronts us is how to grow only those that are profitable. This may be done either by cutting out the less desirable or grafting them with those varieties that are in demand.

With very large, old trees, having but a few long, bare, main branches, the expense would be too great and very little good fruit would be procured if grafted, and the sooner they are taken out the better. Those with a good supply of branches near the ground can be successfully grafted and in a few years produce good crops of the most profitable varieties.

While grafting old trees is work that anyone with ordinary skill in the use of tools can accomplish, it requires good judgment to do the work so as to obtain the best results. The aim should be to produce as far as possible a full, low head. This cannot in all cases be done in one year, therefore, such branches as are in the right position and of the proper size are grafted the first year, and perhaps some very large branches removed to force growth into smaller ones so that they may be grafted or budded a year or more later.

The tools required for grafting are a saw with fine teth for cutting off the stocks, a large, sharp knife for paring the top smooth, a thin-bladed, sharp knife for cutting the scion, a grafting chisel with which to split the stock and hold open the cleft for the insertion of the scion, and grafting wax for covering, to keep out air and water from all cuts made.

The time when grafts are most certain to grow is in the spring. In the latitude of St. Louis about April 15 is a good time for cherries and plums and about May 1 for apples and pears.

Small branches from one to two inches in diameter are the best for cleft grafting. These are cut off at an equal distance from the center of the tree at right angles to the axis of each branch. The end of the cut is then pared with the large knife and split with the grafting chisel, selecting a place where the wood will split straight. The chisel is then knocked out and the wedge driven in to hold open the cleft while the scion is being inserted.

The scion, a shoot of one year's growth, taken from the outside of the tree, is cut wedge-shaped in two ways and is inserted into the cleft so that the inner bark of both stock and scion shall come in close contact. Two scions are used in each cleft to insure success. When the scions are in place the wedge is knocked out and the two are pressed closely together.

Should the stock be small, growth will be more certain if it is tied together firmly with raffia or other soft, strong string. All cut surfaces, the end of the stock, the split and the ends of each scion, should be covered carefully with grafting wax to exclude air and moisture.

Grafting wax may be purchased of dealers in horticultural supplies or it may be made by melting five parts of rosin, two parts beeswax and one part of tallow or linseed oil by weight. When thoroughly melted together the mixture is poured into a pail of cold water and then drawn into sticks. Or it may be allowed to get nearly cold and then be cut out in cakes and pulled. It will be most convenient for use if made up into sticks of about two ounces each, and then carried to the orchard in water. In applying, a little soap, or beef or mutton tallow, will keep it from sticking to the hands.

The grafts should be examined several times during the first summer, and if the wax is running or curling it must be pressed back into place. All sprouts starting from the stock near the scions should be rubbed off, unless the graft has failed, when they should be allowed to grow until the stock can be regrafted or the sprouts budded.

Before growth begins the following spring, such stocks as were not successfully grafted and others large enough, should be grafted again and any shoots budded the previous August should be cut back to within about one-half of an inch of the bud.

When both grafts have grown, one is cut off so that the wound will heal over and make a sound branch, which it would not do if both were allowed to grow. In young orchards as soon as one finds that he has undesirable varieties he should graft them and not lose valuable time.—Wm. H. Underwood.

The Farmer Was Wild.

"Helo, old man have any luck shooting?" "I should say I did. Shot seventeen ducks in one day." "Were they wild?" "Well—no—not exactly; but the farmer that owned them was."—Exchange.

It exceeds anything that this live concern ever issued before, and is sent free on simple request. The Ohio Carriage ufacturing Company pay the postage this catalogue address, H. C. Phelps, ident, Station 204, Columbus, Ohio.

Reclaiming Worthless Swamp Land.

It is surprising how few years are required to bring about great changes, both in city and country.

When we left the old home county less than ten years ago there were a great many acres of low, undrained swamp land lying along a creek which during the summer months was a very small stream, but in times of high water stretched out over a wide surface. This land was never considered of enough value for taxation, and as the ground was covered mostly with rushes and rank weeds, it was practically of no value for pasturage for stock.

One enterprising owner of some of this land experimented with a small portion and discovered that it was an ideal onion and celery soil. The question of drainage was vigorously agitated and with success, and since this was accomplished the transformation of this worthless land has indeed been wonderful. When we visited this section during last summer it seemed almost incredible that the fine fields of celery, onion and some other products were occupied with the usual swamp growth and worthless for growing crops.

In conversation with one of these growers we learned something about the methods used in producing such fine results.

First, after this land had been drained came the removal of all the surface growth. This was quite a laborious process, but was necessary, and was accomplished by means of cutting and carrying away in wagons, but the thick growth of rushes, brakes, etc., mixed as it was with the muck soil, made an admirable addition to the compost heap.

The uncovered soil was then left for some months to "weather." An application of lime was then given to neutralize the acids which new muck soils usually contain.

Although it is generally conceded that muck soils abound in richness, this richness relates only to nitrogen, as only small amounts of phosphoric acid and only traces of potash are found, and as no soil is complete in fertility without these elements, it was necessary to apply them. 150 pounds of muriate of potash and 200 pounds of bone superphosphate were applied broadcast before the ground was completely fitted for sowing onion seed or setting celery plants. The result of the whole was a most luxuriant and vigorous growth. The onions were of immense size, but crisp and extremely mild in flavor, rivaling the Bermudas, while the celery was the finest we had ever seen or eaten. Both of these products command top prices in Cleveland, where most of them are sold.

Another grower upon adjoining land used only one-half the amount of potash and phosphoric acid and loses a large percentage of his crops by blight and poor keeping. This is because the nitrogen content of his soil is greatly in excess of the minerals, and both onions and celery are too soft. The minerals, and particularly the potash, give solidity or firmness to these vegetables.—E. A. Season.

Pasturing Hogs.

In pasturing hogs it will be found a good practice to construct a number of half-acre lots, placing a portable house in every other one and giving a sow and her pigs an individual house. By the time they have eaten or stamped down all the green stuff on this half acre, the house can easily be lifted over the fence to the next lot and the hogs moved where they will have plenty of fresh, green pasture. The lot they have been taken from can then be plowed and sowed in rye or forage crops that grow comparatively fast, so that by the time the hogs have exhausted the second lot they can be returned to the original one. Thus the two lots will support the sow and pigs until the pigs are old enough to wean, and will, if properly cared for, support the sows the year round.

It will also be found a good practice to have a larger lot, if possible, of from five to ten acres, to turn all the pigs into after they have been weaned and allow them to remain there until they are four or five months old, feeding them in the meantime and allowing them plenty of ground and exercise so that they may develop bone and muscle and be in a good healthy condition to go into the feed lot.

In building portable houses it must be remembered that they should provide good, clean, dry sleeping quarters. —Wm. H. Underwood.

GRAND SWEEPSTAKES WHITE CORN.

Liberal Corn Prizes Offered by The National Farmer and Stock Grower of St. Louis, Mo.

The best corn-growing farmer in the United States of America is Mr. L. B. Clore, of Johnson county, Indiana. His reputation has been made, sustained and become illustrious by the exhibits of Johnson County White Dent Corn of his own breeding and raising.

Mr. L. B. Clore makes no pretense that he is any better or more capable than any other corn-growing farmer, but when he makes an exhibit for a grand prize he gets it. He won the grand sweepstakes at the National Corn Show in 1908, also in 1909.

Mr. L. B. Clore has placed a certain amount of his Grand Sweepstakes White Corn at the disposal of the editor of The National Farmer and Stock Grower, to be used as subscription premiums.

Therefore, anyone who will send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower can select one pound of Clore's Grand Sweepstakes White Corn, and we will send it postpaid by mail as a free premium.

Furthermore, if any of our patrons grow corn from premium seed corn furnished by us as a free premium and exhibit the same at their own State Fair—for every championship premium won by said corn we will pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars, and for every third prize five dollars, provided that these prizes are won during the year 1909 with corn grown by our subscriber from the seed corn furnished by us to him as a free premium.

These prize offers are good in every state where a State Fair is held, and are also good at any Interstate, National or International Show. If any of the premiums are won at the National Corn Show of 1909, we will double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us $25.00; and if winning a sweepstake prize, will receive $50.00 from us. Then, if winning a first prize at the National Corn Show, the exhibitor would receive fifty dollars additional from us, and, if winning a sweepstake prize, would receive $100.00 from us, or a total of $225.00 in all. All this is possible with ten ears of corn. Mr. Clore did it from his own seed corn, and our readers will be furnished seed of the same family and breed of corn from which all the Clore premiums have been won. We are also offering a similar line of premiums for yellow corn, which will be found in another column.

SUBSCRIPTION BLANK.

I Make the Best Scale on Earth

And I can prove it. Forty-five years ago I commenced selling scales to the user letting him have a free trial and never asking a cent in return until he had found that my scale was exactly as represented. I have patented the only reliable PITLESS STOCK SCALE, complete with steel frame, compound beam and beam box without extra charge, sold at a fair price. My scale is not cheapest, but BEST. I will send you full information, a scale on approval or book, "Reasons for Owning a Scale" if you address "JUST Ile Pays the Freight."
91 C St., BINGHAMTON, N. Y.

HAVE YOU A GOOD SHEEP-SHEARING MACHINE?
Before you shear your sheep, why not investigate the merits of the hand-power shearing machine? The Stewart machine has a reputation of doing the work extremely well and getting enough extra wool from a small flock to pay for itself. The machine is advertised on another page of this issue.
Ask your dealer to get one for you, or write direct to the manufacturers, the Chicago Flexible Shaft Company, 182 Ontario street, Chicago, Ill.

DISTEMPER CURED OR NO CHARGE.
The Binkley Medical Company, Nappanee, Ind., manufacturers of Frazier's Distemper Cure, has for the past twenty-five years been selling it under a guarantee to refund the money if the remedy ever failed. This is of itself evidence of the unusual value of the remedy. In all this period the sale of "Frazier's" has constantly increased until it is used by over a half million breeders and farmers. It is time that those not familiar with it should investigate it. If your druggist will not supply you, the above firm will prepay all charges on direct orders. $1.00 size holds three 50-cent bottles.

Tobacco Kills

A new discovery, odorless and tasteless, that ladies can give in coffee or any kind of food, quickly stopping the tobacco habit without his knowledge. Anyone can have a free trial package by addressing Rogers Drug & Chemical Co., 801 Fifth and Race Sts., Cincinnati, O.

COMMERCIAL USES OF THE CORN PLANT.

Article Winning Second Prize in Contest on Above Subject at the National Corn Exposition, Omaha.

Aside form the ear, but a small part of the matured corn plant is used to feed stock. Our farmers as a whole sell but very few cobs, leaves, stalks or husks, unless it be to their neighbors. Thus the great majority of our corn plants except the ear portion are never taken away from the farm.

With most of us our corn stalks are simply used as a feed for live stock. After the corn is husked we turn into the field a horse or two and a few cows. We let them "rough it a while." They eat very little of the stalk itself. They just nose around them trying to find a few nubbins that the hired man overlooked.

The leaves are a little more valuable. They are very nutritious and make excellent food for the stock. They serve a good purpose if the old cows get a chance at them before the wind blows them away. It does not take very long for a wind to make a corn stalk bare after the leaves have become crisp and dry. For this reason the farmers cannot make very good use of the leaves or the stalks except when they feed the plant in the form of fodder or silage.

With the exception of the ear, we make a more practical home use of the cobs than of any other part of the plant. Nothing makes a better fire for the kitchen stove in the summer. Nothing is better to start the fires in the cold winter. Three tons of cobs have a fuel value equal to one ton of hard wood.

Some farmers scatter their cobs over the fields, believing that they are valuable as humus. Cobs do contain considerable potash, but they do not amount to very much as a manure.

Some twenty-five years ago, when the farmer was almost giving his stock away, when he was compelled to sell the duck and goose feathers, corn husks were put to a practical use. They were used in mattresses and bed-ticks. But nowadays even the renter has a feather bed. Husk ticks have generally gone out of date, except in bunk houses of construction companies.

Thus far we have discussed the commercial uses of the corn plant upon the ordinary farm. But to-day the corn plant has other important uses. From it are made many articles of commerce. In some localities the stalks are stripped of the leaves and ears and bound into bundles. They are then shipped to manufacturing plants. Here the pith is taken out by means of a depithing machine. The soft pith is then rolled into a fine grade of paper. From the coarser parts is made a stiff box board. The use of the corn stalk along this line is a promising one. The pith makes a good paper and is comparatively cheap. Manufacturing companies can make paper from corn pith two or three times as cheap as they can from wood pulp or rags.

Some one has said that we need our corn to insure prosperity in times of peace. Uncle Sam believes he can make good use of it in protecting his people in times of war also. The pith of the corn stalk is finding a ready use in the construction of battleships. It is used as a packing in the hulls. Pith readily absorbs water. Thus when a shot penetrates the shell of the ship the pith swells and closes the holes.

After the pith has been removed, the outer shell of the stalk is ground into a meal. This meal is called "The New Corn Product." This is used to some extent in the preparation of stock foods. The leaves are frequently used in this manner also. Leaves are very high in nutritive value. Along with the New Corn Product they are mixed with other materials, such as dried blood, molasses, sugar-beet pulp, apple pomace, distillery and glucose by-products. We call the resultant mixture a stock food.

Fom the husks are made a cheap grade of hats used to a large extent in the Southern States. In the Northern States we make a coarse door mat out of the husks. They are also used as a packing in the manufacture of horse collars.

The woody part of the corn plant, such as the outer shell, is composed largely of cellulose. Cellulose is used in the manufacture of explosives. It is treated with chemical compounds, such as nitric and sulphuric acids. Gun cotton is the result. Nitro-glycerine, a very powerful explosive, can be very readily made from the hard, woody portions of the corn plant. From this cellulose is also made what is called pyroxylin varnish.

There are few of us but that have seen the corn cob pipe. The old German farmer always brings it to town with him every time he comes with the cream. A large number of these pipes are made every year. In St. Louis the "Missouri Meerschaum" is made from the cob. For this kind of pipe they use a very large cob. Such cobs sell for about $25 per thousand.

After an ear of corn has been shelled there is a soft, fuzzy coat upon the cob. This is called "corn down." It is used to a large extent in padding mattresses.

The corn plant will always be used in the manufacture of many products. Every year brings with it a few new uses of the corn plant. Its cheapness of production leads us to believe that the amount and number of such products will continually increase. But for years to come these uses will not directly affect the majority of our corn raisers. These new industries develop largely in the cities. The needs are to a large extent supplied by some certain locality or by the surrounding country. Since we raise a great deal of corn, since the cost of shipping much bulky material is great, the majority of our farmers will not, in the near future, be vitally concerned about the commercial uses of the corn plant outside of those common to the home place. The farmer will spend much more time driving the cows to and from the stalk field and a great deal more time picking up cobs for the kitchen stove than he will thinking about a possible new product of the corn husk.—G. W. Patterson, Ames, Iowa.

Care of Grass Lands.

The grass lands have proved to be among the most profitable areas on our farms. They are not, however, so much appreciated as in Europe, where they long ago began to be taken care of by the use of every measure that would protect them.

The American meadows suffer most in the spring, for it is then that they are most badly tramped. This is due to the fact that in the fall of the year the cattle are not usually turned into the meadows when they are known to be soft, and the fall frosts soon tighten up the ground. But in the spring the meadows are in the process of thawing and become soft before the owner realizes it and when he does not suspect it. Also in the fall the old grass on the meadows was quite long and so protected the soil below it to some extent, while in the early spring the grass is shorter and deader, and the bare soil is easier reached by the hoof of the tramping animal.

The composition of the soil will determine how much damage is to be done by the tramping. On a sandy loam the tramping probably has the least effect, for the soil is not injured by being compressed. It does not become glazed so as to keep out the air, and the roots of the plants can quickly develop in it, for they can get the oxygen they need.

It is far otherwise in heavy clay soil. The hoof of the animal presses the wet clay together and it puddles or glazes. The air cannot get through the glazed portion, consequently the oxygen, which is part of the air, cannot get through into the soil. Therefore there is no plant growth.

Remember it is the exclusion of the air from the soil by the clod that does the mischief. Were it not for this, the growth of plants would quickly re-establish the old conditions in the meadows.

$4.24 Paints this House with "Tower" Paint

Best Paint in the World Body and trimmings, two coats. Your choice of colors. Then you will not need to paint again for about 8 years. That is 53 cents a year for improving the looks and value of your property. This low priced and long lasting paint is only procurable of us. It is the highest grade paint in the world. We have other paint much cheaper than this and much cheaper than any other house can sell, as low, in fact, as $2.50 for a house like this. But it will not look as good nor last as long as our reliable "Tower" paint at $4.24, though fully as good as other firms sell for their best paint at a much higher price.

Before you buy get our big 1909 Paint Book and Color Card

It tells you how to estimate cost of paint for any building, how to combine colors, how to save money and do the job right—in fact what you ought to know about buying and using paint. Color Card shows about 125 actual samples of our paint.

What Size Building Are You Going to Paint? Let us tell you in dollars and cents our low price for paint enough for body and trim two coats, to do the job in a perfect manner and at least cost. We make no charge for this information.

Get Our Paint Book Now. Figure out the cost, best colors, etc. A copy will be sent free. Just write us a postal card or letter and say: "Send me your new House and Barn Paint Book and Color Card," or cut out this ad., write your name and address on the margin and mail to us.

Branch House 19th and Campbell Sts. KANSAS CITY **Montgomery Ward & Co.** Michigan Ave., Madison and Washington Sts. CHICAGO 78

The great damage done in the spring is also due to the fact that the clay soil that is compacted in the spring dries out with the wind and the sun, and the mass becomes hard and remains so. When we consider that a single animal weighing a thousand pounds will make thousands of these clods in a single day, we see how very injurious it is to have cattle and other stock pastured in hay meadows in the spring if the soil contains a good percentage of clay. In the fall, when clods are made, they stand a chance of being disintegrated by the frosts of winter.

The care of grass lands involves many other things than merely keeping off the cattle and other stock in the spring time. The grass land needs to be studied as thoroughly as does any other part of the farm. The soil that comprises the grass land needs to be known more intimately than we have ever known it. Rotations and the sowing of improved varieties of grasses will increase the annual income from these lands. The matter of fertilizing grass lands is one which has been too generally ignored.

How much attention is being given the grass land is usually indicated by the thickness of the sod. The meadow that has been farmed for a long series of years and still has a thick sod is probably being well cared for. Such a meadow is in shape both to resist a hard drouth and to produce good returns in grass.

HUNTING TROPHIES.

The influence of the Sportsman's Show and the universal interest in ex-President Roosevelt's coming hunting expedition to Africa have brought the hunters of big game out in force with their trophies of the forest and hunting field.

So far the advantage seems to lie with Bill Hillis, who has filed claims for the Bear Hunters' championship of the great Northwest. To support his contention he sends in two splendid mounted bear skins of remarkable proportions. One is the skin of a giant grizzly, shot when its heavy fur was in its prime. Its claws offer extraordinary proof of the grizzly's vicious fighting equipment. The second skin is that of a polar bear bagged by Hillis in Northern Alaska, and is of such size that it fills the large Broadway window of the M. Hartley Company, where these trophies are displayed. Both these huge brutes were brought down by a .35 Remington auto-loading rifle, one of the powerful arms which have an important place in President Roosevelt's African hunting trip. —From the New York Times, March 3d, 1909.

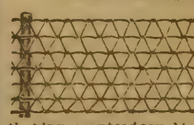
The last government land in Phelps county, Missouri, was taken on March 19 by Booker H. Rucker, of Rolla, who cash-entered 480 acres. This was in several tracts of from forty to eighty acres. The price paid was $1.25 an acre. It is said that little of the land is suitable for cultivation.

Wire & Fencing

At Wrecking Prices!

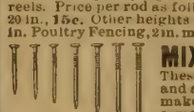
Here's the *greatest* opportunity ever presented to buy Wire Fencing and Nails at an enormous saving. There's good reason why we can sell our merchandise for *less money* than anyone else. We purchase our goods in an entirely new and original way. No old-time methods about our business. We recently purchased the contents of a barge sunk in the *Ohio River*, containing *20,000 kegs o Wire Nails*, besides thousands of reels of high-grade Barbed Wire, Wire Fencing and much additional wire product. Our customers get the benefit of our wonderful operations. The Fencing that we are offering in this advertisement is strictly first class in every way. It is as high-grade galvanized material as is manufactured. Nothing better. Equally so the Barbed Wire offered is the finest and best manufactured. It is unimpaired and just as good as the regular first-class material that you buy from your *high priced* dealer. The Nails are offered just as they are. No deception about our business. *We want satisfied customers everywhere.*

SPECIAL FENCING SALE!

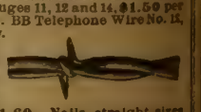


We offer 100,000 rods of heavy galvanized fencing, either diamond mesh like illustration, or square mesh. Fencing that is guaranteed equal to the very highest grade manufactured. We have it in all widths. It is put up regularly in 10 and 20 rod reels. Price per rod as follows: 18 in., 14c; 20 in., 15c. Other heights in proportion. 26 in. Poultry Fencing, 2 in. mesh per rod, 28c.

Galvanized Barbed Wire, $2.45 per 100 lbs. Two or four point regular galvanized Barbed Wire, put up on reels, per 100 lbs., $2.45. Painted Barbed Wire, per 100 lbs., $2.25. Our Special Galvanized high-grade, light weight Barbed Wire, put upon 80 rod spools, price per spool $1.80. Painted Twisted Wire, per reel, $2.00. **Galvanized Fence Wire, $1.50 per 100 lbs.** At this price we will supply you new Galvanized Wire Shorts. They are put up 100 lbs. to the bundle. By shorts we mean wire in lengths from 50 to 200 ft. Good for all general purposes. Our price on gauges 11, 12 and 14, $1.50 per 100 lbs. Other gauges in proportion. BB Telephone Wire No. 13, $2.85 per 100 lbs. *Write for catalog.*



MIXED WIRE NAILS, PER KEG $1.60



These Nails were on board barge sunk in the Ohio River and are more or less rusty. They are practical for use and make a fine handy assortment. Put up mixed, just as they come, 100 lbs. to the keg. Sizes from 3 to 40 D. Per keg, $1.60. Nails, straight sizes just one kind to a keg with slight surface rust, sizes 3 to 60 D; also Casing Nails and Finishing Nails, all kinds: price per keg of 100 lbs., $2.00. First-class bright, clean new Nails, 20 D common, per keg, $2.20.

Ask for Our Mammoth Bargain Illustrated FREE CATALOGUE No. C. P. 319. It shows 10,000 bargains bought by us at Sheriffs' Sales, Manufacturers' and Receivers' Sales. Also explains our wonderful Marine and other Wrecking operations. Shows everything in the line of material and supplies, including high-grade Furniture, Household Goods, Rugs and Carpets. Give us a trial. Write today.

CHICAGO HOUSE WRECKING CO., CHICAGO, ILL.

The Trees in the Garden.

On nearly every farm are trees in the rden or near it. With proper condi-ns of culture, the trees are benefited their nearness to the cultivated eas. But in many cases the reckless-ss of the plowing and subsequent iture injure the trees.

The writer has seen repeated illus-ations of this, where well-planted aces came into possession of people ought up in the city. The reckless-ss of the plowing resulted in the ees being checked in their growth and ndered liatle productive.

An illustration of this kind came under e observation of the writer last year. man near him had developed a fine me place with a garden, fruit trees d shrubbery. In the garden he had inted a number of plum trees and erry trees, and by the side of it a mber of pear trees.

These trees had made a fine growth the six or seven years since they were anted. The original owner was care-l to keep the plow far from them, and ch year moved his gardening opera-ons farther away, as the roots of the ees annually reached out into the cul-ated space.

Last year the place passed into the nds of a city man, who knew nothing out such things as the progression of e roots. He hired a village teamster do his plowing for him, and the mster showed his ignorance of tree lture by plowing close up to the trees d even around them.

One fine cherry tree was loaded with ssoms, but it will probably have few it this year, on account of the severe atment it got last spring, which was lowed by a severe drouth in summer. least three-fourths of the roots were t off, and these cut-off roots were the rts engaged in collecting most of the d and moisture.

The tree is a large one and has in the mmer time a large amount of foliage. e natural result will be that the tree ll do well if it is able to elaborate ugh food for its foliage this coming ason, to say nothing of producing a p of fruit.

Around the pear trees, the plowing s even more severe. In the case of cherry tree, the branches forced the es to keep three feet or more away m the trunk, but the pear trees, ng upright in growth and being still ng trees, had no wide branches with ich to protect themselves. The plow s run deep to within eighteen inches the trees, and each tree now stands a little island of sod.

t will take years of time for these es to recover from the treatment y have received, and if the same atment is repeated each year, the s will amount to but little for fruit duction.

n a deep prairie soil, the trees would d to send their roots down, and so uld be able to protect themselves and ure food and moisture in consider-e quantities. But these trees are heavy clay, and the surface soil only rich in humus and available plant d. The trees on this soil tend to ral branching more than they would deep prairie soil. Therefore the nage is more serious.

Pruning the Apple Tree.

The apple is the most cosmopolitan of hard fruits and the one about which re seems to be more varied opinions regard to the pruning of it. Every ple grower is confronted every win-ne his trees. While pruning is a with the question of how best to rm his trees. While pruning is a ural process it should be avoided much as possible as the tree gets er. The heaviest pruning, in pro-tion to the amount of tree top, is e during the first two or three years he tree's growth. During this time apple tree should be properly ted and should be well pruned, so when it comes into bearing it will be necessary to prune it severely. wo forms are generally considered he starting of the young apple tree the orchard—the low and high-ded tree. The choice of either one these forms depends to a great extent on the cultural methods to be followed by the orchardist and upon the climatic conditions. The high-headed tree is perhaps better suited for northern and eastern conditions, while the low-headed tree is better adapted to our section of the country.

The first pruning of the young apple tree, after it has been transplanted to the apple orchard, should be carefully done, as at this time we determine the height of the trunk. The top should be cut back to about twenty to twenty-four inches from the ground. The following spring a number of limbs will develop from the trunk. Three to five limbs only should be allowed to form the scaffold. At the next pruning, the following spring, these scaffold limbs are again cut back somewhat, and any interfering limbs are also removed. At the third and even the fourth pruning the limbs should be cut back and the tree rounded up generally. By this method of pruning the tree is shaped up and it may be properly started.

While there are some fruit growers who claim that the bearing apple tree should be cut back every year, the nature of the growth at this time in this climate does not warrant such practice, and on the whole the results are not so satisfactory. The bearing tree should be pruned as lightly as possible. It does not produce the same rank growth that the young tree does during the first few years. A great deal of the vitality of the bearing tree is used up in the production of the fruit, and in fruit spores for the following crop. While the tree does not require severe pruning it should be pruned a little every year. All the dead and broken limbs should be removed as well as those which interfere. Avoid the cutting of large branches.

The limbs should be cut as near the trunk as possible so that the wound may heal over quickly. Never cut limbs so as to leave a stump one or more inches in length. Such stumps if left never heal over. The healing of the wound depends on the activity of the cambium layer. This layer is most active in the spring after the tree starts to growing. The longer the wound remains exposed the more it will dry and crack. Wounds which are made in the fall or mid-winter necessarily remain longer before the cambium layer begins to grow over them than those made in the spring just before the tree starts to growing. While trees can and may be pruned any time during their dormant period—that is during the fall, winter and spring—the preferable time is in the spring, shortly before growth begins.—Fabian Garcia of the New Mexico Agricultural College.

"Some men seem to be as anxious to separate you from your time as others are to separate you from your money."—Chicago News.

AGENTS WANTED

We want men who are not actively engaged in business to act as our agents. We pay liberal cash commissions. Write for our catalogue and full particulars.

ON CREDIT

Buggies
Only $10. Cash.
Balance $5 a month. Warranted for 3 years.

Surreys
Only $25. Cash.
Balance $7 a month. Warranted for 3 years.

Farm Wagons
Only $15. Cash.

From Our Factory To You

FREIGHT PREPAID

On Breese Bros. Rubber Roofing

This remarkable new selling plan will save you money on the highest quality old reliable Breese Bros. Rubber Roofing. This is the most liberal offer ever made on a high grade roofing.

Look at the low prices quoted and compare them with others, and remember that these prices include freight charges. You will find that you cannot buy anything but the cheapest sort of roofing at this price, through a dealer. We are the only manufacturers of high grade roofing that offer to sell direct to the consumer at **wholesale factory prices.**

And **Breese Bros. Rubber Roofing** is the very highest quality on the market.

Every roll of Breese Bros. Roofing that leaves our factory is covered by our absolute guarantee to be **water-proof, fire-resisting** and durable.

It is made of long-fibre, wool-felt, saturated in asphalt by the special Breese Bros. process and heavily coated on **both sides** with flexible, water-proof compound.

Costs one quarter as much as shingle and lasts twice as long.

Lowest Factory Prices

Freight Prepaid on 100 lbs. or more

35-lb. Roll, 108 sq. ft., 1-ply **$1.35**

45-lb. Roll, 108 sq. ft., 2-ply **$1.85**

55-lb. Roll, 108 sq. ft., 3-ply **$2.25**

Write for FREE Samples to Test and Free Booklet

Get our free, liberal samples of 1-ply, 2-ply and 3-ply Breese Bros. Roofing. Put them to every test you can think of, prove to your own satisfaction that it is the best roofing made.

When you buy Breese Bros. Roofing you are protected for years to come because you are dealing with the responsible makers, whose guarantee is absolute. We stand ready to make good on every claim.

Longest Guarantee and Prompt Safe Delivery

Write us at once for the free samples and booklet or order direct from this ad. Money back if not satisfied.

We pay the freight to all points east of the western boundary line of Minnesota, Iowa and Missouri and north of the south line of Tennessee. If you live beyond, we pay it that far.

This remarkable, low-priced special offer may not be made again. Take advantage of it and write us now—today.

Stomach Troubles

Vanish Like Magic

FREE to Every Man or Woman

Would you like to eat all you want to, and what you want to, when you want to, without a chance for trouble in your stomach?

Would you like to say **farewell** for the rest of your life to Dyspepsia, **Indigestion**, Sour Stomach, Distress after eating, Nervousness, **Catarrh of the Stomach**, Heart Fluttering, Sick Headache and Constipation?

Then send me 10 cents to cover cost of packing and I will mail you absolutely free one of these wonderful Stomach Drafts. They regulate the bowels, relieve soreness, strengthen every nerve and muscle of your stomach, relieve you at once and make you feel like a new man or woman. So write today enclosing 10 cents for the postage, etc., and get one of these wonderful Stomach Drafts that are celebrated because they cure where medicines fail. Write Dr. G. C. Young, 304 National Bank Bldg., Jackson, Mich.

The Twice-a-Week St. Louis REPUBLIC

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Democratic newspaper in the United States. We highly recommend this paper.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

On account of the interest in the present political campaign we are able to combine both of these papers for the price of one.

SEND US ONE DOLLAR

and we will mail to your address **The St. Louis Republic Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years.

Address,

EVENTS SUBSCRIPTION AGENCY,
3552 Vista avenue, - St. Louis, Mo.

FACTS ABOUT INCUBATORS.

Hard facts, instead of loud boasts, are what the modern poultryman is looking for. He is a thinking, studious man. He does not want to be told what he wants in the line of incubators. He can decide this question for himself better than anyone else can decide for him. When he reads up on the subject, he does not want to read the claims of any one manufacturer for any particular incubator. He wants to know about them all.

The Sure Hatch Incubator Company of Fremont, Neb., and Indianapolis, Ind., has realized this fact, and has therefore issued just this kind of a book. The Sure Hatch Company is composed of practical poultrymen.

Success with incubators is not the result of chance. The science of artificial hatching is based on facts, not theories. The price of an incubator is not a safe guide, for it is easy to build them cheap.

The book gets right down to foundation principles. Makes everything plain.

The Sure Hatch Company has printed, for free distribution, several thousand copies of The Incubator Book. It contains more good, practical help for poultry raisers than any other book ever sold for $2.00, yet it is free for the asking.

Address, Sure Hatch Incubator Company, Box 40, Fremont, Neb., or Dept. 40, Indianapolis, Ind.

Horticultural Notes For April.

April is a very busy month for the horticulturist. Spraying, pruning and planting all come more or less together, and it is often hard to decide which work shall have precedence. Spraying for the San Jose scale cannot be done after the buds open, for both the oils and the lime-sulphur wash are fatal to leaf and flower tissue. Kerosene emulsion may be used, but is not a popular mixture. Where the brown rot is prevalent, it is well to give one spraying with copper sulphate (bluestone) and water, four pounds to fifty gallons, before the buds open; after the blossoms have fallen, it must be changed to the regular Bordeaux mixture by the addition of four pounds lime. In the case of the peach, cherry and Japan plums, only half this strength may be safely used, altering it to a 2-2-50.

Nearly all forms of vegetation require pruning, but after the second or third year it should not be necessary to do but very little cutting on the apple, pear, cherry and plum, and the less that can be got along with the better. In the case of the peach, annual pruning is an essential to profitable fruit production. The fruit of the peach is borne only on the wood which grew the preceding year, and for this reason nature endows this tree with a strong growth, the shoots usually growing three feet and more. As near as any rule can be laid down, it may be said that this new growth should be cut back from one-third to one-half. The Japan plums, which in growth much resemble the peach, should be pruned in the same way as long as they make this much wood.

The roses should be cut back quite severely, losing a good part of their old wood. To the unknowing the operation of pruning appears to be a weakening process, analogous to amputating a human limb, but this view is only true in certain cases, such as removing large limbs from bearing fruit trees. In young trees and generally throughout the plant kingdom the removal of a portion of the wood by pruning, when done in the dormant period between the fall of the leaf in the autumn and its reappearance in the spring, acts as a stimulator to stronger growth instead of a weakener. In fact, it is a well-known rule that the weaker the plant or vine the more severely should we prune. Where only a meager growth was made last year, the plant will be greatly strengthened for this year by cutting it nearly all back.

In the case of the grape, the cane should be cut back to only two buds at planting time, and this should be repeated the second spring. The canes of the second summer, if strong, may be permitted to bear sparingly the third year. The grape offers perhaps the best example of the salutary results of excessive pruning, for in its case the removal of the old wood is indispensable to the production of good fruit and the continued health and vigor of the vine. If not pruned, or if too much bearing wood be left, too much fruit will set and the vitality of the vine be so weakened that the next year's crop will be a failure and the very life of the grape jeopardized. About thirty buds are usually enough to leave on a vine, and these may be distributed over two or more arms or canes, according to the system of pruning practiced.

Almost equally important as top pruning is root pruning. Formerly it was thought that the more and longer roots to the young tree or plant the better. This theory necessitated the digging of large holes and the careful spreading and distribution of the roots through the soil, thus making the work slow and expensive. We know now, however, that long roots are a positive detriment, since they consume for their support a great deal of the reserve food of the plant. Neither do they insure a better root system or quicker growth in the plant, for as a matter of fact they do not grow any more when once transplanted except in diameter. All further root growth is by means of new rootlets which make their appearance in large numbers from the cut ends of the old roots and to some extent from their sides. These rootlets are more vigorous when formed near the main stem of the plant and appear in greater numbers.

Dr. Stringfellow, of Texas, proved that trees could be successfully planted in holes made with a crowbar and filled with liquid mud. In this case the roots were cut back to mere stubs. Tree roots should be cut back to about four inches in the case of yearling nursery stock and to about six inches for two-year-olds. Young grape vines can be shortened to about six inches and other kinds of stock in proportion. This effects a great saving in the labor of planting, as the holes need be neither wide nor deep. The depth should be determined by the former depth at which the tree stood. In the case of all plants with fibrous, flexible roots, the quickest method is to use a spade, making a V-shaped cleft; drop the roots into this and cover with a simple pressure of the foot, taking care that the opening is tightly closed from top to bottom. No air holes must be left around the roots, for they prevent root growth and allow drying air to enter and shrivel the cambium layer. Raspberries, blackberries, grapes and all such classes as well as small trees with only fibrous roots can be expeditiously and safely set out by this method.—L. R. Johnson, Cape Girardeau, Mo.

WORLD'S CHAMPION EAR OF CORN.

Now that every farmer who is up-to-date in his method, pays strict attention to his seed corn, we think it will be of interest to our readers to see a likeness of the man who grew the Grand Champion Prize Ear, in competition with 75,000 ears of corn exhibited at the National Corn Show held in Omaha, Neb., during the past winter.

The breeding of seed corn has now reached such a high plane of perfection that it requires a man of unusual experience, judgment and ability to produce prize winners.

Mr. Overstreet not only won the first prize for the single ear, but also the first in best exhibit of twenty ears, and first in sixty ears of corn.

In addition to these three prizes he won several others in different classes, the above three being of the nature of sweepstakes, open to any exhibitor.

While there are many elements entering into the growing of corn of this class, Mr. Overstreet believes that special attention should be paid to the manner of planting, particularly as to the accuracy of drop.

MR. JOE R. OVERSTREET,
Franklin, Ind.

He says: "An accurate drop is most important, next to good seed and good seed bed and with a Deere No. 9 edge-drop planter dropping two grains in one hill and three in the next, which this planter does to perfection. You will get a stand of 2½ stalks to the hill, 3 feet 6 inches apart. With favorable weather conditions I can grow 100 bushels to the acre easily, and find prize winners easy picking.

The Deere No. 9 planter is the only planter I ever owned that I can plant my corn and get exactly any kind of a stand I want."

Of course Mr. Overstreet has made a specialty of seed corn growing and his results are perhaps somewhat better than the average farmer will be able to obtain, but the above shows what can be done when the proper attention and care are given and such results serve as a very forcible object lesson to all farmers of the corn belt.

The Deere No. 9 planter used by Mr. Overstreet is manufactured by Deere Mansur Company, Moline, Illinois. If you wish further particulars write and ask for the latest Corn Book and please mention this paper.

Low Fares To MONTANA

Crop figures for 1908 prove that **Montana** is an excellent field for profitable farming. Secure a farm of your own there now.

Fertile land at reasonable prices. Homestead lands are still plentiful in Montana close to the new towns on the

The $5,000 Stallion Contest.

It does not cost anything to go into the contest. Forest Patch, son of Dan Patch, 1:55, is the reward. The contest is mentioned on page 19. We hope a lanrge number of our readers will enter this contest and that one of our subscribers will win it.

In one of our best poultry papers—The Standard, of Quincy, Ill.—a market authority states that during summer monhs the cockerels ought to be removed from the laying hens. The unfertile egg has no germ to develop by heat, and it reaches market untainted and in splendid condition.

THE DOMESTIC SHEEP.

There is one modern writer on Sheep industry who has made his mark. It is Dr. Henry Stewart. He has written a book entitled **The Domestic Sheep.**

It is up-to-date in every particular. There are 384 pages, and besides going into the subject in a practical way there are illustrations of every breed and every subject belonging to the industry. For $1.50 we will send **The National Farmer and Stock Grower** for one year and one copy of **The Domestic Sheep.** This is the time to study the sheep business. There is money in it. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Colorado Lambs at St. Louis.

During the first twenty days of the month of March, 1909, about 15,000 Colorado lambs were sold at St. Louis National Stock Yards. There were forty-seven different sales, the average was 69 pounds, and the average price was $7.36 per 100 pounds. The lowest price was $6.60 per 100 pounds, and the top price was $7.75 for a choice lot averaging 73 pounds. At any time during this period a choice lot of lambs were good for $7.75 per 100 pounds. The average weight of eight lots selling at $7.65 or better was 73 pounds; the average of three lots selling below $7.00 per 100 pounds was 65 pounds. The heaviest weight for a straight load of lambs was 83 pounds, and these sold at $7.75 per 100 pounds. St. Louis is developing into a first-class market for Colorado lambs and the shippers appear to be very well satisfied with the result. Later in the month lambs averaged higher.

"At the Sign of the Golden Fleece."

An article on sheep husbandry entitled as above has attracted much favorable attention, and because of the great demand has been reprinted in the form of a booklet. The article was written by Mr. John Clay, of the firm of Clay, Robinson & Company, and he has promised us that he will send out free copy to any of our readers who may write for it. Mr. Clay is a great sheeping and market authority, and all he writes about sheep is practical as well as poetical. The booklet contains several of the most beautiful pastoral pictures we have ever seen. In writing for a copy of the "Golden Fleece," please address Clay, Robinson & Company, National Stock Yards, Ill.

The Spring Lamb Market.

This branch of trade is just beginning, and it will be interesting to watch the St. Louis market. The few lots of spring lambs arriving in the month of March were sold at 9 to 11 cents a pound. In the beginning buyers are willing to accept lambs which are very light, but as soon as the run is fairly started they have to obtain lambs weighing 60 pounds or better. Large supplies of light lambs lead to low prices, but large supplies of first-class lambs encourage trade by attracting additional buyers. One thing must be borne in mind, and it is that just so soon as the warm weather sets in, ram lambs are sold at a discount. Packers cannot use ram lambs in first-class trade, therefore they cannot be made to buy them at first-class prices. In July, wether lambs will outsell ram lambs 50 to 75 cents per 100 pounds. If the run is large, the wether lambs and the ewe lambs will be bought and buck lambs left to the cheap trade. The sheep trade is interesting, because people are being educated to eat and enjoy mutton. The farmers ought to cater to this demand. After the lambs are sold, the ewes can be shorn and then can be fattened for market. In the fall of the year another set of ewes can be purchased and bred. Another crop of lambs will naturally follow. At the present time, however, the proper programme is to watch the situation from the market standpoint. St. Louis is always a first-class market for sheep and lambs.

Sheep and Goats.

Angora goats are not sufficiently numerous for the purpose of eating out all the brush growing in the forest reserves, but they are to be used for the purpose of cutting out strips in five guards about 300 yards wide. These lanes cut out by the goats are expected to save many a valuable strip of timber. If the goat herder follows up the goats with a brush knife the results will show very much quicker than if the goats are expected to cut down the dry brush and burn it up in addition to eating the sprouts.

Early in March, at the St. Louis National Stock Yards, Estill & Son, of Howard county, Missouri, sold 232 lambs, 76 pounds average, at $7.50 per 100 pounds. These were native lambs, crop of 1908, probably eight or nine months old.

Early in March, at the St. Louis National Stock Yards, Horace McNeil, of Bond couny, Illinois, marketed 136 head of 69-pound Western lambs at $7.40 per 100 pounds.

The Ohio College of Agriculture will hold the third annual sheep-shearing festival on Wednesday, April 14th, at the Live Stock Pavilion, on the University Grounds. There will be shearing by hand and machine; judging by students and a Talk on Wool by Prof. C. S. Plumb.

Those who have wool clips for sale should write to A. J. Child & Sons, St. Louis, Mo., and obtain their 1909 wool circular. St. Louis is a first-class wool market for the shipper and it has often been the means of preventing disastrous declines in values when other markets were demoralized. Many mills buy in St. Louis that do not buy anywhere else, and the Eastern markets can be lifeless when St. Louis is active. Messrs. Child & Sons handle wools strictly on commission, and the firm is absolutely reliable.

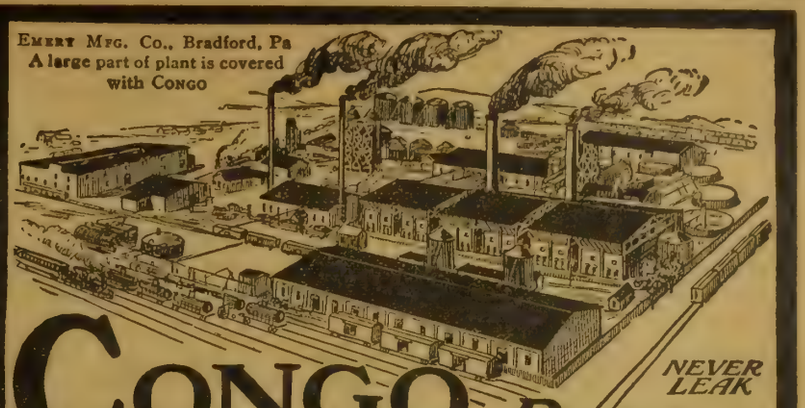
Sheep Shearing at St. Louis.

As stated in the March edition of this paper, a large section of the Independent Stock Yards, Bremen avenue, St. Louis, Mo., is now devoted to sheep feeding. Favorable arrangements have been made to hold the sheep there a reasonable time before they are reshipped to be sold at the St. Louis National Stock Yards. They go through to market on the same billing. Every advantage and facility of a sheep-feeding station is afforded right snug up to the market. There is also a full and complete sheep-shearing equipment in operation, so that the sheep or lambs can be shorn before being marketed. Sheep do well in the substantial sheds of the Independent Stock Yards, where they feed No. 1 alfalfa hay, wheat screnings, cottonseed meal and cracked corn at fair prices. There is no charge for water, care or yardage.

All who are interested in marketing sheep can obtain all information they desire by writing to commission firms advertising in this paper or to G. E. Thonssen, Manager Independent Stock Yards, St. Louis, Mo.

Richest Lands in America.

The editor of The National Farmer and Stock Grower was one of the first to stick a plow in the ground in South Dakota, in the country now traversed by the Chicago, Milwaukee and St. Paul Railroad. It was in 1876, and at that time there was no railroad between Yankton and Bismarck on either side of the Missouri river. For hundreds and hundreds of miles it is a splendid black soil and it is of surpassing depth and richness. We actually bought 600 bushels of white onions raised on two acres of ground, produced in the vicinity of Standing Rock Agency, where the road now crosses the Missouri river on its way to the Pacific Coast. It is the Chicago, Milwaukee and St. Paul Road that is the enterprising factor in settling up all the rich lands of the Northwest. The road management is now opening up a splendid territory in Montana. In ten years these cheap lands will all be dear lands. The climate is inviting and the productions enormous. Millions upon millions of money are being expended on costly bridges, favorable grades and easy curves. The Milwaukee Road builds cities and furnishes markets. All who intend to seek a new home are invited to send for Montana Folder No. 77. It explains and illustrates everything relating to this new country. Address, F. A. Miller, G. P. A., C., M. & St. P. R. R., Chicago, Illinois.



CONGO ROOFING

NEVER LEAK

THE GUARANTEED ROOFING

One of the most attractive features about Congo is that you get a genuine Surety Bond with *every roll*. This Bond is issued by the National Surety Company. *Every* roll of 3-ply Congo is guaranteed for a period of *10 years*.

Thus you are protected for a long time by the strongest guarantee ever issued, backed by a Surety Company whose bond is as good as the Government's.

That Congo is made of the right stuff—durable and lasting, is attested to by the fact that the Surety Company was willing to back it, and for so long a period.

Congo is really a better purchase than ever before.

In addition to the Surety Bond, we furnish with every roll *galvanized caps* instead of the tin caps or nails supplied by others. The galvanized caps can't rust or bend or break. Liquid cement is also furnished free.

We mean to get the roofing trade of the country and think these *special features* will come pretty near landing it.

Send to-day for free Sample of Congo and a copy of the Guarantee Bond.

DON'T BUY GASOLINE ENGINES

UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engine; revolutionizing power. Its weight and bulk are half that of single cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. **THE TEMPLE PUMP CO., Mfrs., Meagher and 15th Sts., Chicago.** THIS IS OUR FIFTY-SIXTH YEAR.

Nervous Prostration

"I suffered so with Nervous Prostration that I thought there was no use trying to get well. A friend recommended Dr. Miles' Nervine, and although skeptical at first, I soon found myself recovering, and am to-day well."

MRS. D. I. JONES,
5800 Broadway, Cleveland, O.

Much sickness is of nervous origin. It's the nerves that make the heart force the blood through the veins, the lungs take in oxygen, the stomach digest food, the liver secrete bile and the kidneys filter the blood. If any of these organs are weak, it is the fault of the nerves through which they get their strength. Dr. Miles' Nervine is a specific for the nerves. It soothes the irritation and assists in the generation of nerve force. Therefore you can hardly miss it if you take Dr. Miles' Nervine when sick. Get a bottle from your druggist. Take it all according to directions, and if it does not benefit he will return your money.

TAPE-WORM Expelled alive in 60 minutes with HEAD or no charge. No fasting, no sickness, no pain. Medicine pleasant and perfectly harmless. Medicine sent to any part of the country. You cannot afford to miss this great offer which we are making to introduce our bargain **post card catalogue** which we also send **free** with the post cards. Address, **DAVIS BROS.** Post Card Dept. B-116 Chicago. **15¢**

SELECTED POETRY.

JIM BLUDSO OF THE PRAIRIE BELLE.

Wall, no, I can't tell whar he lives,
Because he don't live, you see;
Leastways, he's got out of the habit
Of livin' like you and me.
Whar have you been for the last three year
That you haven't heard folks tell
How Jimmy Bludso passed in his checks
The night of the Prairie Belle?

He weren't no saint, them engineers
Is all pretty much alike—
One wife in Natchez-under-the-Hill
And another one here, in Pike.
A keerless man in his talk was Jim,
And an awkward man in a row,
Because he never flunked, and he never lied;
I reckon he never knowed how.

And this was all the religion he had—
To treat his engine well;
Never be passed on the river;
To mind the pilot's bell;
And if ever the Prairie Belle took fire,
A thousand times he swore,
He'd hold her nozzle ag'in the bank
Till the last soul got ashore.

All boats has their day on the Mississip,
And her day come at last—
The Movastar was a better boat,
But the Belle, she wouldn't be passed.
So she came tearin' along that night—
The oldest craft on the line—
With a nigger squat on her safety-valve,
And her furnace crammed, rosin and pine.

The fire burst out as she cleared the bar,
And burnt a hole in the night;
And quick as a flash she turned and made
For the willer-bank on the right.
There was runnin' an' cussin', but Jim yelled out
Over all the infernal roar:
"I'll hold her nozzle ag'in the bank
Till the last galoot's ashore!"

Through the hot, black breath of the burnin' boat
Jim Bludso's voice was heard,
And they all had trust in his cussedness,
And knowed he would keep his word.
And, sure's you're born, they all got off
Afore the smokestack fell—
And Jim Bludso's ghost went up alone
In the smoke of the Prairie Belle.

He weren't no saint—but at jedgment
I'd run my chance with Jim,
'Longside of some pious gentlemen
That wouldn't shake hands with him.
He seen his duty, a dead-sure thing—
And went for it thar and then;
And Christ ain't a-going to be too hard
On a man that died for men.

—John Hay.

THE BELL OF ATRI.

At Atri in Abruzzo, a small town
Of ancient Roman date, but scant renown,
One of those little places that have run
Half way up the hill, beneath a blazing sun
And then sat down to rest as if to say:
"I climb no farther upward, come what may"—
The Re Giovanni, now unknown to fame,
So many monarchs since have borne the name,
Had a great bell hung in the market place,
Beneath a roof, projecting some small space,
By way of shelter from the sun and rain,
Then rode he thro' the street with all his train,
And with the blast of trumpets loud and long,
Made proclamation that whenever wrong
Was done to any man, he should but ring
The great bell in the square, and he, the King,
Would cause the Syndic to decide thereon,
Such was the proclamation of King John.

How swift the happy days in Atri sped!
What wrongs were righted need not here be said,
Suffice it that, as all things must decay,
The hempen rope at last was worn away,
Unraveled at the end, and strand by strand
Loosened and wasted in the ringer's hand,
Till one, who noted this in passing by,
Mended the rope with braids of briony,
So that the leaves and tendrils of the vine
Hung like a votive garland at a shrine.

By chance it happened that in Atri dwelt
A knight with spur on heel and sword in belt,
Who loved to hunt the wild boar in the woods,
Who loved his falcons with their crimson hoods,
Who loved his hounds and horses, and all sports
And prodigalities of camp and courts;
Loved, or had loved them; for at last grown old,
His only passion was the love of gold,
He sold his horses, sold his hawks, and hounds,
Rented his vineyards, and his garden grounds,
Kept but one steed, his favorite steed of all;
To starve and shiver in a naked stall,
And day by day sat brooding in his chair
Devising plans how best to hoard and spare.

At length he said: "What is the use or need
To keep at my own cost this lazy steed,
Eating his head off in my stables here
When rents are low and provender is dear?
Let him go feed upon the public ways;
I want him only for the holidays."
So the old steed was turned into the heat
Of the long, lonely, silent, shadeless street;
And wandered in suburban lanes forlorn
Barked at by dogs, and torn by briar and thorn.

One afternoon, as in that sultry clime,
It is the custom in the summer time,
With bolted doors and window shutters closed,
The inhabitants of Atri slept or dozed;
When suddenly upon their senses fell
The loud alarum of the accusing bell!
The Syndic started from his deep repose,
Turned on his couch and listened, then arose
And donned his robes, and with reluctant pace
Went panting forth into the market place,
Where the great bell upon its cross beam swung,
Reiterating with persistent tongue,
In half articulate jargon, the old song,
"Some one hath done a wrong, hath done a wrong!"

But ere he reached the belfry's light arcade
He saw, or thought he saw, beneath its shade
No shape of human form of woman born,
But a poor steed, dejected and forlorn,
Who, with uplifted head and eager eye,
Was tugging at the leave of briony.
"Domeneddio!" cried the Syndic straight,
"This is the knight of Atri's steed of state,
He calls for justice, being sore distressed,
And pleads his cause as loudly as the best."

Meanwhile, from street and lane a noisy crowd
Had rolled together like a summer cloud,
And told the story of the wretched beast
In five and twenty different ways at least.
With much gesticulation and appeal
To heathen gods, in their excessive zeal.
The knight was called and questioned; in reply
Did not confess the fact, did not deny;
Treated the matter as a pleasant jest,
And set at naught the Syndic and the rest,
Maintaining in an angry undertone
That he should do what pleased him with his own.

And thereupon the Syndic gravely read
The proclamation of the King, then said:
"Pride goeth forth on horseback grand and gay,
But cometh back on foot and begs its way;
Fame is the fragrance of heroic deeds
Of flowers of chivalry, and not of weeds!
These are familiar proverbs, but I fear
They never yet have reached your knightly ear.
What fair renown, what honor, what repute
Can come to you from starving this poor brute?
He who serves well, and speaks not, merits more
Than they who clamor loudest at the door.
Therefore the law decrees that as this steed
Served you in youth henceforth you shall take heed
To comfort his old age and to provide
Shelter in stall, and food and field beside."

The knight withdrew abashed; the people all
Led home the steed in triumph to his stall.
The King heard, and approved, and laughed in glee,
And cried aloud: "Right well it pleaseth me!"
Church bells, at best, but ring us to the door;
But go not in to mass; my bell doth more—
It cometh into courts and pleads the cause
Of creatures dumb unknown to laws;
And this shall make in every Christian clime
The bell of Atri famous for all time.

—Henry W. Longfellow.

THE CATTLE ROUNDUP.

Once more are we met for a season of pleasure,
That shall smooth from our brows every furrow of care,
For the sake of old times shall we each tread a measure,
And drink to the lees in the eyes of the Fair.
Once more let the hand-clasp of years past be given;
Let us once more be boys and forget we are men;
Let friendships, the chances of fortune have riven
Be renewed and the past come smiling back again.

The past, when the prairie was big and the cattle
Were as "scary" as ever the antelope grew—
When to carry a gun, to make our spurs rattle,
And "ride a blue streak" was the most that we knew;
The past, when we headed each year for Dodge City,
And punched up the drags on the old Chisolm trail—
When the world was all bright and the girls were all pretty,
And a fellow could "mav'rick" and stay out of jail.

Then here's to the eyes that like diamonds are gleaming,
And make the lamps blush that their duties are o'er;
And here's to the lips where young love lies a-dreaming;
And here's to the feet light as air on the floor;
And here's to the memories—fun's sweetest sequel—
And here's to the night we shall ever recall—
And here's to the time—time shall know not its equal—
When we danced the day in at the Cattlemen's Ball.

—H. D. C. Maclachlan, Amarillo, Tex.

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 3065 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

10 DAYS FREE TRIAL We ship on approval, without a deposit, freight prepaid. DON'T PAY A CENT if you are not satisfied after using the bicycle 10 days. **DO NOT BUY** a bicycle or a pair of tires from anyone at *any price* until you receive our handsome art catalogs illustrating every kind of bicycle, and have learned our *unheard of prices* and *marvelous new offers*. **ONE CENT** is all it will cost you to write a postal and everything will be sent you free postpaid by return mail. You will get much valuable information. **Do not wait**, write it now. **TIRES, Coaster-Brakes, Sundries** and all sundries at *half usual prices*. **MEAD CYCLE CO.** Dept. D 138 CHICAGO

ACROSS THE SILENCE.

On the other side of the stillness,
Where our hearts and hopes abide
With those we have tenderly loved,
Our souls shall be satisfied.
In the fairness of the morning,
'Neath the glow of the roselit skies,
We shall give across the silence,
To our darlings a sweet surprise.

When the angels have closed our eyelids
With a lingering, fond caress,
And we hear a glad "Good morning"
From the lips we have yearned to press,
We shall wonder why the silence
Had seemed to us so long,
And heaven shall be the sweeter
For life's discordant song.

With time and its clinging shadows,
Our doubts and all our fears
Shall fade in the morning sunlight
Across the silence of years.
Beyond the voiceless stillness,
Dividing that land from this,
Love breathes in sweeter fullness
An eternity of bliss.

—Belle McKinney Swope.

WHISTLING IN HEAVEN.

ou're surprised that I ever should say so?
Just wait till the reason I've given
hy I say I shan't care for the music
Unless there is whistling in heaven.
hen you'll think it no very great wonder,
Nor so strong, nor so bold a conceit,
hat unless there's a boy there a-whistling
Its music will not be complete.

was late in the autumn of '40,
We had come from our far Eastern home,
ist in season to build us a cabin
Ere the cold of the winter should come;
nd we lived all the while in our wagon,
While husband was cleaning the place
here his house was to stand. and the clearing
And building it took many days,

that our heads were scarce sheltered
In under its room, when our store
f provisions was almost exhausted,
And husband must journey for more;
nd the nearest place where he could get them
Was yet such a distance away
hat it forced him from home to be absent
At least a whole night and a day.

ou see, we'd but two or three neighbors,
And the nearest was more than a mile,
nd we hadn't found time yet to know them,
For we had been busy the while;
nd the man who had helped at the raising
Just stayed till the job was well done,
nd as soon as his money was paid him
Had shouldered his ax and had gone.

ell, husband just kissed me and started—
I could scarcely suppress a deep groan
the thought of remaining with baby,
So long in the house all alone;
or, my dear, I was childish and timid,
And braver ones might well have feared,
or the wild wolf was often heard howling,
And savages sometimes appeared,

ut I smothered my grief with my terror
Till husband was off on his ride,
nd then in my arms I took Josey,
And all the day long sat and cried,
I thought of the long, dreary hours,
When the darkness of night should fall,
nd I was so utterly helpless,
With no one in reach of my call.

nd when the night came with its terrors,
To hide ev'ry ray of light,
hung up a quilt by the window,
And, almost dead with affright,
neeled by the side of the cradle,
scarce daring to draw a full breath,
st baby should wake, and its crying
Should bring us a horrible death.

ere I knelt until late in the evening,
And scarcely an inch had I stirred,
en suddenly, far in the distance,
A sound as of whistling I heard.
tarted up dreadfully frightened
For fear 'twas an Indian's call,
d then very soon I remembered
The red man ne'er whistles at all.

d when I was sure 'twas a white man,
thought, were he coming for ill,
d surely approach with more caution—
Would come without warning and still.
the sounds, coming nearer and nearer,
ook the form of a tune light and gay,
I knew I needn't fear evil
rom one who could whistle that way.

y soon I heard footsteps approaching,
hen came a peculiar dull thump,
if some one was heavily striking
n ax on the top of a stump;
then, in another brief moment,
here came a light tap on the door,
quickly I undid the fast'ning,
ed in stepped a boy, and before

e was either a question or answer,
either had time to speak,
at threw my glad arms around him
el gave him a kiss on the cheek.
I started back, scared at my boldness,
he only smiled at my fright,
e said, "I'm your neighbor's boy, Elick,
me to tarry with you through the night.

aw your husband go eastward,
I made up our minds where he'd gone,
I said to the rest of our people:
at woman is there, all alone,
And I venture she's awfully lonesome,
And, though she may have no great fear,
I think she would feel a bit safer
If only a boy were but near.'

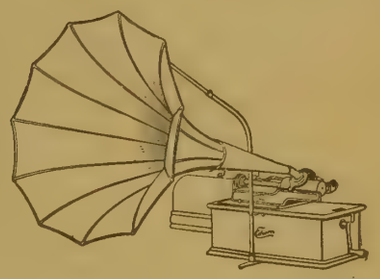
So, taking my ax on my shoulder,
For fear that a savage might stray
Across my path and need scalping,
I started right down this way;
And coming in sight of the cabin,
And thinking to save you alarm,
I whistled a tune, just to show you
I didn't intend any harm.

And so here I am at your service;
But if you don't want me to stay,
Why, all you need do is to say so,
And should'ring my ax, I'll away."
I dropped in a chair, and near fainted,
Just at thought of his leaving me then,
And his eyes gave a knowing, bright twinkle
As he said: "I guess I'll remain."

And then I just sat there and told him
How terribly frightened I'd been,
How his face was to me the most welcome
Of any I ever had seen;
And then I lay down with the baby,
And slept all the blessed night through,
For I felt I was safe from all danger
Near so brave a young fellow and true.

So now, my dear friend, do you wonder,
Since such a good reason I've given,
Why I say I shan't care for music
Unless there is whistling in heaven?
Yes, often I've said so in earnest,
And now what I've said I repeat,
That unless there's a boy there a-whistling,
Its music will not be complete. —Exchange.

The next time you go to the city will you stop at a store where Edison goods are sold and hear an Edison Phonograph?



If you do you will be entertained—better entertained than you have any idea of.

Better entertained than you have been at many theatres or concert halls, for the reason that here you may choose your entertainment rather than accept what has been arranged.

If you like opera selections, a star whose name is familiar to you will sing. If you prefer band or orchestra music, you can choose not only the band or orchestra from a number of celebrated aggregations, but also the music you wish to hear played.

If you like the popular music of the day—the song hits from the latest musical comedies—the singers who made those hits are there to do their best for you. Or, if you are in the mood for a good story the country's cleverest comedians will liven up the program with their fun.

When you hear

The EDISON PHONOGRAPH

you will be impressed with a number of things.

First, that the Edison Phonograph is a wonderful entertainer; the most wonderful of the age.

Second, that what you have heard is not an imitation of something better but a reproduction of all that is best in music and songs; the actual voices of famous singers and the actual notes of celebrated bands and orchestras.

Third, that you can, for a small amount of money, transfer this all-star company to your home and witness performance after performance, each one differing from the others and all of the highest order.

Farm life should not be all work; neither should rest time become monotonous. You, perhaps, come to the city frequently, but the wife and the children do not have that advantage. They miss much in the way of diversion that you enjoy.

Wouldn't they welcome the Edison Phonograph with its new songs, good stories and bright music!

The farm with an Edison Phonograph is not isolated, because it is in touch with the one great thing that keeps a farm from becoming so, and that is clean, wholesome, fascinating entertainment.

Remember this the next time you are in the city. The Edison dealer will be pleased to demonstrate and explain the Edison Phonograph.

NATIONAL PHONOGRAPH COMPANY, 168 Lakeside Avenue, Orange, N. J.

Impure Blood Thoroughly Cleansed

Relieved of All Impurities Through the Use of Stuart's Calcium Wafers.

The blood is a thick, opaque fluid of a rich, red hue in the arteries, and a purplish blue in the veins. It derives its color from numerous small bodies floating in it which are called red corpuscles. If the blood be examined under a microscope the red corpuscles will appear as thin, circular disks, floating in a transparent, nearly colorless fluid.

These red corpuscles number 5,000,000 to the cubic centimeter; but it often happens that they become very much diminished in number, a condition known as anaemia or leukoaemia. There are also other circular bodies in the blood known as white corpuscles, but which are much less numerous than the red.

The red corpuscles are the stimulating and animating elements of the blood. They absorb oxygen in their passage through the lungs, and convey it to the tissues of the blood, where, combining with food elements absorbed from the stomach, it evolves animal heat.

Whenever the kidneys fail to properly filter the blood of its impurities, or whenever constipation occurs, the impure foreign matter collects in the blood-current, is carried to all parts of the system in the circulation, and is usually deposited in the form of pimples and other eruptions upon the skin.

Most of these eruptions appear upon the face, for the reason that the skin there is thinner than anywhere else. Many people commit the error of trying to cure the pimples or eruptions by the application of salves and lotions, which is a great mistake, as the cause of the trouble is deeper seated, and the skin disease is simply the outward manifestation of the impure condition of the blood within.

Calcium Sulphide is the greatest blood purifier in existence. Instead of driving the blood impurities out through the pores, it sends them out through the proper channels — the kidneys and intestines.

STUART'S CALCIUM WAFERS contain calcium sulphite, combined with other powerful alteratives or purifiers, which act rapidly and powerfully upon the morbid products of the blood, expelling them completely, preventing their return, and incidentally removing pimples, boils, blackheads, carbuncles, tetter, ringworm, scurvy and all other skin blemishes.

Call on your pharmacist and secure a package of this wonderful blood-cleaning remedy; price 50 cents. Also write us for trail package free. Address F. A. Stuart Co., 175 Stuart Building, Marshall, Michigan.

THE LANGUAGE OF FLOWERS.

This is a beautiful study, and it is elegantly explained by the most satisfactory methods. There are twenty-four post cards, and each post card shows a different flower, grouped in such a way that the sentiment that each flower represents is spelled out by the flowers. For example, the violets of the violet card spell "Faithfulness;" the roses "Love;" clover, "Be Mine," etc. Each post card is different, finished in many colors, and glossed.

THE UNIVERSAL MAGAZINE

is a nice, bright, cheerful, illustrated monthly magazine, published at 25 cents a year, and the post cards can be selected as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

To Wash Colored Fabrics.

In washing nice colored garments there are four things to be avoided—hard rubbing, strong soap, hot water and hot starch—and nice colored garments should always be washed by themselves and not hurried through with the weekly washing. There are various ways of setting the colors and strong salt water is good for most colors, though some of the delicate shades require a different treatment. Very light shades of pink and blue should be soaked in salt water in which a small lump of alum is dissolved, while lilac and violet may be set with alum alone, using a small lump to a pail of water, and if the color is green, a small cup of vinegar should be used in the rinse water. It is a good thing to keep a bottle of alcohol in the house, as it will remove grass stains, and fruit stains of every sort may be removed if they are rubbed well with the alcohol before they are put in the wash. The best way to keep the color in gingham and other nice cotton dresses is to wash them quickly through a strong Pearline suds, and the rinsing water and starch should be of the same temperature, and the garment should be turned wrong side out before it is rubbed through the starch to keep the starch from showing on the right side of the goods.

Ripe tomatoes rubbed on a spot of iron rust will frequently remove it without a second application, and some other remedies are equal parts of ammonia and turpentine for paint, and lard for tar or wheel grease.

When making children's dresses, it is a good plan to have a large piece of the goods washed every time the dress has a washing, then when the dress needs altering or mending one has a piece of goods exactly like the dress to do the mending with.

All nice cotton dresses should be ironed on the wrong side to avoid the shiny appearance they have when ironed on the right side of the goods.—M. A. T.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions for Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Tucked and Plain Blouses, With Belt or Peplum.

No. 6214.—The simple blouse that is without fullness and which is made of fine material tucked, is a pronounced favorite. Here are two models, one of which is adapted to plain material to be tucked as indicated, the other of which is designed for the ready tucked material, all-over lace and waistings of a similar sort. Both models include the new, long, close-fitting sleeves, and both allow a choice of a belt or peplum at the lower edge, while the tucked blouse also can be extended below the waist line in shirt waist style. The pattern is an eminently practical and desirable one, really including two. In the illustration the tucked waist is made of crepe de Chine, and, as will be noted, the tucks are all arranged to turn in the most effective manner.

Both the plain and the tucked blouses consist of front and backs with one-piece sleeves and collar.

The quantity of material required for the medium size is, for the tucked blouse, 5 yards of material 21 or 24, 3 yards 32, or 2½ yards 44 inches wide; the plain blouse, 3 yards 18, 2¾ yards 21 or 24, 1⅝ yards 32, or 1⅝ yards 44 inches wide.

The Pattern 6214 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Thirteen-gored Skirt.

No. 6154.—The many-gored walking skirt is a favorite of the season, and this one, with buttons down one side of the front, makes one of the very latest and best-liked models. It suits broadcloth, serge and cheviot, velvet and velveteen, indeed all suiting materials and all those that are used for separate skirts. It is simple and its many seams mean slender lines while they also provide easy fit and render the task of making a simple one. Either inverted plaits or habit back can be used, as liked, and if the opening at the front is not desired, buttons can be used as trimming only and the opening made at the center back after the regulation style, although the front closing makes one of the features of the present season. In this case broadcloth, in the beautiful new shade known as catawba, is trimmed with buttons covered with Ottoman silk and is simply stitched in tailor style.

The skirt is made in thirteen gores and can be closed at the back and trimmed with buttons, or made with the opening at the left of the front gore and closed either with buttons and actual buttonholes or invisibly with buttons used as trimming. Or, again, if a very plain skirt is in demand, the buttons can be omitted altogether and the skirt closed either at the back or the left of the front, as preferred.

The quantity of material required for the medium size is 8¾ yards 24, 8¼ yards 27, 4⅝ yards 44, or 4 yards 52 inches wide, if material has figure or nap; 7 yards 24, 6½ yards 27, 4⅛ yards 44, or 3⅜ yards 52 inches wide, if material has neither figure nor nap.

The Pattern 6154 is cut in sizes for a 22, 24, 26, 28, 30 and 32-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Sailor Custume.

No. 6237.—Sailor costumes continue to be favorites for girls of all ages, and this one has a great many possibilities. It can be made with a body lining to which the skirt is attached, or the skirt can be joined to a belt and a separate shield be used beneath the blouse, as liked. Also it is adapted to wool materials and to washable ones, and suits of the sort are equally fashionable for serge, cashmere and similar wool materials and for linen, chambray and other washable fabrics. In this case, however, blue serge is made with a body lining and the shield is made of white.

The costume consists of skirt and body lining, the blouse and the shield. The skirt is straight and plaited, and the body lining, when used, is faced to give a shield effect. The blouse is quite separate and is drawn on over the head, the neck edge being finished with a big sailor collar. There is an inserted pocket in the left side, and the sleeves are tucked at the wrists. When a separate shield is used it is adjusted under the blouse and buttoned to position beneath ehe collar.

The quantity of material required for the medium size (ten years) is 6½ yards 24, 5½ yards 32, or 4 yards 44 inches wide, ⅝ yard 36 inches wide for the body lining, 5¾ yards of braid.

The Pattern 6237 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Boy's Suit.

No. 6208.—The boy's suit is made with Knickerbockers, and the long blouse in Russian style is a favorite one. It is becoming; it is comfortable; it is satisfactory from every point of view. This one can be made from wool material, from silk or velvet, for occasions of extreme dress, and from the washable fabrics that are used for boys' costumes. In the illustration serge is trimmed with a stitched band of the same, but woolen goods include cheviots and many mixtures, shepherd's checks are liked and much used, and the suit made from velvet, velveteen or corduroy is extremely handsome. With the coming of warm weather, mohair and silk will be in demand for the dressy costumes, and linen, galatea, madras, kahki and the like will continue to be favorites among washable materials.

The suit is made with the blouse and the trousers. The blouse is made with fronts and back and is held to position by means of a belt, but this belt can be either of leather or the material. The sleeves are tucked at the wrists to give a cuff effect, and the shield is attached under the blouse. The Knickerbockers are of the regulation sort, drawn up by means of elastic at the knees.

The quantity of material required for the medium size (six years) is 4⅝ yards 24, 3¼ yards 32, or 2⅝ yards 44 inches wide.

The Pattern 6208 is cut in sizes for boys of four, six and eight years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Housecleaning Notes.

The ambition to be the first one in the neighborhood through house cleaning is not a laudable one; it means colds, unnecessary fatigue and discomfort to the entire family, and often has with it a menace to health. Better take things calmly, even if not through so early.

Cupboards, drawers and similar portions can be cleaned out at leisure on rainy days, when there is little danger of interruption by callers. Air the furs well and then pack away in thick paper bags; flour sacks answer nicely for this. If the eggs are not deposited before the packing, no insect can do damage later, unless there is a perforation in the sack. Tie very tight; or, better, paste the top together. Sprinkle plenty of lavender leaves in and about the bags; or, if these are not at hand, use oil of lavender instead.

It was no myth or superstition which led our grandmothers to perfume their linen closets so freely with lavender. It is one of the most effective insecticides and much more agreeable than the moth ball. Use it freely in closets, under carpets, and in all places which the moth is likely to invade.

When sweeping or working in the dust, wear a pair of canvas gloves as a protection to the hands. They will not only protect from dust but render the hands less prone to become rough.

If you wish to repaper, remove the old paper by soaking it up with a thin, hot paste. It is much more effective than water, and paper will be easily detached in long pieces without the dust usually in attendance.

Do not remove the last stove in the house except the kitchen range, unless you have an oil heater for emergency. There are usually cool, damp days thorugh the summer when a little fire is needed.

Use one of the numerous polishing materials for the purpose in washing windows. It is surprising how much more easily and brilliantly they can be cleaned.

Be sparing of soap in cleaning paint. Ammonia, a teaspoonful to a quart of water, is more effective and not nearly so hard on the paint. When through with the water, use it on the house plants. It is a most valuable fertilizer, and if there is more than can be used on the house plants, the flower beds and garden will be grateful for it.

Hang carpets and rugs on a stout pole or line and let the wind blow the dust out. A day of exposure to the wind is much more effective than a thorough beating, besides being easier on fabric and muscle.

Alum water used very hot is a sure insecticide in bedrooms. Use it freely about the bedsteads; if vermin have gained a foothold, cover all unvarnished parts thoroughly and revarnish the rest. Fill cracks in the plaster with Plaster Paris, and common newspapers torn up in small pieces soaked in thin paste and filled into cracks in the floor will form a hard filling that will look well if the floor is painted.

Bright sunshize has a wonderful effect in refreshing bedding that is not desirable to wash. Comforts stuffed with wool are much better thoroughly aired for a day or two, and if they have had a protecting shield during the winter they will emerge from the sun bath practically as fresh as new.—Bessie L. Putnam.

Music on the Farm.

Again we take pleasure in inviting attention to the card of the National Phonograph Company, which will be found on page 23. The Edison Phonograph is a great entertainer. It is greatly improved. The new Amberol Records play twice as long as the old re cords, and the new specially-made horns bring out every word with great force and clearness. A farm with music is worth a 'ozen farms without. Write for booklet entitled "The Edison Phonograph and the Home." Address, National Phonograph Company, 168 Lakeside Ave., Orange, N. J.

Aprons.

Too many fail to realize the full import of the little world, the part which it may play in the economy, ease and cleanliness of the household; and it is a pleasure to see that the styles which protect the dress effectually are again in vogue. It is not only a saving of washing or cleaning dresses, but it saves the wear to which the duties of the household subject the dress, and a set of large, serviceable aprons enable the owner to be presentable at all times and to be practically free from the regalia of the kitchen and ready to entertain at the shortest warning.

The modern pattern is long enough to protect the entire skirt, gored to fit as neatly as the dress, and the side breadths extend back far enough to cover nearly the entire skirt. Two capacious pockets, one stitched into either side of the front gore when the seams are sewed, quickly and effectively provide for the handkerchief and any emergency articles for which a temporary lodging may be required. The front breadth at least is prolonged to completely shield the waist, preferably held in place by straps which pass over the shoulders and down the back to the belt. Such an apron is easily ironed, the gored effect lessens the amount of material required, and if long sleeves or shields for the sleeves are provided, the dress is not soiled in the daily duties. A ruffle around the bottom, though not figuring in the recent patterns, is preferred by some, as it deflects any spilt liquid from soiling the skirt.

While good apron gingham is the standard material for kitchen aprons, one may frequently get one out of an old dress that is past wearing, yet parts of which are too good to throw into the rag bag. Old cloth, however, should always be made up in the plainest possible way.

In children's every day and school aprons there is the same chance for economy. Some of the models are in a loose sack form, buttoned the entire length in the back or at the side, and when warm weather comes they will prove most comfortable dresses. Another style shows a square neck, loose-fitting waist and skirt almost long enough and of sufficient width to cover the entire dress.

For every-day wear do not choose too light colors. The idea is to have goods that will wash easily and protect the dress when at meals or play. For a dress apron one may use similar patterns, thereby transforming a half-worn skirt of an adult into a handsome as well as useful garment for the little one. A bit of lace or embroidery about the neck and sleeves improves the looks wonderfully and perhaps suggests the use of a remnant that has before seemed useless.

In picking up for the spring house cleaning, material for two or three white aprons for yourself for afternoon will no doubt come to light. These little rounded effects are so small that they require very little cloth, yet they add much to the neat appearance of the housewife and often prove a protection to the dress from lint or dust. Some of the thin materials have the fullness in the belt arranged in the form of small tucks instead of gathers. Any odds and ends of lace or ribbon may combine in the finish of ties and pockets.—Bessie L. Putnam.

LOSING HIS MIND.

"Mother, guess you'd better send for th' doctor," gasped Uncle Charlie Seaver as he sank into a chair and rocked back and forth, holding his gray head.

"Snakes alive! ye havn't been an' got th' misery in yer hed, have ye, Silas?" gasped his astonished wife, dropping a pie-tin.

"I don'no what's th' matter, but I've alwus had a hunch my mind'd go some time. It's cum, I guess. I noticed th' trouble fust last week when I plum forgot to go up an' swear off th' $100 assessment till it was too late. Then I neglected to go to th' school meetin' last night to fight agin the new Commissioner. But, wuss an' wuss, I didn't guess within eleven pound and seven ounces of the weight of Wal Weaver's big hog killed to-day. I guess my mind has gone all right. I'm about all in."—Republic.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Bust Supporter and Reducer.

No. 6205.—Some form of bust reducer and supporter is really essential to modern dress unless the figure be extremely slight. This one is practical and serviceable withal. It can be made from linen, coutil or any similar durable material, and it will be found thoroughly satisfactory.

The front portion is made in sections and is dart fitted. The back is seamed at the center. Lacings at the front regulate the size.

The quantity of material required for the medium size is ½ yard 36 inches wide.

The Pattern 6205 is cut in sizes for a 36, 38, 40, 42, 44 and 46-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Street Gown.

No. 6223.—The street gown is one of the very latest developments of fashion and has a great many features to commend it. It is smart; it is generally becoming; it is simple; it is available for a great many occasions and for a variety of materials. At this season it is worn with a fur wrap for additional warmth, but it may be looked for in increasing numbers with the coming of warm weather. This model is one of the best and can be made with the high rolled-over collar illustrated or be cut out to form either a V-shaped or round neck. The scalloped edges are fashionable and effective, but here also there is the opportunity for the exercise of individual taste, for either such finish or straight edges can be used. In this case catawba-colored broadcloth is trimmed with satin in matching color, but all the materials that are used for silks are appropriate for this gown, with trimming either of contrasting material or of braid, as liked.

The gown is made with front and center-back portions, which extend full length, and with side-front and side-back portions that are joined beneath the belt. The sleeves are distinctly novel, the inner portions being lapped over the outer and allowing singularly effective use of buttons as trimming.

The quantity of material required for the medium size is 9 yards 27, 5½ yards 44, 4½ yards 52 inches wide, with ¾ yard 21 inches wide for the trimming. The width of the skirt at the lower edge is 3¾ yards.

The Pattern 6223 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Dressing Jacket.

No. 6244.—The simple dressing jacket is the one that most women prefer, and here is a model that is becoming and satisfactory to wear, yet which involves so little labor in the making that its simplicity becomes a consideration. There are tucks over the shoulders which conceal the arm-hole seams and which mean becoming fullness, but there are only shoulder and under-arm seams. The front edges are finished with hems and the sleeves can be made in full or three-quarter length, as liked. In the illustration challis is trimmed with banding, but cashmere, Henrietta and pretty simple oriental silks, the various lawns, batistes and other inexpensive printed wash fabrics all are appropriate, with trimming of any banding that may be liked, or frills of lace would make a dainty finish.

The jacket is made with fronts and back. It is finished with hems at the front edges and the rolled-over collar is attached to the neck. The simple one-piece sleeves are finished with rolled-over cuffs, and the ribbon confines the fullness at the waist line.

The quantity of material required for the medium size is 4⅛ yards 24, 3 yards 32, 2⅝ yards 44 inches wide, with 3⅝ yards of banding.

The Pattern 6244 is cut in sizes for a 34, 36, 38, 40, 42 and 44-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents. (If in haste, send an additional two-cent stamp for letter postage, which insures prompt delivery.)

Tucked Blouse With Fancy Yoke.

No. 6227.—The blouse that is made with a combination of wide and narrow tucks is a very charming one and peculiarly well adapted to the fashionable thin materials. This model produces the best possible lines and includes the new close-fitting sleeves together with a fancy yoke. In the illustration the yoke is made of all-over lace and the blouse itself is made of fine white lawn, but ready-made yokes can be utilized for the purpose, if preferred, or the yoke could be made from embroidery, or from plain material with some simple design embroidered by hand. When washable materials are used the blouse is designed to be made unlined, but it is just as well adapted to net and to silk as it is to lawn, batiste and the like, and a fitted lining is included in the pattern. The model will be found equally desirable for the odd blouse and for the entire gown.

The waist is made with a fitted lining, which can be used or omitted, as liked, and consists of front, backs and yoke. The neck is finished with a high stock collar, and the long sleeves are made in one piece each.

The quantity of material required for the medium size is 5¾ yards 21 or 24, 3½ yards 32, or 2¼ yards 44 inches wide, with ¾ yard of all-over lace.

The Pattern 6227 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Mannish Shirt Waist.

No. 6194.—The plain, mannish shirt waist is one of the latest and smartest of the season and promises to be even more popular in the near future. This one can be made with or without the yoke at the back, and allows a choice of regulation sleeves with over-laps, or of those that are made with short openings only, the edges of which are hemmed. In the illustration, striped madras is the material shown, but linen, flannel, silk and the inexpensive printed wash fabrics, indeed all the waisting materials are appropriate.

The waist is made with the fronts and back, and when the yoke is used it is applied over the back. There is a pocket on the left front, and the edge of the right is finished with a wide box plait. The sleeves are perfectly plain, in shirt style, without gathers at the shoulders, and are finished with straight cuffs.

The quantity of material required for the medium size is 3⅝ yards 21 or 24, 3 yards 32, 2⅛ yards 44 inches wide.

The Pattern 6194 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Infant's Slip.

No. 6217.—The simple little slip that is finished with frills at the neck and sleeves is a favorite one and is so comfortable that the baby would be rendered happy by wearing it much of the time. Here is a pretty one that is simplicity itself and which can be made from lawn, batiste and similar materials or from flannel or flannelette, if it is to be used for sleeping and greater warmth is required. It is long enough to keep the little wearer warm and snug, and it is absolutely free from objectionable fuss.

The slip is made with front and backs. It can be closed to the depth illustrated, to a greater depth, or for the entire length, as liked. The sleeves are full, gathered into straight bands, and the neck is finished with a tiny frill.

The quantity of material required is 2½ yards 24 or 27, 2¼ yards 36, or 2 yards 44 inches wide, with 1¼ yards of ruffling.

The Pattern 6217 is cut in one size only, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Please address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

INEXPENSIVE DRESS GOODS.

Can you suggest an inexpensive and pretty material for afternoon dresses? My allowance is small, yet I naturally want to dress as well as I can.—NEIGHBOR.

That is the problem with a great many of us, Neighbor, but I know several women who have found a satisfactory solution. They do their own dressmaking and have used Simpson-Eddystone Prints, which come in an infinite variety of beautiful designs and many colors. You'd be surprised to see the stylish effect, and you'd never guess how little the dresses cost. They are not all show, either. The materials are very durable. They have a good body and the colors stand repeated washing. I don't know of anything that would meet your requirements better.

A SONG OF SPRING.

Loveliest of trees, the cherry now
Is hung with bloom along the bough,
And stands about the woodland ride
Wearing white for Eastertide.

Now, of my three-score years and ten,
Twenty will not come again,
And take from seventy springs a score,
It only leaves me fifty more.

And since to look at things in bloom
Fifty springs are little room,
About the woodlands I will go
To see the cherry hung with snow.
—A. E. Housman.

BETTER CISTERNS --- WHY?
To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.
A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

LUMBER
Send Us Your Lumber Bill for Our Estimate!
We urge you to send us your building list for our estimate. Make up a list of every single item you will need and send it to us. We guarantee to go over it carefully and itemize it fully, and to send you a statement of just what we will furnish. You can include in your list of material everything needed; that means even plumbing and heating material, furniture, rugs, etc.
100,000,000 FEET OF NEW LUMBER AT WRECKING PRICES
We purchased direct from the Mills, at various Forced-Sales, thousands of carloads of high-grade, first-class, brand new Lumber. We bought it at sacrifice prices and we are offering it for sale at a reasonable margin of profit. This is an opportunity of a lifetime to buy the *very best* Lumber manufactured at *prices less* than the dealer or jobber *can ordinarily buy it for*. Write us today.
CHICAGO HOUSE WRECKING CO., 35th & Iron Sts., CHICAGO

We publish a book of some 500 pages, containing a general record of our goods and showing millions of dollars worth of merchandise secured by us at Sheriffs' Sales, Receivers' Sales and Man'f'rs' Sales. It lists Building Material and Supplies, Machinery, Roofing, etc.

Postal Savings Banks.

The Postmaster-General is trying to establish postal savings banks, and is meeting with some objections, and these ought to be cleared away before the desired law will pass. That there are objections to the establishment of postoffice savings banks is news to many of us, and indeed many of us have not supposed there could be any objection to an institution which appears at first sight to be so desirable.

In England, we well remember the institution of postal savings banks; they were received with great favor; people who never deposited money before went down into their stockings and deposited money with the government. The government owed so much money at the time on which it was paying 3 and 3½ per cent. interest that it was glad to get money at 2 and 2½ per cent., and so there was a profit in the transaction and apparent benefits to all concerned.

It has been discovered since then that depositing money in government banks is like putting it into the ground again. Safe enough, 'tis true, but not active. Not loaned out again in order to encourage enterprises; no buildings were put up with the money deposited with the government; it paid interest, as well the national debt paid interest, but it earned no interest, as it would have done had the money been deposited where it would be loaned out again.

There were many private savings banks in England that had building and loan association connections. If a man wanted to build a home, he could borrow most of the money from private savings banks and pay the loan out by weekly or monthly payments, but he never could borrow a cent from the government banks for any purpose whatever, consequently the beneficial work had to be done by the private banks, and the uselessness of the postoffice savings banks, so far as the upbuilding of the country is concerned, is one of the reasons why in England the postoffice savings banks are not making much progress in recent years. It is even stated that tying up so much money is one cause of putting so many people out of work in England.

In the United States, many localities are without banking facilities, especially out-of-the-way country places. Bankers say that there is a bank wherever there is use for one; but farmers may not see it in that light. But people of this country ought not to be taxed to pay interest on money borrowed from the people unless the government is actually in need of money or unless it can be loaned out again to good advantage. We understand that the Postmaster-General proposes to find a way to keep the money in actual circulation in the communities wherein it is obtained, thereby overcoming the objection to taking the money and deadening it by storage or by wasting it in Washington.

Private banking is not credited with the good it does. Only by loaning their own capital, their surplus and a majority of deposits can a bank be successful. The mere storage of money is no part of the banking system. It is absolutely impossible to conduct the business of the country without most liberal private banking facilities. The establishment of government banks in competition with private banks is not without danger. A postoffice savings bank in England is not a bank in the true sense of the word—it is simply a postoffice depository—the interest is paid by taxation. In a true bank the interest is paid out of the earnings and the earnings are obtained by providing the means for beneficial enterprises.

We hope that Congress will not establish postoffice depositories to take active money away from the people and then to tax the people to pay interest on money held in storage.

Potato Chips.

These are always relished at luncheon or picnic; they also form a substitute for meat that may occasionally be an acceptable variation in the school lunch. While obtainable at the stores, they are easily prepared at home, the ability to have them fresh and of superior quality amply compensating for the work; besides, when one produces their own potatoes and lard, the economy is worth considering. In fact, some find their preparation for dealers or private customers the source of a goodly sum of pin money.

The chief secret of success is in slicing them very thin, as thin as paper. First pare, and then slice. Make the slices even and as thin as possible. Cover them with cold water and let stand several hours before frying.

Shortly before wanted, heat a kettle of lard, as for frying doughnuts. Remove the potatoes from the water; let them drain a few moments; then wipe them dry on a soft cloth—one without lint. An old towel is excellent, absorbing the water readily. Put as many of them into the smoking, hot lard as can be turned freely. Let them cook quickly until they are crisp and slightly browned; remove with a skimmer to a colander, and let them drain until the surplus lard is drained off, which will be by the time the next kettleful is ready to take out. Sprinkle with salt to taste when first removed from the kettle. If the directions are followed, the superiority of the fresh article will be sufficient inducement to the average housewife to prepare her own chips in the future.—Bessie L. Putnam.

Cooking Beef.

A new way for cooking steak has recently been brought to my notice which is so cheap as well as excellent that it seems worth passing along the line. To one pound of round steak allow a teacupful of flour. Pound or hammer it into the meat. The latter is reduced to a very thin piece by this process, but fold it over three or four times until of sufficient thickness, first adding pepper and salt to taste. Fry brown in a little hot lard, meat fryings or butter. This will give the gravy a rich brown color when done. Then add enough water to cover and let it simmer slowly for two hours.

By this method lovers of rare steak will not complain that it is tough; those who object to rare meat may be sure that it will not confront them here. The meat will be tender and delicious, while the gravy, which is much increased in quality by blending the flour with the juices of the meat, is most excellent. Some have compared the flesh thus cooked to that of duck.

The traditional soup-bone has been forced to the rear by those who make the most dainty broth, none but good steak being used by the professional for this purpose. The secret is, aside from having good meat, in putting it into cold water, skimming as it comes to a boil and then cooking slowly for several hours.

A cheap, nutritious meal, however, has for the basis a ten-cent soup-bone, cooked until the meat cleaves off readily. If desired, potatoes, beans or other vegetables may be added.

If there is danger that a boiling piece will not be done at the desired time, a bit of soda, the size of a pea, will make it more tender without impairing the flavor. If by chance you get a piece that should not have been sold as strictly fresh, it may be improved in flavor by soaking a short time in water to which has been added a little salt and half a teaspoonful of soda. Then pour off this water, rinse in pure cold water, and if there is any questionable odor, add a little soda to the water in which it is boiled, carefully removing the scum as it rises.

The best way to keep meat in warm weather is to hang it up where the air can circulate freely; yet keep it protected from the flies.

When the roast is large enough for two meals it is more acceptable if the cooking is varied a little. The first day the whole may be put into the kettle and cooked if there is danger of its not keeping well uncooked. When partly cooked, remove half, and let the rest boil until tender and then dry it down in the kettle until browned enough to make nice gravy. Season with salt, pepper and a pinch of summer savory. Thicken the gravy with flour.

The next day the rest can be finished in the roaster while the potatoes and other vegetables are cooking, thus dispensing with extra fire. If a good stuffing is made and flavored with parsley or onions and the meat folded and sewed over it, the result will be so different from that of the day before that it will be hard to realize that the two meals were from the same piece of meat.

Yet unless the cook studies variations her family will soon tire of beef. The fireless cooker will save much stove heat in summer, but it is best to first cook the meat at least half an hour on the stove. The fireless will then render it tender; and if one wishes it roasted or browned in the kettle, this can readily be finished while the vegetables are cooking.—Bessie L. Putnam.

A Problem Solved

Home Made Gas Light From Crushed Stone and Water

VOLUME for volume, this rural gas actually gives twelve times more light than the best city gas.

Like city gas, it is used in handsome brass or bronze chandeliers and fixtures of endless variety.

A simple twist of the wrist turns on a brilliant flood of light in any room in the house, day or night.

It has already driven the oil lamp with its grease, smoke, soot and smell, out of 176,000 town and suburban homes.

Takes some member of every one of these 176,000 homes, fifteen minutes once a month, to make all the gas the household can use.

***

The magic is all in the wonderful gas-producing stone.

This stone is manufactured in huge electric furnaces, in a temperature of over 6,000 degrees Fahrenheit.

When ready to use, it looks and feels like crushed granite and is then known as Union Carbide.

Union Carbide is packed at the factory and distributed through warehouses all over the country in sheet steel cans in which it may be kept for years.

In these packages it is safer to handle and store than common coal, as it will not burn and can't explode.

***

The gas which this wonderful stone yields is genuine Acteylene.

And Acetylene, carried in iron pipes to ornamental fixtures, burns with a soft, brilliant, pure white light.

On account of its color, it is the easiest of all lights on the eyes, and is a boon to those afflicted with eye strain troubles.

It is not poisonous and one might sleep all night in a room with an open burner without harm.

For these reasons it is used extensively as an illuminant in hospitals, factories, mines, light-houses and government army posts.

To produce Acetylene, it is only necessary to mix Union Carbide with plain water in a small tank-like machine that is usually set in one corner of the basement.

The formula is simple, and the work can be handled by most any school boy.

Once a month he must fill the little machine with Union Carbide—the machine does the rest—it makes gas only when the lights are burning and stops making gas when they are turned off.

Anybody that can cut and fit pipes can install the generator, pipes and fixtures in two days without injuring walls or floors.

With such an installation you can make this glorious beautifying light in your own home for less money than same amount of light from kerosene would cost.

***

If you happen to live in the country, you can do as thousands of farmers have done—run the gas pipes to lights placed on your porches, in your horse and cow barn, or even in your barn yard and have all of them fixed up to light with a touch of an ignition button on post or walls.

Such a lighting scheme is not only a boon to the housewife and children, but it's a mighty handy convenience for the man of the house when he must do his chores after dark, or when he is called out in the night to attend a sick animal.

All these lights will be permanently fastened to ceilings, walls or posts, and enclosed in tight globes.

For this reason they are many times safer than lamps or lanterns that are so often tipped over with disastrous results.

Write us today how large your place and where it is located. Then we can mail our booklets and tell you how little it will cost to make this light yourself.

Just address Union Carbide Sales Co., Dept. B, 156 Michigan Ave., Chicago, Ills.

Webster's NEW STANDARD Dictionary

Home and Office Edition. A splendid book for readers of The National Farmer and Stock Grower. There are 756 pages, 5x7 inches, 1½ inches thick, and the book weighs 22 ounces. It is splendidly bound in flexible cloth, with patent thumb index, with front and back title in gold. There are 840 illustrations and 19 full-page plates. Besides the Dictionary proper and supplement of recent words, it contains many other features, such as key to pronunciation, dictionary of geography, Biblical, classical and historical names, musical terms, foreign phrases, current abbreviations, etc. For handy, quick, general use, for doctors, ministers, lawyers, merchants, mechanics, editors and farmers, this is a great, useful, interesting, necessary book. We use it as a subscription premium in connection with The National Farmer and Stock Grower. Send us One Dollar and we will send you one copy of Webster's New Standard Dictionary by mail post paid, and we will send you The National Farmer and Stock Grower, every issue for two years. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. t is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, hog, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you Practical Farming and Gardening, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "Practical Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid,** including one-year's subscription to this paper. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For One Dollar paid in advance we will send one copy of Hammond's Handy Atlas post free by mail and credit three-years' subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook.

For One Dollar we will send The National Farmer and Stock Grower for three years and a copy of the Cement Workers' Handbook. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

This is a Circular Letter Concerning the 4th Edition

OF THE

Live Stock Breeders' Directory

FOR THE YEAR 1909.

Issued by the HALE PUBLISHING COMPANY, 3550 Vista Ave., St. Louis, Mo.

This **Directory** will contain the names and addresses and the class of stock or product that is raised by about 12,000 prominent live stock breeders and ranchmen and experimental farmers. Every state and territory will be represented. It is intended to include seed, fruit, grain and dairy farmers, especially those who are engaged in plant improvement.

We have published this book successfully three times, and the fourth edition will be the best of all. It will be arranged by states and all names will appear in alphabetical order.

The book will also include a section, which will contain names and addresses of about 4,000 business firms in towns and cities whose names will be of special interest to farmers and stock breeders. We intend to publish a Directory that will be useful to all farmers. If they wish to buy a pure-bred stallion, a bull, a ram, a jack or a jennet or any live stock, this Directory will show them the names of all breeders having stock to sell in their own and other states. If they wish to purchase agricultural implements, seeds, veterinary or dairy supplies, this will give them the full list to select from. The names are all collected and we are now correcting the lists for publication.

This circular is especially addressed to Live Stock Breeders. All names are entered in the book free of cost. We charge breeders $1.00 per copy for the book. If they purchase a copy and pay for it in advance, we place the name in capital letters prominently before the people. If an advertisement is ordered the price is $2.50 per single column inch, including a copy of the book and the advertisement is placed in the list of the state where the breeder resides. It is essential that all breeders furnish particulars so that they be properly represented. The book will have a large circulation.

Blank to be Filled Out

And Mailed to Office of Publication.

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

GENTLEMEN:—I send you name and correct address to appear in the **Agricultural Blue Book and Live Stock Breeders' Directory** without cost to me.

My name is.....

TWO THOUSAND MEXICAN LAMBS FROM ONE FEED-LOT IN NEBRASKA SOLD BY CLAY, ROBINSON & CO. AT THE ST. LOUIS NATIONAL STOCK YARDS. They were in three consignments, averaging 73 pounds, and sold at 8 cents a pound, during the month of April, and on each day topped the lamb market. The picture represents a feed-lot owned by Messrs. Bond Bros. & Co., of Gothenburg, Neb., and is one of their six feeding stations, in which 35,000 sheep and lambs were fed during the past winter. In the picture appear L. C. Butscher on the left-hand side, and Mr. John Doud, yard foreman, on the right. Mr. Butscher, who is well known in sheep-feeding circles of the West, has charge of the feeding operations. He is also well known in educational circles in Colorado and New Mexico, where he held important positions in colleges. The Bond Bros. are wealthy and extensive owners of land and sheep in the Southwest, with headquarters at Espanola, N. M. The picture will attract attention to the splendid sheep and lamb sales made by the firm of Clay, Robinson & Co., also to the article on page 22 concerning the St. Louis Sheep Market by Mr. Bert H. Johnson, Sheep Salesman for Messrs. Clay, Robinson & Co. at the St. Louis National Stock Yards, who is selling an average of one-third of the sheep coming to the market. The double-page display, showing the offices of Clay, Robinson & Co. at the National Yards, on pages 16 and 17, should not be overlooked.

THE ST. LOUIS LIVE STOCK MARKET BY FAR THE MOST ACTIVE AND COMPETITIVE. Attention is invited to pages 12 and 13, 14 and 15, 16 and 17, 22 and 23, all of which contain interesting reading about the St. Louis Live Stock Market—the best for cattle, hogs, sheep, horses and mules. IN EACH AND EVERY DEPARTMENT THE VERY BEST.

and Stock GROWER

To Save Labor
USE THIS
DAIN
LOADER
MAKE
Better Hay
WITH THIS
DAIN
Side Delivery
RAKE

No pulling or tugging to drag the hay from the back end of the load if this Loader is hitched to your wagon, because the elevating bars push the hay forward on the wagon so one man handles the hay easily.

The Dain Loader takes hay from swath or windrow. Two sets of self adjusting rakes having a long sweep over stubble gather hay clean, but do not disturb trash. The reciprocating bars elevate hay without injury to the tender leaves because the self-expanding throat allows hay to pass freely onto wagon without wadding, tangling or jamming.

An apron at top keeps hay from spilling or blowing off side of load. Wheels set underneath so it can be taken through gates and operated close to fences, can be coupled on without crawling under wagon, uncoupled without getting off load.

No ropes, cog gears, crossed chains, crooked crank shaft, or other traps to cause trouble, delay and expense. Simple in every respect, light draft and durable.

USE THE DAIN SIDE DELIVERY RAKE and have air cured hay. Such hay has better color, is sweeter, rich in natural juices and nutriment. Worth more to feed or sell.

It's a Tedder and Rake in one, more and better than either. The three sets of teeth on a slowly revolving reel gently deliver two swaths of hay upside down in a loose continuous windrow so that every bit is exposed. The teeth may be set forward out of plumb so fluffy windrows are made in heaviest hay. Spring-supported reel-frame prevents jar and strain over roughest grounds.

These two tools are famous for saving labor and improving hay. Like Dain Mowers, Sweep Rakes, Stackers and Presses, they are made of highest grade guaranteed material and will stand severe use even abuse that would ruin ordinary tools.

We have specialized on building hay making machinery for over a quarter of a century and have a reputation for producing unequaled labor-saving, rapid-hay-handling, reliable tools.

Ask your Dealer to show you the Great Dain Line.

Corn Prize of $50 Per Acre.

Not only are prizes offered at the various County, State and District Shows for the best ear or best ten ears of corn, but the National Corn Exposition this year is to give prizes to the boy or young man under twenty-two years of age who grows the best two acres of corn.

This means a big undertaking for those who enter the competition, but it was offered last year for the best acre of corn and went to a boy from Connecticut.

The prize is offered by Mr. R. H. Stockton, President of the Majestic Range Company of St. Louis, Mo. The best two acres will be awarded $100 and the second will be $50 in cash. The only condition made is that Mr. Stockton wants the boys to write him and let him know when and where the corn is planted. Mr. Stockton paid $100 last year to the New England boy who produced the best acre of corn.

At the National Corn Show of 1909 samples will be shown from the fields and displayed in a special section of the Junior Division. The address of Mr. R. H. Stockton is care of Majestic Range Company, 2014 Morgan street, St. Louis, Mo.

Primitive agriculture consists of robbing the soil and after the fertility is gone to try to rob it again. The new agriculture consists of feeding the soil and making it better, that good crops can be raised again and again.

WHITMAN'S **NEW MODEL STEEL BEAUTY HAY PRESS**
NEVER FAILS

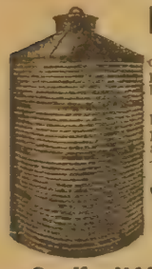
With or without self-feed positive pull back without spring.

A complete line of power balers, hay, paper, wool, shavings, cotton hull and compress presses.

Write for Catalogue.

Our success with this machine has been simply marvelous. It is **absolutely correct** in principle. It is built entirely of steel. Thorough tests convince us that it is and no pull of team in crossing. Has large feed opening and long bale chamber. Warranted in every particular. We also make a full line of Balers. For full information address the manufacturers.

THE WHITMAN AGRICULTURAL COMPANY, 6909 S. Broadway, St. Louis, Mo.



BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

Will It Pay to Irrigate?

Irrigation is sure to be a larger and larger factor in our agricultural operations as the country increases in population. The higher the price of land the more does it become necessary to get out of it larger and larger returns.

The supply of water to the soil is a large factor in regulating its productivity, and this fact is recognized more and more by the farmer as his experience increases.

It used to be thought that irrigation is a burning question only where rain seldom falls; but we have passed beyond that idea now, and irrigation is being practiced in many regions of the world where the rainfall is ordinarily good.

Even where the rainfall is good, taking the year as a whole, it is often so poorly distributed that crops are lost because the water is not present just at the time when it is most needed. Irrigation is therefore a crop insurance, even in humid regions. We have seen wide areas placed under irrigation merely to secure this insurance, which is a profitable thing in the long run. Thus, in Alberta, a great deal of land is charged $1.50 per acre for water merely as a crop insurance, though in some years little or no water is needed.

It will take a long time to bring our uneven land under any method of irrigation; but the levels for the water, once established, can be maintained indefinitely. The streams all over the country present the best supply of irrigation water, as they pass many farms, and the water of streams is usually rich in mineral plant food and other elements that are usable by plants.

Irrigation from artesian wells is now being practiced in many parts of the country, and in thousands of localities windmills are being used. The supply of water by pumping is also found economical where there is a good market for the produce of the gardens.

But will it pay to irrigate? The general answer "Yes" can be given. We have but to think of the years when the rains have been good in the spring but have failed in summer and caused the entire loss of crops to feel sure that irrigation, as a crop insurance alone, to say nothing of increase in yield, is a paying operation.

The writer was through a big strawberry field where the owner had applied irrigation water to a part of the field and had left a part unirrigated. The pickers were harvesting the berries. Where the irrigation had been applied the berries were plump, hard, and of good color. On the rest of the field the average size was but half that of the irrigated portion, and on a few rows they had dried up owing to a severe dry spell that had existed just previously. The field covered several acres of land, and the value of the berries harvested was many hundreds of dollars, all of which was practically saved to the grower by the pumping of water to supply the furrows between the rows. The saving in one year was several times the cost of the irrigation outfit.

Even along the Atlantic seaboard, where the annual rainfall rises to near the fifty-inch mark, irrigation plants are being established by the growers of truck and fruit.

Beef and Grass.

How to make beef profitably is now a problem that requires for its solution more thought than it has required at any previous time in the history of this country. The rapid rise in the price of land in the last half century has been but one of the causes operating to make the solution difficult. Another great cause has been the phenomenal advance in the price of corn, which has hitherto been the feed most relied on for the making of American beef.

Yet the fact that European countries are producing some beef, in spite of high-priced land and high prices for feed, shows us that it is possible to continue the production of beef under almost any conditions that are likely to arise.

The production of beef in England and Continental Europe was greatly checked by the American competition, as the Americans were able to produce beef at an absurdly low price on account of having a vast area of cheap land and corn that sold at an abnormally low price. But with the increase of values here we do not have the same kind of competition to meet, for there is now no corresponding area of the world that can send beef to supply our market. In Argentina the same factors are working as here, namely the increase of values of land and corn.

More and more the beef maker is being forced to rely on grass as his principal feed in beef making. Grass is the feed that has been the chief reliance of the European beef maker while he has been struggling with his American competitor. He has fed grass judiciously and supplemented it with roots raised at home and a little high-priced feed imported from America.

The improvement of the pastures to enable them to produce a great amount of nutritive grass is the first step necessary in solving the problems connected with cheap beef production, or rather with profitable beef production. We do not know for a certainty that we will ever again be able to produce cheap beef.

The writer was in the pasture of one farmer where the grass was so thick and luxurious that he was able to get an unusual amount of grazing from each acre of land. This had been brought about by first putting the soil in as perfect condition as possible and then sowing mixed grasses to get a heavy turf. The pasture was protected in fall and spring, and the cattle were not turned on in the spring till the grass had made a good growth and the enlarging roots had helped strengthen still further the carpet of green above the soil. Also, as soon as the pastures at any time showed signs of becoming short, the cattle were taken out and put into another pasture till the first pasture had recovered its old vigor.

Grass so produced makes the cheapest feed of the English steer, and it will prove to be the cheapest in this country. Farther West, where the sod is not easily formed, alfalfa promises to be the great source of green feed for beef cattle.

Only the man that has low-priced land can afford to ignore the importance of bringing up the pastures to a high state of efficiency, if beef is to be produced profitably.

Recent sales of alfalfa hay at St. Louis include one car inferior no-grade at $12 per ton; No. 2 grade at $15 to $16 per ton; and No. 1 at $16 to $17 per ton. It is seldom that alfalfa has sold higher.

What We Gain by Rotating Crops.

In the first place, we get a greater return from the soil, taking one year with another. This has been demonstrated hundreds of times by some of our best scientists, though the cause is not always apparent. So we have tried to explain it by theorizing a toxic condition of the soil produced by long growizg one crop in one place. This theory is accepted to some extent by some of the experimenters connected with the United States Department of Agriculture. This effect is shown in animals that do better on a variety of food than on one kind alone, no matter how perfectly balanced that food may be.

It has been shown that, by rotating, soil will produce more than without rotating, even if no manure is applied; but it must be recognized that in that case the plant food in the soil is being depleted more rapidly than it would be if only one crop were grown. But, after all, it is the taking of the plant food out of the soil and turning it into merchantable products that makes money for the farmer. So, even without the application of manure, he can afford to rotate to a limited extent.

Freedom from insects is helped by rotations. Certain insects are peculiar to certain crops, and it generally takes a few years for a certain kind of crop to become infested with insects peculiar to that crop. If the crop is taken off the field, and another put on as soon as the insects get bad, it will prove a check to the insects. This is notably so with the bill bugs that sometimes infest corn fields and with the wire worms that infest old meadows.

The grass lands are probably more improved by rotating than any other part of the farm, for the reason that many of our old meadows are infested with insects and have been mown so long that they have become thin. It is noticeable that a thin meadow plowed up and put into a cultivated crop will, when again put into grass, produce remarkably well for a number of years.

While the rotating of the meadows with other farm crops is not always desirable, in the main it enormously increases the productivity of that land. The writer remembers one large field that had been devoted to grass growing for so many years that the sod had become thin and the grass on it was hardly worth the cutting. It was plowed up and put into potatoes and cultivated crops for three years, after which it was returned to grass land. For several years after the grass grew so high and the hay made from it was in such volume that it was always a question as to how it could be properly cured.

The destruction of weeds is one of the things we gain to a considerable extent by rotation of crops. When such things as the wild morning glory appear in the grain fields, rotation becomes a necessity. The crop that requires the most cultivation and that will pay best by such cultivation is the best weed killer.

Each crop takes from the soil a different proportion of plant foods. One uses most of the potash, another more of the phosphate, and another more of the nitrogen. Often one element will be so near the vanishing point that the crop yield will be cut down materially. If, in such a case, a crop is brought on that uses a different kind of plant food in large quantity, it will give better results than the displaced crop.

The best results of rotation are obtained when fertilizers are annually applied with the crops, for that prevents the loss of plant food, which loss is always increased with the increase of size of crops.

A Boy's Prize Cow Essay.

1. She should have good shelter.
2. She should have good clover hay and ground corn cob meal.
3. She should have plenty of good water and be milked regularly.
4. A cow should not be excited while being milked. A cow should never be dogged or whipped when being brought home from the pasture.

We have a large cow barn and good cement floor and gutters. We bed the cows knee deep in straw every night. If you want your cows to pay, you want to buy an Empire separator and ship your cream to the Blue Valley Creamery Company, St. Joseph, Mo. I am twelve years old. Yours very truly, Wm. Jennings Bryan Scherier, Argonia, Kas. (See advertisement of Empire Cream Separator on page 6.)

L. A. Patterson, of Seligman, Mo., reports that 350 acres will be in cantaloupes this year. Last year the local output was ten car-loads, but this year they hope to ship fifty to sixty car-loads to market. The melons are of the Rocky Ford variety and come to market about two months earlier. They have organized the Seligman Fruit Growers' Association.

AERMOTOR PUMPING DEVICES

Are known and used the world over. Hundreds of thousands of AERMOTORS in use. Thousands of GASOLINE PUMPS in use.

$25

Buys an 8-ft. Aermotor. This is the galvanized-after-completion steel Aermotor which revolutionized the windmill business. It contains every improvement which wide experience has shown to be desirable.

NOTE THE ROOM IN THE BASE OF THIS TOWER FOR PUMP, TANK OR STOCK.

The Aermotor Gasoline Pump is easily attached to "any old pump" in 30 minutes. The engine and pumping gears are assembled in one simple, compact and durable machine which is complete in every detail and ready to set up and go to work. It will pump as much water as an 8-ft. windmill and will run as many hours a day as you desire.

We make so many of these engines that we have put in the facilities for building them perfectly.

We are almost ashamed of so low a price on an engine so well designed and so well built, but we are proud of the engine

No other pumping device ever gained such great popularity or reached such great sales in so short a time

PRICE $37 1/2

For engine complete with walking-beam and supporting frame.

$27 Buys a 30-ft. Trussed Tripod Tower with unbraced base.

This does not appear again. Write now for circulars and testimonials.

You can afford to have one of these on every well.

It occupies very little room, requires little attention, and gives a large amount of service. The supporting frame is clamped to the pump stand, making a very solid and compact arrangement.

These attachments have been devised to provide the easiest, quickest and most substantial way for connecting to any style of pump which is already in the well. Everything is supplied for setting up complete as shown, except the stakes.

The Egg Trade of the United States.

The Bureau of Animal Industry of the Department of Agriculture has just issued a circular by Milo M. Hastings, presenting the results of a study made during the past year of the conditions surrounding the production and marketing of eggs. It appears that there is an enormous loss due to the spoiling of eggs, which could be largely prevented by improved methods.

According to Mr. Hastings, the bulk of the poultry wealth of the United States is to be found on the general farms of the Mississippi valley. Some idea of the growth of the poultry industry on these general farms is shown in the case of the state of Kansas, where exclusive poultry farms are practically unknown, yet the value of poultry and eggs sold has increased over a million dollars each year for the past five years.

The total loss to the egg trade caused by the needless deterioration runs into large figures. The causes of the losses and their estimated proportion to the total crop value are summed up as follows: Dirty eggs, 2 per cent.; breakage, 2 per cent.; chick development or heated eggs, 5 per cent.; shrunken or held eggs, 5 per cent.; rotten eggs, 2.5 per cent.; moldy or bad flavor, 0.5 per cent.; total, 17 per cent.

The loss from chick development or heated eggs is probably greater than from any other source, and is especially heavy during the summer in the South and West, where it amounts to 25 or 30 per cent. of the eggs produced during the heated season. The responsibility for heated eggs is almost wholly with the farmer, although the rural buyer and the freight handler are in no-wise innocent.

"To save the millions of dollars which are carried down our sewers in the shape of bad eggs," says Mr. Hastings, "we must have, first, a campaign of education among egg producers that will show every farmer's wife that when eggs are allowed to remain in damp nests, under broody hens, or in hot kitchens, there is a loss in quality which means an actual loss in money to herself and to her neighbor; and, secondly, a system of buying eggs that will as nearly as possible recompense every producer who sells eggs exactly in accordance with what those eggs are worth. Above all else, the infallible rule concerning the marketing of eggs is for the farmer to sell his eggs as soon as possible after they are laid."

The profits of the city retailer are by far the largest item in the marketing of eggs. An approximate idea of the profits of the various handlers of eggs may be obtained from the following figures, showing the elements of cost of a dozen eggs purchased by a New York consumer:

	Cents.
Paid to the farmer in Iowa.	15
Profit to the country store.	0
Gross profit of the shipper.	.75
Freight to New York.....	1.5
Gross profit to receiver...	.5
Gross profit to jobber....	1.25
Loss from candling.....	1.5
Gross profit of retailer....	4.5
Cost to consumer.....25	

In the opinion of Mr. Hastings, the greatest handicap to the egg trade is the general store, with its custom of bartering merchandise for eggs. The storekeeper reckons his profit on goods as more than his loss on eggs. He does not try to enforce improvement upon his patrons by buying on a quality basis, and with the advantage his peculiar position gives him he keeps the other egg buyers from doing so.

The circular discusses quite generally the various phases of the egg industry, and may be obtained free of charge by addressing a request to the Bureau of Animal Industry, Washington, D. C., for a copy of Circular 140.

FIELD PEAS AND BEANS.

Most Profitable Crops—Enriching the Soil—Following the Small Grain Harvest — The Machinery For Threshing.

Beans and peas are now national crops, and not only national, but necessary. The reason such crops are necessary is because they both give and take from the soil. They take from the soil abundant and valuable crops and leave behind a fertilizing constituent more than the land contained before. No wonder peas and beans are spreading all over the country. Beans in a general way are Northern productions and peas are largely grown in the South—the crops meet each other half way.

We have before us a catalogue of J. L. Owens Co., of Minneapolis, devoted to illustrating their bean and pea threshers—and the first seventeen pages contain the most valuable literature concerning the history and methods of cultivation and value for feeding purposes and other uses of both grain and hay. All farmers should read this work, and keep it for constant reference. It will interest anyone in raising beans or peas even if the subject has not been considered before.

Owen's bean and pea threshers are made in different sizes: the first one in the catalogue is suitable for individual farmers, as it requires only one to three horse-power to operate it. The capacity is ten bushels per hour. It weighs 400 pounds and has been known to thresh 150 bushels in ten hours. The other machines are larger, approaching grain separators but of different construction. The Owen's line includes double cylinder machines, 26 by 44 feet and 36 by 54 feet, with practically unlimited capacity. An intermediate machine, 16 by 28 feet, requiring three to five horse power, is good for forty bushels an hour, and shipping the weight is about 1,800 pounds—thus it appears that the Owen's machines are made to s it all circumstances and conditions. We earnestly advise our readers, in their own interest, to write to the J. L. Owens Co., 677 Superior street, Minneapolis, and ask for a free copy of their Bean and Pea Thresher catalogue and their free-trial plan.

St. Louis Wool Market.

Those who have wool clips for sale should write to A. J. Child & Sons, St. Louis, Mo., and obtain their 1909 wool circular. St. Louis is a first-class wool market for the shipper and it has often been the means of preventing disastrous declines in values when other markets were demoralized. Many mills buy in St. Louis that do not buy anywhere else, and the Eastern markets can be lifeless when St. Louis is active. Messrs. Child & Sons handle wools strictly on commission, and the firm is absolutely reliable.

The Hog of To-day.

The hog is more of an individual than a machine, and his breeder should treat him as such. Methods which may be accepted as established have been worked out in swine breeding, but adherence to all of them cannot, for many practical reasons, be rigid. The breeder himself, his breeding stock, environment, feed resources, climate and other factors are so largely involved that one man's success may spell another man's failure. A common-sense type of hog in the hands of a common-sense breeder constitutes a combination best calculated for satisfaction and profit during a succession of years.

Live stock husbandry represents a high type of constructive effort, and swine breeding offers as much satisfaction and gain as any other branch. It may profitably engage the attention of the man who raises hogs merely from financial motives; but a breeder who attains a foremost place in his calling has an interest in his business not inspired solely by rewards in money. The compensations of swine raising are ample for the man who desires to make his work a profession, as hundreds who have a just pride in their achievements can testify.

Intelligence used in his breeding and care has raised the hog from the plane of the veriest savage, unsought except when hunted like any other wild beast, to that of a benefactor, contributing a wide variety of meats, among them the most toothsome known to the epicure, and other products essential to the best tables, to commerce and the trades. The hog's disposition has yielded to the influence of good breeding and changed from that of the outlaw, ready for conflict with man or beast, to the peaceable temperament belonging with propriety to the barnyard resident. His conformation has been molded by skillful methods from bony, angular uncouthness into a structure of massive width, depth and thickness, affording a marvelous yield of pork and lard. Incidentally, by domestication and generations of breeding him for early maturity and quick fattening, the length of his intestines has been increased. It is claimed by scientists, more than 130 per cent.

Swine are as susceptible as other animals to the influences of environment, and three or four generations cover a period long enough to bring about great changes in them. Experiments made at the Wisconsin Station in crossing the wild or razorback hogs and their crosses with the improved and approved breeds showed that a marked improvement in appearance and quality in the wild hog's progeny was possible, although in constitution and gains of flesh they did not compare with purebreds; and when cholera struck the Station herds, these supposedly hardier hogs were the first to succumb. Their feeding habits were irregular; on one day they would gorge themselves so that they would be found fasting for the next day or more. These compelling forces of heredity made plain that both right breeding and right environment are essential to the attainment of right results. At the same time environment may be, in some cases, as destructive in its results as in other cases it is beneficial. Swine typical of the best breeding require but two or three generations of wrong environment to degenerate to the level of the most unapproved types. Much, therefore, depends upon the breeder and his provisions for and care in handling.—From Coburn's "Swine in America."

CREDIT Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of The National Farmer and Stock Grower will be glad to furnish the paper three years for **One Dollar,** the same to be payable at **the end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

Changing Wheat Into Flour.

In the matter of turning good wheat into good flour, the general calculation is that it requires 4½ bushels or 270 pounds of wheat to make a barrel of flour. In the process of handling and milling there is a loss or wastage of 3 to 5 per cent. The miller has then 260 pounds to account for, which produce 196 pounds of flour. There are also about 64 pounds of bran, shorts or shipstuff, which have to be disposed of before the net cost of flour to the miller can be ascertained.

A miller buying 4½ bushels of wheat at $1.20 per bushel would pay $5.40. It costs 50 cents in expense to produce a barrel of flour, which brings the total up to $5.90. Deduct 80 cents for value of bran, etc., say 64 pounds at $1.25 per 100 pounds, and we have $5.10 as the cost of flour at the mill.

The flour would represent a small proportion of the highest grade called "Patent," now selling from $6.25 to $6.60 a barrel; a large quantity of second-grade flour called "Straight," now selling at $5.90 to $6.15 per barrel; a small proportion of third-grade flour called "Extra Fancy," now selling at $5.25 to $5.60 per barrel; a small quantity of a grade called "Fancy," now selling at $4.25 to $4.60 per barrel; and a small quantity of a grade called "Low," now selling at $3.50 to $4.10. This does not by any means explain the exact production of grades of flour; it simply gives a reasonable idea. On the basis of wheat at $1.20 per bushel, standard flour was selling at $6.00 per barrel.

In round figures, not considering cost, 2-cent-a-pound wheat produces 3-cents-a-pound flour; and 2½-cents-a-pound wheat produces 3¼-cents-a-pound flour. We asked a grain dealer the question: "With wheat at $1.50 per bushel, what would be the price of flour?" and he said: "Wheat at $1.50 means flour at $7.50 a barrel."

At $7.50 per barrel, the half-pound of flour used by bakers in a five-cent loaf of bread would not quite cost two cents.

$1.00 Per Sq.

"FAMOUS" Rubber Roofing

The Roof That Wears Better Than Iron.

Lowest prices ever quoted—not a cheap roof, but a brand new, all asphalt rubber surfaced roofing of good weight, every square and roll perfect. A square contains 108 square feet. Complete with large-head nails and cement.

Fertilizer Material Duty Free.

We hope that Congress will not make the mistake of placing a duty on potash salts. There are no mills or mines producing potash salts in this country; therefore, a duty cannot be protective; and if a duty is levied, it will collect little or nothing, because the demand for potash is dependent upon prices being down to bed-rock.

Always unwilling to purchase fertilizer, the farmer has to be convinced again and again of the necessity before he will accept the principle that to obtain large productions the land must be fed.

Congress recognizes the necessity for the admission of fertilizing material without duty, and potash salts should not be made an exception. A duty on potash salts would increase the cost of the farmer's fertilizer without increasing his crop, or conferring any benefit on either the producer or consumer of farm products. The proposed duty would add about one cent per bushel to the cost of producing both wheat and corn. Should the duty result in the refusal of the farmers to buy fertilizers containing potash salts on account of the increase in the price, the wheat yield in the sections east of the Mississippi river would be reduced about 30 per cent. Therefore, potash salts should not be left on the list of materials on which a retaliatory duty may be placed.

Light For Farmers' Homes.

People may not be willing to believe it until they have seen it themselves, but it is a positive fact that the brightest light, the whitest light, the cheapest light for any **home is Aceytlene.** Farm homes are becoming more habitable, more elegant and more satisfactory by its influence. The lighting of the farm home is a great subject. Obtain light upon it. Write to the Union Carbide Company, Dept. B, 156 Michigan avenue, Chicago, Ill., and ask for information. No farm house is too large or too small.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "Practical Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid,** including one-year's subscription to this paper. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Write to The "Famous," Dept. 361, St. Louis, Mo., for Bargain Bulletin No. X 53. It contains a fine line of houshold goods.

Fertilizing Apple Orchards.

Some orchards are overfertilized and some are underfertilized. We must acknowledge, however, that the overfertilized orchard is seldom seen. The underfertilized orchard can be seen in any part of the country where the soil is not remarkably rich, and in such a soil good apples are not generally grown.

For practical purposes, we can ignore the overfed orchard. We will hardly find enough manure to satisfy the needs of the underfed ones. If the farm-yard manure that can be spared from the other crops is supplemented by the addition of purchased potash and other plant foods, with the further addition of lime on some soils, we will then not have more than is necessary, judging by the capacity shown by most of our apple growers for buying plant foods.

There are multitudes of orchards that need applications of lime, often because the soil is deficient in lime, and at other times because the soil is too sour to do its best without a neutralizer of the acid. But lime is not a plant food in the usual acceptance of that term. It can never take the place of potash, nitrogen or phosphorus.

Where orchards are in grass land, the writer has noticed that fertilizer is frequently applied at a disadvantage. One farmer observed has followed the practice during many years of keeping a six-foot in diameter space dug up around each tree and annually piling manure into that space, leaving all the rest of the ground in sod. It may be doubted if the trees get the full benefit of the manure in this way, for the roots of the tree extend generally far beyond its branches, and ramify or branch in all directions in search of food. If the fertilizer is placed over all the area being fed over, the greater part will be secured, but if it is placed in one position, at the base of the roots, away from the small feeding roots, little of it will be used. Moreover, if it is piled quite deeply during moist, warm weather, much of the valuable portions will be lost in gas.

Fertilizers for orchards should be applied in the spring and not after midsummer, unless it be late in the fall, when the trees have begun to drop their leaves. For the readily available plant foods, such as the nitrogen, spring application is best. It has been shown that when applied in the fall there is a great loss, through drainage, of the nitrogen, while if applied in the spring the roots of the trees secure a greater portion of it than at any other time.

The trees are feeding heavily in the spring, for they are making new roots, new leaves and new fruit, and late in the spring are manufacturing fruit buds for next year. By the end of July much of this severe work is over, but while it is going on the trees need to be well fed. Also at this time the conditions of moisture supply are generally such that the plant food is utilized more fully than at other times.

There are some that still hold to the idea that orchards need no fertilizing, and this is the cause of much of the lack of success with orchards. Apple trees need feeding as certainly as do cabbages, strawberries or any other of our economic plants.

The Lesser Apple Leaf-folder.

During the past two years nurserymen in various parts of the state have an insect which is comparatively new reported considerable damage from in Iowa, the apple leaf-folder. . The Entomological Section of the Experiment Station at once began to investigate the life history of this insect, and to experiment with different methods of combating it, in order to discover, if possible, some means by which it might be held in check.

The results of the experiments indicate that arsenate of lead is the most effective remedy. Directions for spraying, together with a complete life history of the insect, have just been published in Bulletin No. 102, "The Lesser Apple Leaf-folder." Copies of this bulletin may be obtained free by applying to Director C. F. Curtiss, Iowa Experiment Station, Ames, Iowa.

Some Suggestions For the Care and Delivery of Cream.

1. The separator should be kept in a clean place, where the air is free from the odors and dust of the stable, barn-yard or milking yard. The separator and all other utensils must be thoroughly cleaned every time they are used.

2. Cream testing 25 to 30 per cent. of fat will keep better; that is, not sour as quickly as thinner cream, and will be better from a butter-making standpoint. There is the further advantage that more skim milk will be retained on the farm.

3. The cream should be cooled to at least 50 degrees immediately after separation, and then kept cool until called for by the cream hauler. There are different plans of cooling, and individual patrons of creameries must decide which method is best suited for their own circumstances. If the quantity of cream is large enough to warrant it, a special cream cooler over which the cream may be passed direct from the separator will be most satisfactory. For small quantities, the most practicable plan is to put the cream in a deep, narrow can, which is in turn placed in a tank of cold water. The water will require changing from time to time, unless a supply of ice is available for adding to the water. If a windmill is used to pump water for stock or other purposes, a good plan is to have the water go first into the cream tank and overflow into the stock trough, placed at a safe distance.

4. The cream from each milking should be thoroughly cooled before being added to that from previous milkings.

5. The cream should be delivered to the creameries in a sweet condition.

6. If the preceding cannot be strictly enforced, it is advisable to have the cream delivered in an individual can. The buttermaker would then have the opportunity of rejecting cream unfit for the making of first-class butter, or of giving instructions for its improvement, and in that respect be placed on even terms with his brother buttermaker in a whole-milk creamery.—J. A. M., Ottawa, Ont., in Hoard's Dairyman.

The Cream Separator You Want

In Style, Price and Size, Is In

THE EMPIRE LINE

We make the *two types* of separators that are recognized as standard and we make each type in *all sizes*. That means that here, at headquarters, we don't have to claim everything for one style and condemn all others in order to make a sale.

We can state *facts* about each style. It doesn't matter to us which style you buy. One style costs less to make than the other style, and we give *you* the benefit. That's another good reason for coming to headquarters.

Both styles in the Empire Line are the same in *quality*. And all Empires are backed by the Empire guaranty—as good as a Government Bond.

THE FRICTIONLESS EMPIRE or the EMPIRE DISC

will make more money for you, save you more work and pay for itself over and over again for more years than any other separator made at any price. Hundreds of thousands of cow owners using the Empires will tell you to get an Empire if you want the most dollars from your dairy. Send for names of Empire users in your state.

No matter what you have planned to buy in the way of a separator, don't decide until you have seen the Empires.

Dairy Book, Free. We have issued the most fair, just and impartial cream separator book ever printed. It shows the different standard styles and gives the unbiased truth about each. It will prove an agreeable surprise to you. We'll mail you a copy the day we get your name and address.

Dairy and Creamery Notes.

"It's a good cow that will pay you present market prices for corn and oats, but the good cow will do it every time."—Blue Valley Bulletin.

The Blue Valley Bulletin says: "Straining milk takes out the insoluble foreign matter, but it's the foreign substance in solution that does the real harm."

The next meeting of the Missouri and Illinois Milk Producers' Association will be held at 1 p. m., Monday, May 24th, at the office of the Secretary. Mr. Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo.

The next meeting of the National Dairy Show will probably be held in Milwaukee, and an effort is being made to get the National Creamery Buttermakers' Association to hold the annual convention at the same time and place.

The state of Iowa has appropriated $10,000 to be used by the Dairy Association for the improvement of dairy interests of that state.

Not one farmer in ten thousand; not one creamery buttermaker in a hundred, and not more than five Agricultural College experts in all, can determine in advance how much moisture there will be in their butter, and yet there is an arbitrary law concerning it which is liable to get honest men in trouble.

Butter prices have held up well so far this year, compared with the average. The end of April is considered the breaking time, but the break did not come as quickly as usual.

H. C. Phelps

Let Me Pay the Postage on My Big Free Buggy Book to You

Though these books cost me 8c each for postage alone, yet I'll gladly send you one free because I want you to know about Split Hickory Vehicles—made-to-order—sold direct from factory to you at home on 30 Days' Free Road Test—guaranteed 2 years.

Book Tells How I Save You $26.50 on Split Hickory Buggies

—tells why I can save it to you and just where the saving comes in—also tells how I save you at the same ratio on over 100 styles of Split Hickory Vehicles—more vehicles than you could see in 10 big store rooms. Better send for this book, sit down of an evening and look it over. It's full of actual photographs of Vehicles and Harness of every description. It's my latest and best book—for 1909—and it's truly a Buggy Buyers' Guide. It not only gives descriptions and prices in detail, but also tells how good vehicles are made—why they are better made my way—all running parts made of second growth Shellbark Hickory, split with the grain, not sawed across it, thus giving extra strength and long wearing qualities. It tells about one of my latest features—Sheldon Genuine French joint automobile springs, making the easiest riding buggy on the market—even riding over rough roads is a pleasure with a "Split Hickory."

Buying direct from the factory brings you in touch with the people who make your vehicle. My two years' guarantee is to you direct—my 30 Days' Free Road Test is to you direct—my price to you direct—no roundabout transaction as when buying through a dealer—keep the dealer's profit to buy other things with—all meaning a big saving and more satisfaction to you.

Will you let me mail you the book? Will you write for it today. Address me personally

THE PRICE OF WHEAT.

Even When Advanced by Speculation, the Farmer's Product is Not High.

There was considerable excitement because May wheat was quoted about 2 cents a pound, or, say, $1.20 a bushel, on the Chicago Board of Trade. It is very probable that the constant buying on the part of a Mr. Patten caused wheat to sell a few cents higher than it otherwise would have done, but it is very probable also that Mr. Patten was well informed as to the supply of wheat in sight and the demand, and is not altogether certain that he made a cent by his operations, and it would be hard to prove that he was gambling. After Mr. Patten left the market, cash wheat delivered in April sold higher than the May option.

We do not take any part in condemnation of the Chicago Board of Trade. All the corners appear to put prices up, but never higher than they ought to be, considering the statistical situation. We do not consider $1.80 a bushel, or 3 cents a pound, in market, any more than a fair price for wheat, and we have no hesitation in saying that we consider option trading absolutely necessary for the international clearing and disposition of the wheat crop. For wheat is a world's crop, and it has to be considered as such. We cannot have high prices when Europe is full of wheat, and they cannot have low prices for wheat in Europe when they are short and have to buy of us. One thing is certain, and it is that the wheat in farmers' hands (and many farmers claimed to be holding wheat) has advanced in cash value through the Chicago excitement, for people who sold wheat to Mr. Patten had the privilege of delivering the goods. There may be gambling and speculation, but there is no way to designate it from legitimate trading.

At the time the wheat was selling at $1.20 or better, say 2 cents a pound, we were informed upon good authority that flour was selling at $6.00 for the barrel of 196 pounds, and that loaves of bread containing one-half pound of flour were being sold at retail over the counter at 5 cents; or, in other words, a six-dollar barrel of flour when made up into bread would cost the consumer $19.60 for 392 loaves of bread at 5 cents each. The farmer receives 2 cents a pound, out of which the freight bill is paid; the miller receives 3 cents a pound, and when it reaches the consumer it is 10 cents a pound. Out of the 10 cents the baker gets 5 cents and the retailer 2 cents a pound. These figures may not be exact, because there is No. 2 wheat and No. 3 wheat; there are different grades of flour and different qualities and makes of bread, but it appears to us that wheat ought to sell in the wholesale market from $1.20 to $1.50 a bushel, which is 2 to 2½ cents a pound, without any excitement or disturbance, when the city consumer is in the habit of paying 8 to 10 cents a pound for the flour when it is made into bread, even when the farmer is not getting a dollar a bushel for his wheat.

In our opinion, wheat can be sold by farmers at $1.50 a bushel without the laboring people having to pay a cent more for a loaf of bread or having the weight of the loaf reduced. In countries where domestic economy is practiced the laboring people buy their own flour and bake their own bread.

WILL YOUR HARVEST BRING FULL VALUE?

It all depends on you—whether you make full value a possibility.

To prepare your soil—to plant good seed and plant it at the right time—to care for your fields while the grain is growing, all this is vital to farming success. **You know** it is **vital** and you use all your intelligence, all your ingenuity, all your energy to do things as they should be done.

How about the harvest?

That's when the reward comes. That's when you transform your season's thought and labor and watchfulness into gold.

Your harvest will bring you full value if you are prepared to harvest at the right time—just when the grain is ripe—and prepared with a machine that will get **all** the grain, whether standing, down or tangled, without delays, without breakdowns. A dependable machine in dependable condition is an absolute necessity.

In all walks of life we are guided best if guided by **known** truths.

It took years of expense, years of vexations and worries, for the farmers of the world to learn that they could always depend on the

Champion McCormick Osborne
Deering Milwaukee Plano

HARVESTING MACHINES

—depend on them for an easy harvest
—for a **quick** harvest
—for a harvest with least labor
—least expense
—a full value harvest

Need we suggest that you let this known truth guide you? **You** don't want to experiment. You want a machine you **know** will give you a full-value harvest—this year and next year and through years to come.

These six dependable harvesting machines are manufactured under conditions that insure superior quality in every machine. This accounts in a large measure for their world-wide popularity.

Buying a machine is not as simple a matter as it may seem—a number of things must be taken into consideration. You should know something about the mechanical principles—how the machine works. You should know something about the materials entering into the construction—something about the degree of skill in the workmanship—something about the responsibility of the company behind the machine.

The Champion, Deering, McCormick, Milwaukee, Osborne and Plano machines are equipped with every known improvement and mechanical principle that would in any way tend to insure better work in the field. The workmanship and materials are the best that can be secured.

This means that if you buy one of these machines you will secure one that is made to work successfully.

In building these machines, inventors and designers work together for the development and improvement of every principle and detail in construction, and hence it is possible for this company to offer you machines that represent the highest attainment in both design and construction.

In other words, when a Champion, Deering, McCormick, Milwaukee, Osborne or Plano machine is in operation on your farm, you can feel assured that it is going to do the work as it should be done. The designers work year after year in the field studying conditions, and the improvements that are being made from time to time place these machines in a class by themselves.

After working a whole year to grow a crop, you cannot afford to place your harvest in jeopardy—you cannot afford to put yourself in danger of unnecessary delays in the harvest field. In other words, you should have a machine that can be repaired quickly if anything should go wrong.

If you have one of these binders, there will be no occasion for worry, because every dealer handling one of these lines carries a full stock of repair parts. Under ordinary conditions, the machine will not break or get out of order—for each machine is tested and retested under far more trying conditions than will ever be encountered in the harvest field.

In the manufacture of these machines the principle of construction is right—the materials are right—the workmanship is right—but, of course, all these things could not be done without an adequate organization—facilities to secure the proper raw materials and to employ skilled workmen and equip the manufacturing plants with the most modern facilities for turning out the machines. It is the thorough work in the selection of the raw materials and designing machines and the careful construction that lessens your responsibility when you go into the harvest field. Therefore, it behooves you not to make a mistake when you buy your binder.

Now, while you have the time, get ready for a full-value harvest. Call on the dealer. Ask him for catalogue of whatever of these six tested and proven dependable harvesting machines you want.

If you do not know a dealer near you, write to our Chicago office, or any of our branch offices, and a dealer's name and address will be sent you promptly.

Second in importance only to a perfect machine is perfect binder twine. No better twine can be made than Champion, McCormick, Deering, Osborne, Milwaukee, Plano and International in sisal, standard, manila and pure manila brands. These twines—and **repairs that fit for all machines** of the International line—sold by dealers everywhere.

No More Foot-and-mouth Disease.

The Secretary of Agriculture has issued an order, effective April 24th, releasing entirely the quarantine for foot-and-mouth disease, as he is satisfied that the disease has been completely eradicated from the United States.

LIGHT, YOUNG, FAT CATTLE.

Unlimited Demand for Them at The St. Louis National Stock Yards.

We have often referred to the advisability for stock raisers to improve the quality of their herds and flocks, with special reference to producing light-weight, fat butcher cattle. We are always reminded of this subject whenever we visit the National Stock Yards, the live stock market of St. Louis. The sales of cattle there amount to about a million head a year, and it is the very best market for the class of cattle referred to. We started writing about this class of cattle several years ago, thinking that possibly the market might decline about the time people began to be interested. But the market has not declined and the prices keep up. The Live Stock Reporter of May 1st, quotes choice to fancy yearling steers at $6.10 to $6.50 per hundred pounds; good yearling steers $5.65 to $6.00; choice to fancy heifers, $6.00 to $6.25; good, fat heifers, $5.40 to $5.90 per hundred pounds. These figures are best appreciated by stockmen who have known them to sell in the past at $3.50 to $4.50 per 100 pounds, and with an extreme top price of $5.00 for the fancy kinds. It is the active competition at the St. Louis market that keeps up the demand and prices.

A patron of this paper, writing to us about this class of cattle, asks: "What makes these cattle sell so well?" The answer is—fat and quality. Feeding until they are strictly fat—and raising calves that are sired by pure-bred Hereford, Shorthorn, Aberdeen-Angus or Galloway bulls. A fat yearling steer, without quality, may sell for $5.00 per 100 pounds, but the fat yearling steer with quality, of the beef type, is worth $6.25 per 100 pounds, on the same day at the same market. The difference between the fat scrub steer and the fat steer with quality, at a year, and a year and half old, is $10.00 to $15.00 per head in favor of the steer with the right kind of breeding. So much for the scrub bull that sires a scrub steer. The scrub steer may sell well on a good market, but that don't make him a good steer.

During the last week in April, L.N. Barley, of Lafayette county, Missouri, marketed twenty-one yearling steers, 994 pounds average, at $6.30 per hundred pounds; W. H. Kline, of Christian Co., Ill., marketed fifty-seven head, 685 pound yearling steers, at $6.25 per hundred pounds; J. W. Creed, of Calloway Co., Mo., marketed 30 butcher heifers, 688 pounds average, at $6.25; M. W. Walker & Sons, of Saline Co., Mo., marketed 30 yearling heifers, 781 pounds average, at $6.25; R. H. McClintic, of Audrain Co., Mo., marketed 24 heifers, 799 pounds average, at $5.85; Chas. Lebkeucher, of Cass Co., Ill., marketed 56 heifers, 669 pounds average, at $5.95; Meyer & Watkins, of Brown Co., Ill., marketed 17 heifers, 769 pounds average, at $5.90; Robertson & Hutchison, Moniteau Co., Mo., marketed 12 steers and heifers, 730 pounds average, at $6.00; W. T. Hodge, of Boone Co., Mo., marketed 13 heifers, 780 pounds average, at $6.00, and 2 fat heifers, 720 pounds, at $6.35; J. T. Rigsby, of Macoupin Co., Ill., had in a few butcher heifers, 800 pounds average, at $6.25, and E. Wilton, of Macoupin Co., Ill., marketed 17 steers and heifers, 978 pounds average, which sold at $6.15 per hundred pounds. These are representative sales of the class referred to and only a few loads of them were entitled to be classed as choice.

Several points can be relied upon in regard to this branch of trade. First—that there is an unlimited demand for handy, fat, good quality cattle at the St. Louis National Stock Yards. Second—that they bring as much money when they are up to the standard, from one state as from another. Third—that the requirements are always: fat and quality. Fat without the beef type called quality does not mean top prices, and quality without fat often causes the cattle to be sold to a stockman who knows how to get them in market condition, and he pays a price for cattle that are not fat.

The Hay Situation.

The hay market is very strong and likely to continue so. In some sections the crop will be short and it may be large in others. Hay was selling at $9.00 to $18 per ton at St. Louis during the last days in April. Sales included clover-mixed at $14 to $15; poor to best timothy at $9.00 to $16; No. 2 alfalfa at $15 to $16; No. 1 at $17 to $18. Plenty of demand for good hay. Prairie hay scarce and wanted; one car sold at $12. In this connection we desire to invite attention to the advertisement of the Dain Manufacturing Company on page 2. We have advertised Dain hay rakes, loaders and other tools and implements for twenty-five years. They are always up-to-date. Quality in hay depends upon proper handling. Tools are the great consideration; therefore this particular advertisement should be read with great interest.

AMERICAN FLAG PREMIUM.

Every family should own an American flag, and the good and lasting flags that are of extra material and fast colors are hard to get. We have a flag of nice, soft cloth, fast colors, 2½x4 feet, a splendid flag. We are offering it as a subscription premium.

Offer No. 1.—To any boy or girl who will obtain two single subscriptions to The National Farmer and Stock Grower at 50 cents each and send us in One Dollar to pay for same, we will send one American flag free, and will pay postage on it.

Offer No. 2.—To anyone who will send us 60 cents we will send The National Farmer and Stock Grower one year. We will send one American flag by mail prepaid. The extra 10 cents is for postage and packing.

Offer No. 3.—Anyone who will send us One Dollar to pay for his own subscription three years in advance can select our American flag as a premium, and we will send it, all charges prepaid.

We do not brag about our premiums. They are the best ever sent out by any publication.

Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Missouri Dirt Valuable.

A. L. Jenkins sold the Leavell Farm of seventy-three acres, west of town, to L. J. Cary, yesterday, for $8,395, $115 per acre—the highest price that has been paid for farm land in this part of the state to date. —News of Chula, Livingston county.

FARM AND RANCH LANDS.

ARKANSAS.

4,500 acres of **Arkansas** Prairie Land;
2,280 acres of **Arkansas** Timbered Land;
1,000 acres of **Arkansas** Timbered Land; and many good **Arkansas** Farms for sale cheap. Have some bargains for first who come. Apply to **D. H. BALFOUR & CO., Box 235, Warren, Ark.**

Michigan.—I sell Farms in Oceana, the best county in Michigan. Fruit, Grain, Poultry and Stock Farms. Write for list. J. D. S. Hanson, Hart, Mich.

Missouri—2,520 Acres.

I can sell for for $40 an acre the best large farm in Missouri at the price. It has four good residences, eight good barns, other outhouses, good fencing. 500 acres in cultivation, 800 acres prairie blue grass pasture, 400 acres open woodland blue grass pasture, 200 acres prairie meadow. A small portion heavy walnut, hickory, white and red oak timber. 100,000 feet of black walnut timber and cut no tree that will square less than 10 inches at small end. This is a fancy farm proposition. I emphasize that this is a beautiful farm, rich land, smallest quantity of waste land. Also a small, clean, high-class timber proposition. Not far from Kansas City; four miles to railroad transportation. Gasoline launches on river adjoining farm. No overflow land. Easy terms. There is now no incumbrance.

J. H. LIPSCOMB,
306 Fidelity Trust Bldg., Kansas City, Mo.

HOMESEEKERS

Come where one crop of tomatoes will pay for the land. 62 canning factories in the county. 360 cars canned tomatoes shipped last year. Fine dairy and stock country. Send for list and circulars describing a county that has been overlooked. No hail storms or hot winds. Grow most everything. Most healthy country. All good water. We can interest you. Write us your wants to-day. One price. We do business only on the square and our reputation is our reference.

WRIGHT & WATERSTRIPE,
Marshfield, Mo.

New Mexico Land for Sale. 1,000 acres on the Pecos river. Two miles on the river will make a fine cattle ranch, or can be irrigated. For particulars, address, **J. G. Clancey,** Puerta di Luna, New Mexico.

Ohio.—For Sale: 870 acres in Scioto county, adapted to sheep raising and tobacco farming. Ten car-loads of hickory butts, ten thousand railroad ties, large number of telephone poles can be cut at any time—timber enough to pay for place. Price, $15.00 per acre. Ill-health; must sell. For particulars address, **N. B. Shelly,** Arion, Ohio.

Tennessee.—Send for booklet on farming and full description and price of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

A Texas Proposition

122,000 ACRES

That should be investigated. I will sell this large tract for $4.25 an acre on easy terms. 70 per cent. tillable land, 50,000 acres finest valley land. Annual rainfall 25 inches. Elevation 1,300 feet. Located near land selling for $15 to $20 an acre. Close to railroad. Rich land. An offer of $15,000 a year rent on five year lease for grass has recently been refused for the tract. A man with money will quadruple his investment in a short time.

J. H. LIPSCOMB,
306 Fidelity Trust Bldg., Kansas City, Mo.

Texas.—12,000-acre ranch within eight miles of Sabinal, Uvalde county, Texas. A part fine grazing land and the balance richest agricultural soil. Will sell in 2,000-acre tracts or less. Agricultural lands average $11.00 per acre and grazing lands average $4.75. Greatest bargains in the state. For particulars address **Albert D. Evans,** National Stock Yards, Ill.

VIRGINIA FARMS, $5.00 Per Acre and upwards. Easy payments. Catalogues free. Loans made on country real estate. **George E. Crawford & Co.,** 1009 East Main St., Richmond, Va. Established January, 1875.

"We can sell your property. Send description. **NORTHWESTERN BUSINESS AGENCY, Minneapolis, Minn."**

320 Acres of Wheat Land in WESTERN CANADA Will Make You Rich

Fifty Bushels per Acre have been grown. General average greater than in any other part of the Continent. Under New Regulations it is possible to secure a Homestead of 160 acres free and an additional 160 acres at $3.00 per acre.

"The development of the country has made marvelous strides. It is a revelation, a record of conquest by settlement that is remarkable." Extract from correspondence of a Missouri Editor, who visited Canada in August last.

The grain crop of 1908 will net many farmers $20 to $25 per acre. Grain-raising, Mixed Farming and Dairying are the principal industries. Climate is excellent; Social Conditions the best; Railway Advantages unequaled; Schools, Churches and Markets close at hand.

Lands may also be purchased from Railway and Land Companies. For "Last Best West" pamphlets, maps and information as to how to secure lowest Railway Rates, apply to **Sup't of Immigration, Ottawa, Can.,** or to the authorized Canadian Government Agent.

J. S. Crawford, 125 W. 9th St., Kansas City, Mo.; C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

Some of the notorious Alaska wheat sown in the fall in St. Louis county, Missouri, started all right, but it was winter-killed. Alaska wheat is not a winter wheat.

A FAIR PRICE FOR WHEAT.

It Ought to be Paid to the Farmer Without the Country Going Into Bankruptcy or Causing Poor People to Suffer.

There is considerable excitement over the recent advance in the price of wheat, and most of that excitement is due to ignorance of the subject.

Wheat is a staple farm crop, and the average production in the United States is not over fourteen bushels per acre. In twenty years the farmer has not received even a remunerative price for wheat, let alone a profit.

The average price in the years 1866 to 1869 was $1.20 a bushel, in depreciated currency. From 1870 to 1879 the average price was 99⅓ cents a bushel; the average price from 1880 to 1889 was 83½ cents; the average price from 1880 to 1889 was 65.4 cents; and from 1900 to 1907 was 72⅛ cents.

Farmers have raised wheat year after year to sell it at 1 to 1½ cents a pound until they tired of robbing their farms by raising an exhaustive crop for the purpose of getting no more than the wages of day laborers.

Now comes a time when wheat advances to 2 cents and 2½ cents a pound. A speculation in wheat to be delivered in May closes at $1.26 per bushel at Chicago, and that is what is causing all the excitement. Mr. Patten, a speculator, is getting all the blame, and yet not a barrel of flour has yet been made from wheat of his trading, and the millers who are actually buying and milling wheat and paying $1.40 to $1.45 a bushel on delivery in real money for real wheat are complaining that the speculative market is too low; that it causes them to sell flour down to the cost of the wheat.

On April 28th, at St. Louis and East St. Louis, real red wheat sold at $1.38 to $1.46 in real money per bushel, and speculative sales for May delivery closed at $1.23. The public excitement was about the speculative wheat at $1.23 per bushel, and it is the people who are in the milling business who were suffering, because the cart was before the horse, and they had to pay $1.46 per bushel without any chance of raising the price of flour, owing to the agitation of the subject.

Flour Was Selling—Per Barrel

First Grade, called Patents, at.....$6.25 to $6.60
Second Grade, called Straights at..$5.90 to $6.15
Third Grade, called Extra Fancy, at.....$5.25 to $4.60
Fourth Grade, called Fancy, at.....$4.25 to $4.60
Fifth Grade, called Low, at .....$3.50 to $4.10

The farmer at last was receiving 2 to 2½ cents a pound for his wheat.

All the miller received is about 3 cents a pound ($6.00 per barrel) for his best average flour.

The baker buying flour in large quantities buys flour not above 6 cents a pound; in fact, the baker buys flour called Extra Fancy, quoted at $4.25 to $4.60 per barrel of 196 pounds.

He makes a loaf out of a pound of flour, or two loaves each containing one-half pound of flour, which he sells at 8 cents (two five-cent loaves) to the storekeeper, and the storekeeper sells the two loaves for 10 cents, which is 5 cents each.

The farmer receives for his wheat at the highest point in years 2 cents a pound, $1.20 a bushel; or 2½ cents a pound, which is $1.50 per bushel. And the consumer pays 10 cents for a pound for flour when it is made into bread, and has done so during the period when farmers only received 1 to 1½ cents a pound for wheat, or 60 to 90 cents a bushel, —low prices indeed—returning to the farmer but $8.40 to $12.60 an acre—not enough money to pay for planting, cultivating and harvesting the crop.

We have no quarrel with the baker—he knows his business. The farmer's margin of profit for a whole year must be searched in the 2 cents a pound; and the baker's profit for three or four days at most must be searched for in the 5 cents difference between the 3-cent-a-pound ($6.00 a barrel) flour and the 8-cent (1 pound of flour) loaf. The farmer must sell wheat at $1.20 a bushel or better or he will stop raising wheat, and then what will become of the baker?

Very much flour is bought and baked into biscuit, and the home baking of bread is not altogether a lost art. Those who bake their own bread will not complain of farmers getting 2 to 2½ cents a pound for their wheat, neither will they complain of the miller's very modest price for flour; but there are others who do not bake bread, and they are dependent upon any size loaf the baker sees fit to give them. We fear this is an extravagant nation. There are families with less than a thousand dollars a year who are buying bread puffed up with wind instead of buying flour and baking it. With the finest and cheapest stoves, and fuel not dear, the housewives prefer to buy bread at 10 cents a pound to baking at 4 cents, at most, a pound of flour made into bread. It is not high-priced wheat that makes living dear, but the determined extravagance and negligence of the housekeeper. The rich can afford it; we glory in their putting money in circulation; but the clerk's family, the mechanic's family, the policeman's family, cannot afford to pay double price for that which is actually necessary. In England, where the writer of this article was born and raised, bread is sold by the pound, and on every baker's counter there is a bread knife to cut a piece off a second loaf to make good the weight of the loaf being weighed, and yet in England and Germany 85 per cent. of the families bake their own bread as a measure of domestic economy.

The National Farmer and Stock Grower will take great pleasure in furnishing ten farmers' wives each with one hundred pounds of flour. The purpose is to bake good bread and to ascertain exactly how much bread can be made out of one hundred pounds of flour. We will expect the flour for each batch of bread to be weighed before baking, and each batch of bread to be weighed after baking directly it is properly cooled. We will ask for but a loaf or two for exhibition purposes. We wish to obtain the average of many bakings, that we may be able to show positively how much good bread is usually made out of a hundred pounds of flour. We will also ask the Directors of Agricultural Colleges to demonstrate how, with wheat at $1.50 per bushel, the people can be furnished bread at a fair price within their means.

We farmers must do something to educate the people of the cities in the economical management of their households before the President appoints another commission to teach us how to manage our farms.

$29.75 FOR THIS NEW LOW DOWN AMERICAN $29.75
CREAM SEPARATOR

A SEPARATOR THAT EXCELS ANY SEPARATOR IN THE WORLD

DON'T HESITATE BECAUSE OUR PRICE IS LOW. The quality is high; we guarantee it. It is up to date, well built and well finished. It runs easier, skims closer and has a simpler bowl with fewer parts than any other cream separator. Don't accept our word for it. Judge for yourself. Our offer enables you to do this at our expense. Write us a postal card or a letter and receive by mail, postpaid, our 1909 catalogue. It is handsomely illustrated, showing the machine in detail, and fully explains all about the Low Down AMERICAN. It also describes the surprisingly liberal LONG TIME TRIAL proposition we can make you. Competition is defied by the quality and price we make. Our generous terms of purchase will astonish you. Remember, we are the oldest exclusive manufacturers of hand separators in America, and the first to sell direct to the user. You are not dealing with any agent, middleman or catalogue house when dealing with us. Not one single profit is paid anyone between ourselves and our customer. You save all agents', dealers', even catalogue house profits and get a superior machine by dealing with us. Our New Low Down AMERICAN Waist High Separator is the finest and highest quality machine on the market and our own (the manufacturer's) guarantee protects you on every AMERICAN Separator. We can ship immediately. Western orders filled from Western points. Write us and get our great offer and handsome free catalogue on our New Low Down AMERICAN Separator. Address

[Please mention National Farmer and Stock Grower.]

The Hand Separator.

Some writers and many dairy speakers are condemning the hand separators, yet in spite of this fact farmers of the Northwest are as busy as they can be purchasing these machines for use on their farms, and the Minnesota Dairyman will say to them that they are right in their conclusion, and wishes them to go on with the good work and to see that they get the very best of these machines on the market and to spend as much time as possible studying how to use the machine and **how to clean them.** This last is the all-important part of running the hand separator, and it is the one place where there are so many that fall down.

The using of dirty separators has cost the hand separator manufacturers more than any one thing, and it behooves every manufacturer to send out the word with every agent that their machines will not do good work unless washed twice a day. In this way they can help to improve the hand-separator butter and help to improve the dairy farmer's condition.

It is up to the State Dairy and Food Departments to assist in the matter of making better hand-separator butter, and they can do wonders in this line in a very few years if they will but apply the law to the users of hand separators who are not keeping them in a sanitary condition. An arrest or two in a neighborhood will do more to clean up the hand separators than any and all the agitation in the section can do. Get the hand separators out of the barns and into the milk house, and there will be no trouble to keep them clean.—Minnesota Dairyman.

"I Made $2400.00 IN ABOUT 2 MONTHS"

writes one man a few months after becoming my representative in my CO-OPERATIVE REAL ESTATE BUSINESS. No experience necessary; this man had none. I will teach you the business by mail and appoint you my special representative. You can work all or part of your time. PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have

discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send **The National Farmer and Stock Grower** for two years and we will send the book, **Profitable Dairying,** as a premium. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

A New Seven-day Butter Record.

The milk of this Holstein cow, shown in the accompanying cut, was tested for butter by a representative of the Cornell University Experiment Station, Ithaca, N. Y., during the latter part of March, 1909, and by the Babcock test showed a yield in seven days of 28.44 pounds of butter-fat. As such records are commonly stated by the Herd-book Association, this yield of butter-fat is equivalent to 35.55 pounds commercial butter at 80 per cent. fat.

World's Champion Cow, 35.55 lbs. Butter in 7 days
Grace Fayne 2nd's Homestead, Pure Bred Holstein

This yield exceeds that of any other cow tested under the present scientific systems in use at Experiment Stations, which are to-day the only true tests, and is a wonderful example of the capacity and development of cows of this famous breed of dairy cattle. The previous high record was held by a Holstein cow owned by a Wisconsin breeder, and New York state now claims the champion cow of the world, owned and developed in Syracuse by Mr. H. A. Moyer.

This cow exhibits to a great degree the characteristic vigor of the Holstein. Her last test was begun when she was six years, twenty-three days old, and showed 5.42 per cent. fat. She was the champion four-year-old of 1907, testing 29.16 pounds in seven days and 119.22 pounds in thirty days. As a five-year-old she tested 30.55 pounds in seven days and 126.68 pounds in thirty days.—F. L. Houghton, Secretary Holstein-Friesian Association of America, Brattleboro, Vt., April 15, 1909.

The Business of Dairying.

In our last edition we mentioned a book entitled "The Business of Dairying." It is issued by Professor Clarence B. Lane, Assistant Chief Dairy Division, United States Department of Agriculture. The price is $1.25 a copy. It is prepared for producers and handlers of milk and all who make dairying a business. It is divided into six divisions and twenty-six chapters. There are 300 pages, 5x7 inches. It is full of instructive illustrations. We earnestly advise all who are interested in dairying to buy a copy of this book. The more we look at this book the more we are pleased with it.

On the difficult subject of the cost of producing milk Professor Lane is very interesting and instructive. He shows in detail how one farmer saved 18.3 cents per hundred pounds in the cost of milk, something that any farmer could also do. In another case 12.1 cents per hundred pounds was saved. The same book gives a ration fed by one dairyman at a cost of $133.22 per year per cow, while another dairyman fed his herd a ration costing only $34.25 per cow per year. The differences in the cost of the rations named in this valuable book were not at the expense of the cows or the amount of the product; the herd that cost only $34.25 per year per cow to feed produced 400 pounds of butter-fat per cow.

We have adopted the book as one of those on our selling list. Send us $1.25 for one copy of "The Business of Dairying," and we will send it postage paid. We will also credit one-year's subscription to The National Farmer and Stock Grower. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Starters in Buttermaking.

The value of starters in buttermaking, the kind and amount to use, and the substitution of other materials for milk in making starters, are questions that are of great interest to buttermakers. The principle on which the use of starters is based is the influence which certain bacteria have on the quality and flavor of the butter. By pasteurizing the cream and adding a starter which contains the desired form of bacteria, the character of bacterial growth in the ripening cream can be readily controlled. To determine just which starters are best, and whether it pays to use any at all or not, a series of extensive experiments were carried on by the Dairy Section of the Iowa Experiment Station, under the direction of Professor F. W. Bouska, Dairy Bacteriologist. The results of these experiments have been published in bulletin form, and may be obtained from Director C. F. Curtiss, Ames, Iowa. Ask for Bulletin No. 103, "The Use of Starters in Buttermaking."

Holding Up the Milk.

John Burroughs, the eminent naturalist, makes the following statement on this subject in the Outing Magazine:

"Most farmers and country people think that the 'giving down' or 'holding up' the milk by the cow is a voluntary act. In fact, they fancy that the udder is a vessel filled with milk, and that the cow releases or withholds it just as she chooses. But the udder is a manufactory; it is filled with blood from which the milk is manufactured while you milk. This process is controlled by the cow's nervous system; when she is excited or in any way disturbed, as by a stranger, or by taking away her calf, or any other cause, the process is arrested and the milk will not flow. The nervous energy goes elsewhere. The whole process is as involuntary as is digestion in man, and is disturbed or arrested in about the same way."

It is well for those who are inclined to use the milk stool on a cow when she refuses to "let the milk down" to remember Mr. Burroughs' statements, which are without question correct.

At the sale of dairy cattle held at Westerville, Ohio, April 9th, by Mr. A. B. Lewis, thirty-nine head of Jersey cattle sold at auction at an average of $244 around. One bull, Imp. Stockwell, was sold for the extraordinary price of $7,000 to Dr. H. D. Rodman, of Shelbyville, Ky.; and the cow Fontaine's Gold Medal sold for $1,500 to C. I. Hudson, of East Norwich, Long Island, New York.

U.S. U.S. U.S.

The Most Perfect
Cream Separator
That Money Can Buy.

The United States 1909 Models

Nos. 14 and 15, like all other sizes, are absolutely unequaled.

They are **the standard** Separators of the world.

They are entitled to this claim of being **Standard** because they won out in the greatest contest of Cream Separators ever held at any National or International Exposition in 50 consecutive runs, lasting through one month, on the milk of 10 different breeds of cows. The ***De Laval Disc Separators*** and the ***Sharples Tubular Separators*** were entered in this contest and **were beaten.**

The United States Separators are used by a very large percentage of the leading breeders in all the 10 leading dairy breeds of cows.

The United States Separators are used by progressive dairymen and creamerymen everywhere.

The United States Separators have **handsome frames,** cast in **one solid piece.** They have **waist low supply cans.** The **gears** are all **enclosed, dust proof** and **self oiling.** The **bowls** are **most simple** in construction and **easily washed** thoroughly in all parts in from two to five minutes. No long goose neck pipe in the United States to get foul and difficult to clean.

Dairy women as well as **experts consider** that the **United States** is now the **easiest cleaned, turns easiest, skims cleanest** and **wears longest.**

The United States was the originator of the enclosed, dust proof, self oiling gears. All others using this feature are imitators.

Send for illustrated catalogue and circular, No. **125.**

Editor knows from experience Shoo-Fly is O. K.

NEW BUGGY CATALOG JUST OUT!

One of the very finest books of its kind that we have ever seen is the Elkhart Carriage and Harness Mfg. Co.'s new catalog, which shows all their newest and latest designs. For the benefit of our many interested readers we print here a picture of their famous "No. 1000" Buggy.

"No. 1000" is equipped with true sweep bike axles and twin auto seat, which is divided. However, the upholstering is made all in one part as in the ordinary seat. This buggy is said to be an unusually easy-riding vehicle and is built perfectly. Regular buggy style gear, instead of the bike gear here illustrated, may be had by those who prefer it.

"No. 1000" is made with steel tires and ⅞ or ¾ inch solid rubber tires. Sarven Patent or Half Dodge Spoke wheels can be had on this buggy, too. In fact, several changes may be made to suit the fancy of the user. Many other desirable styles are shown in the Elkhart free catalog and all are good. Before investing in any kind of a buggy we advise our readers to send a postal to the Elkhart Carriage and Harness Mfg. Co., Elkhart, Ind. They sell direct to buggy users. Kindly mention this paper.

"St. Louis consumes twenty car loads of potatoes a day, including what it wastes under the name of mashed potatoes."—Globe-Democrat.

SKIM MILK ON THE FARM.

The Cash Value and Use as a Valuable By-product.

Of all the by-products on a farm in the dairy line, skimmed milk should head the list. If this article was properly appreciated the value of many a so-called "poor cow" would be considerably increased.

Skimmed milk may be safely estimated to be worth from fifteen cents to one dollar per one hundred pounds, according to its quality and the use that is made of it.

I believe hand separator skimmed milk is of greater value and of greater use than skimmed milk obtained by any other method. It will give better satisfaction and produce better results, as the milk is uniform from day to day.

Skimmed milk as a food for young animals is hardly to be surpassed if fed right. The greatest danger and a decided waste is in overfeeding, especially young pigs and calves.

After a calf is two weeks old, the feed may be gradually changed from the whole milk until only skimmed milk is given. Calves thrive much better on the warm skimmed milk from the hand separator than on the skimmed milk brought home from the creamery, where the milk of several hundred cows is probably mixed, or the milk set in pans and crocks or deep cans, which, when the cream is taken off, is always cold and usually half sour. I think skimmed milk may be fed to calves with more profit than to any other thing about the farm, unless it be the poultry.

Chickens fed almost entirely on it but allowed to run at large will grow very fast. The skimmed milk, if allowed to stand until thick and loppered, will be greater economy and prove as satisfactory.

Pigs fed on skimmed milk, either sweet or sour, give good satisfaction, although care should be taken not to change from one to the other. Pigs seem inclined to the sour rather than to the sweet, and in either case grain foods should be fed with it in order to make a balanced ration. Skimmed milk as a food for all young animals is an aid to the digestive organs, as there is not a particle of it but is digestible.

Its use in increasing the fertilizing qualities of the manure must not be overlooked. This is considered one of the greatest losses when the whole milk is sold off from the farm. Skimmed milk is used in making "Cottage" or "Dutch" cheese, and, when properly made, it has brought $1.00 for every 100 pounds used, in many instances. This, of course, depends on the market.

Authorities on this subject assert that if there are no other uses to take up the skimmed milk, it is worth at least seven cents per hundred to throw on the land, but a very large amount may be used that will bring in a higher cash value than that.—Estella F. Miller, New York. [First-prize Essay of New York State Fair in Class—The Use of Skim Milk Upon the Farm.]

Dairy Sires Necessary.

Baron Schrewe, a German scientist and authority on pure-bred dairy cattle, says that a good milch cow will not be the mother of good milch cows to a profitable degree of certainty, unless she is mated with a bull that is descended from a long line of good milkers.

Baron Schrewe instituted experiments with 153 cows. These cows were the progeny of four bulls. The bulls were of the same breed and two were strictly descended from first-class milkers and two were not. A careful record was kept, for a period varying from three to six years, demonstrating conclusively that the dairy quality of the bulls they were mated with was of the highest importance in determining the milk yield of their female descendants.

MILK PRODUCERS' ASSOCIATION.

Fourteen Cents a Gallon the Standard Price For April Milk—Next Meeting Monday, May 24th.

During the month of April the Secretary of the Milk Producers' Association of Missouri and Illinois sent out a statement of the condition of affairs and requested that all members in arrears pay over their dues to the Delegates on their railway lines, that the association be placed in a financial position to pay indebtedness incurred in the service of the milk producers. The result of this circular is expected to be shown at the next meeting, to be held on Monday, May 24th, at 1 o'clock p. m., at the office of the Secretary, Mr. Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo.

Hon. D. I. Furbeck was at headquarters on Monday, April 26th, and, acting as Milk Committee, reported that the Grafeman and Union Dairy Companies had promised to pay fourteen cents for uncontracted milk delivered to them in April by members of the association. The St. Louis Dairy Company, having a large proportion of the milk under contract, declined to state a positive price for uncontracted April milk. Several smaller dairies were hardly disposed to pay fourteen cents unless they were to get more warm weather toward the end of the month. The expectation is that fourteen cents will be paid by most dairies for uncontracted April milk.

According to a statement made by Mr. Furbeck, covering price received for his own milk for a series of years, April milk last year was thirteen cents; in 1907 it was twelve and one-half cents; in April, 1906, the price received was fourteen cents. During ten years, from 1895 to 1904, the price of April milk averaged eleven and one-half cents. It is claimed, with good evidence to support the claim, that notwithstanding the increased cost of milk production, the price of milk would have remained very much as it was but for the conservative and persistent negotiation with the milk distributors on the part of the Milk Committee of the association. This is only one of the benefits conferred on its members by the Milk Producers' Association.

In the month of April dues were paid by Mr. James Shannon, of Robertsville, Mo., and Charles Griffin, of Grassland, Ill.

It is proposed that hereafter the written report of the Milk Committee will be mailed out to members only as soon as the report is made, and the proposition will very likely be adopted.

Protection From Fire.

Fire prevention is an important subject for farmers, and in this connection we advise our readers to take notice of the advertisement of the Goodson Electric and Mfg. Co. advertising a portable fire extinguisher at a very reasonable price.

DE LAVAL SEPARATORS MAKE THE BEST BUTTER

The one purpose of every thinking buyer of a cream separator is the making of the most and the best cream possible, whether for home buttermaking, creamery patronage, or any other use to which cream is put.

It is possible to "claim" almost eyerything for the various makes of cream separators, but the one indisputable fact that would-be competitors do not even attempt to get around is the unquestionable superiority of the DE LAVAL machines in the making of the best butter.

Year after year, dating back to the invention of the "ALPHA-DISC" system of DE LAVAL bowl construction, butter made by users of DE LAVAL machines has scored highest and won all higher awards in every large and thoroughly representative butter contest throughout the world.

Beginning with the first great annual contest of the NATIONAL BUTTERMAKERS ASSOCIATION in 1892 and ending with the 1908 contest, not only the HIGHEST but every anywhere near high award has been made to users of DE LAVAL separators and more than nine-tenths of all exhibits scoring above 90 % in quality have been DE LAVAL made.

THE ROLL OF HONOR ALL DE LAVAL USERS

The First Prize winners and their scores at every convention of the National Buttermakers Association since its organization in 1892 have been as follows:

1892	Madison, Wis., Louis Brahe, Washington, Iowa	Score 98.
1893	Dubuque, Iowa, C. W. Smith, Colvin's Park, Ill.	Score 97.
1895	Rockford, Ill., F. C. Oltrogge, Tripoli, Iowa	Score 98.
1896	Cedar Rapids, Iowa, Thomas Milton, St. Paul, Minn.	Score 97.82.
1897	Owatonna, Minn., H. N. Miller, Randall, Iowa	Score 98.5.
1898	Topeka, Kan., Samuel Haugdahl, New Sweden, Minn.	Score 98.
1899	Sioux Falls, South Dakota, A.W.McCall, Creston,Iowa.	Score 97.
1900	Lincoln, Neb., H. T. Sondergaard, Litchfield, Minn.	Score 98.
1901	St. Paul, Minn., E. O. Quenvold, Owatonna, Minn.	Score 97.
1902	E. L. Duxbury, Green Bay, Wis.	Score 98.5.
1904	St. Louis, Mo., L. S. Taylor, Glenville, Minn.	Score 98.5.
1906	Chicago, Ill., A. Carlson, Rush City, Minn.	Score 97.
1907	Chicago, Ill., A. Lindblad, North Branch, Minn.	Score 97.5.
1908	J. C. Post, Hector, Minn.	Score 98.

(There were no conventions in 1894, 1903 and 1905.)

In the great 1908 contest 504 of the best buttermakers in the United States competed, with first, second and third, and all important awards, being made to users of DE LAVAL machines.

At each of the big Chicago National Dairy Shows DE LAVAL butter has made a CLEAN SWEEP of all highest prizes, and at the December 1908 Show, when instead of butter there was a cream contest, under the supervision of the Dairy Division of the United States Department of Agriculture at Washington, first and second prizes in both classes were won by DE LAVAL cream.

Going back further, DE LAVAL made butter received the GRAND PRIZE at the ST. LOUIS WORLD'S FAIR and as well at the last PARIS WORLD'S EXPOSITION.

In all the hundreds of important state and country contests the world over for twenty years the superiority of the DE LAVAL separator in the making of fine butter has been conclusively proven.

THE EXPLANATION IS TO BE FOUND IN THE IDEAL DESIGN AND CONSTRUCTION OF THE DE LAVAL SEPARATING BOWLS AND THE THOROUGHLY PRACTICAL CONDITIONS UNDER WHICH DE LAVAL MACHINES MAY BE OPERATED AND USED.

A new 1909 DE LAVAL catalogue—affording an education in this as in other features of separator knowledge—is to be had for the asking.

The Superior Location and the Push and Energy of the Market Firms Have Made the

St. Louis National Stock Yards

THE GREAT CENTRAL LIVE STOCK MARKET OF THE UNITED STATES.

This Applies to Cattle, Hogs, Sheep, Horses and Mules.

During the Year 1908 the St. Louis National Stock Yards Made

A BETTER SHOWING

Than Any Other Live Stock Market in the Country.

SHIP YOUR STOCK

To the Best Market, Where Business is on the Up-grade; Where There is the Greatest Competition.

Butcher Cattle Quotations.

The greatest market on earth for butcher cattle is at the St. Louis National Stock Yards. Fancy native heifers are selling at $6.00 to $6.25 per 100 pounds; choice heifers at $5.50 to $5.90; medium to good heifers at $4.85 to $5.40; common to medium heifers at $4.00 to $4.85. Strictly fancy fat cows are selling at $5.60 to $5.75; good to choice fat cows at $4.50 to $5.50; medium cows at $3.85 to $4.40; cows classed as cutters at $2.60 to $3.65; canning cows at $1.00 to $2.60. For heifers the market has been higher, but it is seldom, if ever, that fat cows have sold so well.

Milch Cattle at St. Louis.

Strictly good milch cows are selling the highest in the history of the world. At the St. Louis National Stock Yards common skates are selling at $18 to $30 per cow and calf; a fair class at $35 to $45; a good class at $50 to $60; and fancy milkers with good calves at side at $65 to $70. They have to be fancy to sell at the top quotation, but really top cows, four years old, of milking family and appearance, would sell for more money.

Sheep and Lamb Sales.

Late in the month of April the following sheep and lambs were sold at the good, active, reliable market at the St. Louis National Stock Yards: D. E. Miles, Monte Vista, Colo., 566 Mexican lambs, 68 pounds, at $7.75; J. B. Cowles, West Harpeth, Tenn., 66 spring lambs, 60 pounds, at $8.25; and 30 shorn ewes, 106 pounds, at $5.40; T. C. Hale, Wichita, Kas., 283 Western lambs, 70 pounds, at $7.90; McKinzie & Ferguson, Texas, 498 shorn wethers, 87 pounds, at $5.40; W. R. Campbell, Cairo, Mo., 125 shorn lambs, 70 pounds, at $7.00; Gardner & McKee, Nebraska, 583 Mexican lambs, 60 pounds, at $7.60; Bennett Bros., Cairo, Mo., 135 shorn lambs, 68 pounds, at $7.10; W. D. Wade, Lamonte, Mo., 48 shorn native ewes, 125 pounds, at $5.50; A. Baker, Nebraska, 244 Mexican lambs, 70 pounds, at $8.25—all quotations being at the price stated per 100 pounds.

Colorado Cattle at St. Louis.

On the last day of April, at the St. Louis National Stock Yards, Messrs. Clay, Robinson & Co. sold 110 head of beet-pulp steers, good quality and fat, 1,300 pounds average, at $6.55 per 100 pounds. They were shipped by Lockhart, Beggs & Ballentine, from Rocky Ford, Colo. The sale is a good indication of first-class salesmen and an elegant market at St. Louis.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,

Veteran Commission Salesman, General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Do not forget us when you wish to know anything about either the Sheep, Hog or Cattle Market or future prospect.

Don't hesitate to write or ship to

James H. Campbell,

National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign horses, cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Sheep and Lamb Prices.

On the last day of April, the sheep circular of Messrs. Clay, Robinson & Co., at the St. Louis National Stock Yards, contained the following up-to-date quotations: Wethers, good to choice, $6.00 to $6.50; wethers, fair to good, $5.50 to $6.00; yearlings, good to choice, $7.00 to $7.40; yearlings, fair to good, $6.50 to $6.85; ewes, good to choice, $5.75 to $6.25; ewes, common to medium, $4.25 to $5.25; ewes, culls, $3.00 to $3.75; lambs, good to choice, $8.00 to $8.25; lambs, common to medium, $7.25 to $7.75; lambs, culls, $5.75 to $6.75; bucks, $4.00 to $5.00—all quotations being at the price stated per 100 pounds. The quotations are for sheep and lambs with wool on; clipped sell for $1.00 to $1.25 per 100 pounds less.

First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Try us once. We have a great and expanding Market at St. Louis.

Evans-Montague Commission Company

Box 68,

NATIONAL STOCK YARDS, ILL., FORT WORTH, TEX., and at KANSAS CITY.

Splendid Railroad Service.

In the past history of the St. Louis live stock market there was a dark spot in the matter of delays in the deliveries at the National Stock Yards. Inadequate bridge facilities were the sole cause. This, however, is cleared away—bridges are now plentiful—the Eads bridge, the Merchants bridge, the Alton bridge and the Thebes bridge, all contribute in the deliveries of live stock and the traffic is expedited. The railroads are making great efforts to keep things moving and the Terminal Association is cutting down all former records. The market was always the best in the world and now the railroad service is equal to the market. Shippers will do well to keep this in mind.

OUTSOLD ALL WESTERN MARKETS.

Hog Sales at St. Louis.

At St. Louis, on April 30th, the best hogs, 240 pounds average, sold at $7.40, and the bulk of the hogs at $7.10 to $7.30. At Kansas City the top hogs sold at $7.27½, or 12½ cents lower than St. Louis, and the bulk of the hogs sold at $6.75 to $7.20, which is 10 to 35 cents lower than St. Louis, an average of about 22½ cents lower than St. Louis on all of the hogs. On the same day St. Louis was practically steady with Chicago, and higher by 20 to 25 cents than Omaha, and higher by 15 to 20 cents per 100 pounds than St. Joseph. All this is a lesson to farmers and stock shippers. Buy and feed on Kansas City basis and ship to St. Louis to get the money. That will make the farmer and the shipper rich. Once upon a time the writer of this article, for experimental purposes, had about eighty loads of hogs bought in Kansas City and shipped and sold at St. Louis. A few loads every day for several weeks; a speculator's profit and a commission were paid at Kansas City; the freight was paid to St. Louis; there was considerable shrinkage in transit; there were a few dead hogs; but the St. Louis margin over Kansas City was 18 to 35 cents, and the transaction lost no money. The lesson learned from the transaction was that shippers would have made a killing if they had shipped the hogs to St. Louis in the first place; and the same holds good to-day. St. Louis has more hog-buying competition in a day than Kansas City has in a week.

SHIPPERS AND SELLERS —of— STOCK AND FEEDING CATTLE are reminded that the ST. LOUIS NATIONAL STOCK YARDS furnish by far the best market for their stock.

A majority of the stock feeders of Missouri, Illinois, Indiana and Ohio prefer to buy their feeders at St. Louis. They have short runs, favorable rates, quick service, small shrinkage. These people get their cattle home in good shape. There is never a glut of stock cattle at St. Louis. Western shippers can get their stock cattle to the St. Louis market just as easily and as cheaply as they can to any inferior Far West market, and at St. Louis there is quicker sale, better results, and in the shipping in, concentration, sale and outward shipment there is less expense, less shrinkage and less loss to come out of the cattle. The center in which all can be brought together and distributed at the least expense to all concerned is the best market of all.

THE BEST MARKET OF ALL —UNDER ANY AND ALL CIRCUMSTANCES—IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

At St. Louis National Stock Yards, on April 21st, a consignment of mealfed bulls, 64 head, 1,332 pounds average, sold at $4.40 per hundred pounds. They were from Colorado City, Texas.

McFARLANE COMMISSION COMPANY.

HORSE and MULE COMMISSION SALESMEN

AUCTION EVERY **MONDAY** IN THE YEAR.

JOHN K. MAXWELL, Manager.

Write For Weekly Market Report.

McFARLANE COMMISSION COMPANY,
NATIONAL STOCK YARDS, ILL.

Stock Cattle Quotations.

Stock cattle quotations at St. Louis National Stock Yards are quite interesting. It is a splendid market, especially for the better class of steers and heifers. Stock cows, according to quality, sell at $2.00 to $3.50 per 100 pounds; a fair to medium class of stock heifers, $3.25 to $4.25; fair to medium stock steers, $3.50 to $4.35; good to choice stock steers at $4.50 to $5.00; feeding steers, fair, 900 to 1,050 pounds, at $4.50 to $4.90; good at $5.00 to $5.25—all quotations being at the price stated per 100 pounds.

St. Louis Mule Market.

Mr. Lan Morris, of the McFarlane Commission Co., of the National Stock Yards, reports a strong market for big mules, and not enough mules to fill the demand for them. It appears that good, sound mules of all ages, fourteen and a half hands and up, are selling well—while the thin, small, blemished kinds are at a discount. The trade is for mules that are ready to be hitched up and started right off to work. The better class of mules are slow sale simply because the salesmen are trying to get big money for them and not because of any weakness in the market. Mr. Morris is a high authority on mule values and sells a large number of mules on the market.

Kansas Yearlings at $6.50.

At St. Louis, first Monday in May, A. Wilson, of Butler county, Kansas, marketed seventy-five yearling steers and heifers, averaging 710 pounds, which sold at $6.50 per 100 pounds. This is the kind of cattle that are referred to in the article on page 8.

Clipped Lambs at St. Louis.

At St. Louis, on the opening May market, Mat McKinney, of Randolph county, Missouri, and one of the best-known sheep feeders in Missouri, had in a car of his clipped Western lambs that averaged 77 pounds and brought $7.60 per 100 pounds. This is a new record for clipped lambs and shows the quality of the offerings and the excellence of the market.

Southern Cattle Prices.

Cattle in the Southern division at the St. Louis National Stock Yards are selling well. The best class of meal-fed steers are quotable up to $6.00 and $6.25 per hundred pounds, and grassers at $5.00 to $5.50 per hundred pounds. Official quotations are as follows:—Prime meal-fed steers, at $6.00 to $6.25; fair to choice fed steers, at $5.00 to $6.00; common to choice grassers, at $4.50 to $5.50; common to medium steers, at $3.50 to $4.85; choice to good heifers, at $4.00 to $5.00; good to choice cows, at $3.75 to $4.50; fair to medium cows, at $3.00 to $3.65; cutters, at $2.50 to $3.00; canners, at $1.50 to $2.35; bulls, at $3.00 to $4.75; fair to choice vealers, at $5.00 to $6.25; fair to good, heavy calves, at $3.50 to $4.75; common calves and yearlings, at $2.25 to $3.40—all quotations being at the price stated per hundred pounds.

WE WILL HOLD OUR

FIRST

Range Horse Sale

TUESDAY, JUNE 15,

AT

THE ST. LOUIS HORSE AND MULE MARKET

And every two weeks thereafter until the close of the season. We will hold our regular auctions throughout the summer on Tuesdays and Wednesdays. Write us for further information.

Campbell & Reid and Western Sale Stables Co.,
NATIONAL STOCK YARDS, ILL.

Texas Sheep at St. Louis.

On the first Monday in May, at the St. Louis National Stock Yards, C. A. Broome, shipping from San Angelo, Texas, marketed 1,171 head of 93-pound sheep, which sold at $5.85 per 100 pounds.

Range Horse Sales of 1909.

At the St. Louis National Stock Yards the sales of Western range horses, conducted by Messrs. Campbell & Reid and Western Sale Stables Company, will commence on Tuesday, June 15th, and continue every other Tuesday until November 2d. The dates are June 15th and 29th; July 13th and 27th; August 10th and 24th; September 7th and 21st; October 5th and 19th; and November 2d. Horsemen having stock to ship will do well to understand that these range horse sales are the most successful of all. St. Louis is in the center for people who can get the horses home, who know how to handle them, fatten them, train them and market them. Thousands of farmers are looking forward to these sales. Horsemen interested should write for further particulars to J. J. Searcy, Secretary, National Stock Yards, Ill.

The Thursday Auction.

Mr. Holland, of Holland & Nugent Bros., reports of the last auction in April at the St. Louis National Stock Yards as follows: "Good chunks sold as strong as they have any time this year. We had only a few draft horses, weighing 1,600 and over, and they sold at strong prices. The best demand was for chunks from 1,200 to 1,400 pounds, with quality. Rugged, thin horses that were full-aged sold exceptionally well, bringing very near as much as the fat chunks. At this time of year the consumers want horses for immediate use, and horses that are a little short of flesh, short-backed, good-middled, good bone and full-aged are selling extra good. We sold some harness horses with size at good prices. We did not have many Southerners. There is a demand for cavalry horses, 15 to 15.3 hands, from four to seven years old, bays, blacks, browns, sorrels and chestnuts. They are paying from $125 to $140. They will be in demand for at least three weeks. We are assured of plenty of buyers and we will be in shape to sell your horses at satisfactory prices. Buyers in the East have come to realize that they can buy the class of horses on Thursday that their market demands, and they also know that we sell them, and our shippers realize that we have the buyers and that we see that their horses bring what they are worth. You can ship your horses to us and be assured of satisfactory and intelligent service."

The Price of a Bull.

An aged bull, whose service had expired, and whose time had come to go to the butcher, was fattened up and weighed 1,790 pounds. He sold at five cents a pound on the St. Louis market, which is $89.50 for the bull.

Best Record of Any Market.

The St. Louis National Stock Yards have received in four months 241,874 cattle, 940,995 hogs, 175,956 sheep and 48,497 horses and mules. Cattle, hog and sheep receipts show a considerable gain over last year, and horse and mule receipts show a small decrease. Taken together, St. Louis shows best of any market compared with former records. Hog receipts at St. Louis are the largest on record.

JOS. A. MAXWELL MULE CO.,

Postoffice, National Stock Yards, Ill.

DEALERS IN ALL KINDS OF

MULES

Especially the Better Class.

Large Mules and Miners.

MR. JOSEPH A. MAXWELL, Pioneer Mule Dealer of America, founder, and formerly of MAXWELL & CROUCH, has now associated with him his sons, GEORGE W. MAXWELL and FRANK MAXWELL

A large, select stock of all classes always on hand. Our guarantee will ever remain as it has during the many years of our existence—GILT-EDGED. Information concerning the market cheerfully given.

Our References: Anyone who has ever bought of us.

NATIONAL STOCK YARDS, ILL.

Representative Mule Dealers.

The Joseph A. Maxwell Mule Company at the St. Louis National Stock Yards buy, feed, fatten, train, classify and sell mules, enter into contracts for the delivery of mules of all kinds and principally of the better class. Buyers of mules are specially invited to correspond with this firm. With large barns, unexcelled facilities and always buying and keeping a stock on hand the firm is in a position to give satisfaction. Mr. Joseph A. Maxwell, President of the company, is the pioneer of the St. Louis market, and his reputation is world-renowned. Address the firm Joseph A. Maxwell Mule Company, National Stock Yards, Ill.

May Market For Beef Cattle.

The first Monday in May, Hon. C. Walz, of Montgomery county, Missouri, marketed seventy-three head, 1,379-pound steers, sold to Morris & Co. at $6.70 per 100 pounds—a good indication of the May market.

Price of a Fat Cow.

A fat native cow at the St. Louis market, on the first Monday in May, weighing 1,350 pounds, sold at $5.75 per 100 pounds, which is a total of $77.64 for the cow. The fat-cow market at St. Louis is as good as the hog market.

The sale of pure-bred stock to be held at the St. Louis National Stock Yards, May 5th, 6th and 7th, will begin before this paper is fairly distributed. We hope Mr. McGavock and his breeders will meet with the encouragement they deserve.

Wanted We will present you with a handsome and valuable gift in exchange for a small amount of your time.

We want information of the proposed organization of telephone companies in your part of the country, also names of farmers who contemplate putting in telephones. If you can get reliable information of this kind, write us at once. We guarantee you will be delighted with the gift we will send you.

We sell a high-grade telephone complete for $10. Anyone can install it and be in constant touch with his neighbors and the nearest town. Our telephones are used by the Government. This proves their quality.

No Government Horse Raising.

The Farmer and Grazier of Adelaide, Australia, is very properly opposed to the government going into the horse-raising business. That paper says:

"The proposal for the Australian government to breed horses is not favorably regarded by farmers. Many of them consider it a farcical suggestion. The best way to encourage the horse-breeding industry is to pay a good price for suitable animals. The cause of the present scarcity of superior animals arises from the fact that they were a drug in the market a few years ago, and consequently breeders turned their attention to more payable lines. With the certainty of a fair margin of profit farmers will soon set about to breed horses of the right stamp. The Commonwealth Government could assist to attain its end in this direction by offering substantial prizes at the principal Agricultural Shows in the various states for its needs and by giving, as already mentioned, a fair price for animals of the right type. We consider that it is the business of the government to assist industries in which it is interested, but not to embark in them in opposition to many taxpayers."

Curry and Brush the Horse Daily.

The horse on the farm that is working hard these days needs the very best of care. In feeding, the horse should have a correct, full ration, and in stabling and in all other points that will tend to keep up the condition of the horse we should do our part.

The currycomb is a little article which should be used liberally on the work horse each morning. There will be no time lost that is spent in currying the work horse. We say it should be used right every morning, and know that it will pay in more ways than one.

The horse that has been working at this time of the year will sweat some each day, which is good for the horse, but the thing to do is to remove the sweat the next morning, or else how will it look? How will it look to see a lot of dried sweat all over the horse when you drive him out the next day? Take time to remove this in the morning before you take the horse out. It will pay to do all this for looks alone, yet that is not the only thing.

All this accumulation on the surface of the horse should be removed or else it will stay on there and close up the pores and in some measure prevent further perspiration, thus preventing nature from casting off the poisonous waste matter of the body. It prevents the further casting off of the waste matter and causes many forms of horse sickness.

We know that the proper and daily currying of a horse will help to keep him in better flesh; we know that it will help, but would not try to say just how much; we have heard of old that the proper currying and brushing was worth two quarts of oats to the horse; we do not know whether it is really worth that much or not, but know it is worth attending to.

The careless way is to go to the barn in the morning and the first thing get the corn basket and throw the corn in the trough and stuff a little hay in the manger; and that is the last the owner sees of the horse until he comes from breakfast and then grabs the harness and slings it at the horse, buckles it on as quick as possible, and goes on a trot to the field. This is not the best plan, for it is all backward, for the horse should not have the corn first. If you think the horse will drink any water, offer that first, then give hay, and while the horse is eating the hay, you make liberal use of the currycomb and brush, and then give the grain. Take time to see that everything is all right. Save accidents.

In currying the horse, keep in mind what you are doing it for, and remember that it is to remove this poisonous matter and to make the horse look better. We first want to remove as much of this waste matter as possible, and there is a right and a wrong way to do this. I take the currycomb first, and if the horse has sweated freely the day previous, I ruffle this comb back and forth to loosen up this sweat, and then curry down the right way, and in all this rap the comb often on the stall to remove the dust that has been collected, and after a good currying use the brush as much as you like.

Do not think that the currycomb and brush are the tools for the fancy horse trainer alone. They know enough to use them with telling effect, but it is more important that the average farmer uses them as well. We need to take care of our horses, for we depend on them for a living. We cannot afford to forget this.—E. J. Waterstripe.

ST. LOUIS THE LARGEST AND BEST HORSE AND MULE MARKET IN THE WORLD. The picture presented herewith was taken at the St. Louis National Stock Yards just before the Thursday horse auction by Holland & Nugent Bros. Commission Co., and represents a typical Eastern chunk, consigned to the market by Halstead Bros., of Tecumseh, Neb. This black chunk sold for nearly $100 more than the average horse of his weight and was considered as being the best horse in his class offered at the St. Louis National Stock Yards in many years. In the picture next to the horse is Mr. Leonard Halstead, the enterprising horse buyer, who consigned him to the market and who had seventeen horses in the Holland & Nugent sale averaging $279 each. Next to him stands Mr. Joseph Nugent. Our readers are reminded that Messrs. Holland & Nugent Bros. hold their horse auction every Thursday in the year and that Mr. Ed. Conway sells the mules.

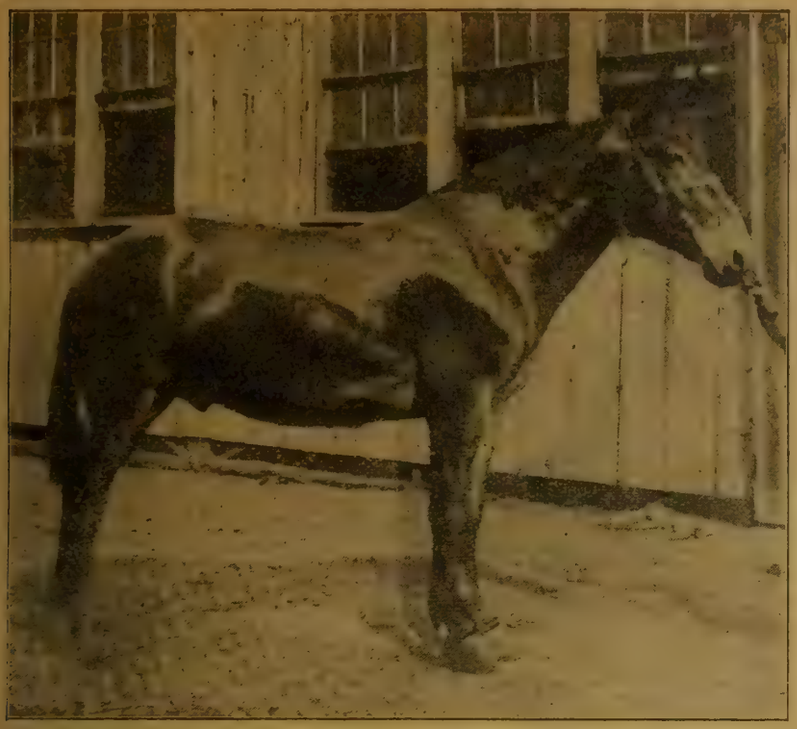
Sales of Fine Big Mules.

During the month of April two cars consisting of 40 big railroad mules were sold at the St. Louis National Stock Yards and shipped to Alberta, British America, to Mr. J. D. McArthur, a railroad constructor. They were thoroughly tested by the government inspector, Dr. Clancy, and given a clean bill of health. Another notable shipment consisted of 32 mules 16.2 to 16.3 hands high and weighing an average around 1,400 pounds. These mules went to Bohlen-Huse Ice Co., of Memphis, Tenn., and a finer lot of mules were seldom seen together. The price of these mules was not stated but the lot contained matched teams such as sell readily at $600 a pair. Both lots mentioned in this item were sold by Harry Gillen and Adolph Heiman, veterans of the National Stock Yards.

THE ST. LOUIS HORSE AND MULE MARKET THE LARGEST AND BEST IN THE WORLD. MR. MAX FIES, of FIES & SONS, Birmingham, Ala., a constant visitor and a regular buyer on the market. MR. FIES stands on the left, and FRANK MAXWELL, of the JOS. A. MAXWELL MULE COMPANY, on the right.

Noted Percheron Stallion Sold.

James J. Hill, the great Railroad Manager, has just bought of McLaughlin Bros. the four-year-old Percheron stallion Lambin, for his North Oaks Farm. Lambin was imported from France by McLaughlin Bros. last year and has been very successful since then in the show ring. He especially distinguished himself by winning first prize in Class 2 at the International Live Stock Exposition at Chicago last year. This was the largest class of Percheron horses exhibited at the International.



ST. LOUIS THE BEST AND LARGEST MULE MARKET IN THE WORLD. This picture presents one of the most perfect and largest mules ever sold at the St. Louis National Stock Yards. A seal brown horse mule, 18 hands 2 inches high, five years old and weighing 1960 pounds, in fair working condition, built in splendid proportion, with extra bone and large feet. This mule was sold to Louis Asher, of Pittsburg, Pa., by the Joseph A. Maxwell Co., of the St. Louis National Stock Yards, after vainly offering $700 for one to match him. In this connection we desire to refer to the large number of first-class mules sold at the St. Louis National Stock Yards. Mr. Joseph A. Maxwell makes a specialty of buying, matching and selling the better class of mules and has sold thousands of them for special purposes. A card of his firm will be found on another page of this paper. The Postoffice address is National Stock Yards, Ill.

Impaction in Horses.

Of late several cases of impaction in horses have come to the Veterinary Hospital of the Colorado Agricultural College, Fort Collins. This is not an uncommon condition in horses, especially at this time of year, and as it may easily be prevented, a word of advice in this connection may not be amiss.

The impacted mass is usually located far back in the digestive tract, in the small colon. In studying physiology of digestion we find a very plausible reason for this. As the food reaches this portion of the bowel it loses its fluid consistency, and, if coarse and not well digested, is likely to form a serious obstruction.

This is not written for the purpose of discussing the nature of the disease or the treatment of the same, but rather to sound a note of warning as to the cause of the disease and how it may be prevented. Treatment in a large number of cases is unavailing. No amount of physic or rectal injection will remove the impacted mass. Wheat and barley straw, as well as alfalfa hay that has become bleached by exposure to the weather, are the most prolific causes of this condition in Colorado. Especially is this true if the water supply is limited. With horses that are fed some grain with a fair quality of hay with plenty of water and exercise, this condition is almost unheard of. Remember that the horse's food is not cooked, and therefore his teeth must be in good condition to properly masticate his food. It will well pay every farmer to examine the teeth of all his horses at least twice a year. It is worse than throwing feed away to give it to horses that can neither masticate nor digest it. Poor feed and bad teeth are responsible for three-fourths of all the colics and other digestive disorders of the horse. Horses are worth money. It pays to keep these things in mind. Impaction in the horse is usually fatal.—Geo. H. Glover, D. V. S., Colorado Agricultural College, Fort Collins.

John A. Campbell—The Horseman.

The McFarlane Commission Company announce that Mr. John A. Campbell has purchased an interest in that company, and that he will take an active part in conducting the Monday horse auction at the St. Louis National Stock Yards and in the general sale of horses at private terms. This will be news to horsemen who have not known heretofore that Mr. Campbell had retired temporarily from the yards to look after his extensive horse-raising interests in the West, and they will be glad to see him again in active cooperation in the market which he did so much to build up. Next to John Kirk and T. T. Ruby, now deceased, who originated the Monday and Tuesday auctions, Mr. Campbell is the market pioneer, having originated the Wednesday horse auction at the National Yards. No man stands higher or is more favorably known in horse circles. As a sterling horseman of the highest class, in ability and integrity, he will greatly assist in the onward and upward movement that will bring a half million horses to be sold at the St. Louis National Stock Yards each year.

Four St. Louis Horse Auctions.

The daily horse auctions of the St. Louis market commence on Monday at the St. Louis National Stock Yards and continue four days. The Monday auction is conducted by the McFarlane Commission Company; Tuesday by the Western Sale Stables Company; Wednesday by Messrs. Campbell & Reid; and Thursday by Holland & Nugent Bros. The auctions are continued Friday and Saturday when the supplies are large. Special sales of high-class horses are conducted in the Grand Pavilion by day and at night by electric light. The commission firms are in active competition in soliciting business and are organized to expedite the general movement and make rules whereby all sales are conducted in the interest of a square deal for buyers and sellers. During the week ending April 24th about 2,500 horses were sold upon the market, and they were received, sold and shipped out without delay, the work being done between Monday morning and Friday night. Four successful daily auctions were held and a special sale. Shippers and buyers all over the country are invited to visit the National Stock Yards, the largest and best horse and mule market in the world.

ST. LOUIS THE LARGEST AND BEST HORSE AND MULE MARKET IN THE WORLD. MR. D. W. MILLER, of Waterford, Miss., an always welcome visitor and a large buyer of horses and mules. MR MILLER has branch stables at Greenwood, Yazoo City and Holly Springs.

Missouri Draft Horses.

In the acution sale of Thursday, April 22d, conducted by Holland & Nugent Bros. Commission Company at the St. Louis National Stock Yards about 650 head of horses were sold, including a fine lot of twenty draft horses that were consigned to the market by J. Andy Ford, of Maryville, Mo. In this consignment were eight dapple-gray horses, 1,400 to 1,600 pounds, that averaged $284 each. One magnificent gray horse, 1,500 pounds, sold to John Pender, of Johnstown, Pa., for $370. This shows that whenever Missouri goes strongly into the breeding and raising draft horses St. Louis has the market ready for them.

Horse Owners! Use GOMBAULT'S Caustic Balsam

A Safe Speedy and Positive Cure

The Safest, Best BLISTER ever used. Takes the place of all liniments for mild or severe action. Removes Bunches or Blemishes from Horses and Cattle. SUPERSEDES ALL CAUTERY OR FIRING. *Impossible to produce scar or blemish.*

CRITTENDEN & CO. Dept. 29 Cleveland, Ohio.

The "Proof of the Pudding."

Extracts from unsolicited letters received by CLAY, ROBINSON & COMPANY, from customers.

J. C. COBB, President of the Bank of Odessa, Mo.: "Your account sales of two loads of cattle received with check for net proceeeds. You surely made a good sale. The yard boys must have done their part well, for there was a shrinkage of only 10 pounds per head. And the salesman did his duty, getting full top of the market. The office boys remitted for same promptly."

J. S. HANAN, Granger, Mo.: "Cattle came to Mt. Sterling, and are an excellent load. They were in good shape to be on the road so long. All good, quiet cattle. Thanks for your good selection."

P. H. MALUY, Bremen, Kas.: "Your letter containing account of sale received. Must say I am well pleased with the price you obtained for my hogs, also with the weights, which show that you gave them a good fill."

L. A. JACOBY, Marshall, Mo.: "I shipped you two loads of hogs during the last two or three weeks, which sold at good, round prices."

E. E. FLEMING, Cozad, Neb.: "I sent two cars of heifers to your house a couple of weeks ago. They did so well that I sent them eight more loads this week."

RUFUS E. MORELY, Beverly, Ill.: "I greatly appreciate and thank you for your service in buying and selling my sheep for me. I received 25c. per cwt. more than I expected, and was really surprised to know they topped the market (by 15c. per cwt.) I will certainly do business with you hereafter."

JOS. ARTHUR, Decatur, Ill.: "Car of steers you bought arrived in good shape. They suit me exactly, for they are my kind."

John J. Miller, Washington, Va.: "We were remiss in writing you how well pleased we were with the calves you recently purchased for us. They arrived in good condition. We feel that you did the best for us, and we are satisfied. We expect to give you further orders."

MR. JOHN CLAY, head of the firm of CLAY, ROBINSON & CO., live stock commission agents, with well-organized houses doing business at nine principal markets, including the St.Louis National Stock Yards.

G. M. HART, Chillicothe, Ill.: "Am well pleased with the car of stock cattle you bought for me."

JACK ROYSTER & BRO., Corydon, Ky.: "We were well pleased with load of cattle just received from you. They came O. K. We send you another order."

J. A. & J. O. FINLAY, Oneida, Ill.: "Yours received with draft. You made a good sale."

J. A. SLATER, Batavia, Ia.: "Received returns for my cattle, and the sale was satisfactory."

HENRY LEVERINGTON, Winslow, Ill.: "Received returns for hogs. Think you made a good sale the way the market was."

G. DIEKHOFF, Stout, Ia.: "Having shipped a car of hogs to you last week, can say that I am well satisfied with the sale you made."

S. D. VANCE, Denver, Ill.: "Account sale and check for car of hogs at hand, and will say am much pleased with prices you obtained for them. Thank you."

A. A. BRAVINDER, Humboldt, Ia.: "Received returns for car of butcher stock. Prices you obtained were very satisfactory. Thanks for market reports you sent me."

L. McWHORTER, Burt, Ia.: "Received account sales of car of mixed stock, and would say they brought 20 per cent. more than I expected. Will send you something better next time."

EXTERIOR OF OUR EAST ST. LOUIS OFFICE.

ON February 8, 1909, we opened at above market our ninth House, and have done a very satisfactory (and increasing business) there from the start. A. J. Milton, for a number of years one of our cattle salesmen at South St. Joseph, and more recently with us in the same capacity at Chicago, is in charge of the cattle department; Bert Johnson, also formerly of our Chicago staff, sells the sheep, and F. E. Berry, formerly of our East Buffalo staff, handles the hog consignments. These salesmen are all thoroughly experienced and capable, and will give you first-class service.

CUSTOMERS' ROOM.

THE pictures show you our East St. Louis offices, salesmen and manager. These offices are well-equipped and up-to-date; the salesmen skilled and alert. Back of them, moreover, is the entire Clay, Robinson & Co. organization, with houses at each of the nine leading markets, and over two hundred employes. Whether you consign to us or not, call at our East St. Louis office the next time you are on that market, get acquainted with our people there, and incidentally receive a little souvenir.

PRIVATE OFFICE—F. H. EMMERT, MANAGER AT EAST ST. LOUIS.

The "Proof of the Pudding."

Extracts from unsolicited letters received by CLAY, ROBINSON & COMPANY, from customers.

PETER THOMSON, Castana, Ia.: "I thank you very much for the returns. You certainly made a most satisfactory sale on my load of cattle, and I will no doubt patronize your company in the future."

E. V. RANNEBARGER, Argenta, Ill.: "I received account of sales for my hogs O. K. Thank you for your good sale, as that is the first time I ever had the pleasure of topping the market. I consider the sale very satisfactory, and a nice price."

C. N. JACKSON, Cashier of the Weld County Savings Bank, Greeley, Colo.: "I beg to acknowledge receipt of draft covering results from three cars of lambs for Jackson & McConnel. I beg to assure you that I am exceedingly well pleased with results you have obtained for us."

A. D. SILVA, Shoshone, Idaho: "I received my returns, and was well pleased with the price they brought, as $5.40 is a very good price to get for feeders, topping the market with a car of cattle. That is going some."

PLATTE VALLEY LIVE STOCK ASSOCIATION, Paxton, Neb.: "Account sales for car of cattle duly received. The sale was very satisfactory, considering the dull market of that week. You will hear from us this summer and fall."

D. C. CHANDLER, New Virginia, Ia.: "I was very well pleased with the sale of the hogs."

JOHN H. DICK, Sycamore, Ill.: "I thank you for the good service you have done for me."

MR. CHARLES O. ROBINSON, of the live stock commission firm of CLAY, ROBINSON & CO., doing business at Chicago, Kansas City, South Omaha, Denver, Sioux City, South St. Joseph, South St. Paul, East Buffalo, and last, but not least, at the St. Louis National Stock Yards.

W. O. MATTHEW, one of the owners of the Matthew Farm at Mt. Auburn, Ill.: "Am greatly benefited by your market letters, and duly appreciate same."

L. E. POITEVIN, Dow City, Ia.: "Yours enclosing account of sales for hogs sold at $6.95 at hand. Am well satisfied with sale made. I had only 50 pounds shrink from here."

OSCAR NELSON, Rudd, Ia.: "I am shipping you a car of stock that I cannot accompany, but trust you will do as well as you did on my last shipment, which was very satisfactory."

J. T. JOHNSON, Osage, Ia.: "I shipped my cattle on the 10th and your firm sold them for me very satisfactorily on the 11th. You can refer any inquiring shippers to me for a good recommend for your good business dealings."

FANNIE M. SHAW, Oneida, Ill.: "Account sales of steers received. While the market was a disappointment that day, it seems to me that you did very well with them, and I am entirely satisfied with your work for me. Hope that I may be in shape to do further business with you next season."

F. A. ELLIS, Grimes, Ia.: "I have just sold out the cattle I got of you last July. They did fine for me and made me money. Weighed 1,050 pounds when I got them and 1,525 pounds after a four and one-half months' feed. Sold for $6.00 right here at home. Paid $3 86."

J. H. MORMAN, Larchwood, Ia.: "[illegible] arrived all right. I am well satisfied at them. I expect to feed two cars next fall, and I will give you a get them for me again."

We Give Them Away!

We have printed, for free distribution, several thousand copies of The Incubator Book. If you want a copy, *get busy!* Send a postal and book comes, all charges prepaid, by return mail. It tells the things you must know if you make extra large profits raising chickens.

Sure Hatch Incubator

The Incubator Book tells what makes the "Sure Hatch" the Champion of the World. Tells all about the "bargain" incubators. Shows why they fail. More good, practical help for poultry raisers than in any other book ever sold for $2—yet it is free for the asking. Send today. Address

POULTRY HOUSES, COOPS, ETC.

This is an up-to-date poultry book, written by H. A. Nourse, editor of the Poultry Herald. It was prepared during the past year and is the result of many years' study and experience. It is a book of newest plans for building poultry houses, with description of coops, fixtures and poultry utensils for the farm, village or suburban poultry keeper. It is a book of 100 pages, and is finely illustrated. It is worth its weight in gold. We are sending The National Farmer and Stock Grower for one year and the book Poultry Houses for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

MADE THE BLIND SEE.

Cyrus Hedges, Gladstone, Ill., writes under the date of February 19th that Visio has completely restored the sight of a horse that has been blind a month, and the appearance of the eye is perfect. Visio for sale by druggists, or sent postpaid on receipt of the price. Visio Remedy Association, Dept. C, 1933 Wabash avenue, Chicago.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. L. H. Cooch, account sick, Hale Publishing Co., 3550 Vista would say St. Louis, Mo.

Stop the Losses.

The losses among birds is the great factor that stands in the way of success in poultry raising. This is the factor that sets at naught the best-laid plans.

The writer was brought up on a farm and accustomed to the care of poultry, but this fact did not make him wise enough to prevent large losses when he started to raise poultry for himself and in considerable numbers.

The greatest loss comes from mismanagement of young chicks. A young chick is subject to so many different kinds of casualties that it takes a wise manager to know how to avoid them all.

The first great loss comes from the presence of lice on the chicks. Out of 200 chicks the writer tried to raise one season in the beginning of his career, a very large number perished from lice. The insects did their work before their presence was suspected.

The best thing to check lice is grease, but this has to be applied with care and not carelessly. In the careless application of grease hundreds of chicks have been lost, even in some flocks of medium size. Chicks in the downy state cannot stand much of this remedy. One poultryman that greased all his small chicks all over lost 80 per cent. of the total number greased.

Grease and kerosene have to be still more carefully used. Some people insist on using the kerosene with the grease and cannot be convinced that the kerosene is not necessary. But it is worse than useless, because its effect is to harden the skin and prevent the natural functions of the pores of the skin. It should be discarded altogether. The grease will serve every purpose.

The proper way to apply grease is the way that has been often advocated by this paper—applying a little under each wing, a little on top of the head, and a very little under the tail. The lice make for these places and will become covered with the grease. Lice breathe through pores in their bodies, and when these pores are filled with grease the insects smother, and the smothering takes place in a very few minutes. If the chicks have begun to feather, a little grease should be applied at the base of the wing feathers.

The next great cause of loss is the presence of rats. Many a small chick and many a small pullet have been killed by rats. The writer once heard a half-grown pullet squalling loudly and ran to the poultry house to see what was the matter. The pullet was being drawn under the side of the walk that ran from the house to the barn. The pullet was dragged away from a big rat that had gotten her by the legs and was dragging her under the boards.

If rats are present, all hiding places should be torn out and something else placed where the boards have been. Cement can be used for floors, but if that is not convenient, the floors may be so reconstructed that nothing can hide under them. Old floors in outbuildings are great protectors of the rodents that work mischief. Open work will discourage them, and it is easily possible to have the floors so built that cats can get under them in search of the rats. A rat will not stay where he cannot have a secure hiding place.

Cats are sometimes a great source of loss among chicks, but not farm cats, according to the observation of the writer. Village cats destroy chicks wherever they can find them, but the farm cats seem to know that the chicks are a part of the equipment of the farm. When a cat forms the habit of eating chickens the only thing to do is to kill the cat.—Augustus Wright.

Poultry Notes.

During the third week in April a large number of cases of storage eggs were sold in New York City at 23 cents a dozen, and one sale was quoted at 24 cents.

The strength of the Easter egg market in the large cities was distinctly due to the moderate production and to the comparatively small number of cases in storage. The storage eggs were mentioned as being about 60 per cent. of the number held at the same time last year.

Chickens that are raised in the spring and sold in the fall bring ordinary prices; but chicks that are successfully raised in the summer and early fall and sold as soft roasters in the spring generally bring high prices.

Egg farming is a profitable business, as the eggs are always a cash product. You don't have to wait for a market. The only fresh egg is the one which is delivered to the buyer within a few days after being laid. The egg delivered by the producer to the consumer is the one that makes egg farming pay.

Mrs. Wilcoxon says that a friend of hers conducts an egg farm on five acres of ground, and he has 2,500 laying hens. He has many small details to look after, but he can beat any other five-acre farmer when a comfortable home and a good income are both considered.

Magnificent Subscription Premium.

The National Farmer Hat.

The sizes are from 6 5-8 to 7 1-2. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color.

Number of Acres for a Living.

We do not need to have half a dozen sections of land before we have enough to farm, as many seem to think. Such would not be called a farm at all in our mind. It would be more than one man could farm. One man said he wanted one state for a corn field, another for a meadow, another for pasture, and another for a wheat and oats field, and then he would have land enough. Do not think that because you have a small or medium-sized place that it is not large enough to farm, for you have just as good a chance as anyone; of course, the more acres the more we can have for pasture, but it is not best to have too much in cultivation, no matter how much land we have. Better take a smaller part and cultivate it right, than to cultivate twice as much and cultivate it half.

With less acres we can give better cultivation, and the better tillage we give the land the better the crops are. "Tillage is manure" is the old adage, and it is indirectly. Thorough tillage of the soil unlocks plant food that cannot be reached by the plant otherwise, and with less acres under cultivation we can give more tillage on the part that we have in cultivation, and increase the crops on it.

Some time ago we had an inquiry from a young man in the city who was formerly from the farm, but had been in the city for a number of years. He had forty acres of pretty good land. Ten acres was what is termed "waste land," but made the best pasture, and the balance was about as good land as could be found, and the place was close to town.

What he wanted to know was if he could make a living on only forty acres. Just wanted to know if he could make a reasonable living; was somewhat tired of the city and would rather live in the country if he could make a living on the place, as that was about all he saved in the city. We told him that if he did not make the living that the lack of more acres was not to blame. We think he had a fine chance for a living. The land was good and rich already, and ready to grow profitable crops. He could make a living, and after he was fixed up a little better he could make more. He came and did well.

He had just the ideal home, and with only thirty acres of fine tillable land he had the best chance to bring this up to the high state of production. He had time on his small place to cultivate it right and to haul manure and build up the land. The small farmer has less to worry over than the ranchman. Where a man has too much to look after, and if things do not go just right, it is a strain on his mind, and often his work becomes a burden, and he becomes neglectful and does not care what he does or what happens.

We believe the happiest farmer and the one who gets the most out of life is the man who owns a small or medium-sized farm not too far from town, and has it well fixed. He can then take his time for everything, and can get more out of his acres, and can get more out of life. Money is not all to be looked after. We want our business so that we can have our minds at ease, and have time for rest. The small farmer does not have to work so hard, and with good managing he always has something.

The great and highest point in farming is to keep up the fertility of our soil, for from this comes all our resources as a farmer. With the small or medium-sized farm this can more easily be done. We can then have every acre manured up to the highest, and have it produce a full crop each year. The man who owns a section takes a long time to manure it all over, but the small farmer can get over his in a short time. Do not worry about the farm being too small; but rather worry over it being too big. Tend well what you have.—E. J. Waterstripe.

HISTORY OF AGRICULTURE.

Three Thousand Historical Items Arranged by Dates From the Earliest Times to the Year 1906 —All For 25 Cents.

The editor of the National Farmer and Stock Grower has collected historical items relating to agriculture and live stock raising and arranged them in the order in which the incidents happened. It is a record which is intensely interesting to all earnest farmers and progressive stockmen. The events recorded include much that is ancient and is brought down through the ages of progress to about the year 1906. This material is all arranged in a handy booklet of 100 pages; it is nicely illustrated and is a handy, useful publication. We will be glad to send a copy, postage paid, to any of our readers on receipt of 25 cents, or we will credit one-year's subscription to The National Farmer and Stock Grower for 50 cents and we will send a copy of the Date Book History of Agriculture as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Sale of the Shire Champion.

Mr. Jno. G. Truman, Manager of the Truman's Pioneer Stud Farm of Bushnell, Ill., writes as follows:

"Among our numerous sales late in March was perhaps one of more interest to American Shire horse breeders than any sale that has been made for some time, when we closed the deal whereby Mr. B. F. Fletcher, of Dalton City, Moultrie county, Ill., became the owner of our international champion Shire stallion,'Mazemoor Harold.' Never, in our opinion, since the year when Blaisdon Pluto won championship at the International Show has there been a horse the equal of Mazemoor Harold shown at the International, and taking into consideration the fact that he is eight years old, he has extraordinary hard and clean legs, is absolutely sound, and weighing when shipped 2,310 pounds. Certainly the farmers and breeders in the vicinity of Dalton City are to be congratulated upon having a horse of that character in their midst. We have had several very tempting offers for him, but Mr. Fletcher was determined to own the best aged Shire horse in America, and was willing to pay what one of that kind was worth.

"We also had the pleasure of selling to Mr. F. A. Huddlestin, of Webster City, Iowa, the imported five-year-old Shire stallion which we recently imported. He is a grand specimen of the breed, being extraordinarily wide and thick, with the best of feet and joints, wide, flat bone, and all that goes to make a strictly first-class draft horse."

Sales of Tennessee Jacks.

During the month of April, Mr. Thos. H. Ezell, proprietor of Mill Creek Stock Farm, postoffice address Station B, Nashville, Tennessee, reported that he sold to Mr. A. B. Moore, of Alabama, a good five-year-old black jack for the sum of $975, and a medium jack to Mr. Hendry, a prominent stockman of Florida. Other sales were two good jacks and three jennets going to Cleveland, Ohio, and a good two-year-old saddle stallion to an Arkansas stockman. Mr. Ezell was kind enough to state that he finds The National Farmer and Stock Grower to be the best advertising medium that he ever placed an advertisement with. He has a card in the breeders' column, one year's end to the other, and he has a choice lot of young jacks and jennets for sale in addition to splendid saddle stallions.

Corn Breeding Bulletins.

The Illinois Agricultural Experiment Station has issued several important bulletins relating to diseases of the corn plant. There are nine bulletins in all which relate to corn breeding. Farmers should write to the Director of the Station at Urbana, Ill., and ask for them.

AN EXPERIENCE
AT THE BELLE MEADE FARM

THE Belle Meade Farm of Bedford, Mass., is well known for its thoroughgoing and scientific methods, and is a model in many respects. Its big stables are all covered with Amatite Roofing. The owners write us as follows:

"It is now nearly three years since we put your Amatite Roofing on our new 300 ft. buildings. This Roofing is now in its third winter and has gone through without a leak, and there is every indication that it will be good for many years. The buildings with this light, sparkling Roofing and the red trimmings as painted, are very attractive in appearance, and altogether we are much pleased with your Amatite Roofing. We are contemplating the construction of some further buildings for our Shetland Ponies, and mean to use more of your roofing."

If the Belle Meade farm people had chosen a "smooth surfaced" roofing it would have cost them more in the beginning and the difference would have become greater every year. Those roofs were laid in 1905. In 1907 they would have required a thorough painting, which would have to be repeated in 1909, and every two years thereafter.

The Amatite, however, *has had no painting*, and needs none. The mineral surface takes care of that. When the roof finally wears out and the owners of the Belle Meade Farm compute the cost of their Amatite Roofing they will put down "for the Amatite, so many dollars;" "for care of same, nothing." If they had used a painted roofing there would probably be several coats of paint to figure on, besides the original cost of the roofing, and the total would be several times as much as Amatite.

It does not matter whether your roofs be large or small, it is wasteful to use anything but Amatite.

Let us send you a free sample, together with a booklet telling more about Amatite. It will save you money later.

BARRETT MANUFACTURING COMPANY

New York	Chicago	Philadelphia	Boston

Address,
J. G. TRUMAN, Manager, BUSHNELL, ILL.

POLAND-CHINA SWINE. Spring Pigs sired by Keep On Spellbinder and Chief Perfection. These Pigs are beauties. Will sell the choice of litters at $10.00 each. Buy now and this fall, when you will have a $25.00 hog.

D. F. BEAUCHAMP, Meredosia, Ill.

WELLS' PRIZE-WINNERS "Are Better."
Barred Plymouth Rocks, White Wyandottes and Rhode Island Reds. Prizes at Illinois and Indiana (State Fairs), Mattoon, Nashville, DuQuoin, Thompsonville Shows. Premium Matings (15 eggs)," $2.00; Standard Matings (15 eggs), $1.00.
FRANK WELLS, : : DuQuoin, Ill.

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Prices reasonable.
WILARD MILLER, R. F. D. 2, Anita, Iowa.

RED POLLED DAIRY and BEEF CATTLE.
This is the oldest and best combination breed for production of fat cattle and rich milk. A farmer cannot go wrong who buys and sticks to them. I have four Bulls for sale at $100 to $125 each; good Bull Calves at $40 to $55; fair Heifer Calves at $30 to $40; and first-class yearlings, both sexes, at $60 to $75. Have the right kind of cattle on your farm that will thrive and fatten. Good milk and good beef production in the same breed.

C. M. CHAMBERS, Bartlett, Iowa.

R. C. JOHNSTON, Lawrence, Kas.,
Breeder of Thoroughbred
REGISTERED ANGORA GOATS.
Goats for sale from imported Turkey and South African Bucks. Satisfaction guaranteed. Write for prices on Bucks and Does.

THIRTY HEAD OF PEDIGREED DUROC RED BOAR PIGS, $7.00 a head; Kan't Be Beat and Choice Goods' breeding.
CHAS. DORR, Osage City, Kansas.

O. I. C. SWINE.
Will be pleased to answer any inquiry in regard to our O. I. C. Swine. We have fifty Pigs to sell. Our prices are reasonable. Quality unexcelled. We breed producers.

ALVEY BROS., Meriden, Kansas.

JACKS AND SADDLERS.
The Cook Farms have 175 head of Registered Jacks, Jennets and Saddle Horses. One hundred head of these must be sold by the 15th of May. If you want a bargain in a good Jack or Saddle Horse, write quick or visit the Cook Farms.

J. F. COOK & CO., Lexington, Ky.

NOBODY BREEDS BETTER Fox, Cat, Deer or Wolf Dogs than I do. Send for free list. Closing out other breeds at your own price. Fox Cubs, $4.00 each.
E. F. WILMOTH, Shelbyville, Ky.

Another Truman Importation.

The Minnetonka, sailing from Linden on April 24th, brings to the Trumans' Pioneer Stud Farm, of Bushnell, Ill., another very select lot of Shire stallions and fillies. They are due at New York, May 3d, and at Bushnell, May 5th. The farm has been in business thirty years. Mr. J. G. Truman, writes us, saying:

"We are still making very attractive prices on about fifty imported Shire, Percheron, Belgian and Hackney stallions, and I am safe in saying that we never had a better selection of first-class young horses than at the present time. Shall be pleased to mail our catalogue to any of your readers contemplating the purchase of a stallion."

St. Louis Range Horse Sales.

Mr. J. J. Searcy, Manager of the range horse sales conducted by Campbell & Reid and Western Sale Stables Company at the National Stock Yards, has gone West for a week or two to make arrangements for the first sale to take place on June 15th, and every two weeks thereafter. Our readers are reminded that the best range horses offered for sale at any market are offered here,and the sales are advertised and conducted in a more regular, reliable, exactly-as-represented manner than is done at any other market. All who are interested in this branch of trade should address J. J. Searcy, National Stock Yards, Ill.

The Hereford Record.

Volume XXXII. of the American Hereford Record is now ready for distribution and is published by the American Hereford Cattle Breeeders' Association at 221 West Twelfth street, Kansas City, Mo., Mr. C. R. Thomas, Secretary. The volume contains records of 2,000 animals, in every case giving number, sex, name, breeder, date of calving, owner, sire and dam. There are three grand illustrations — Prince Ruppert, 17th, junior champion bull at American Royal and International Show; Curtis, an Interstate prize-winning bull; and Leedale's Lad, the champion steer at the Fort Worth, Texas, Feeders' and Breeders' Show. There is the usual thorough index to breeders and owners and a complete list of members of the association by states, and the book is well up to the usual high standard of typographical excellence.

Blooded Stock.

Alvey Bros., of Meriden, Kansas, have a fine bunch of spring pigs for sale. They are O. I. C. swine. They are from well-mated sows, have plenty of quality and are of the rangy, growing kind. Buyers will be pleased with this stock.

Mr. Charles Ford, of Mortonsville, Ky., writes that he has the finest lot of March and April pigs he ever saw. His specialty is Tamworth swine. He advises those who wish to get a start of Tamworths to buy young pigs at the time express charges are light, because Tamworths soon grow to be large hogs and shipping expenses become a considerable item. He has spared neither time nor money to get together a fine herd, and at the Lexington Fair, last year, he won seven out of nine first prizes and championships.

Mr. E. F. Wilmoth, of Shelbyville, Ky., is advertising a variety of dogs for hunting foxes, wild cats, wolves, coons and oppossums. He publishes a list of dogs for sale, which can be had by writing for it.

On April 13th, at the St. Louis National Stock Yards, J. Overly, a well-known stockman of Cooper county, Missouri, sold twelve yearling steers, 1,125 pounds average, which brought $6.95 per 100 pounds, bringing a gross price of $78.18 per head. They were red, white and roan cattle, and beef-type cattle fed to a finish.

J. W. Kirby, of the Kirby Stock Farm, Marmaduke, Ark., writes: "I have lots of good words echoing back from customers who have bought the get of our great boar "On the Pike," without seeing him, and when they see him they cannot keep from buying one of his pigs, for they look at the hog and not at the dollar."

At Albany, Mo., April 10th, C. E. Tennant held an auction of Poland-China hogs, and with a top price of of $42.00 made an average of $23.44 for the entire offering.

Look up the advertisement of Chas. Dorr, of Osage City, Kas., offering thirty head of pedigreed Duroc Red boar pigs at $7.00 a head. They are sired by a son of Kan't Be Beat and a son of W. L. A.'s Choice Goods and Hunt's Model breeding. There is no excuse for having inferior stock when pure-bred pigs are so cheap.

On April 14th, at Melbourne, Iowa, M. L., and A. J. Andrews, held an auction, and sold nine Shorthorn bulls for an average of $177.77, and forty females at an average of $218.50. The top-price bull was Robin Hood, calved June, 1907, sold to Leisey Bros., of Wisner, Neb., for $300. The top price for a cow was $800, paid by Harmon & Mansfield, of Rhodes, Iowa, for Imp. Clara, 58th, a Scotch Shorthorn, nine years old.

Hackney Horse Society.

"The affairs of The American Hackney Horse Society seem to be assuming a condition of prosperity quite at variance with the widely heralded talk of a year or two ago that the automobile was going to supplant the fashionable carriage horse. The society has within a year published two volumes of its stud book containing pedigrees of 931 stallions and 1,322 mares, and after expending about $2,500 for the publication of its records its financial condition is at present strong enough to enable the organization this year to offer medals at every Fair and Horse Show in the United States and Canada where there is a classification for stallions and mares registered in the American Hackney Stud Book.

Some of the principal exhibitions at which these medals will be offered are at the International Horse Show at Chicago, the National Horse Show at New York, Philadelphia, Montreal, Ogdensburg and Seattle; the State Fairs of Virginia, Indiana, Iowa, Michigan, Minnesota, Illinois and New York, and the Canadian Fairs at Winnipeg, London, Toronto and Victoria." Mr. Gurney C. Gue. 308 West 97th street, New York, is Secretary of the American Hackney Horse Society.

A FINE KIDNEY REMEDY.
Mr. A. S. Hitchcock (clothing dealer), 890 Carrier Building, East Hampton, Conn., says if any reader afflicted with a kidney or bladder trouble will write to him he will direct them to the splendid home remedy he so successfully used. He is glad to do this, and does not wish you to send him money.

FOX AND WOLF HOUNDS

of the best English strains in America; 40 years experience in breeding these fine Hounds for my own sport. I now offer them for sale. **Send stamp for catalogue. T. B. HUDSPETH, Sibley, Jackson County, Mo.**

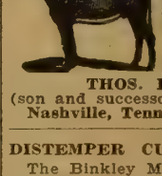
That are bred right and will be sold right. Also M. B. Turkeys (Wolf Strain), S. C. W. Leghorns (Whycoff Strain), and B. P. Rock Chickens (Bradley Strain). Eggs in season. A few pairs of Pea Fowls for sale. Address,
M. W. MAGNUSSON, Safe, Mo.

WRITE FOR FREE CIRCULAR. Leading varieties Pure-bred Poultry. Quotes lowest prices on fowls and eggs. Unused Photo Post Card, 5c. postage, from our fowls.
THE L. H. MUELLER POULTRY FARM, Wellsville, Mo.

TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won seven out of nine first prizes at Leyington Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907.
CHAS. FORD, Mortonsville, Woodford County, Kentucky.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write me for catalogue. Also Jersey Cattle.



THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

DISTEMPER CURED OR NO CHARGE.
The Binkley Medical Co., Nappanee, Ind., manufacturers of Frazier's Distemper Cure, has for the past twenty-five years been selling it under a guarantee to refund the money if the remedy ever failed. In all this period the sale of Frazier's has constantly increased until it is used by over a half million breeders and farmers. It is time that those not familiar with it should investigate it. If your druggist will not supply you, the above firm will prepay all charges on direct orders. $1.00 size holds three 50c. bottles.

Paints and Roofing.

The "Famous," a great and reliable department store in St. Louis, is famous for buying goods at great discounts and selling at small profits. The "Famous" is advertising paints and roofing on page 5, and will send free a valuable and interesting catalogue if requested to do so. Address, The Famous, Dept. 361, St.Louis, Mo.

UP-TO-DATE IMPROVEMENTS IN CREAM SEPARATORS

Cream separators come and go—every year some new names and some that are heard of no more—but all appear to have little effect upon the firmly established prestige of the "World's Standard" De Laval machines, which were first in the beginning and which their makers have spared no effort or expense at any time to keep in the van of all attempted competition.

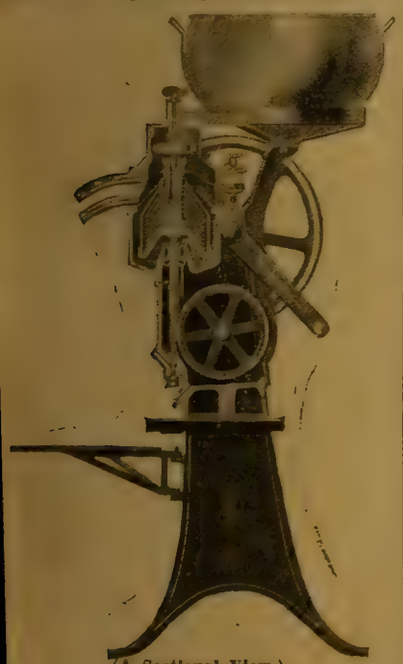
A year ago we commented at length on the many novel changes found in the new line of Improved De Laval machines then introduced, and now the manufacturers say that a year's practical experience in the actual sale and use of the new machines has but served to suggest a little greater refinement of perfection in the 1909 machines and to bring out some points of advantage not fully appreciated at first even by those who had designed the new machines.

The interest in cream separators is so great the present year, and this wonderful implement is so productive of so much profit and convenience to the dairy farmer, that it is worth while to review again some of the radical changes made in the new 1908-1909 De Laval machines.

The capacities were increased from ten to twenty per cent., while there is claimed to be a noticeable improvement in the still more complete separation of the butter-fat from the milk, particularly under the more difficult but frequently unavoidable circumstances of ordinary farm and dairy use.

The supply can is now low enough to meet the objection that has sometimes been made to the lifting of milk into it. It is spun from a single sheet of tin-plate, so that it is seamless and absolutely sanitary, while it is globe shaped and thus avoids any splashing over of the milk

The bowls retain the distinctive "Alpha-Disc" and "Split-wing" tubular shaft De



(A Sectional View.)

Laval features, but have been scientifically re-designed, from engineering considerations, so as to involve the least air resistance in being driven and in the discharge of cream and skim-milk from them. The bowl is more sanitary in its construction, being free from tubes, wings, orifices, or any parts which are not easily unassembled and may not be quickly and completely cleaned.

The supporting spindle now sets well up under the bowl, at the center of weight and balance. It is of the combined spindle and worm screw type, but still detachable from the bowl, the spindle always remaining in the frame where no harm can come to it. It is thus said to possess all the advantages of both the old double and single bowl spindles, with none of the previous disadvantages of either.

The top bearing, which provides the yielding cushion the bowl spindle must have, is most ingeniously simple, hardy and inexpensive. It is merely a circular bowed steel spring surrounding the bronze bushing, affected by wear or conditions of use and easily removed and replaced.

A new feature which appeals to every housewife is the drip shelf coming between the frame and the stool and catching any milk or overflow of milk and water, that might otherwise run to the floor.

In the reconstruction of the machines every part has been carefully designed with reference to its extreme simplicity, not only in itself but in its assembling with the other parts with which it must fit, and it is claimed that the new machines have been completely unassembled down to the last part within five minutes of time, by persons who had never touched a separator before, and then completely reassembled again within ten minutes without the slightest trouble.

The new machines have been the subject of much favorable comment by Experiment Station and other authorities, and many experienced users of separators have come to appreciate some of the difficulties they had to contend with before and some of the new features which it seems hard to be without once it is known that they can be had.

More than 15,000 users of old machines—various other makes as well as antiquated De Laval—are said to have availed during 1908 of the small "trade" allowances which the De Laval Company makes for such old machines, and it is confidently expected that a still larger number will do so this year.

The accompanying sectional view of one of the machines illustrates some of the new features mentioned.

Anyone desiring further information concerning De Laval Cream Separators should address the De Laval Separator Company, 42 East Madison street, Chicago, Ill. Mention this paper and write for catalogue.

LOOK TO YOUR HARVESTING MACHINE.

The annual advertising of the International Harvester Company of America, warning farmers to look to their harvesting machines and be fully ready for the harvest should not go unheeded by our readers.

Harvest time is fast approaching.

You plowed in season. You fertilized your fields. You made the best seed bed possible. You leveled and rolled the ground and you drilled in the grain, and then you looked confidently to Mother Nature to do her part.

It has cost you not a little in labor and money and you are looking forward with considerable anxiety to the time when you will reap your harvest.

But you have another duty to perform. Nature is doing her part well. She is growing the crop rapidly—more rapidly, perhaps, than you think. Soon the crops will be grown and ripened and then—

—Then you must be ready to harvest it quickly.

There must be no delay. It may be necessary to cut and shock it all in a very few days in order that you may save it all. It is not a matter of willingness to work. It is a matter of readiness with proper machines to harvest your grain quickly and economically—a matter of saving it all so you will reap the whole reward to which you are entitled.

You are not so concerned as to what name is painted on your harvester or mower. But you are greatly concerned about the efficiency. You want your machine to be right working. You want it to be sure. You will have no time to stop and make repairs when the harvest is on. You will not tolerate waste.

What harvesting machine shall you buy?

You should decide that matter without bias or prejudice. Decide it simply and solely in your own interest. What binder or sowing machine will be sure to serve your own interests best?

The International Harvester Company of America offers to farmers in the Champion, Deering, McCormick, Milwaukee, Osborne and Plano harvesters, machines that are standard.

There can be no question that they represent the survival of the fittest in harvesting machinery. Other harvesting machines by scores have been at various times manufactured for a few years and then their manufacture has been abandoned. The six machines named have been manufactured for many years. The efficiency of each and all is attested by thousands of farmers in all parts of the country.

As a farmer you want dependableness. You cannot make a mistake—no farmer can make a mistake in buying a Champion, Deering, McCormick, Milwaukee, Osborne or Plano harvester. They are represented by different local agents in all considerable towns. Choice between them is largely a matter of personal preference. A catalog giving the merits of any machine can be had by calling on the local agent of that machine or by writing direct to the International Harvester Company of America at Chicago. An investigation for yourself is worth while. The purchase of any one of the International machines goes far toward enabling you to say you are fully ready for harvest.

THE HORSE NEEDS

Special attention in the change of diet in the spring from exclusive dry food to the partial or entire grazing diet. For all classes of horses a tonic of Craft's Distemper Cure proves valuable to guard against any bad results and to prevent coughs and ward off the influenzas, such as distemper, shipping fever, grippe, etc. Readers should ask for it at druggists, or, if need be, may order it prepaid direct from Wells Medicine Company, 17 Third street, Lafayette, Ind.

AN IMPROVED HAY PRESS.

The Whitman Agricultural Company, St. Louis, Mo., have added a new and valuable feature to their already excellent line of hay presses. This is a self-feed, positive pull back without a spring, and serves to completely eliminate the old-style spring process, so often the cause of delay and expense in the loss of time, to say nothing of the annoyance and labor caused the operator. The new appliance is so constructed as to form a positive connection with the press mechanism so that the pull back is accomplished as smoothly and inevitably as the operation of the press and there is no longer possibility of twisting or jamming, as in the operation of the spring. All those interested in hay presses will appreciate the value of this innovation, a detailed description of which is furnished by the manufacturer.

The Whitman Company are the largest manufacturers of both horse and power hay presses in the world, and are issuing an attractive descriptive catalogue setting forth the special features of this and their other lines of high-grade agricultural machinery. Readers of The National Farmer and Stock Grower should address Whitman Agricultural Company, 6909 South Broadway, St. Louis, Mo., and ask for a copy of this catalogue.

A Real Mineral Surfaced Roofing.

The new mineral surfaced type of roofing is one of the latest and best of labor-saving devices for the farmer. The old type of so-called "rubber roofings" were inexpensive and easy to lay, and became very popular on that account. But they required painting every two years or so to keep them from leaking.

Amatite Ready Roofing, which is the most popular of the mineral surfaced roofings, needs no painting or coating of any kind. After it is laid the farmer can leave it strictly alone, and it will continue to give him uninterrupted, satisfactory service year after year.

A sample of Amatite, showing the real mineral surface, can be secured without cost by addressing a post card to the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, Cleveland, Cincinnati, St. Louis, Pittsburg, Kansas City, New Orleans and Minneapolis.

The Price of Grain.

On April 30th, at St. Louis, visible wheat, called cash wheat, sold as follows: No. 2 red (soft wheat) delivered on East Side, at $1.50 per bushel; No. 3 red sold at $1.44 to $1.48; and No. 4 red was quotable at $1.20 to $1.37½ per bushel.

On April 30th, at St. Louis, No. 2 corn sold at 73½c. a bushel; No. 2 white corn at 74c.; No. 2 yellow corn at 74c.; No. 3 yellow corn at 73½ to 74c.; and No. 4 at 73c.

On April 30th, at St. Louis, cash oats, No. 2, sold at 55 and 55½c.; No. 2 white at 57c.; No. 3 at 56 and 56½c.; and No. 4 at 54 and 54¼c.

Not much rye was selling, but the quotation was 83½c. a bushel.

May options closed as follows: wheat, $1.27½; corn, 70⅝c.; oats, 54c.

Potatoes at St. Louis.

Potatoes are supposed to be selling high, but farmers do not think so. At St. Louis, April 30th, old potatoes sold as follows: Michigan Rurals, 97c. a bushel; New York Rurals, $1.00. Produce Exchange quotations were: Fancy Rural, 95c. to $1.00; choice do. at 92 to 95c.; Burbank at 90 to 95c.; Rose at 75 to 85c.; Red River Early Ohio at $1.00 to $1.10; Minnesota, do. at 95c. to $1.00; Western, do. at 85 to 90c. New potatoes were selling as follows: Alabama and Louisiana Triumphs in barrels at $4.00; hampers at $1.00 to $1.20; and sacked at $1.40 to $1.50 per bushel, delivered; white in barrels at $3.00 to $3.35 per barrel; in sacks at $1.25 per bushel, and hampers at 90c. to $1.00. Fancy Florida Triumphs at $4.25 to $4.50 per barrel.

Dr. J. W. Connaway, of the Missouri Board of Agriculture, experimented with 600 hogs in cholera infected herds and saved 95 per cent. of them. They were healthy when inoculated but in danger. He used the serum developed by himself.

It Costs You Absolutely Nothing

FREE DEAFNESS CURE.

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh. Address, Dr. G. M. Branaman, 1264 Walnut st., Kansas City, Mo.

MR. BERT H. JOHNSON, sheep salesman for CLAY, ROBINSON & CO. at the St. Louis National Stock Yards, who contributed the following article upon the St. Louis sheep market.

ST. LOUIS SHEEP MARKET.

Good Prices Are Obtained and Larger Supplies Can Be Sold to the Advantage of the Sheep Raiser and Shipper.

The Different Classes of Buyers—Buying and Selling Requires Skill and Ability—Wide Range of Quality and Values in the Sheep Market.

Editor National Farmer and Stock Grower:

I am glad to have an opportunity to say a few words to your readers concerning the market for sheep and lambs at the St. Louis National Stock Yards. Selling sheep is the only business I have on the market. I do not sell cattle and I do not sell hogs. Sheep selling is my specialty, and I am expected to devote all my time to it; therefore, the friends and patrons of our company can always be assured of their shipments receiving the undivided attention of a sheep salesman. I will be glad to write and advise them at any time, and do the very best I can to obtain good results for their consignments when they arrive on the market.

The St. Louis Sheep Market O. K.

As a sheep salesman I find the St. Louis market to be fully equal to all its opportunities. The general supply, however, is not so large as it ought to be. I am not speaking for myself alone when I say that to keep this market interesting six days in the week we need more regular supplies, better supplies and larger supplies. Last year the average on this market was about 13,000 head of sheep and lambs a week, and prices would have been fully as high if twice as many came in. Out of the 13,000 weekly arrivals about 2,000 head a week were not fat enough to kill for mutton, and that left about 11,000 a week for the butcher trade. Half the time the St. Louis packers were shipping in dressed mutton or live sheep from other centers in order to ship them out again to fill their orders for mixed loads of dressed beef, mutton and pork. The packers do not wait on us to supply them with sheep; they depend upon themselves; and if the St. Louis market is not well supplied the trade becomes weaker than it would be if it was able to keep all our buyers working full time.

The Wholesale Sheep Butcher.

Our mutton sheep buyers can be divided into three classes. The first and oldest class is the St. Louis sheep butcher. This is not a large class, but there was a period when the entire local trade was in their hands. From 1870 to 1880 the St. Louis packers, Whittaker, East St. Louis Packing Company, Heitzberg, Krey, Wissmath, Belz, Laux, Neibert and others did not slaughter sheep. It was John Ball, Bill Jones, Kroeker, Prendeville and other wholesale sheep butchers who bought the sheep. This was before the days of Nelson, Morris & Co., of Swift & Co., of Armour, of the St. Louis Dressed Beef Company, and the Independent Packing Companies. There were sheep butchers at St. Louis in 1880 and there are sheep butchers in 1909.

Packing House Buyers.

The second class, and the most important class to-day, are the packers who slaughter at St. Louis. Furnish them regular supplies at about Chicago prices and they will slaughter 25,000 sheep and lambs a week. We can depend upon them if they can depend upon us. If they can buy at St. Louis they will not have to pay double freight bills shipping in sheep or mutton from other points. They would rather buy at St. Louis and pay a good price than have to depend on irregular purchases elsewhere.

Eastern Order Buyers.

The last class of buyers at St. Louis is the Eastern and interior butcher. The scarcity of sheep at this market comes near shutting them out. This is a considerable interest if we could only supply them. There are local order buyers stationed at St. Louis who buy cattle and hogs and ship them East to be slaughtered. They bought 200,000 cattle and 710,000 hogs on the St. Louis market last year, and yet they seldom come near the sheep house. Their Eastern houses need sheep, but they know we are not getting enough to fully and regularly supply the local trade, and they are slow about sending orders that cannot be filled. I hope to see the day when we will be receiving enough sheep to be able to bring these Eastern houses in strong competition with the local trade. Messrs. Clay, Robinson & Company are trying to encourage Eastern firms to buy sheep at St. Louis, the same as they buy cattle and hogs.

Keep the Buyers Working.

The way to obtain good, average prices is to keep buyers working their houses to a strong capacity. Keep them going, so they are sure of their supplies, then they will not stop when the market is advancing; but if they are working short hours, they can easily drop out altogether and let the market down.

A Market Near the Consumers.

It is not within the power of any set of men to absolutely regulate the supply of sheep on the St. Louis market; but this much I can say with confidence, that it is a very safe market to ship to. I am in a position to compare sales at all the markets, and do so from day to day, and I have no hesitation in inviting sheep shippers to come here. It is a good, responsive market, and we know that sheep are worth more to the St. Louis buyers than they are to the buyers on the farther Western markets. This is due to the fact

[Continued on the next page.]

A Genuine SURETY BOND GUARANTEE with every roll of Congo.

So many guarantees are given nowadays that to a certain extent they have lost their value; but the one which accompanies each roll of Congo is *different* from all others.

It is a genuine Surety Bond backed by the National Surety Co., one of the largest and best known Surety Companies in this country. It protects you absolutely.

It is a distinct, clear-cut guarantee, and any man who desires the best roofing for his money, and wants the same backed by a reputable house as well as by a Surety Bond, can do no better than invest in Congo.

Samples will be sent for the asking, and we know if you test it thoroughly, as a roofing should be tested, there will be no hesitation on your part in securing it quickly.

Further information, samples, etc., on request.

504 WEST END TRUST BLDG., PHILADELPHIA, PA.
CHICAGO SAN FRANCISCO

Sheep Notes and Items.

On April 14th, H. L. Anderson, of Pike county, Illinois, marketed a load of 84-pound clipped Western lambs that sold at $7.10 per 100 pounds.

On Wednesday, April 8th, at the St. Louis National Stock Yards, 1,838 Texas wethers, averaging 82 pounds, were sold at 6 cents a pound. They were grassers from Southern Texas.

In handling sheep, those who feed them for market should remember that at the time they are becoming heavier as muttons they are also constructing a fleece of wool. The sheep does not put on flesh as fast as the hog, but it must be remembered that the hog grows no fleece. The sheep can give a farmer good returns for a moderate-sized food ration, and his fleece often pays his year's expenses.

AGENTS WANTED

We want men who are not actively engaged in business to act as our agents. We pay liberal cash commissions. Write for our catalogue and full particulars.

CENTURY MFG. CO.,
Dept. 423, East St. Louis, Ills.

that the superior location of St. Louis is very near to the dividing line between the producers of the West and the consumers of the East, and in my opinion it will eventually be a very large and perfectly reliable sheep market. There are all the competitive elements to make it so. It is up to us commission salesmen to build up the buying side of the market. We are nearer to the consumers than any of the Missouri river markets.

Buying and Selling Standpoints.

I hope your readers will understand the difference between the selling and buying standpoint. It is our duty to sell our consignments to the best possible advantage without fear or favor. To do so we must know the quality and current value of the supplies we have to offer. We must also be in a position to form a good idea when the market is in our favor, so that we can get a little more money for our customers' sheep than we did the day before. Some people are of the opinion that the market quotations are stuck up so we can see them, and all we have to do is to take the market price. That is a great mistake. The market has to be made every day on every load or part of a load, and the commission salesman is a great factor in making the market what it really is. Furthermore, the best work by a salesman is often done when the market is glutted and he has to submit to a sharp decline, which may cause considerable discontent on the part of a shipper.

Incompetence Causes Sacrifices.

The buyers, on the other hand, are required to make their purchases on as low a basis as possible. If we are paid to force the market up, they are paid to force it down. One cannot afford to be outbought or to be outsold by a competitor. We have to satisfy our customers, and they have to explain their purchases to their bosses. As a general rule, we have to contend with buyers who are fully competent to take care of their end of the business. The idea that incompetent men can buy or sell on the St. Louis sheep market without sacrificing their employers' interest need not be entertained for a moment; neither is the market under control of any one set of men.

Wide Difference in Quality.

It is especially important that a sheep salesman be a good judge of quality. In lambs there is a very wide difference. A lot of lambs may be sorted and one end sell for $7.50 per 100 pounds and the other end for $5.50. This is an extreme case, but the market shows it all the time. If they were all fat and choice quality they should all bring the top price. The wool helps to deceive the eye, and the hand of the sheep salesman or the buyer is the better reliance.

Great Fluctuations in Prices.

Not only is there a very wide range of quality in the sheep house, there is also a wide fluctuation in prices. In the hog house prices advance or decline 5 to 10 cents on the same conditions that would cause lambs to advance or decline 15 to 25 cents, or 10 to 15 cents in sheep. This is probably because sheep are lighter animals, and a change of 5 cents per 100 pounds on a 250-pound hog would amount to about 15 cents on an 80-pound sheep. This gives us the double incentive to know our sheep and our market, that we may not have to submit to declines in prices without the very best of reasons for them.

Selling One-third of the Receipts.

In this letter I will not make special mention of our sales on the market. Our circulars for this purpose are issued weekly, and we will gladly send them to sheep raisers. We opened this office on the 8th of February of this year, and Clay, Robinson & Company are now selling one good third of all the sheep coming to the St. Louis market. We advise our friends and patrons to ship to St. Louis whenever the market justifies them to do so. It makes no difference to us at which market the sheep and lambs are sold so long as our customer obtains the best net results.

A Word of Good Cheer.

I do not know that there is much more to say about the St. Louis market, but I think that a word of good cheer to the sheep raiser is in order. The demand for mutton and lamb is gradually increasing. With the very moderate number of sheep in the country there must be a continued and regular demand. The road is clear for many years to come, and sheep raisers can continue in business with the confidence of receiving remunerative prices. There will always be rising and lowering markets, but the sheep raisers' interests are in good hands.

Stock Ewes For Breeding Purposes.

Before closing this communication, please let me say a word about furnishing farmers with stock ewes for breeding purposes. Our facilites enable us to buy stock ewes and stock lambs to the best advantage at any season of the year. All the stock sheep at Denver, Sioux City, Omaha, St. Joseph and Kansas City are available to our force of buyers. They can ship a load to our customers at any point in St. Louis territory. Commencing with July, we will endeavor to get stock lambs, stock ewes and feeding sheep shipped in to the St. Louis market. Stockmen who contemplate going into the sheep business are invited to make our office at the St. Louis National Stock Yards their headquarters. There is a grand opportunity to raise lambs to sell on the early market, and after shearing the ewes feed them for market also. The West can supply the ewes every year cheaper than Missouri and Illinois farmers can raise them, and the Missouri and Illinois farmers can raise one crop of lambs and then sell the wool at a profit and afterwards sell the fat shorn ewes for more than they cost when purchased in the fall.

A First-class Commission House.

The firm of Clay, Robinson & Co. is handsomely equipped at nine principal live stock markets. I am ordering our Denver house to buy thin sheep for our customers to feed in Missouri. The same sheep later on will come to St. Louis. Our business is just as much to buy stock sheep and lambs as it is to sell them again when our patrons have fattened them. Our Western houses ship many feeding sheep into Illinois, Indiana, Ohio and as far east as West Virginia. We are in a position to advise sheep raisers where to sell their sheep, and we are in a position to advise sheep feeders where to obtain their supplies.

Respectfully Yours,
BERT H. JOHNSON,
Sheep Salesman for Clay, Robinson & Co. at the St. Louis National Stock Yards.

"If you feed silage, half the hay crop may go to market at a profit."

St. Louis Sheep and Lamb Sales.

For several months last year The National Farmer and Stock Grower devoted quite an amount of space to advocating that farmers take an interest in producing lambs for the spring season of 1909. The idea was to try and fill up the early markets with spring-fed lambs before the usual run of grass-raised lambs commenced to come in. Sheep and lambs are usually scarce on the market of January, February, March and April, and the run increases in May, and continues strong in June and July. So far as the spring of 1909 is concerned, prices have been good and the season was backward. Up to April 20th spring lambs of 1909 were scarce and inferior. The range of prices paid for natives was $6.50 to $11 per 100 pounds. The weights averaged from 32 to 54 pounds. The first spring lambs from Tennessee arriving April $9.25 per 100 pounds. They were only in fair condition, and a real good lot might have sold for a cent a pound more. In the meantime, last year's Western lambs fed over winter and very few natives were bringing nice money. We note clipped Western lambs, 84 pounds, at $7.10 per 100 pounds; Colorados, with wool on, 73 pounds average, at $8.00; another lot on another day sold at $8.10, representing the high mark in price. This article is written April 20th, and only takes note of the market up to that time, and it fully supports all claims advanced by this paper last year. The receipts so far are 14,000 head larger, and prices average a cent a pound higher than last year. The St. Louis market is a great help to sheep raisers, and it is destined to assist in the creation of a great and profitable industry in the Mississippi valley.

The Blue Valley Bulletin says: "It pays to feed high-priced feeds only to unusually good cows. It never pays to feed the other kind anything."

Webster's NEW STANDARD Dictionary

Home and Office Edition. A splendid book for readers of The National Farmer and Stock Grower. There are 756 pages, 5x7 inches, 1½ inches thick, and the book weighs 22 ounces. It is splendidly bound in flexible cloth, with patent thumb index, with front and back title in gold. There are 840 illustrations and 19 full-page plates. Besides the Dictionary proper and supplement of recent words, it contains many other features, such as key to pronunciation, dictionary of geography, Biblical, classical and historical names, musical terms, foreign phrases, current abbreviations, etc. For handy, quick, general use, for doctors, ministers, lawyers, merchants, mechanics, editors and farmers, this is a great, useful, interesting, necessary book. We use it as a subscription premium in connection with The National Farmer and Stock Grower. Send us One Dollar and we will send you one copy of Webster's New Standard Dictionary by mail post paid, and we will send you The National Farmer and Stock Grower, every issue for two years. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Dale Monument.

"I guess we'll get it up by Decoration Day," said Daniel Dale. "It'll cost seven hundred, but it will be as fine as the Browns' and a sight better'n some that belong to folks that put on more airs than we do."

"I don't know as it makes so much difference after all," answered Thirza, Daniel's wife. "Folks who care for us 'll think just as much of us when we're gone, whether we have a seven hundred or a one hundred-dollar marker. But since you set such store by it, I'm glad we've got the money together, Dan."

It was later in the day that Daniel saw Lettice Barclay coming up the walk for an afternoon visit with Thirza. She threw him a gay Good Afternoon, and the man could not but take notice of her bright face and pretty dress.

"But she couldn't come up to Thirza a few years ago," said Daniel to himself. "She wasn't in it then for good looks alongside of Thirza. If Thirza had on them same clothes now and could get rested up, I bet she'd beat Letty all to pieces now yet!"

But why couldn't Thirza have new clothes and go out more? They had finished paying for the farm and had now seven hundred dollars ahead for the new monument to be put in the family lot. It was a matter of pride with Daniel that a stone the equal of any in the cemetery should be placed in their lot, and he was looking forward with delight to the day when it should be set up. It was the next day that he had planned for his visit to the monument dealer's, and early in the morning he started on his trip. He asked Thirza to go along, but she refused, and in his heart he felt glad for the refusal.

Instead of pulling up his team at the monument dealer's he drove straight past and up to the biggest department store in the town.

"Have you got a girl here that knows something about women's clothes that could pick out something proper and becoming?" he asked the obsequious floorwalker who met him at the door. The girl being produced, Daniel went to work with a will. He never did things by halves, and if the generous selections made did work havoc with his pocketbook, the result was nevertheless pleasing to Daniel. When the last purchase had been made Daniel turned his team homeward, but he was not quite through with the day's business. When within a mile of his farm he turned down a small lane and drove up to a small farm house.

"Is Nellie at home?" he asked of the woman who stepped to the door at the sound of wheels. In response Nellie came out.

"I'd like to have you come up and help Thirza a spell. Better get your things together and I'll call for them to-morrow. Can you come to-morrow?"

Nellie's answer was a glad assent, for she had been waiting for a steady place.

Thirza had just put the finishing touches to the meal when Daniel drove up. "Here, Thirza!" he called. "Come and help me get the monument out!" And with that he began to unload boxes and bundles upon her until she had more than she could carry. After he had gone to put the horses up Thirza began opening the delightfully mysterious packages, and she was not yet half through when he returned to the house. She was sitting on the floor in the midst of the spoils with flushed cheeks and lips parted in a smile of wonder and delight. It was not until he was close beside her that she was aware of his presence. Then she gave him a radiant look. "Dan, Dan," she cried, "how did you know that always doing without was breaking my heart? Oh, how I've wanted such things! But how could you do it?"

"I guess I woke up just about in time," answered her husband. "I just made up my mind that instead of getting a grand monument for us after we're dead and gone, I'd use some of the money to give you a little pleasure while you are here. And to-morrow Nellie's coming to stay and help until all the summer work is out of the way. You won't object, will you?"

"I should say not," answered Thirza, cocking her head on one side to get a better view of the shimmering piece of silk she was running through her fingers.—Janet Thomas Van Osdel.

Try This.

Always using boiling water for cooking potatoes.

Putting a pinch of baking soda in peas, tomatoes and Lima beans when cooking them.

Mixing the white of an egg to every four tablespoons of dry coffee before the water is added.

Cutting hot brown bread with a string.

Pouring hot water over tomatoes when they are to be peeled.

Doing your hair in a new way and putting on a fresh, pretty waist when the blues attack you and nothing seems worth while.

Keeping a scissors and a cushion containing needles and twine for sewing up roasts, above the kitchen work table.

A good, hearty laugh the next time anything goes wrong.

Going to bed occasionally at seven o'clock in the evening and taking ten to twelve-hours' sleep.

Hanging fresh pennyroyal in the bedroom to drive away mosquitoes.

Wearing a pair of cotton gloves when doing sweeping and the rougher part of the housework.

Filling up the wall space around your kitchen table with utensils most used, so as to minimize the number of steps taken while doing the kitchen work.—J. T. V.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, hog, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you Practical Farming and Gardening, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Little Grains of Life, Free

Try Little Curo Grains of Life and Get Well, Nature's True Way of Curing Disease.

Rheumatism, Neuralgia, Gout, Kidney Disease, Constipation, Eczema, Pimples, Skin Diseases, Anemia, Catarrh and Catarrhal Diseases, Piles, Insomnia, Are Cured Perfectly by These Marvelous Life Giving Grains.

A Fifty Cent Package, Especially Prepared for Your Disease, Sent Free to All Who Write.

If you are sick we will send you free on application, a fifty-cent package of Little Curo Grains of Life, all charges prepaid. If you will try them as directed they will prove to you beyond the remotest possibility of a doubt that nature has provided in them her own true, harmlesss, positive way to restore you to health—strength and vigor—and prolong your life many years.

Little Curo Grains of Life possess all the natural and necessary properties for supplying the system with every requisite of life and health. They cure constipation and remove all poisons and disease germs from the system. They create rich, red blood and keep it pure, thus making impossible the existence of any bad blood. They supply the nerve centers with generating power and renew and rebuild the nervous system, thus banishing all nervous afflictions, such as insomnia and headache. They act directly upon the kidneys and make them healthy and strong and able to perform their functions in a natural way. All Kidney diseases are thus cured perfectly. Rheumatism and gout, which are blood diseases, are driven out of the human body. Catarrh and all catarrhal poisons are expelled. Catarrh of the stomach and bowels and all stomach and bowel troubles are cured in a harmless way by these great, natural, health-giving Little Grains of Life.

Health is restored and life is prolonged by these wonderful life-giving Little Curo Grains to an extent unheard of since the days of the Patriarchs. There is no earthly reason why anyone should not live to the great age of one hundred years or over, as he did in year sgone by, if he keeps his body in a perfect condition of health in a natural way, as he can do by using Little Curo Grains of Life, combination three course treatment prepared for each individual disease.

If you are suffering from any distressing and dangerous diseases like Rheumatism, Neuralgia, Gout, Kidney Disease, Anemia, Constipation, Eczema, Pimples, Catarrh of the Stomach or Bowels, Insomnia or Headache, send at once and get a fifty-cent package of these wonderful Little Grains of Life absolutely free, all charges prepaid. It will cost you no money—send none, just your name and address. It will be worth more to you than anything that money could buy. Delay will gain you nothing. Send to-day.

Free Fifty Cent Package Coupon

"You Cured My Kidneys FREE"

I Have Bona Fide Letters From Sufferers of Kidney, Bladder and Rheumatic Disease

I Have Cured Without Receiving One Penny of Pay.

My Great Treatment FREE

I will send any man or woman my treatment for the cure of Kidney, Bladder and Rheumatic troubles free, just for the ocupon below and a short letter which gives me the symptoms of your disease in a particular manner.

I don't want you to send me any money. I send this treatment absolutely free, and with it my great big book on all the diseases of the Kidneys and Bladder, together with full and complete description of all forms of Rheumatism.

DR. T. FRANK LYNOTT

Formerly of the world-famous Bellevue Hospital, New York, and holder of especial certificate for urinary analysis from University of New York.

Now, don't make a mistake that my treatment for the cure of Kidney, Bladder and Rheumatic troubles is one of the old failing kind. Throughout the United States men and women famous in their own locality are living testimonials of the perfection of my treatment. I know how painful and horrible are diseased kidneys and bladder, and how terrible Rheumatism is; so I have made this line of medicine my field of work, and I have been very successful. If I can cure you free I want you to tell your friends of my treatment. This is the way I secure my patients. I would like to have you in my offices just for one hour to read my letters and to see the great and sucessful work I am doing every day in the year. Now, remember, I don't want you to send me money, but simply to send to me the coupon below, which does not in any way bind you, but from which, together with your letter, I can tell exactly your condition. I send the treatment for your particular disease in a plain, confidential package, all charges prepaid, and containing my great and complete work on Kidney, Bladder and Rheumatic troubles. I will do just as I say I will—no deviation whatever. You get your treatment free for the coupon and letter of symptoms which I ask you to send me to-day.

Free Kidney, Bladder and Rheumatism Cure Coupon.

DR. T. FRANK LYNOTT,
2534 Occidental Bldg., Chicago, Ill.

Please send me your method and your remedies for the cure of Kidney, Bladder and Rheumatic troubles, free of charge. I enclose letter herewith explaining my symptoms. It is understood this treatment is to be sent to me absolutely free.

Capons For Market.

The capon to the chicken family is precisely the same as the steer is to the cattle family—a male that is not allowed to become a sire—and under nature's laws becomes a more perfect meat producer. The beef steer we have before us every day in the year, but the capon is a rarity.

Poultry fanciers talk about capons, but seldom raise them, and a visitor can attend many shows without seeing them. We go over the Poultry Show catalogues and reports of the greatest shows, and seldom a word is said concerning capons. At the St. Louis World's Fair there were prizes for capons. It was an exception.

If we wish to learn something concerning the value of capons we have to turn to the Eastern market reports; but when roasting chickens, which are fed cockerels, are selling up to 18 and 21 cents a pound, not much is heard of capons, and yet no doubt capons often sell higher than roasters.

It requires a year to make a first-class capon. The average weight is about eight pounds, and eight pounds at 22 cents a pound is $1.76, a good price for a chicken, even if has to be shipped to Philadelphia to be sold.

Any locality in which a number of families will determine to master the business of producing capons can become very rich and independent.

The following is from Farmers' Bulletin No. 287, issued by the United States Department of Agriculture:

Capons and Caponizing.

A capon is a castrated male bird. After being caponized the bird becomes more quiet, is more readily fattened, the comb and wattles cease to grow, and the plumage becomes heavy and glossy. Capons neither crow nor fight, and are despised by other fowls. They often show a great fondness for little chicks, and instances are not uncommon where they have been utilized in rearing broods of chickens. In many Eastern markets the prices paid for dressed capons range from 20 to 30 cents a pound. The highest prices usually prevail from January to May, and the larger the birds the more they bring a pound. For this reason the larger breeds—such as the Brahma, Cochin, Langshan, Plymouth Rock, or Wyandotte—are the most suitable. If well grown, a capon will weigh from ten to twelve pounds at one year of age.

Fowls hatched early in the spring can be caponized before hot weather comes, which is an advantage, although no ill results should follow the operation at any time of the year if it is properly done. Generally speaking, the bird should be from two to three months old and weigh about two pounds, depending largely on its development. A good set of tools is indispensable and can be purchased for from $2.00 to $3.00. As a complete set of instructions is furnished with each set, it is unnecessary to go into details here. The beginner should, however, operate on several dead cockerels before attempting to operate on a live one.

After caponizing, the bird should be given plenty of soft feed and should have plenty of water to drink. The capon begins to eat almost immediately after the operation is performed, and no one would suppose that a radical change had taken place in his nature. Leave him to himself, as for the time being he is his own doctor. It is well, however, to look him over two or three days after the operation has been performed, for sometimes air gets under the skin, causing a slight swelling or "wind puff." This can be relieved by pricking through the skin at one side of the swelling with a sharp needle and gently pressing out the air with the hands. The wounds will heal within ten days from the operation. The capons should be fed nourishing but not fattening feed, the object being to keep them growing. They should be allowed to grow until about a year old, depending of course largely on their maturity, some breeds maturing much more rapidly than others.

About three weeks before marketing, place the fowls in small yards and feed them three or four times a day, giving plenty of corn and other feed. Corn meal and ground oats, equal parts by weight, moistened with water or milk, makes a good mash for fattening capons.

In dressing capons, leave the head and hackle feathers, the feathers on the wings to the second joint, the tail feathers, including those a little way up the back, and the feathers on the legs half-way up the thigh. These feathers serve to distinguish capons from other fowls in the market. Do not cut the head off, for this is also a distinguishing feature of the capon, on account of the undeveloped comb and wattles.

Sheep Notes.

The American Sheep Breeder says: "The American flockmaster is not the only fellow that growls at the railroads. The Australian sheepman is dependent upon a railroad system operated by the state and at certain seasons of the year he has to wait three months for cars to ship his wool to market."

On Wednesday, April 14th, at the St. Louis National Stock Yards, 138 head of Western yearlings fed in Missouri and clipped before shipment were sold at $7.15 per 100 pounds. They were consigned by W. P. Campbell, of Randolph county, Missouri.

At the St. Louis National Stock Yards, on April 15th, S. T. McCoy marketed 250 head of 71-pound Western lambs with the wool on that sold at $8.10 per 100 pounds, reaching the high price of the year.

On Friday, April 16th, there were 541 New Mexico lambs sold at St. Louis by William Leeton that averaged 72 pounds and sold at $8.10 per 100 pounds. They had their wool on their backs.

On April 19th, at the St. Louis National Stock Yards, J. Walferman marketed from Colorado four double decks of lambs with the wool on that averaged 75 pounds and brought $8.00 per 100 pounds. John Dixon marketed from Kansas of his own feeding 282 head of Western lambs that weighed 71 pounds and brought $7.90 per 100 pounds.

At the St. Louis National Stock Yards, April 20th, a string of 1,115 head of Colorado lambs, 73 pounds average, were sold at $8.00 per 100 pounds. These were last year's late lambs that were not over ten months old.

On Monday, April 12th, at the St. Louis National Stock Yards, Payne & Rembach had a consignment of Colorado lambs, 799 head, 71 pounds average, which sold at $8.00 per 100 pounds. This was the high mark of the year thus far.

A SEPARATOR THAT PLEASES.

For a number of years the American Separator Company, have been putting out a cream separator which has given satisfaction.

Probably the best trait of the separator is the extent to which it pleases its users. In this connection we are pleased to note that in the matter of repairs, Geo. Kay, of Stonington, Mich., writes as follows:

"We have used the No. 1 American Cream Separator for over five years. It has not cost us one cent for repairs in that time and is just as good as it ever was. It does good work, has paid for itself long ago in the increased yield of butter. It is very light running and easy to clean. The American is O. K. I would heartily recommend it to those in want of a first-class separator."

Alfred Geoffrion, Las Vegas, N. M., writes as follows:

"Please excuse me for not answering sooner. The Low Down American Separator that I received from you in good condition a few months ago is giving entire satisfaction in every respect. It is easy to run, close in skimming and easy to wash. I consider the American Cream Separator a high class machine. I advise anyone buying a separator to buy an American.

"I heartily endorse your plan of selling direct from factory to farm, and think it the best way."

C. K. Gwinn, Adrian, Mo., under date of September 4th, 1908, writes the manufacturers as follows:

"The latter part of July past I ordered one of your Low Down American Separators, which reached me the first of the past August.

"As you allowed me to use the same for thirty days, I will now take pleasure in giving honor where honor is due. We have used the separator twice every day since it arrived and we have found it without a single fault.

"In the meantime there has been quite a number of our neighbors who have examined our machine and pronounce it perfect. But that is not all: two men who run dairies of twenty to twenty-five cows have looked our New No. 2 American over and said that we have a better separator than theirs.

"This testimonial is unsolicited on your part, but it gives me pleasure to send same to you, as it is all facts, which you have perfect liberty to use with my name."

Andrew Busch, Hancock, N. Y., who has used an American Separator ten years, says:

"As regards the separator I purchased from you over ten years ago, must say it has given thorough satisfaction in every respect."

Mr. A. Buck, Des Moines, Ia., who finds that his American Separator has paid for itself again and again during the nine year's use writes:

"We used your separator for nine years; were very much pleased with same to our satisfaction; never had any trouble or repairs. Think it paid for itself again and again."

This is strong commendation for the American Separator and should inteerest every person considering the purchase of a machine this season. A postal card will bring a catalogue and all details. Write to American Separator Co., Box 1102, Bainbridge, N. Y.

An Explanation.

A prominent lawyer of Vicksburg, Miss., who, after two months of widowhood, took unto himself another spouse, was very indignant when he read in one of the local papers the following notice of his marriage:

"The wedding was very quiet, owing to a recent bereavement in the bridegroom's family."—News.

20 Years With Heart Trouble

"Dr. Miles' Heart Remedy has cured me of heart disease of over 20 years' standing. I was so bad that I could not do my work, and could scarcely draw a full breath without fainting or smothering. The doctor told me he could do no more for me; then I commenced taking the Heart Remedy. I shall never forget that night. I slept better than I had before in months. I kept right on getting better, until I was perfectly well."

MRS. LAURA RUSSELL,
Logan, Iowa.

When the heart action is weak, it fails to pump the blood through the lungs with sufficient rapidity. Then the lungs do not absorb the proper amount of oxygen, although they may be taking in a normal amount of air. The result is shortness of breath, smothering spells, difficult breathing, oppressed feeling in chest. Dr. Miles' Heart Remedy strengthens the heart nerves and muscles, and in this way increases the circulation.

Get a bottle from your druggist. Take it according to directions, and if it does not benefit he will return your money.

THE BEDBUG.

An Item That is Interesting to Careful Housekeepers.

It would not be considered polite to mention the name of a certain oval, flattened, brown, wingless insect which is parasitic on man. Suffice it to say that it is active entirely at night and hides by day in cracks and crevices, where the housewife finds great difficulty in reaching it.

This insect has long been a pest of mankind. It was known to the Romans, who gave it the name of cimex, which has now become its scientific name. Doubtless it also associated with other ancient peoples, for it is distributed over the greater part of the world and has great powers of maintaining its hold wherever it is introduced. It will withstand great extremes of temperature and live many months and perhaps years without access to its natural food.

Careful housewives consider it a disgrace for this insect to be found in the house, but this is not necessarily so. Our modern passion for travel furnishes the best possible means for the distribution of the parasite. It finds its way into traveling cases, trunks and clothing, and is in this way transferred to new fields. It is thus likely to be found at some times in almost any locality. Houses which are connected by water pipes, fences or gutters are likely to be infested by the insects traveling over these lines of communication, especially if the source of the pest happens to be uninhabited.

The bite of the insect is accomplished by inserting four bristle-like mouth parts into the skin and sucking the blood which flows through a tube-like proboscis. So far as is known, no poison is inserted into the wound by the insect, though the bite is quite poisonous to many persons, causing red blotches, which are quite irritating. The insect has never been convicted of carrying disease from one person to another, though this is quite possible. In a respectable household, of course, danger from this source is comparatively small, but where the insects have taken up the cosmopolitan life in a hotel or other public abiding place, the case is different. They are not always discriminating in their associates.

For mild infestations, a number of common remedies are quite effective. One of the best is a liberal use of gasoline. Pour it over the cracks in the mattress and about all the cracks and crevices of the bedstead. Do the work thoroughly and pour in sufficient to fill every crack. Wherever this fluid comes in contact with eggs or insects they will be killed. The gas is explosive, however, and must be used during the day and when there is no danger from fire in stoves, lamps or cigar. Benzine will serve the same purpose as gasoline. Kerosene will do equally well, but leaves an oily condition which is quite undesirable.

Where the insects infest cracks of the floor and walls of the room it may be necessary to resort to methods of fumigation. Brimstone burned at the rate of a pound to a thousand feet of space has been used with success. The vessel containing the burning brimstone should be placed in a tub of water or pail of sand to prevent the escape of fire, and the room kept closed for twenty-four hours.

Sometimes buildings are so badly infested that it is necessary to resort to fumigation by hydro-cyanic acid gas, but this should only be undertaken by experienced persons, on account of the deadly nature of the substances used.—S. Arthur Johnson, Colorado Agricultural College, Fort Collins.

Useful Helps in the Dairy.

The best way to prevent a butter bowl from spitting is to rub it well with fresh lard before it has ever been used or wet with water. Heat the lard and grease the bowl inside and out, just as long as the wood will absorb the lard, which will usually be a large cupful.

A good way to clean the wire piece of the milk strainer is to rub it, both inside and out, with fine, dry salt, then shake thoroughly. The best strainer is one made of a thin cloth, but these must be washed and rinsed after each time of using to keep them white and sweet-smelling.

The neat and attractive form in which butter is made up for the market has a good deal to do with its ready sale, and it is one's duty and very little more trouble to impart a purity and sweet odor about your milk and butter. One of the first requisites in caring for milk is to keep the pans or crocks perfectly sweet, and this cannot be done unless you have two sets, and use them on alternate days, sunning and airing when not in use.

The best way to keep all the dairy utensils clean and sweet and in a sanitary condition is to rinse them out with cold water, then wash with hot water and a clean cloth and finally scald thoroughly with hot borax water, using about one tablespoonful of borax to the gallon of water, and a small brush is far better around the seams and corners than a cloth. The borax is very cleansing, and then it purifies and disinfects, and the outside of the dairy utensils should be scalded with the borax water as well as the inside, as this will kill disease germs and destroy bacteria. Do not turn any of the dairy utensils upside down over a table when you have finished washing them, but hang them up or place them outside where they can get the air and sunshine. If the cloths used about the dairy are not kept perfectly sweet and clean they make fine breeding places for disease germs, and the utensils cannot be made clean with soiled cloths.—M. A. T.

Our Daughters — What Are We Teaching Them?

Are we training them to be honest and self-supporting citizens?

Hundreds of employers, harassed and irritated with incompetent, inaccurate, unthinking girl employes, will answer "No!"

Are we training them to be good housewives?

Hundreds of young husbands, wondering why they cannot make both ends of their income meet, will answer as emphatically "No."

These questions are asked and answered in a series of articles by well-known writers, the first of which appears in Woman's Home Companion for May.

The Hen Was Hatching.

First Rooster — "Where's your wife?"

Second Ditto—"Oh, she's in the barn hatching out some scheme to add to my expenses."—Exchange.

WANTED Traveling Salesmen

YOU Can Be One Over 500,000 are now employed in the United States and Canada, and thousands of new ones start every year. Traveling Salesmen earn all the way from $1,000 to

$10,000 A YEAR

and expenses. We will teach you to be an expert by mail in eight weeks.

Our Free Employment Bureau

the largest of its kind in the world—will assist you to secure a position with a reliable firm. CONCRETE FLOORS.

How to Construct—For Stables and Barns—The Water Cure.

Too much care cannot be exercised in preparing the foundation for a concrete floor. This should always be well drained and firmed, to a depth of from six to eight inches below the concrete.

It pays to thoroughly tamp this foundation before putting on the mixture. If the soil contains a great deal of clay, it may be necessary to remove part of it and to fill in with broken stone, gravel or cinders to within four or six inches of the proposed finished surface, depending upon the thickness of the floor. Blind drains of coarse gravel or tile may be laid from the lowest points in the excavation to carry off any water that may accumulate beneath the structure.

For the construction of the ordinary stable or barn floor, which is not to carry any great weight, the following proportion is to be recommended for the concrete floor: One part cement, two and one-half parts clean, sharp sand and five parts of loose gravel or broken stone. This should be finished on the surface with a one to one and one-half-inch layer of a mixture of one part cement and one and one-half to two parts of clean, sharp sand. The total thickness of this floor must be from five to eight inches, depending upon the load it is to carry.

For engine foundations, floors or driveways over which heavy loads pass, the following proportion is to be recommended: One part cement, two parts sand and four parts broken stone or gravel.

For all large floors it is advisable to place the concrete in sections not to exceed six feet square. This may be done by placing a two-inch plank of a width equal to the desired thickness of the floor on edge as a box in which the concrete is tamped until water begins to show on top. Make several of these forms, holding the plank in place by means of stakes driven into the under surface. (These stakes should be driven on the outside of the form, so they may be easily removed after the concrete has partly set and the planks have been taken out.) Fill alternate forms at first, tamp the concrete thoroughly, especially the edges. As soon as the concrete has partly set, remove the plank and fill in the forms not filled at first. Mark the side plank to show exactly where the joints come.

The finishing coat should be spread on before the concrete has set. To make this of uniform thickness it is best to place either one or one-half inch wood strips, as is desired, on top of the concrete over which a straight edge may be run. Smooth with a trowel, for a smooth surface, or with a wooden float, for a rough surface. Groove exactly over the joints of the concrete so as to bevel the edges of each block.

Do not trowel the surface too much, as it tends to separate the cement from the sand and injures the wearing surface.

The floor should be constructed with slope enough to carry all liquids to certain points from which it may be drained.

Protect the new floor from the direct rays of the sun, currents of air and frost, and keep constantly moistened for several days. Water is very important in the curing of concrete constructions, and must be liberally used.

Use nothing but the best cement that can be obtained. The sand should be clean, sharp, and not too fine; it should be free from loam or clay, as these will tend to destroy the adhesive quality and retard the setting of the cement. Use clean, pure water for mixing. Mix thoroughly. Water thoroughly. Cure thoroughly.—H. M. Bainer, Colorado Agricultural College, Fort Collins.

You bend every energy towards making your farm productive.

What are you doing towards making it attractive?

Not attractive as a piece of improved real estate; not attractive as a money-making institution, but attractive as a home.

If there was a farm implement that would make your acres more productive, you would buy it without question.

Would you not, just as willingly, buy an instrument that would make your home brighter, more cheerful and more interesting?

Then buy an

Edison Phonograph

the wonderful invention of Thomas A. Edison, an instrument planned and perfected for the sole purpose of so multiplying the songs of great singers, the music of famous bands and the jokes and stories of great entertainers, that everybody may enjoy what otherwise would be the pleasure of the few.

Consider the attraction such an instrument would mean in your home, bringing it in touch with all that is popular and best in music and songs.

How could your hours of rest be better and more profitably spent than by listening to a song by a prima donna or a music comedy favorite, a rousing march by a band of distinction or a monologue by a man who has made the whole country laugh?

There is probably an Edison dealer in the town or city near you who has the new Edison Phonographs and all the latest Records. Ask to hear them. Learn about the Amberol Records—Mr. Edison's latest invention—Records that play twice as long as the standard Edison Records and longer than any other Record of any kind. If there is no Edison dealer near you, write us for a complete catalogue of Edison Phonographs and Records.

NATIONAL PHONOGRAPH CO.

YOU CAN BE A SALESMAN.

A very interesting little book on Salesmanship is gotten out by the National Salesman's Training Association. It shows how any man with tact, ambition and perseverance can become a salesman and secure a good position as a traveling representative for some large firm. The life of the Traveling Salesman is pleasant and the pay good, many earning as high as $10,000 a year, and it is a very poor one who does not make $1,000 a year and expenses. Then, too, a good salesman can always get a good position, as the demand exceeds the supply. If you are at all interested in this great profession and want to be a real salesman, be sure and write to the nearest office of the National Salesman's Training Association, either at Chicago, New York, Kansas City, Minneapolis or San Francisco, for their book, "A Knight of the Grip." Address your letter to Dept. 337.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Princesse Costume.

No. 6288.—The Princesse costume is one of the very latest fancies of fashion and will be extensively worn throughout the spring and summer. This model is exceedingly graceful, is simple in the extreme, yet is very generally becoming, inasmuch as it is not oversevere and gives just a pretty suggestion of the favorite Empire style. In the illustration it is made of faded blue serge with trimming of soutache and with girdle of satin, while the chemisette is of embroidered net. It will be found appropriate for all the seasonable suitings, however, and there are a great many novelties offered, as well as the familiar Panama cloths, serges, diagonal weaves and the like. Soutache and embroidery continue to be favorite trimmings, but straight banding could be substituted, or bands of contrasting material, if a plainer, simpler garment is wanted, and satin on wool will be worn throughout the spring as extensively as it has been through the winter. A little later the same model will be found available for linen and for pongee, and buff linen braided with white soutache or coronation braid will be extensively worn this coming summer, while it suits this model admirably well.

The costume is made with front and back portions that extend for full length, but the skirt and bodice are separate at the sides and are joined as shown in the small view. The closing is made at the left of the front, and there are the new, shapely one-piece sleeves that are cut in points over the hands.

The quantity of material required for the medium size is 9 yards 27, 5 yards 44, or 4¼ yards 52 inches wide, with ¼ yard of satin, soutache according to design, ⅝ yard 18 inches wide for the chemisette.

The Pattern 6288 is cut in sizes for a 32, 34, 36, 38 and 40-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents. (If in haste, send an additional two-cent stamp for letter postage, which insures more prompt delivery.)

Semi-fitted Coat.

No. 6289.—The cutaway coat is one that is always liked for spring, and one that is always pretty and generally becoming. This one includes the seams that extend to the shoulders and which mean both grace and easy fit, and includes the plain back that is so much liked this season. It can be utilized for broadcloth or for serge, for Panama cloth or for any seasonable suiting, and for the costume of one material throughout, or for the wrap of plain cloth or silk to be worn over gowns of harmonizing color but contrasting material. In the illustration, however, it is made of broadcloth, in one of the very beautiful mulberry shades, and is trimmed with bands of satin to match, while the Brandenburgs are of black, just a touch of black on a colored costume making one of the features of the incoming styles.

The coat consists of fronts, side-fronts, back and side-backs, and can be made either in cutaway style or with straight front and lower edges. There are two-piece sleeves, and the neck can be finished plain or with a standing collar, as liked. The coat also is perforated for shorter length.

The quantity of material required for the medium size is 5⅛ yards 27, 3 yards 44, or 2⅝ yards 52 inches wide to make as illustrated; 4⅛ yards 27, 2½ yards 44, or 2⅜ yards 52 inches wide for shorter length, with ½ yard of satin for bands.

The Pattern 6289 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Blouse or Shirt Waist.

No. 6278.—The simple blouse that allows effective use of buttons is one greatly in demand this season, and this model with its wide box-plait is exceptionally desirable. In this instance it is made from one of the new fancy cotton crepes, but it will be found admirably well adapted to linen and madras and to all waisting materials. The wide box-plait and the plain spaces between it and the shoulders allow unusually good opportunity for the display of hand embroidery, and embroidery on linen and materials of the sort will make a notable feature of spring and summer waists. The small, close-fitting, one-piece sleeves finished with three tucks at the lower edge of each are among the later models and much liked, but regulation shirt waist sleeves can be substituted if preferred. In short, the waist will be found an excellent one for the odd blouse of almost any seasonable material, and also for the entire gown, whether that gown is made of linen, chambray or something of the sort or from cashmere or similar light-weight wool.

The waist is made with fronts and back. There are three tucks in each front at the shoulders, and the closing is made beneath the wide box-plait. The tucked sleeves are close-fitting and can be either seamed for their entire length or closed with buttons and loops for a short distance above the lower edges. The regulation sleeves are gathered and joined to straight cuffs.

The quantity of material required for the medium size is 3¾ yards 24, 2⅞ yards 32, or 2⅝ yards 44 inches wide.

The Pattern 6278 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Teddy Bear Night Drawers.

No. 6236.—No sleeping garment suits the young child better than this one. Its very name appeals to his fancy and it is so comfortable and so roomy and yet so perfectly protective that every mother is certain to welcome it. In the illustration it is finished with feet, but this feature is optional, and the leg portions can be cut off at the ankles, if preferred. Domet flannel, outing flannel, the finer French and Scotch flannels, simple cotton cloth, muslin and cambric and all materials that are used for children's night gowns, are appropriate. In this case the drawers are designed for a boy and are finished with a plain stitched collar and wristbands, but frills of lace can be added at neck and wrists to make them more dainty when designed for feminine use.

The night drawers are made with front and back portions and can be finished at the neck with either a standing or rolled-over collar. The sleeves can be gathered into wrist-bands or left plain, as liked. When the feet extensions are not used the lower edges are finished with hems.

The quantity of material required for the medium size (six years) is 4 yards 27, or 3 yards 36 inches wide.

The Pattern 6236 is cut in sizes for children of two, four, six and eight years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Tucked Blouse.

No. 6285.—The dressy blouse that can be closed at the front is a genuine boon, and this one is charming and attractive while it includes that feature. In the illustration it is made from one of the new French crepes with embroidered dots, and the trimming is embroidered banding in which buttonholes are worked that allow of passing the ribbon scarf in and out. But it is adapted to every seasonable waisting, to the odd blouse and to the gown, and is exceedingly charming apart from the material chosen. The lines are pretty and becoming, and the sleeves are of the graceful one-piece sort that are so designed as to bring the seam under the arm, where it is invisible, while they fit perfectly. The trimming illustrated is effective, and among the novelties of the season, but not obligatory, for the band on the front could be embroidered by hand or trimmed in any way that fancy may suggest. Crepey materials will be extensively used this season and have the merit of requiring no starch nor iron, but there are just as many of the lawns, batistes and other familiar waistings seen as ever.

The blouse is made with the fronts and back. It is tucked on becoming lines and is closed invisibly at the center front. The sleeves are pointed over the hands and are so shaped that they cling to the arms, taking their form perfectly, and are graceful in the extreme.

The quantity of material required for the medium size is 3⅝ yards 24, 2¾ yards 32, or 2 yards 44 inches wide, with ⅝ yard of banding 2¼ inches wide, and 1⅜ yards of lace insertion and 3 yards of edging to make as illustrated.

The Pattern 6285 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents. (If in haste, send an additional two-cent stamp for letter postage, which insures more prompt delivery.)

Girl's Cutaway Coat.

No. 6299.—Cutaway coats are always pretty for spring and fall, and this one is especially adapted to the younger girls. It is youthful in effect, simple and absolutely smart, and it includes the patch pockets that are so fashionable just now. It can be made from cloth, from serge, from homespun, or from cheviot, from the shepherd's check that is being utilized for coats this season, and a little later from linen and pongee. It can be trimmed with braid, as illustrated, or with bands of contrasting material, or it can be finished with stitched edges. Old blue broadcloth with trimming of black braid is the material illustrated, however, and handsome buttons effect the closing at the front, while smaller ones in matching style ornament the collar and sleeves.

The coat is made with fronts, side-fronts, back and side-backs, and with the seams to the shoulders, which mean that it is very easy to fit. The pockets are of a novel sort, with deep overlaps, and are arranged over the side-fronts. The sleeves are made with upper and under portions, and are trimmed on indicated lines.

The quantity of material required for the medium size (ten years) is 3 yards 27, 2 yards 44, or 1⅝ yards 52 inches wide, with 4¾ yards of braid.

The Pattern 6299 is cut in sizes for girls of six, eight, ten and twelve years, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents. (If in haste, send an additional two-cent stamp for letter postage, which insures more prompt delivery.)

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

THE LANGUAGE OF FLOWERS.

This is a beautiful study, and it is elegantly explained by the most satisfactory methods. There are twenty-four post cards, and each post card shows a different flower, grouped in such a way that the sentiment that each flower represents is spelled out by

the flowers. For example, the violets of the violet card spell "Faithfulness;" the roses "Love;" clover "Be Mine," etc. Each post card is different, finished in many colors and glossed.

The Universal Magazine

is a nice, bright, cheerful, illustrated monthly magazine, published at 25 cents a year, and the post cards can be selected as a free premium by anyone who sends in cash in advance. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

In a district twelve by twenty miles at Petaluma, California, in addition to other breeds in abundance, there are a million and a half white Leghorn chickens which industriously lay for the San Francisco egg market.

FOR THE VEGETABLE GARDEN.

There is a very good book on the subject of Vegetable Gardening, written by Samuel B. Green. It is a manual that can be relied on. It is easy to grow vegetables and save them against the different diseases when at critical periods such a book can be readily referred to. There are 252 pages, nicely illustrated and practical throughout. We will send a copy of the book entitled Vegetable Gardening and The National Farmer and Stock Grower one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

No Feathers on Them.

Scene at a base ball grounds: A ball was knocked sideways and caught on a fly. "Foul and out," was the cry of the umpire. A charming high-school girl, looking at the game, ejaculates: "Ah, really, how can it be a fowl! I don't see any feathers." And she turned to the attendant with an inquiring look. "Well, oh! Yes, you see, the reason you don't see any feathers is because it belongs to the picked nine."—Exchange.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done, absolutely free of charge. Send your name and address to Dr. J. H. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy healthy children, absolutely without pain; also how to cure sterility. Do not delay but write to-day.

DROPSY Cured; quick relief; removes all swelling in 8 to 20 days; 30 to 60 days effects permanent cure. Trial treatment given free to sufferers; nothing fairer. For circular, testimonials and free trial treatment, write

The City Visitor.

The flitting countryward from the city home may mean increased burdens in the farm house, and the self-invited guest will do well to consider that her hostess may enjoy the restful swing in the hammock as well as herself—though it is rarely indulged in for reasons which should be patent.

That so many times the announcement of company brings an increase of the "tired feeling" is to be deplored, and at the same time it is a call for reform along certain social lines. Few city people seem to recall that this is the busy season on the farm; that if they wish to thrust themselves upon the luxuries of farm life at this time they should be prepared to bear their share of the extra burden which their presence makes. There are many little things to be remembered. Farm folk must rise at an early hour. It is unfair to keep breakfast waiting or to allow an extra meal to be served on their account. The care of their own room should be given over to the guests unless ill-health is an excuse. Paring apples and potatoes, feeding the chickens, shelling peas, and dozens of other little things, should be enjoyed by the guest if the love for a taste of country life is genuine, and will greatly relieve the housewife.

The latter should remember that a dessert of fresh berries or peaches served with whipped cream is more luscious to the city dweller than the best pastry; that cereals served with pure cream are a pleasing change from those obtainable in the city; that fresh fruit, vegetables and poultry are to such a guest a real treat. If she raves over them, don't think for a moment that it is flattery. And she will (or should) the better enjoy the visit if you bake less and give her more of your time in the fresh air. In this way the city guest will become a pleasure instead of a bore.—Bessie L. Putnam.

Music on the Farm.

Again we take pleasure in inviting attention to the card of the National Phonograph Company, which will be found on page 27. The Edison Phonograph is a great entertainer. It is greatly improved. The new Amberol records play twice as long as the old records, and the new specially-made horns bring out every word with great force and clearness. A farm with music is worth a dozen farms without. Write for booklet entitled "The Edison Phonograph and the Home." Address, National Phonograph Company, 168 Lakeside Ave., Orange, N. J.

A Plea For Gingham.

For every-day wear for children, the substantial ginghams still have many points of superiority. If they do cost originally a little more per yard than calico, the extra width of the cloth makes the cost but little more per square yard, after all. They invariably wear well, and most of them wash well. For the busy woman who does her own sewing, that they will last longer than calico makes them seem the cheapest material on the whole, for the time thus saved is as good as money, and it is much more satisfactory to feel that the cloth upon which one is working will last long enough to pay for the making.

Those who can wear blue will always find the blue and white ginghams, small or large check, neat, fast

Spring Dresses

Style and durability blossom into beauty and economy in **Simpson-Eddystone Shepherd Plaids**—the cotton dress goods with perfectly fast colors. These calicoes have been the standard of the United States for over 65 years. Some with a new silk finish.

Ask your dealer for Simpson-Eddystone Prints. If he hasn't them write us his name. We'll help him supply you. Don't accept substitutes and imitations.

EDDYSTONE PRINTS
Founded 1842

colors, and available for stylish as well as serviceable dresses. One thing in favor of the goods is that there is no right and wrong side, no up and down, consequently the cloth cuts to much better advantage. If there are pleats or tucks to be made, one measuring is sufficient, and the rest can be done by folding with the stripe, thus making this work much more speedy.

For every-day wear, one pattern may be the basis for several neat suits, variations being made in the form of pleating. A stylish dress for a little girl, and one as easily donned as made, is with an inch pleat over the shoulder, this being made after the shoulder seam is sewed, and a double pleat in the middle of the front three or four inches wide. This can be continued down the skirt, preferably four inches for this, and the skirt pleated in side pleats the rest of the way around. A small pocket for the handkerchief is stitched on the left side of the waist.—Bessie L. Putnam.

The Helping Hand.

There are so many ways in which this can be extended without first putting it down into our pocket, and yet many times the chance is lost through thoughtlessness. There are hundreds of choice magazines and home papers destroyed every year simply because the tidy housewife is averse to letting them accumulate in the house, a harbor for dust and insects; yet there are thousands of others mentally starving for the reading matter which they cannot afford to buy; or, worse, substituting a cheap, worthless, or even harmful grade of publications. In the large cities there are a number of societies and institutions which make a bid for this waste literature; but these only reach a limited number, and the vast majority, especially in rural communities, are ignorant of the pressing need in this direction.

Every year the query which puzzles the country folk who happen to have city relatives that remember them handsomely on holiday or birthday occasions, is, what they can send in—not exactly return, but rather in recognition. They forget that there is nothing which will be more acceptable than the country products with which their garden and orchard and cellar are overflowing. The luxury which lies nearest is the one least often appreciated. A box of wild flowers may be more acceptable than the choicest conservatory plants. And certainly a box of fresh eggs is to be preferred every time to the tradesman's product.

The hand which is strongest lifts or points us to what we cannot well get ourselves. Our own hand develops strength as it aids in leading some one into a divergent but pleasant path, as it scatters rare pleasures along the way.—Bessie L. Putnam.

Pretty and Practicable Tea Tray.

Take a piece of satin of any shade harmonious with the color scheme of the table or room; place a small lace doily in the center, and frame this in an oval gilt frame. (These frames can be found in any of the department stores, sometimes with inexpensive pictures in them, for twenty-five cents.) A piece of white linen with either the doily or an embroidered initial in the center framed in a white-enameled frame also makes a handsome tray. The glass is easily wiped off and the linen remains as spotless as before it was used. A piece of felt may be glued on the bottom of the tray, to prevent scratching or marring the table in any way.—Woman's Home Companion for May.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook.

For One Dollar we will send The National Farmer and Stock Grower for three years and a copy of the Cement Workers' Handbook. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Boy's Blouse Suit.

No. 6280.—There is no suit better adapted to the small boy's use than the one in blouse style. It can be made from such washable materials as linen, chambray, madras and the like, and it can be made from plain wool materials, from shepherd's check or serge or any fabric of the sort. It is always comfortable and it suits the small boy's needs perfectly well. This model is buttoned at the right side well to the shoulders, in true Russian style, and includes the Knickerbockers that are so comfortable as well as so becoming.

The suit consists of the blouse and the Knickerbockers. The blouse is made with fronts and backs and finished with a neck band to which the collar is attached by means of studs. The sleeves are tucked at the wrists, and the lower edge of the blouse finished with a hem in which elastic is inserted to regulate the size. The Knickerbockers are simple ones, finished with waistbands and drawn up at the knees by means of elastic inserted in the hems.

The quantity of material required for the medium size (ten years) is 5¼ yards 24, 4 yards 32, or 3¼ yards 44 inches wide.

The Pattern 6280 is cut in sizes for boys of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents; or, what is better, send us 25 cents and we will mail you the pattern and the Universal Magazine for one year.

Seven-gored Skirt.

No. 6272.—The seven-gored skirt is one of the standbys that is always in demand. It suits a great many materials and a great many purposes, and this one has the great merit of allowing a choice of either the high waist line or the natural one. It will be found adapted to all suiting and all skirting materials and to the washable ones that are already being made up as well as to those of wool and of silk, and, as it can be made in either round or in walking length, it is just as well adapted to the house as it is to the street.

The skirt is made in seven gores, and the fullness at the back is laid in inverted plaits. When the belt is used, it is joined to the upper edge, but when the high waist line is desired, the seams are designed to be boned and the upper edge to be underfaced.

The quantity of material required for the medium size is 10 yards 27, 5⅛ yards 44, or 4¾ yards 52 inches wide, if material has figure or nap; 7 yards 27, 3½ yards 44, or 3¼ yards 52 inches wide, if material has neither figure nor nap.

The Pattern 6272 is cut in sizes for a 22, 24, 26, 28, 30 and 32-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents; or, what is better, send us 25 cents and we will mail you the pattern and the Universal Magazine for one year.

Blouse or Shirt Waist.

No. 6278.—The simple blouse that allows effective use of buttons is one greatly in demand this season, and this model with its wide box plait is exceptionally desirable. In this instance it is made from one of the new fancy cotton crepes, but it will be found admirably well adapted to linen and madras and to all waisting materials. The wide box plait and the plain spaces between it and the shoulders allow unusually good opportunity for the display of hand embroidery, and embroidery on linen and materials of the sort will make a notable feature of sprixg and summer waists. The small, close-fitting, one-piece sleeves, finished with three tucks at the lower edge of each, are among the later models and much liked, but regulation shirt waist sleeves can be substituted, if preferred. In short, the waist will be found an excellent one for the odd blouse of almost any seasonable material and also for the entire gown, whether that gown is made of linen, chambray or something of the sort, or from cashmere or similar light-weight wool.

The waist is made with fronts and back. There are three tucks in each front at the shoulders and the closing is made beneath the wide box plait. The tucked sleeves are close-fitting, and can be either seamed for their entire length or closed with buttons and loops for a short distance above the lower edges. The regulation sleeves are gathered and joined to straight cuffs.

The quantity of material required for the medium size is 3¾ yards 24, 2⅞ yards 32, or 2⅝ yards 44 inches wide.

The Pattern 6278 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cens; or, what is better, send us 25 cents and we will mail you the pattern and the Universal Magazine for one year.

Child's Rompers or Overall.

No. 6273.—There is no garment that the little child wears that is more serviceable or more to be desired than this one. It can be drawn on over the frock and used to protect it, or it can be worn in place thereof, and it is roomy and comfortable. It allows the youngster to play and be happy without any consideration for clothing, while it saves the mother many anxious moments. Gingham, chambray, percale, all the inexpensive printed wash fabrics, are appropriate, and also the sturdier linen and galatea for very hard usage. In this instance chambray is finished with plain stitched edges and the rompers are made high at the neck with a standing collar and with long sleeves. A rolled-over collar could be substituted, however, or the neck could be cut square, and three-quarter sleeves can be used in place of the long ones.

The rompers are made with front portions and legs that are cut in one and with the back portion of the body. The leg portions are gathered and joined to a band and are buttoned into place, and the lower edges are finished with hems in which elastic is inserted to regulate the size. The sleeves are the simple full ones that are finished with straight bands, or cuffs, and the belt keeps the garment in position.

The quantity of material required for the medium size (six years) is 3¾ yards 24 or 27, 2¼ yards 36 inches wide.

The Pattern 6273 is cut in sizes for children of two, four, six and eight years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents; or, what is better, send us 25 cents and we will mail you the pattern and the Universal Magazine for one year.

One-piece Corset Cover.

No. 6265.—The simple corset cover that involves little labor in the making is one that appeals to the greater number of women. This model is just full enough to be pretty under the fashionable blouses, and is especially designed for flouncing. When made from that material it means only the sewing up of the shoulder and underarm seams, but it can be made from plain lawn, batiste, cross-barred dimity or any material of the sort, and the upper edge either embroidered by hand or trimmed with lace frills or finished in any way that fancy may suggest. The little circular sleeves are pretty and much liked by many women, but they can be used or omitted, as liked, also there is a choice of belt or peplum at the lower edge.

The corset cover is made in one piece. Th right front edge is finished with a simulated box plait and the closing is made by means of buttons and buttonholes worked in a fiap. The upper edge is finished with beading, which regulates the size, and the lower edge is gathered and joined either to the narrow belt or to the peplum. This last can be used or omitted, as liked, but has the great advantage of keeping the corset cover perfectly in place without bulk over the hips.

The quantity of material required for the medium size is 1⅞ yards 16 inches wide, with ½ yard of plain material 36 for the peplum and sleeves, 1⅞ yards of beading, 1½ yards of edging.

The Pattern 6265 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents; or, what is better, send us 25 cents and we will mail you the pattern and the Universal Magazine for one year.

A GENUINE 23 JEWELED R. R. WATCH

20 Year Guarantee

costs from $50 to $100 in a retail store. Why pay such a price for a R. R. watch. For the next 60 days only we will send to any address by express C. O. D. subject to examination, for only $5.25 a genuine Engine Special R. R. watch in heavy 3 oz. solid ore-silver dust proof screw case, both case and works guaranteed for 20 years. You examine it at your express office and if you consider it equal in appearance to any $25 jeweled R. R. watch you ever saw pay express agent our reduced price $5.25 and express charges and it is yours. Send this advertisement to us with your name, post office and express office address and watch will be sent at once. Address R. E. CHALMERS & CO., 356 Dearborn St., CHICAGO.

[Please mention National Farmer and Stock Grower.]

Girl's Box-plaited Dress.

No. 6282.—Such simple dresses as this one make the standbys of the girl's wardrobe. They can be made from linen, from pique, from the lighter-weight ginghams and chambrays and the simpler inexpensive printed wash fabrics. This one is box-plaited and gives becoming long lines while it is absolutely simple and childlike in effect. In the illustration white linen is combined with blue, but dresses of one color throughout are much worn and the collar made of the same with the edges scalloped will be exceedingly smart without involving any great amount of labor.

The dress is made with front and back portions, which are box-plaited, and is closed at the left of the front. The sailor collar finishes the neck and the shield is attached under it. The sleeves are moderately full and tucked at their lower edges.

The quantity of material required for the medium size (ten years) is 6⅝ yards 24, 4¾ yards 32 or 4 yards 44 inches wide, 1⅛ yards 32 inches wide for collar and belt.

The Pattern 6282 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents; or, what is better, send us 25 cents and we will mail you the pattern and the Universal Magazine for one year.

Work Apron, Sleeve and Cap.

This is May Manton Pattern No. 5815. Whether the busy woman be housewife, artist or occupied in any other pursuit that means possible soil to her clothing, she will be quite certain to welcome this very practical and satisfactory outfit. It can all be slipped on at a moment's notice and it really protects the gown and covers the hair. In the illustration it is shown made of white checked gingham, but white butcher's linen is admirable, and, perhaps, the most durable of all things; gingham, both plain and figured, percale and all similar durable and washable materials are appropriate. We call this the Universal Pattern, because we send the Universal Magazine and this pattern both for 25 cents. The pattern is cut in three sizes—small, medium and large. The Universal Magazine is a very interesting thirty-two page paper. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Please address all pattern orders to Hale Publishing Co., 3550 Vista Ave., St.Louis, Mo.

GRAND SUBSCRIPTION COMBINATION.

For One Dollar paid in advance we will send the National Fruit Grower, the best fruit paper; the Reliable Poultry Journal, the best poultry paper; the Universal Magazine, the best home and story paper; and The National Farmer and Stock Grower, the best monthly farm paper. Each for one full year. This is the finest combination for the subscriber. Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

STEM WIND

Gold Watch AND RING GIVEN FOR SELLING POST CARDS

We positively give both a Famous Alton Watch Stem Wind, beautifully engraved Solid Gold Lady's case, American movement, factory tested, guaranteed five years; also a Solid Gold Laid Ring set with a Coney Gem, sparkling like a $50 diamond, for selling 20 packages of beautiful high grade Art Post Cards at 10c per package. Order 20 packages and when sold send us $2 and we will positively send you the watch, ring & chain. ALTON WATCH CO. Dept. 325, CHICAGO

Work For Uncle Sam

We prepare persons by mail for Railway Mail, P. O. Clerk, City and R. F. D. Carrier Examinations. Pres't of our College formerly conducted Examinations for Government. Success Guaranteed. Write today for reduced rates. Ozment's Civil Service College, Dept. 20, St. Louis, Mo.

AGENTS My Sanitary Coffee Maker produces pure sweet coffee, needs no settler and never wears out. Saves coffee, money and health. Every wife buys at sight new invention; exclusive territory. Send 15c. for 50c. size, postpaid. DR. LYONS, 203 Day St., Pekin, Ill.

THE LANGUAGE OF FLOWERS.

This is a beautiful study, and it is elegantly explained by the most satisfactory methods. There are twenty-four post cards, and each post card shows a different flower grouped in such a way that the sentiment that each flower represents is spelled out by the flowers. For example, the violets of the violet card spell "Faithfulness;" the rose "Love;" clover, "Be mine;" etc. Each post card is different, finished in many colors and glossed.

THE UNIVERSAL MAGAZINE

is a nice, bright, cheerful, illustrated monthly magazine, published at 25 cents a year, and the post cards can be selected as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

SELECTED POETRY.

THE DONKEY WHITEWASHED.

Oh, would you, Ass, that I refute
The opprobium and ill repute
Which ever to your title clings?
Then listen while the poet sings:

In Ireland, where the shamrock grows
And goodness, knowing all things, knows
Why he that writes of Ireland can't
Avoid that overbearing plant)—
In Ireland I have traveled far
In someone else's motor car,
And from my seat have studied
The ways of by- and quadruped.
Who eat and drink and sleep and play
Entirely on the King's highway.

The errant kine themselves approve,
Slow, stupid, dull and hard to move;
Whereas the swine, whom nothing will
Induce to think of standing still,
Must run ahead with endless fuss,
Too fast for them, too slow for us.
The dogs (a race which men suppose
To be a race that thinks and knows)
Bounce forth with misdirected zeal
And barely miss a murderous wheel,
Then bark and bark with false delight
Because they've put the foe to flight!

The hen, being situated where,
Secure from harm and free from care,
He might have watched us and derided,
Descends forthwith to be divided.
The horse, whose more than ample task
Should furnish all he needs to ask,
Sees fit to disregard the reins
And take no end of foolish pains
To drag his most excessive load
Into the ditch beside the road.
Then labors much and suffers more
To get it where it was before.

You, Ass, behave as none of these,
But hold you calm and well at ease,
Perhaps to keep the eyebrow kempt,
Perhaps to show a deep contempt,
You simply turn your head away,
And keep it turned, as if to say:
"It's got to come. Let's shut an eye
And let the foul machine go by."
Thus you shall be to me forever
The type of all that's wise and clever;
And asinine henceforth shall mean
Discerning, sensible, serene."

Ah, Ass, you pressed me to refute
The opprobium and ill repute
Which ever to your title clings.
I hope you've listened while I've sung.
—London Punch.

"RATHER A CHILD."

Rather a child would pray for me
Than some one in a marble shrine,
Or the love that lisps at a mother's knee
Is so wonderfully fair and fine
That the words go straight and the words go far
With a grace that they have alone—
To out and onward past star and star
Till they tremble unto the throne.

Rather a child should lisp my name
In a blessing when comes the night
Than to hear it breathed while the candle flame
Leads the altar a holy light,
Or the shrill-sweet voice of a child can rise
On the mystical wings of love
And cleave the silence beyond the skies
To the listening ear above.

See bedtime prayer, the white, white gown,
And the light that is low and dim,
The wee head that is bowing down,
And the message sent up to Him"—
Then you know somehow that the pure child heart
Is nearer to the Soul of Things,
Or voices that rock and for tears that smart
Child balm it brings.

Skeptical, too, the simple trust
Of the child in the boon it asks—
Can lift us up from the shreds and dust
Of a struggle to renew our tasks—
For a child asks not as we older ones
But it asks with a heart that knows
The hand that fashioned the farthest suns
Lent the grace to the climbing rose.

Rather a child should pray for me
Than the greatest man on earth—
The prayer made in the childish key
Is the prayer of greatest worth—
And I sometimes think that the good God sees
How we trust, and has gravely smiled
The simple words and the bended knees
And the faith of a little child
—Wilbur D. Nesbit, in Chicago Record-Herald.

GREATNESS AT HOME.

Joe Struthers, old, down to the store,
the other day,
Is curious what a fuss folks makes
'bout him, that's sent away
From Cornish corners, years ago. There's
young Jack Swellington,
He used to keep reckin', Do you know
what Jack has done?
Rollin' in wealth? There is some that
actually pay
To see an' hear Jack talkin' out in public
in a play.
Say, he couldn't chop a cord o' hickory
wood in half a year!
They may feed the folks out yonder, but
he ain't no hero here!

"An' there's Erasmus Wrangle. He is mentioned as the great
An' risin' legal wonder of a thrivin' Western state.
Why, I remember well when he was that uncommon dumb
He'd sit up in the cold an' read until his feet grew numb.
He looked uncommon comical one mornin' when the mule
Got balky while Erasmus was a-riding him to school.
He was a right good-natured boy, though jes' a little queer.
He may come it over strangers; but he ain't no hero here.

An' there is Dustin Stax. That feller took a lucky chance
An' landed in a jiffy as a leader of finance!
An' Tommy Scrappins, him as had sech freckles on his face,
Is a military feller with brass buttons an' gold lace!
It's a pity that the public, which to facts is often blind,
Couldn't come to Corncrib Corners before makin' up its mind
About the parties it selects to honor an' to cheer;
They kin fool them city people, but they ain't no heroes here!
—Washington Star.

"WESTWARD THE COURSE OF EMPIRE TAKES ITS WAY."

The Muse, disgusted at an age and clime
Barren of every glorious theme,
In distant lands now waits a better time,
Producing subjects worthy fame.

In happy climes, where from the genial sun
And virgin earth such scenes ensue,
The force of Art by Nature seems outdone,
And fancied beauties by the true;

In happy climes, the seat of innocence,
Where Nature guides and Virtue rules,
Where men shall not impose for truth and sense
The pedantry of courts and schools;

There shall be sung another golden age,
The rise of empire and of arts,
The good and great, inspiring epic rage,
The wisest heads and noblest hearts.

Not such as Europe breeds in her decay;
Such as she bred when fresh and young,
When heavenly flame did animate her clay,
By future poets shall be sung.

Westward the course of empire takes its way;
The four first acts already past,
A fifth shall close the drama with the day;
Time's noblest offspring is the last.
—By George Berkeley.

THE IVY GREEN.

Oh! a dainty plant is the ivy green,
That creepeth o'er ruins old!
Of right choice food are his meals, I ween,
In his cell so lone and cold.
The wall must be crumbled, the stones decayed,
To pleasure his dainty whim;
And the moldering dust that years have made
Is a merry meal for him.
Creeping where no life is seen,
A rare old plant is the ivy green.

Fast he stealeth on, though he wears no wings,
And a stanch old heart has he;
How closely he twineth, how tight he clings,
To his friend the huge oak tree!
And slyly he traileth along the ground,
And his leaves he gently waves,
As he joyously hugs and crawleth round
The rich mold of dead men's graves.
Creeping where grim death has been,
A rare old plant is the ivy green.

Whole ages have fled, and their works decayed,
And nations have scattered been;
But the stout old ivy shall never fade
From its hale and hearty green.
The brave old plant in its lonely days
Shall fatten upon the past:
For the stateliest building that man can raise
Is the ivy's food at last.
Creeping on where time has been,
A rare old plant is the ivy green.
—Charles Dickens.

THE ANNUAL MIGRATION.

Our grandsires lived on the "old home place"—
The spot where they were born!
We well may say it with crimsoned face
And voice of shame and scorn.
Their life in a stupid circle ran,
Dull, fogy folk were they;
Hurrah for the man with the moving van—
Hurrah for the first of May!

How odd to stick to the self-same view,
Ceiling and floor and wall,
When agents at ten or half-past two
In automobile will call!
How odd, con reditive years a span,
At one address to stay!
Huzza for the man with the moving van—
Huzza for the first of May!

'Midst all the city of house and flat
Are some we have not seen—
They fill those visions o' night, begat
By wanderlust, I ween.

'Tis out, 'tis out, for remain who can?
The prick of spring obey!
Three cheers for the man with the moving van—
Hip, hip, for the first of May!

Up with the rugs—good-by, farewell,
Meet you again, maybe.
Where do we go? Can't yet quite tell—
Whenever we stop we'll see.
Chair and picture and pot and pan,
Haul them away, away!
Oh, follow the man with the moving van,
For now is the first of May!
—Edwin L. Sabin, in Woman's Home Companion for May

CAN'T SUIT EVERYBODY.

There's some who like to have it rain,
While others want it dry;
The weather sharp can't suit us all,
No matter how he try.
—Los Angeles Express.

THE MODEST VS. THE VAIN HEN.

A little hen of modest mien,
And not a bit too fat,
Just went, without a bit of fuss,
And laid an egg like that:

O

And when she'd laid that good-sized egg,
Just like a modest bird,
She went and picked her living up,
Without a single word.

Another hen, much larger, too,
Who strutted and looked wise,
Just fussed about before she laid
A dinky egg this size:

o

And when she'd laid this little egg
She had to have her say,
So she went out and cackled, cackled,
Cackled half the day.
—Yonkers Statesman.

EVERYBODY HAPPY.

"The man who would rather be right than be President generally has his preference gratified."—Philadelphia Record.

AS THE TWIG IS BENT.

"I hope you were a good little boy while at your aunt's and didn't tell any stories," said his mother.

"Only the one you put me up to, ma," replied the young hopeful.

"Why, what do you mean, child?"

"When she asked me if I'd like to have a second piece of cake I said: 'No, thank you; I've had enough.'"—Harper's Weekly.

A MEAN FLING.

"What are you coughing about?"

"All the dust flies up my nose."

"You ought to hire out as a human vacuum wagon."—Louisville Courier-Journal.

RESULT OF RASHNESS.

"Out of a job, are you?" asked the first girl. "Boss catch you flirting?"

"No; I caught the boss. Say, what sort of a wedding dress do you think is real swell?"—Philadelphia Ledger.

AFTER MARRIAGE.

"He used to send me ten letters a week."

"Well?"

"And now he can't even bring home one pay envelope."—Washington Herald.

BETTER LATE THAN NEVER.

First Fusser—"I threw a kiss to a girl the other day.

Second Fusser—"What did she say then?"

First Fusser—"She told me that I was the laziest man she ever saw."

A SURE PROOF.

"That old fellow hasn't the slightest suspicion his young wife dislikes him."

"How do you know that he hasn't?"

"Because I have seen him eat her mince pies."

Two Preventives Against Moths.

Take one-fourth of an ounce each of ground cloves and caraway seed, one ounce of dried common salt, one-half pound of lavender flowers free from the stalk and one-half ounce each of dried thyme and mint. Mix well together, and put in cambric or silk bags. These scent bags, if placed among clothes, will preserve them from moths and give a pleasant odor.

If you are troubled with moths in the house, try putting blotting paper well saturated with turpentine in the drawers, among the furs and bed-clothes, or wherever there is any danger of the moths working their depredations; it can even be put along the edges of carpets. Turpentine is the best preventive of moths I have discovered.—Woman's Home Companion for May.

FREE POST CARDS AND ALBUM

To introduce our large new 48-page illustrated catalog we give a beautiful album, fancy colored cover, black leaves, filled with lovely art post cards, **absolutely FREE.** Send 10c coin or 1-c. stamps to cover postage and packing. Only one album to each customer. Address
HOMER GEORGE CO., Dept. 267 CHICAGO, ILL.

WHY BOYS LEAVE HOME.

Do we thoroughly appreciate our boys?

Of course, it would be hard to find a father who did not have affection for his son, but does the average father, the average father on the farm particularly, do the best he can for his youngsters? No doubt he thinks he does, but is his method the best?

We once heard a father say: "Soon the boys will be old enough to support me." He was an extremist, to say the least, but many of us have a touch of that spirit.

Because a boy is our own does not mean he is our slave to do all the chores without the hired man's pay. After all, we owe him a home, food and clothes. To be sure, it is equally unfair for him to expect us to support him without any effort on his part.

A clever man named Anstey once wrote a book called: "Vice Versa," in which a father and his son miraculously changed places and were compelled to appreciate the other's point of view. After that they were good friends and more satisfied with their own proper duties.

Put yourself in your boy's place. Remember you were a boy, and also remember that times have changed, wages have advanced, and that you pay your farm help more than the prevailing rate on your father's farm.

So many boys and young men are leaving the farm and going to the cities that this subject is momentous to all. It is of national importance.

The main reason they do this is because they hope to do better elsewhere, and, as far as ready cash is concerned, they do. They command a money wage immediately anywhere—except at home. Of course, they do not receive as much of value anywhere else, but remember that a real half dollar "all his very own" looks as big to a boy as the hind wheel of a wagon, especially if he has earned it.

Pay your boy a wage for his services. Better yet, make him your partner in a small way, telling him that if he makes good you will increase the interest. Buy him a U. S. Cream Separator and fix his hours of work (when not at school) from say 7 a. m. to 12. Let him have the afternoon to himself to work for outsiders to earn some extra cash.

Charge the cost of the U. S. Separator to his account and show him how to pay for it gradually to you and the interest on the money from the profits he makes in separating the neighbor's milk for them. Then give him a calf to raise all his own, and later some good milch cows. He can use the U. S. Separator to still better purpose then and start butter-making on his own account.

To run a U. S. Separator will not tax a boy's strength; it is so free from friction and weight. U. S. Separators are so simple a child can run one.

As a first step toward keeping the boy on the farm, where he will do himself, his parents, the farm and his country the most good, write the Vermont Farm Machine Company, Bellows Falls, Vt., for Catalogue No. 125.

CANCER CAN BE CURED.

Scores of testimonials, from persons who gladly write to those now suffering, all tell of perfect cures. My Mild Combination Treatment destroys growth and eliminates the disease from the system. **Free book,** "Cancer and Its Cure," and 125 page book of testimonials from **cured** patients in every State in the Union. No matter how serious your case, how many operations you have had, or what treatment you have taken, don't give up hope, but write at once for my books.
DR. JOHNSON REMEDY CO.,
1233 Grand Ave., Suite 103, Kansas City, Mo.

THE UNIVERSAL MAGAZINE.

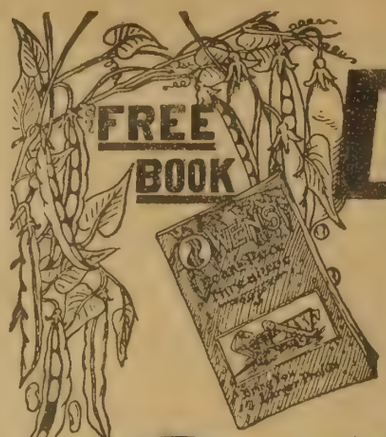
This is a nice, thirty-two-page, three-column magazine, issued monthly. It contains illustrated reading matter of interest to all the family. These are circular mirrors, 3½ inches in diameter and are said to bring good luck, fame and fortune. They are also of fine glass and will last a lifetime. Five subscription for a dollar, including five mirrors. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

BEANS AND PEAS.

OUR BOOKLET ON BEANS AND PEAS EXPLAINS THE ENTIRE CULTIVATION METHODS IN RAISING, HARVESTING AND THRESHING THEM. WE ARE THE LARGEST MANUFACTURERS OF THE BEST GRAIN-CLEANING MACHINERY IN THE WORLD. IT WAS THE LIFETIME STUDY OF THE LATE J. L. OWENS TO INVENT, CONSTRUCT AND PERFECT THE BEAN AND PEA THRESHERS WHICH ENABLE FARMERS TO PLACE THEIR BEANS AND PEAS ON THE MARKET IN EXCELLENT CONDITION AND TO FEED OR MARKET THE HAY TO THE BEST ADVANTAGE. OUR BEAN AND PEA THRESHERS ARE MADE OF THE VERY BEST MATERIAL. THEY ARE THE PRODUCT OF YEARS OF EXPERIENCE IN MAKING AND IN USING THEM ALSO. WE GUARANTEE OUR MACHINERY SIMPLY BECAUSE THE PERFECTION OF THE MATERIALS AND WORKMANSHIP ENABLES US TO DO SO WITH COMPLETE SAFETY. WE HAVE THOUSANDS OF TESTIMONIALS SPEAKING IN THE HIGHEST TERMS OF EVERY SIZE THAT WE MAKE. THEY ARE AS SIMPLE AS WE DARE MAKE THEM, NOT REQUIRING EXPERT MACHINISTS TO RUN THEM, BUT READILY UNDERSTOOD BY MEN OF AVERAGE ABILITY ON FARMS.

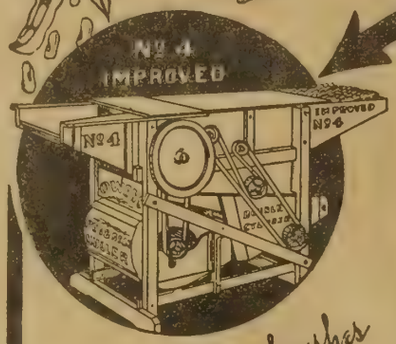
WE CLAIM THAT EVERY BEAN AND PEA GROWER PLANTING AN ACRE OR MORE WILL FIND IT TO PAY TO PURCHASE AND USE OUR NO. 4 MACHINE. THE CUSTOM WORK DONE FOR NEIGHBORS AND NEARBY PLANTERS WILL SOON PAY FOR THE MACHINE SEVERAL TIMES OVER. THE LARGER MACHINES SUIT ALL CIRCUMSTANCES AND CONDITIONS, AND IN NO OTHER WAY OR BY NO OTHER MEANS CAN THE SAME END BE ATTAINED.

WE WILL ESTEEM IT A COMPLIMENT TO RECEIVE AN APPLICATION FOR A CATALOGUE AND WILL TAKE PLEASURE IN ANSWERING ALL INQUIRIES.



DO YOUR OWN THRESHING

ONE-HALF
of your profits from Peas and Beans are lost if you do not thresh them from the vines in such a way that you save the seed in A WHOLE, CLEAN, MARKETABLE CONDITION. The Owens Threshers are guaranteed to do this. They absolutely will not split the seed, and yet take every pod from the vines. They will also shred the vines taking all sand, dirt and foul stuff out of them. Handled by an Owens Thresher your crop will yield you better in quantity and in price both for your seed and hay. Don't continue the old wasteful way of handling your crop——— INVESTIGATE THE NEW————THE PROFITABLE "OWENS"————WAY



For the small grower. Threshes from the vines without splitting the seed. Beans Peas buckwheat, Kaffir corn, cane and Sorghum

The Real Value of a Crop of Peas and Beans

"I tried to thresh my crop with a regular thresher, but I found that over one-third of the seed was split."

This is what hundreds of farmers write us—then some of them tell us that they just gathered by hand enough for seed and turn the rest of their crop into feed. Others again will hand pick their whole crop and hull the pods with a small hand huller.

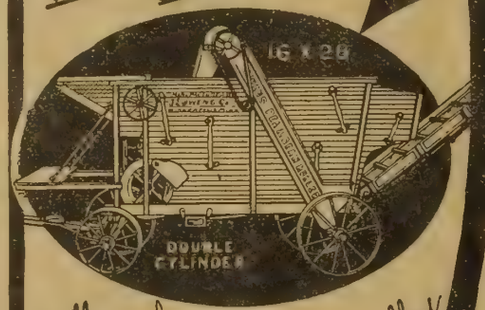
Are you aware of the tremendous waste of profits there are in these methods of handling a crop of beans and peas? Just figure what your crop is worth per acre—$30.00 is a low estimate we are sure, but even at that you do not have to grow very many acres before you have lost enough to pay for an OWENS Thresher.

Perhaps you are one of the many who do not attempt to save the seed—just use it for feed—vines, seed and all.

If you knew that every seed your vines produces could be saved to bring you ***highest market prices,*** that the vines could be shredded for hay, bringing you more money than if you sell or feed it as taken from the fields—would you not investigate the merits of a machine guaranteed to produce these results? Then let's tell you about the Owens Threshers.

If you have tried the hand picking process you know how slow, tedious and expensive it is, and it would pay you to learn about the Owens Threshers before you harvest another crop.

In short, you do not know what the real value of Peas and Beans are until you have threshed your crop with the—



Will also thresh small grain if equipped with extra pulleys. Will increase your Pea and Bean profits 33%

OWENS
PEA AND BEAN THRESHERS

BUILT IN FOUR SIZES

Double Cylinders——Larger Separating Space than any other Thresher of Equal Size——

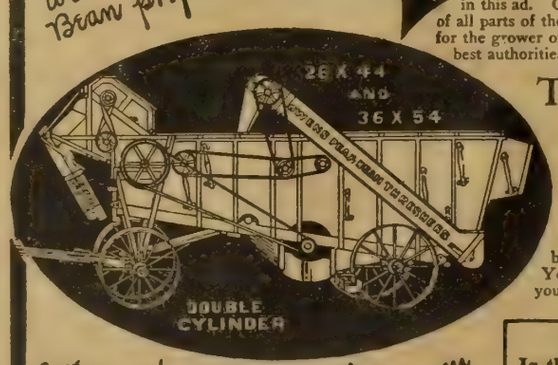
which has double cylinders, enabling one to run the thresher at a low rate of speed, preventing any possibility of splitting the seed—and yet being able to take ***every pod*** from the vines.

(A single cylinder thresher cannot take all the pods from the vines if the speed is reduced sufficiently so as not to split the seed.)

"The Owens" has on account of its extreme length, a larger separating space in proportion to its size than any other thresher built. This also makes the Owens do much cleaner work than any other so that you can do without a recleaner.

It is built of absolute first-class material by the most skilled mechanics and workmen, and is an all around superior thresher—

But we are unable to give you a true, clear description of the Owens in this ad. Our catalog does that fully, besides shows you illustrations of all parts of the machines. You better send for it—it's a valuable book for the grower of Beans and Peas, as it gives information gathered from the best authorities on how to grow and cultivate them.



For the large growers and threshermen who has larger capacity than any other thresher of their size will shred and clean corn as regularly equipped.

Try an OWENS Thresher at Our Risk

We will send any of our 16x28 and larger size machines on a six days approval test to any responsible farmer or thresherman. We don't ask you to take our word for what the thresher will do, we offer to have the thresher demonstrate it to you in actual operation, run by yourself.

You cannot possibly lose by accepting such an offer, and you better write us for further particulars today.

The Manufacturer's Own Proposition to You

Is the most liberal ever made by any manufacturer. If we have no agent or dealer in your locality, we will save you their commission, but you must write us so we can explain it to you fully, and send you price list and full particulars about our free trial plan, guaranty, etc.

Let us hear from you at once.

READ WHAT THEY SAY WHO OUGHT TO KNOW

South Bend, Ind.

J. L. OWENS CO., Minneapolis, Minn.

GENTLEMEN:—The No. 4 bean thresher I bought of you last year is a dandy one. All that saw it work says it does the work fine, we can thresh 10 bushels of kidney beans per hour with a 2 H. P. engine, and it will do all you claim it will do. Yours truly,

Signed. L. F. CAUFFMAN.

Carmen, Okla.

J. L. OWENS CO., Minneapolis, Minn.

GENTLEMEN:—The 16x28 thresher is all that you claim and more. We are now threshing cow peas at a rate of 25 bushels per hour. The vines are the heaviest growth we have ever handled, but with 4 horses on the power, and three hands, we hulled 400 bushels last week, and hauled them from the field where they were in bunches using the teams of the power to haul in, and were hauling about half the time. For these short days this is a pretty good showing. We are now threshing from stacks, and the machine is doing perfect work. We had figured on 800 bushels, but there will be nearer 1200 as it gets them all from the vines. Your 16x28 huller is a success. Respectfully,

J. P. JOHNSTON.

Neosho, Mo.

J. L. OWENS CO., Minneapolis, Minn.

GENTLEMEN:—The 26x44 thresher that I bought of you did the work so nicely far and near they came to see it work and all were pleased. 75% more peas will be sowed here this year because of this separator here to do the threshing. Yours truly,

JACOB I. VICKERS.

Blodgett, Mo.

J. L. OWENS CO., Minneapolis, Minn.

GENTLEMEN:—I bought one of your 26x44 pea and bean threshers, and I must say that it is the best machine I ever saw for threshing clean and also for quantity. The peas I threshed sold for a better price than any other, and even the hay sold for a better price, as the Owens Huller takes out the sand and dirt and takes very little power, 70 pounds of steam will run the whole rig. I advise any man that wants a machine to buy an OWENS THRESHER as they can't be beat. I hope you sell lots of hullers this year, and remain, Yours respectfully,

H. W. WERNECK.

Merrill, Mich.

J. L. OWENS CO., Minneapolis, Minn.

GENTLEMEN:—The new bean and pea huller that I bought of your Mr. Byers is a cracker-jack. The feeder works to perfection. All the fault I have with it is that I can't get beans enough to it. Threshed 320 bushels in 3 hours and 20 minutes. If they can beat that with any other make of machine I would like to see it done. Yours truly,

ISHMAEL DAVIS.

POLLED DURHAM CATTLE—Champion bull and cow. Polled Durhams are Shorthorn cattle with the horns bred out. This pair is highly representative of the breed, and the picture is published in order to show the foundation upon which profitable young market cattle can be produced. See pages 16 and 17 for memorandum of choice young butcher cattle sold on the St. Louis market.

Stock Cattle and Feeder Trade of St. Louis.

A very able article upon the stock cattle and feeder trade at the St. Louis National Stock Yards by Mr. A. J. Milton appears in this issue. He makes the assertion that the stock cattle trade is a spontaneous growth, fostered and encouraged by favorable conditions at the great stock yards. It was started by the stockmen themselves, the railroads have assisted it, the commission firms have enlarged it, the traders have expanded it, and the Stock Yard Company has encouraged it so that stockmen continue to send their stock and feeding cattle to market of their own free will, and the concentration of stock cattle at the market brings in other stockmen who desire to buy that which their neighboring stockmen desire to sell. Mr. Milton explains the usefulness of the trade by the statement that although they often come to market in small bunches, all ages, sizes and conditions, in mixed loads, when they go out to the market again they are assembled in car-load lots, even in size and quality, and the buyer is as glad to get them as the seller was to cash them. The market at the St. Louis National Stock Yards is gaining every year in strength and importance as a stock cattle and feeder center. The article referred to will be found on pages 4 and 5. Mr. Milton is cattle sales manager for the firm of Clay, Robinson & Co.

St. Louis Cash Grain Prices.

On June 1st, in the cash market—deliver the goods and get the money—No. 2 red wheat sold at $1.60 to $1.62; No. 3 red, $1.56 to $1.58, nominal; No. 4, $1.05 to $1.45, nominal; No. 2 hard winter, $1.38 to $1.41; No. 3 hard, $1.25 to $1.35, nominal; No. 4 hard, $1.05 to $1.20, nominal. Last year on the same day the range was 83 cents to $1.01 per bushel.

No. 2 cash corn opened June 1st, 1909, at 74 cents; No. 3, 72½ to 73¾ cents; No. 2 yellow, 74 to 74¼ cents; No. 3 yellow, 73½ cents; No. 2 white, 75 to 75½ cents; No. 3 white, 74 to 74½ cents.

No. 2 cash oats, 58 cents; No. 3, 57¾ to 58 cents; No. 2 white oats, 60½ cents, nominal; No. 3 white, 58½ to 60 cents; No. 4 white, 57 to 59 cents.

and Stock GROWER

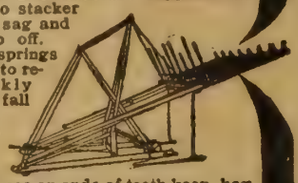
Why DAIN RAKES AND STACKERS EXCEL

We've been making good Hay Tools and nothing else for over a quarter of a century. We are specialists in that line, have uprooted more old fashioned ideas, invented and introduced more labor-saving machines and time-saving features than all other Hay Tool makers put together. We've improved Hay Tools from their crude state up to their present high efficiency.

For example the **Dain Truss Frame Sweep Rake** has hinged tongues. No weight to make horses' necks sore. Sliding seat so driver can balance teeth, lessens draft. Teeth have metal socket points to prevent splitting. High, broad-rimmed wheels make rake run easy. Removable wheel bushings, easily replaced at low cost when worn. Steel channel truss prevents sagging in the middle or at ends. Guaranteed the strongest and largest capacity two wheel rake on the market.

Dain Sweep Rakes are unexcelled for gathering hay clean from swath windrow or cock and transporting it rapidly at low cost. We build five styles of Sweep Rakes, but just one grade, the highest. In our line you'll find a rake built especially for you.

Now, as to Stacker the **Dain Junior** is the most popular in the world. It's the lightest draft because the double A Frame gives compound leverage. Pitcher teeth are adjustable to deliver hay into center of stack from bottom to top so stack settles straight and turns water. That's one reason why **Dain Stacked** hay is better than hand pitched, to say nothing of labor and time saved. The teeth are supported at each side so stacker head won't sag and let hay slip off. Cushioning springs cause teeth to rebound quickly making hay fall on stack in flat mass without tangling.



Hay retainers on ends of teeth keep hay from pulling off and scattering when rake is backed away. This feature saves practically one man's time scratching around with a fork cleaning up loose hay.

The **Dain Junior** is provided with trucks for convenient moving. We make six other styles of stackers. The small farmer, or the big rancher can secure equipment designed particularly for the work he has to do. Great Dain Line Tools are built of highest grade selected material. They are carefully made from start to finish therefore reliable and durable. Ask your dealer to show you the Dain Line.

Less Labor—Better Hay

Write for particulars about the Dain Hay Loader and Side Delivery Rake. The Dain Loader saves one man's hire. The Side Delivery Rake air cures your hay.

Dain Manufacturing Co., 828 Vine Street OTTUMWA, IOWA

A CORD OF WOOD.

Interesting Statement Issued by the Forest Service of the United States Department of Agriculture.

When is a cord of wood not a cord? To the farmer harvesting his small wood lot and to the man laying in logs for the large fireplace of his country or seaside home; to the paper manufacturer buying pulpwood, and to the proprietor of the ordinary city wood yard, to all of these men this question has an important dollar-and-cents meaning.

Queer to say, and contrary to the belief of most people, there are many times when a cord is less than a cord, and many conditions when it is more. School arithmetics say that a cord of wood is 128 cubic feet, or the contents of a pile eight feet long, four feet high and four feet wide. Wood is marketed on this basis. A pile whose length, breadth and height multiplied together gives this number of cubic feet fills this requirement, no matter whether the sticks are long or short, straight or crooked, round or split, unless there is an understanding to the contrary. Nevertheless a cord, though it comes up to legal measurements, is an uncertain quantity, even when the seller is honest and the buyer is satisfied.

A lumberman may have a tract of pulpwood which he sells to a paper mill at $5.00 a cord for as many cords as it will make. It is in the contract that he shall cut and stack it. He cuts it in twelve-foot lengths, and when the job is complete it measures 200 cords, and he receives $1,000 for it. Would he have made or lost by cutting four-foot lengths instead of twelve?

He would have lost, in the first place, from the additional labor required to cut four-foot wood, but his principal loss would have resulted from a greatly diminished number of cubic feet, due to the fact that short sticks lie closer together than large.

Measurements and experimental tests have been made to ascertain exactly how much actual wood is in cords of different lengths, sizes, shapes and species.

Had the 200 cords of twelve-foot wood been cut in four-foot lengths there would have been only 176 cords, and the owner would have received for it $880 instead of $1,000. It was, therefore, clearly to his advantage to cut twelve-foot lengths, but it would have been to the buyer's advantage to have it cut in four-foot lengths. He would have received the same actual quantity of wood for $120 less.

It also makes considerable difference to the seller whether wood is chopped or sawed. If chopped, the chips are lost. Where the logs are large, this loss amounts to no small total. In a cord of four-foot wood, with sticks six inches in diameter, the chip loss is from 6 to 8 per cent.; and, of course, the shorter the sticks are cut the greater the loss. If wood is sawed, the sawdust loss is scarcely the half of 1 per cent.

The difference due to spaces between the sticks of course depends very much on the shape and size of the sticks. Straight, smooth sticks lie close together, and a cord contains more wood and less air. For given lengths, sticks of soft woods are usually straighter and smoother, and, when stacked, lie closer together. But whatever the kind, cords of long sticks are pretty sure to contain more empty space than cords made of short pieces. Likewise, cords of split wood contain less than cords of round sticks. The finer the wood is split the more it makes. Hence wood dealers are often willing to sell kindlings, all sawed and split, for the same price per cord as unsplit wood. They get back the cost of labor in the increased bulk.

A cord (128 cubic feet) of four-foot hard wood usually contains about 83 cubic feet of solid wood; a cord of three-foot wood averages 83 ½ cubic feet; of two-foot wood, 84 feet; and of one-foot wood, 85 feet. The conifers, soft woods, contain 90 to 96 cubic feet. Thus the purchaser receives on an average about two-thirds of a cord of real wood and one-third of a cord of spaces.

In some countries wood is bought by weight, and the buyer comes more nearly getting what he bargains for; but even then he may miss it if he receives green wood when he wants dry. According to timber-testing engineers of the United States Forest Service, wood may lose half or more of its green weight in seasoning. Cedar for lead pencils is bought by weight in this country. The pieces are so small and of such irregular size that they cannot be conveniently stacked and measured as cord wood.

The bulk of nearly all woods decreases as seasoning goes on. A hundred cords green will make from 89 to 93 cords when dry. This is a factor of no small importance to dealers who handle large quantities.

Wood-lot owners and farmers who have small forest tracts from which they expect to sell cord wood are no less interested than contractors who buy and sell large quantities. It will stand them in hand to know how much difference it makes whether wood is cut long or short, chopped or sawed; whether the sticks are round or split; whether large or small; and whether the measurements are to be made while the wood is green or after it is seasoned.

Plowing Up Fall Wheat.

A Greene county, Indiana, correspondent asks me (May 20th) whether I advise plowing up a very poor stand of wheat and putting the ground into corn.

That depends. If it is meant by a "very poor stand" that there is half a stand, then I would leave the field alone. The mistake made is allowing the matter to drag along so late in the season. By April 15th one can tell what condition fall-sown wheat is in, and right then is the time to decide how to handle the ground. However, if there is less than half a stand, rather than risk getting only a few bushels of wheat per acre, I should plow the ground and plant it with some variety of corn that will mature in about 100 days. Don't make another mistake by planting as late as June 1st any of the big, late varieties, which need 130 days or more to mature.—L. C. Brown.

WHITMAN'S NEW MODEL STEEL BEAUTY HAY PRESS

NEVER FAILS

With or without self-feed positive pull back without spring.

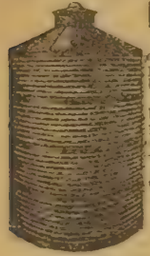
A complete line of power balers, hay, paper, wool, shavings, cotton hull and compress presses.

Write for Catalogue.

Our success with this machine has been simply marvelous. Thorough tests convince us that it is **absolutely correct** in principle. It is built entirely of steel. Has low bridge for horses to walk over, and no pull of team in crossing. Has large feed opening and long bale chamber. Warranted in every particular. We also make a full line of Balers. For full information address the manufacturers.

THE WHITMAN AGRICULTURAL COMPANY, 6909 S. Broadway, St. Louis, Mo.

BETTER CISTERNS --- WHY?



To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

Cruel "Sweat-Pads" Gall

Why wait, or let your horses suffer—and waste time—and worry along with sore-necked horses? You don't have to now.

Over 60,000 horse owners and farmers, and over 4,500 harness dealers who carry them, say that Whipple Humane Horse Collars have revolutionized the horse-collar business.

Any harness dealer will sell you Whipple Collars on 15 days' free trial with money right back **without question** if you are not satisfied by working your sore horses in them. Try it. If your dealer hasn't got them yet, just write us direct to nearest factory.

Thousands and Thousands of Farmers Are Writing Us for Our Book About

WHIPPLE HUMANE HORSE COLLARS

Don't use "sweat-pads." It's like working in the field yourself in a hot day's sun with a blanket padded round your sore neck. It's cruel—especially in hot weather—injures your horses and costs more every way.

Whipple Humane Collars are guaranteed to cure any sore-necked horse while he works—and to absolutely prevent sores, galls and bunches. **No more sweenied colts either; can't be.** Tell you why: 1.—Pulling surface is properly distributed to pull the heaviest load easiest with these collars because there are 45 sq. in. of pulling surface on each shoulder as compared with only 10 sq. in. on old-style hame collars. 2.—Burden of pulling comes above lower shoulder joint, giving horse a chance to step without bruising joint where most bruises come. 3.—No pressure on the thin skin and flesh over the shoulder blade where so much trouble is caused with old-style collars 4.—No pressure at all on top of the neck or on the windpipe to shut off the horse's breathing.

Sold On 15 Days' Trial or Money Back By Over 4,500 Harness Dealers Everywhere. But If Your Dealer Don't Happen to Have Them Yet, We Will Supply You on Fifteen Days' Trial—Over 60,000 In Use Now.

Every set comes complete and ready to use. Built to last for years by expert workmen, and of durable materials. Write for Free Book and testimonials. **Address our Nearest Factory.**

Two Sides to Cultivation.

Cultivation is generally a good thing, but it is not always that. The reason is that cultivation is not always properly given.

Right cultivation is always profitable, but there may be times when no cultivation will be right. Thus we have seen times in the semi-arid West when the days were so dry and the wind blew so hard that to cultivate meant to put the soil into a condition in which it could be the more readily taken off by the wind.

Even in the humid states, cultivation may be so unscientifically given that it will do more injury than good. As an illustration, we remember a man that had a magnificent field of potatoes, and went away for a day or two. The hired man, after cultivating the corn, concluded that it would be a good thing to cultivate the potatoes. So he put in the cultivator and cultivated them good and deep. The result was that so many of the lateral roots were cut off that the growth of the whole field was put back several weeks.

At some of our universities, notably the University of Illinois, careful tests have been made to ascertain how much cultivation of anything should be done. It was found that too much cultivation of any crop was detrimental. Just what amount of cultivation will pay best cannot be settled by any rule, as is obvious, for the conditions are constantly changing. No rule can take the place of a man's judgment in such matters.

At any rate, it is not safe to cultivate a crop deeply after the plants have made a good growth and have sent out a great mass of lateral roots. These roots are all a help to the plants and must be protected. Thus it may be accepted as a good rule to cultivate shallow between rows of plants that are making good growth.

It is now recognized that the reasons for cultivation are chiefly two—the keeping down of weeds and the conservation of moisture. Of these two, the keeping down of weeds is of greater importance, for that reason exists both in the humid sections and in the arid sections of the country. The other reason exists chiefly in the semi-arid sections and occasionally in the humid sections.

Where cultivation is not needed, the continued sustaining of a dust mulch is sure to result in the loss of humus. If the dust mulch is two inches thick, then the humus in that two-inch layer of soil will be mostly burned up, as dry dust is a great destroyer of organic matter.

This is a result that is not generally thought of in the creation of a dust mulch. If the object is the destruction of weeds, no dust mulch need be maintained. The dust mulch is needed only when the water supply in the soil is so meager that it must be husbanded for the use of the growing crops. Often, however, the dust mulch is maintained where it is not required by the conditions of moisture supply.

Health of Farm Animals.

During the past twenty years diseases have greatly increased among farm animals, taking the country as a whole. This has been due to the increase in population and to the increasing number of farm animals, which has meant, of course, a greater exchange of farm live stock.

It is true that foot-and-mouth disease and pleuro-pneumonia have been banished from the country; but, on the other hand, there has been a great increase in the amount of tuberculosis among cattle and other stock. Whether hog cholera has increased in that time it is hard to say, but the increase of tuberculosis puts the balance on the wrong side of the book.

Quarantine measures are doing more than anything else to check the spread of disease. This refers not so much to the quarantine established by the national government as to the quarantine established by the owners of animals.

It is the private quarantine to which we must look for help at this time. The increasing use of this protective measure will do more than anything else to improve the health of our farm animals.

Most of us can remember the days and the farms on which disease among farm stock was never known. Year after year nothing worse came to the stock than accidents. It was not till late years that contagious diseases, such as tuberculosis, became largely threatening.

The first great precaution should be taken in the bringing onto the farm of any and all animals. Especially if they have been bought in the great stock yards should they be under suspicion. Also if they have been transported in stock cars, they may have contracted disease from unsanitary surroundings.

Again and again has it come to the notice of the writer that disease has been brought onto the farm by the introduction of some apparently well animal.

We have some men that are not conscientious in this regard. If they make a tuberculin test and find some well-looking animal to react, they ship it to the stock yards and lose sight of what becomes of it. If the animal happens to be a cow of good promise, instead of going to the shambles, it often goes onto some other farm, to be a center of contagion and a disseminator of disease.

Probably no greater danger to farm stock exists to-day than that to be met with in the milk that is taken back from the creameries to the farms for the feeding of farm stock. Investigations have shown that the milk from certain creameries has caused hundreds of farm animals to be infested with the dreaded disease—tuberculosis. The demand of the hour is for a greater caution in this regard.

Other than the contagious diseases can be lessened by right feeding and right stabling, which means an abundance of light and air. The great dangers, however, come from the contagious diseases, whose spread is helped by dark, damp and unsanitary stables.

Hastening Maturity of Corn.

A correspondent at Monon, Indiana, writes: "Some of our corn in this section has not ripened during the last two or three years. Is there any practical way to hasten maturity?"

It has taken corn growers five or six years to discover that early maturity is a fixed characteristic of varieties. True, condition of one's soil may affect maturity, but always adversely. With good, strong corn ground the tendency is to prolong growth, thus lengthening the usual growing season, rather than retarding growth during a favorable season and hastening maturity. Checking the growth of the plant may hasten maturity, but the size of the ears will be materially reduced. This thing happened last year. August was a hot, dry month. Many corn fields filled out very poorly, simply because the normal growing season was cut short. During a normal growing season the ears tip over nicely.

I advise our correspondent, as I have hundreds of others: If your corn has failed to mature year after year, it is evident you are growing the wrong kind of corn. Plant an earlier-maturing variety. I have seen a great many failures in trying to acclimate some big-eared corn in sections where only 90 to 100 days of good corn weather may be expected. Don't try it. The man who hazards his whole corn crop by planting that kind of seed is running a tremendous risk.—L. C. Brown.

"As you grow ready for it, somewhere or other you will find what is needful for you, in a book, or a friend, or, best of all, in your own thoughts, the eternal thought speaking in your thought."—George Macdonald.

Let Me Pay The Postage on My Big Free Book to You

Though it costs me 8c to mail every one of these books, yet I'll send you one free because I want you to know about my Celebrated Split Hickory Buggies—made-to-order—sold direct from my factory to you at home on 30 Days' Free Road Test—guaranteed two years. Over 100,000 Split Hickory Vehicles now in use giving splendid satisfaction.

STOCK CATTLE AND FEEDERS.

A Few Remarks Upon a Valuable and Necessary Branch of the Live Stock Trade Built Up Inside of Stock Yard Centers Under Favorable Conditions.

(By Mr. A. J. MILTON, Cattle Sales Manager of the firm of CLAY, ROBINSON & CO., Live Stock Commission Agents, at the St. Louis National Stock Yards.)

The stock cattle and feeder trade as generally conducted at the centralized live stock markets is a natural development growing out of favorable conditions which are taken advantage of by those who are interested in selling and in buying cattle which are not yet ready, ripe or fattened for slaughter.

The stock cattle and feeder trade furnishes direct evidence of the usefulness of the up-to-date live stock market and of the value of a system that does wonders which are not apparent to the general observer and do not become evident until the subject is examined in all its bearings.

The market trade in stock cattle and feeders is entirely voluntary on the part of all concerned. It is made up of numerous items, each independent of the others, but leading to the general result, which is the economical concentration, sale and distribution of healthy cattle, which for the time being are either too immature or too thin to properly fulfill their destiny, which is the butcher block.

Value of the Trade.

To the uninitiated the great value of the established stock cattle trade is not even thought or dreamed of. Hundreds of thousands of stockmen in the Western States are able to breed and raise cattle cheaply who are unable to fatten them. They need a profitable outlet for their thin cattle, which the concentrated market affords. Hundreds of thousands of farmers in the corn-growing states produce immense quantities of feedstuffs, and these farmers are helpless when it comes to raising suitable feeding cattle. They have neither the room nor the time to devote to cattle raising, but they can feed and fatten large numbers of native steers, which they can purchase by visiting or ordering from the centralized markets, and thus all interests are served. This in a general way covers the subject, but it does not touch the many minor details.

Favorable Conditions.

If railroad rates were not reasonable, this branch of trade could not have grown up or long survive; if stock yard charges were excessive, the sale of stock cattle in market would be at a great disadvantage; if commission firms did not understand their business and make intelligent purchases in the interest of their clients, there would not be so much satisfactory cattle feeding. I am very proud to say that our firm—Messrs. Clay, Robinson & Co.—have established a perfect organization for the purpose of filling orders for stock and feeding cattle to the customer's best advantage, both in the matter of price and selection, and that we have the confidence and business friendship of the largest number of stock cattle shippers and stock cattle buyers of any firm in the trade. In fact, we support our business as much by the careful, conscientious and able service that we render in this particular branch of trade as we do in our expert sales of fat cattle, hogs and sheep.

Year after year we supply many feeding farmers. We know their methods, the inclination and preferences of the feeder and we generally have time to make the selections to suit them, and when the cattle are delivered they generally fill the bill and contribute towards the perfection of the result, which is a ripe bunch of beeves topping the fat-cattle market.

Buying on Mail Orders.

In buying for a customer we always like to have time to fill an order. We may be able to fill it in a day, and again it may require several days. It does not always pay to be in a big hurry to close a bargain, and a day or two may mean a substantial saving to the client. In stocker and feeder buying we are reminded of the saying that "Well bought is half sold," and, as we hope to sell them again, we have a double interest in having them bought right in the first place. In the live stock commission business we must be able to buy and sell. We may be selling one class of cattle in one market and buying another class in another market. In both cases, of course, acting for our clients. We do not speculate in, or buy or sell live stock for our own account, always acting in the capacity of commission agents. Thus we have no "axes to grind," and are in position to solely consult the interests of our clients. Our house makes numbers of individual contracts with Western ranchmen to sell their cattle to feeder buyers in the feeding sections; in this case the cattle do not necessarily move until they are sold, and they go directly to the feed lot.

The Variety of Stockers.

The variety of animals enumerated in the stock cattle trade is well known to most stockmen, but a word or two concerning them may not be out of place. In the female line there are stock calves and yearlings—young heifers—not fat enough to kill, but suitable for breeding purposes. Many of the attractive loads which are bought and shipped out are made up with single animals and small bunches bought on the market.

It may require a buyer several days to pick up an acceptable load of heifers, and through these means many a full load goes back into the country that came to the yards in mixed loads. People who look at the cattle trade from a distance may not be aware of the fact that a car-load of stock heifers going out from a stock yard may have originated in ten to fifteen car-loads, but during nine months of the year all of them have to come from north of the quarantine line.

Why Farmers Ship Stock Cattle.

Stock heifers are usually classified according to weight, in lots averaging 300 to 500 pounds and 525 to 750 pounds, so that naturally there are two-year-olds in the heavier lots and sometimes a few threes. There are also native stock cows which are thin and yet have sufficient quality and are not too old for a period of usefulness on a farm, and most of these cows are already with calf. These lots of native stock females make it possible for a farmer to stock up a new farm or pasture at very short notice, and by dealing at the stock yards obtain a better selection than he could get by traveling all round the country, at great loss of time and expense. It seems strange that farmers should ship stock cattle to market and farmers also go to market to buy their stock cattle, and

the explanation is that a thousand stock cattle are badly scattered and not for sale in the country, whereas they are all for sale, concentrated and classified when they reach the market. The milk stock sold as springers, or with cows and calves at their side, constitute a class of stock cattle, generally bought, however, for city use, there being numerous dairies inside or on the outskirts of most big cities. There is room for expansion in this class of trade which may develop in the future.

Steers which are included in the more important branch of the stocker and feeder trade are usually divided into the two classes, viz.: Stock steers and feeding steers. The stock steers are young and thin and light weight, and when taken out to the country are generally grazed some time before being put on full feed. The feeding steers, so-called, are supposed to be heavy enough and in condition to go on full feed without delay. There is nothing arbitrary about this trade except that the cattle cannot go out from the stock yards to be fed or grazed unless they are able to pass government inspection.

The Feeding Trade.

The feeding trade in the stock yards includes a surprising number of bulls, stags and oxen. These are usually in mixed loads coming in and in full loads going out. It would be almost an impossibility for distilleries to obtain the bulls they feed unless they were first concentrated in the stock yards. In a general way, stock cattle and feeders are those cattle which can be sold for grazing or feeding purposes for more money than if they were sold to slaughterers for canning or butcher purposes.

The Day of Quality.

In an experience of some years upon different live stock markets, I am forced to the belief that in a series of years since the year 1900 the stock cattle of good quality have sold almost as high as fat cattle were selling for years ago. Quite recently I have seen good-quality feeding steers selling at $5.00 per 100 pounds, and during the period from 1890 to 1895 hundreds of thousands of fat beef cattle equally as good quality sold no higher. The day of quality has arrived. Quality means half, three-quarters and higher grade Shorthorns, Aberdeen-Angus and Herefords. Quality comes from pure-bred beef bulls in the herd. A nice lot of white-face heifers will sell well, fat or thin; a nice lot of reds and roans will do the same; a nice lot of Angus heifers will almost outsell the Herefords and Shorthorns. It is the same with feeding steers; buyers of feeders will pay for beef quality; they know that when they have fed these high-quality steers that they will sell where they belong—they not only sell at the top, and when we have them to sell, with them we create a new top.

I wish to say to farmers that no matter if they are unable to fatten their cattle, they are able to sell them to good advantage if they are of good quality. Since coming to the St. Louis market we have received many orders for stockers and feeders that we have had to send to other markets to be filled—some of them very large orders. Personally, I hope to fill all our St. Louis orders on the St. Louis market.

Southern Stock Cattle.

In the future marketing of young stock cattle I hope to see large numbers arrive from Alabama, Louisiana and Mississippi. Those states being south of the quarantine line, have an open season of two or three months in winter for the sale of stockers. They can market fat cattle all the year round, and if they are short of feed, they can sell the cattle as stockers and feeders. They may not be able to perfect heavy fat cattle in the South in large numbers, but they can raise light, fat, high-quality beef steers and fancy stock steers whenever they are disposed to turn their energies in that direction. If it were known that a large number of stock cattle of the right kind were to be sold at St. Louis from the South during the open season, we could rally the buyers to meet them.

We sell a great many stock cattle which are fed in Illinois, Indiana and Ohio. We ship feeding cattle from Kansas City to Virginia. A great many of the cattle fed in Ohio were bought by Clay, Robinson & Co. Large numbers of the prime beeves fed in Kentucky were furnished by our firm, No matter where prime beef is sold in market, you will find that in buying the feeders Clay, Robinson & Co. have a leading part. It is the same with show cattle. This firm has led in the improvement of live stock for many years and we have sold most of the champions at the Chicago International Live Stock Show.

St. Louis' Advantages.

St. Louis has exceptional advantages in selling stock cattle for Eastern shipment. Washington Court House, Ohio, about seventy miles beyond Cincinnati, is the center of a feeding district. The rate from St. Louis is 17½ cents per 100 pounds, or $35 a car of 20,000 pounds. Stock cattle will run twenty-five to thirty to the car; there is $1.00 per car charge for bedding, and it is a thirty-six-hours' run.

Point of Rocks, Maryland, is another distributing point, which is reached via Belpre, on the B. & O., and the rate is 30 cents per 100 pounds. This is one of the distant runs, but stock cattle can be shipped that far at moderate cost. I could mention other points, but this article is already too long.

Although this is not the active season of the year in the stock cattle and feeder trade, it is certainly time for studying the future. At our office in the St. Louis National Stock Yards we are in close communication with our establishments at Kansas City, St. Joseph, South Omaha and Sioux City. We also have a magnificent stock and feeding cattle trade at Denver. We can obtain any class that is on sale at any market. In addition to our selling force we have feeder buyers who are constantly watching for opportunities to fill their orders, and it goes without saying that they pick up many a bargain, which would never fall in the way of an individual country buyer. In this as in other lines, skilled and experienced service that is in daily contact with every transaction on the market is what counts.

Most of our orders for feeders are received by mail, and in the majority of cases the customer does not see the stock until it is received at his home station. Of course, he can come to market and assist in or supervise his purchases if he wishes, but this is not at all necessary, provided his order is placed with a thoroughly responsible and trustworthy house. Thus you save railroad fare, hotel bills and time. We fill your order just as carefully as though you were here in person.

I am deeply interested in the development of the stock cattle and feeder trade at the St. Louis National Stock Yards. In selling consignments already received I find it to be an active, responsive market. We can sell a half million more stock cattle and feeders than have ever yet passed over the scales in one year. To points in Missouri, Illinois and Indiana the railroad service is quick and satisfactory; the rates are reasonable.

I cordially invite all who are interested in stock cattle and feeders to call at our office. The door is usually wide open, and if it happens to be closed, the latch-string hangs out.

Very Truly Yours,

A. J. MILTON,

Manager Cattle Department, Clay, Robinson & Co., at National Stock Yards, East St. Louis, Ill.

The Twice-a-Week St. Louis Republic

Is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Democratic newspaper in the United States. We highly recommend this paper.

The National Farmer and Stock Grower

Is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

Combination Offer.

By an arrangement with the publishers of the Republic we are able to combine both of these papers for the price of one.

Send Us One Dollar

and will mail to your address

The St. Louis Republic Twice-a-Week Edition

for one year; also

The National Farmer and Stock Grower

for three years.

Address, Hale Publishing Co.,

3550 Vista Avenue, ST. LOUIS, MO.

VISIO CURED HIS HORSE.

I used one bottle of Visio on a saddle horse which had an attack of moon-blindness, and the curative desults were immediate. I cheerfully recommend Visio to any one having a horse with any defect in the eyes. Yours truly, R. C. GUNNING, Elliot Stock Farm, Waukegan, Ill.

BANNER HAY RAKE.

The best Rake ever sold. Steel axle, frame, teeth and wheel. 8 and 10-foot sizes. Both hand and self-dump. **WEBER IMPLEMENT CO., 415 North Main Street, St. Louis, Mo.**

A LONG FAREWELL.

She (effusively)—"How nice it is to have met you again after all these years, my dear Captain Burlington!"

He—"Major now! That was ten years ago, you know."

She (still more effusively)—"How time flies! Well, congratulations and good bye. I hope you'll be a General when next we meet." Punch

"Culture is the power which makes a man capable of appreciating the life around him, and the power of making that life worth appreciating." Mallock.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.**

For One Dollar we will send The National Farmer and Stock Grower for three years and a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Abundance of Vegetables and Fruit.

Last summer I visited a farmer that has made it a point to supply his family with a great abundance of vegetables and fruit. He himself takes care of a farm of over two hundred acres, but he makes it a point to supply his wife with all the things the land can produce under a high state of culture.

He had set apart over an acre of land just back of the house, and this acre of land was enriched to the point where it might easily be too rich. The land had been cultivated over and over again till the earth was in a perfect condition for growing everything that will grow in a Northern garden.

A long row of rhuburb was nearest the house, and the stalks in this row were as big as any we ever see on the market and were more than a yard in length. The owner says that there is nothing like a good supply of farm-yard manure to give big, juicy stalks, and so he cultivates in manure every fall. This work is done in the fall, so that the rhubarb may be fully supplied with an abundance of plant food when it begins growth in the spring.

Next to this row was a long row of asparagus. The farmer had not contented himself with setting out a dozen roots of asparagus. He had a row so long that the tender tips could be cut as soon as they were a little above the surface of the ground. This gave a supply of asparagus tips so tender that all could be eaten like green peas. The richness of the soil also gave tips that were thick and meaty as soon as they appeared at the surface.

Two rows of currant bushes were loaded with fruit when I saw them. Each thrifty clump had been trimmed into regular shape and the foliage was bright and heavy. The hellebore had been applied as soon as the first worm appeared, and thus the foliage had been preserved. The lady of the house said that she always had all the currants she could use, and that the crop was one that could always be depended on if the insects were kept off.

The blackberry and raspberry bushes had been kept cleaned out, and no dead wood was allowed to injure the appearance of the plantation. The grapevines also were in perfect condition on the trellises and were loaded with green grapes.

I asked if the care of this fruit plantation with the vegetable garden did not require a good deal of work? The owner said that it did, and that this was just the reason why so many farmers had poor kitchen gardens, or none at all. The weeds had to be kept down, and this was always a large task, even though the garden and fruit plantation had been laid out in straight lines to make possible the use of the horse cultivator.

Nevertheless, the owner declared that he would not omit the care of this part of the farm at whatever cost it might be, for it made enjoyable living on the farm, as his table was always supplied with the best of fruit and vegetables in great abundance.

The ideal farm life cannot be lived without a full supply of all the good things that can be grown on the farm. The raising of field crops should not be allowed to crowd out the raising of the numerous varieties of fruits and vegetables, which bring both health and happiness to the farmer's family.—M. G. T.

Some Uses of Red Clover.

With the passing of the years the value of red clover is being more and more understood.

Most of us can remember the time when red clover was not looked upon as a very valuable forage plant, even by the owners of dairy cattle. It took the work of the scientist to prove that red clover makes a hay that is superior for feeding cattle, especially if milk is the object of the feeding.

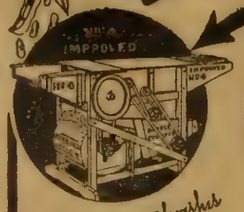
One use of red clover is the amelioration of hard land. On land that is of a heavy clay composition I have seen it do wonders, even when the surface soil had been removed. In a year or two it leaves the land filled with roots that are rich in nitrogen, and in their decay makes a good foundation for the grasses.

I remember especially seeing a weedy area that had been reclaimed from the forest, sown with the seed of red clover. The ground was not touched with the plow. Indeed it would have been difficult to plow it, as it was full of roots. The seed of the red clover was sown among the weeds and soon a luxuriant crop of clover appeared. It remained two years, and when it left the weeds had disappeared. In its place blue grass had come in naturally.

In the East we used to grow it extensively for a double purpose—the securing of a valuable hay crop for feeding dairy cows and the supplying of nitrogen to the land. The soil was of a texture that did not promise much in the way of humus or of nitrogen. We found, however, that red clover could always be depended on to grow on it. We raised two crops of clover and then put the land into something else, usually potatoes.

The clover plant has a very large root, as compared with some other plants. An agricultural professor tells me that it has four times the bulk of the root of a cowpea having the same bulk of top. For this reason it is a great help to land that needs nitrogen and humus. Moreover, the fact that it can be grown without losing the use of the land is very much in its favor.

DO YOUR OWN THREADING



For the small grower. Threshes from the vines without splitting the seed. Beans, buckwheat, kaffir corn, peas and soybeans

Will also thresh small grain if equipped with extra pulley. Will increase your Pea and Bean profits 33⅓%

For the large grower and threshermen. Has larger capacity than any other Thresher. Will shred and clean corn as regularly equipped

ONE HALF of your profits from beans and peas are lost if you do not thresh them from the vines in such a way that you save the seed in a whole, clean marketable condition. The Owens Threshers are guaranteed to do this. They absolutely will not split the seed, and yet take every pod from the vines. They will also shred the vines and take all sand, dirt and foul stuff out of them. Handled by an Owens Thresher your crop will yield you better both in quantity and in price, both for your seed and hay. Don't continue the old wasteful way of handling your crop. Try the—

OWENS PEA AND BEAN THRESHERS

Built in 4 Sizes—Double Cylinders. Larger Separating Space than Any Other Thresher of Equal Size—

which has double cylinders enabling one to run the thresher at a low rate of speed, preventing any possibility of splitting the seed—and yet be able to take EVERY POD from the vines.

(A single cylinder thresher cannot take all the pods from the vines if the speed is reduced sufficiently so as not to split the seed.)

"The Owens" has on account of its extreme length a larger separating space in proportion to its size than any other thresher built. This also makes the Owens do much cleaner work than any other so that you can do without a recleaner.

It is built of absolute first-class material by the most skilled mechanics and workmen, and is an all around superior thresher.

But we are unable to give you a true, clear description of the Owens in this ad. Our catalogue does that fully, besides shows you illustrations of all parts of the machine. You better send for it—it's a valuable book for the grower of beans and peas, as it gives information gathered from the best authorities on how to grow and cultivate them.

The Manufacturers' Own Proposition to You

Is the most liberal ever made by any manufacturer. If we have no agent or dealer in your locality, we will save you their commission, but you must write us so we can explain it to you fully, and send you price list and full particulars about our free trial plan, guaranty, etc. Let us hear from you at once.

J. L. OWENS CO.

679 Superior St. S. E. MINNEAPOLIS, MINN.

Some advocate growing clover and turning it under. This plan has never appealed to me as being a good one. It is more profitable to let the land have the benefit of the roots only and feed the tops to farm animals, afterwards putting the manure on the land. Much of the manurial elements will thus get back on the land, and the proportion that is retained in the carcasses of the animals will be worth too much in the market to permit of its not being disposed of in that way.

Red clover is a good crop to use as a smother crop when dangerous weeds are to be gotten rid of. One year we sowed it with white clover on a piece of rich but weedy land. It grew densely, and one would think the white clover had been crowded out like the weeds; but when we came to mow it we found that the white clover was growing in the shade of the red clover, and the growth of the two was so dense that the stems of the two plants for the lowest three inches were blanched; but not a sign of a weed could be seen.—M.

"A house is no home unless it contain food and fire for the mind as well as for the body."—Margaret Fuller Ossoli.

New Minnesota Dairy Laws.

Andrew French, Dairy and Food Commissioner of Minnesota, has issued a bulletin, making a synopsis of the new laws covering dairy and creamery products, as follows:

Pasteurization of whey delivered from cheese factories is made compulsory, by heating the whey to at least 180 degrees Fahrenheit.

The exemption from the license provision of the law of those owning and selling milk from not more than three cows is eliminated.

All milk or cream purchased for the purpose of manufacturing into butter or cheese shall be received or purchased by weight, and paid for on the basis of the butter-fat contained therein. The falsification, manipulation, overreading or underreading of the test, or the use of such false reading, is made a misdemeanor.

Milk, cream or ice cream cans must be thoroughly cleansed before they are returned to the shipper.

Creameries must label butter packages as containing butter made from pasteurized milk or cream, in the event that certain provisions of the law, as to the use of effective pasteurizing apparatus, shall have been complied with.

Discrimination in prices paid for milk, cream or butter-fat in different localities is a misdemeanor, and heavy penalties are provided in the event of its violation.

On and after January 1, 1910, all operators of the Babcock testing apparatus will be required to secure license from the Dairy and Food Commissioner, after having passed a satisfactory examination.

CREDIT Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of The National Farmer and Stock Grower will be glad to furnish the paper three years for **One Dollar**, the same to be payable at **the end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

Immigration Decreasing.

The steerage business of the Atlantic steamship lines is one of their prime sources of profit. They have been hard hit by the lull in the immigration tide during the past year. The decrease in the number of immigrants carried in 1908 was 583,000, compared with 1907. The average cost of a third-class passage being $30, this made a shortage in the revenues of the steamship companies aggregating the enormous sum of $17,490,000.

HISTORY OF AGRICULTURE.

Three Thousand Historical Items Arranged by Dates From the Earliest Times to the Year 1906 —All For 25 Cents.

The editor of the National Farmer and Stock Grower has collected historical items relating to agriculture and live stock raising and arranged them in the order in which the incidents happened. It is a record which is intensely interesting to all earnest farmers and progressive stockmen. The events recorded include much that is ancient and is brought down through the ages of progress to about the year 1906. This material is all arranged in a handy booklet of 100 pages; it is nicely illustrated, and is a handy, useful publication. We will be glad to send a copy, postage paid, to any of our readers on receipt of 25 cents, or we will credit one-year's subscription to The National Farmer and Stock Grower for 50 cents and we will send a copy of the Date Book History of Agriculture as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Milk Out of Season.

Dr. Evans, the Chicago Health Commissioner, is quoted as saying that God did not make cows to supply milk for human beings; that the original intention was for the cow to only furnish enough nourishment for the calf, and that man took a hand in the matter and by much feeding and much milking she has been forced to gradually increase her supply of milk so it may be used for human needs. This unnatural forcing process has lowered her power of resisting disease and the modern cow is particularly susceptible to tuberculosis. The doctor appears to be of the same opinion as the lady ranchman in Texas who explained to her visitors that the absence of milk on the table was due to it being out of season. The cows gave milk for a few months of the year and dried up, and then the milk season closed. The dairy press of the country is almost unanimous in their view that it is almost time for Dr. Evans to dry up.

New York Milk Prices.

New York Exchange price for April milk was 3⅛ cents per quart, or 12½ cents a gallon; from May 1st to 21st the price was 2¾ cents a quart, which is 11 cents a gallon; commencing May 22d, until otherwise announced, the price was 2½ cents a quart, equal to 10 cents a gallon. The New York milk market has been heavily supplied since April 1st. The cool month of May, and particularly the last half, caused a great accumulation of milk. Our information comes from the Milk Reporter of Sussex, N. J.

A Question About Soil.

A correspondent from Will county, Illinois, writes: "I have a piece of sandy-loam land, which starts a crop off good enough, but for some reason the crops do not fully develop here. They seem to stop growing a month before crops on black bottom land. Can you tell me how to handle this land?"

The trouble here no doubt is the same as is met with on many sandy loams. The top soil is not deep enough to furnish feeding ground for the roots of the plants throughout the season; and, not unlikely, there is an unfriendly subsoil. As long as the roots of plants have abundant room for growth and plenty of food within the feeding ground, they will prosper and develop fully within the normal growing season. Lack of food, crowded feeding ground for the roots hinder the growth and ultimately will completely check it. The thing to do is to gradually deepen the top soil. Grow clover, or other legumes, and return to the soil all the straw and manure made on the farm. By gradually deepening the surface soil to, say, twelve to fourteen inches, the roots of nearly all cereal crops will have ample feeding ground and will not have to depend upon the subsoil for help.

Another point should always be kept in mind when working this kind of soil; that is, the retention of moisture. With a good supply of humus there need be but little trouble from this source. But these soils dry out quickly, and unless they are kept in that mechanical condition to conserve moisture the roots of plants are forced to strike deeper and sometimes they meet with an unfriendly subsoil.—L. C. Brown.

Roofing Guarantees.

When a maker guarantees his roofing, it merely means that he puts his claims for it in writing, and if there is any dispute afterwards, there are thousands of ways in which the maker can evade responsibility if he chooses.

The makers of Congo Roofing, however, have devised an interesting plan which gives the buyer absolute protection. With each roll of roofing is furnished a Surety Bond issued by the National Surety Company of New York, guaranteeing the faithful performance of the guarantee by the manufacturers. This gives to any possible complainant a Court of Appeals to which he can go, over the head of the manufacturer. In fact, this guarantee bond so pledges that if the manufacturers of Congo Roofing should go bankrupt or close out their business, the Surety Company would still continue to guarantee the reliability and satisfaction of Congo Roofing. The guarantee on the three-ply is for ten years.

A copy of the Guarantee can be obtained by addressing the United Roofing and Manufacturing Company, Philadelphia, Chicago and San Francisco.

St. Louis Wool Market.

Those who have wool clips for sale should write to A. J. Child & Sons, St. Louis, Mo., and obtain their 1909 wool circular. St. Louis is a first-class wool market for the shipper and it has often been the means of preventing disastrous declines in values when other markets were demoralized. Many mills buy in St. Louis that do not buy anywhere else, and the Eastern markets can be lifeless when St. Louis is active. Messrs. Child & Sons handle wools strictly on commission, and the firm is absolutely reliable.

You'll Buy a Cream Separator

When You See the One You've Always Wanted

You know there are two styles of separators which are recognized as standard, and that other manufacturers each make **one** style. Each claims that his **one hobby** is the "only" one. Each will try to force his one style on you, whether it's what you want, need and want to pay for it or not. That is **not** the Empire Way.

We saw the good in both styles, if rightly designed, made of the right materials, by the right men. So here is the result of Empire inventions, Empire materials, Empire workmen and facilities, and Empire "know-how"—A quality machine for every cow owner in

The Empire Line

—**The Frictionless Empire.**
—**The Empire Disc.**

All are backed by the Empire Guaranty, as good as a Government Bond—Because we know that each is better than any other make of separator at any price.

As each style has all sizes, we offer twice as wide a choice as others. Some Empires are low in price, because one style costs less to make than the other. All are the same in quality—**First Grade.**

Fit your ideas, fit your capacity needs, fit your pocketbook—at headquarters—The Empire Factory.

The Empire Book Free. Gives facts, not claims, because we don't depend on **one** style to make a sale. It is fair and impartial. Write for it today.

EMPIRE CREAM SEPARATOR CO.
Chicago, Illinois
Factory, Bloomfield, N. J.

Music on the Farm.

Again we invite our patrons to consider the great and interesting subject of musical entertainment on the farm. The Edison Improved Phonograph is a great entertainer. It is greatly improved. The new Amberol records play twice as long as the old records, and the new spceially-made horns bring out every word with great force and clearness. A farm with music is worth a dozen farms without. Write for booklet entitled "The Edison Phonograph and the Home." Address, National Phonograph Company, 168 Lakeside Ave., Orange, N. J.

The highest courts in England and Germany have declared void any law or ordinance which provides standards which a cow cannot live up to. If the seller can prove that the milk in question is just as it came from the cow, he is safe, as he ought to be. We understand that the Maryland law requires a cow to give 3½ per cent. butter-fat and 12½ per cent. total solids, which is an unjust imposition on the cow.

2 H.P. Stationary Engine $29.50

2½ to 8 H. P. Proportionate Prices.

For use on the farm and in the shop.

Runs cream separators, churns, pumps, corn shellers, washing machines, printing presses, etc. Burns kerosene, coal oil, alcohol, gasoline, distillate, without change of equipment, starts without cranking, throttle governed, drop forged steel shaft, best grade babbitt bearings, free catalog tells how to save half cost of hired help. Testimonials. 10,000 in use. All sizes ready to ship.

THE WHEAT SITUATION.

Prices Are Not Any Higher Than They Ought to be, and Entail No Hardship on the Consumer.

What is called the May option in wheat on the Chicago Board of Trade was first traded in on June 23d, 1908, at 89 cents a bushel, and it closed out at $1.34 per bushel on Saturday, May 29th, 1909, because Monday, May 31, was a legal holiday and the Board of Trade was closed. All wheat sold under the May option had to be delivered or settled for by the close of the May market, and all wheat bought had to be received by the buyer or settled for by the close of the May market.

According to official reports, the market closed without any excitement and only 1¼ cents per bushel below the highest quotation during the month. In a general way, the reports agree that there was absolutely no excitement and that the advance in price was fully justified by existing conditions; in other words, on the legitimate market May 29 wheat for consumption was worth all and more than it cost on the speculative market. That actual wheat was scarce and is scarce is fully borne out by the statement that Chicago received 1,001 cars of wheat in May, 1908, and only 133 cars in May, 1909. Actual deliveries on May 29th at Chicago were 595,000 bushels of wheat.

An official report from Chicago said: "There has been no attempt to deceive the trade or the public, everything being in the open. There has been no manipulation and no disposition to take advantage of the shorts." This may be so or it may not. Undoubtedly there was a large amount of speculation, and it is estimated that during the period the market advanced profits estimated to have been made amounting to $6,400,000 were offset by losses of equal amount sustained by the same class of people who traded in grain and had to deliver or settle. It is estimated that the stock of wheat in farmers' hands and sold at higher prices by farmers and holders, elevators, etc., increased in value $50,000,000, and it seems to be a statement which is fairly supported by the facts.

Notwithstanding there is considerable speculation in wheat, there is also considerable trading, day by day, in cash wheat, which goes to the millers, to elevators, or for export. Cash wheat applies to car-loads shipped direct from the country to the open market. In St. Louis, on May 24th, cash wheat No. 2 red sold up to $1.58 per bushel. At Cincinnati the top price for the same grade was $1.56, although the speculative May option was quoted at Chicago at $1.34¼, and in this Chicago case there remained but six days to deliver the goods. On the last day of May, cash wheat for actual delivery was quoted at $1.58 per bushel at Minneapolis.

In studying over this matter with an honest purpose in view of understanding it, we come directly to the conclusion that it is the strong statistical situation which has permitted the wheat to sell higher. The United States Department of Agriculture estimated on March 1st that in farmers' hands there remained 143,692,000 bushels of wheat; whereas last year at the same time there were 148,721,000 bushels, and the year before 206,642,000 bushels. Since March 1st every inducement has been offered the farmer to unload, and although selling has continued for three months and prices have gone higher than farmers expected or hoped for, the selling has not reduced the price. Furthermore, on March 1st, 1909, the percentage of wheat in farmers' hands was less than the average of the past twelve years. Allowing the government report to be correct, it was showing a strong selling situation on March 1st, and if the visible supply and crop were both overestimated, it only shows the demand still greater than the supply, and makes the high market a very reasonable one. Of course, wheat is a world's crop, and when a world's crop is short the door is open for the first man who finds it out to make a little money by buying and storing for an advance.

Much is said about gambling in wheat by people who do not understand anything about it. If a man sells a certain amount of wheat and delivers it according to contract, that is called a legitimate transaction; but if he should have made a bad bargain and pays the difference and settles up the transaction without delivery, that is called gambling, whereas there may be no actual difference in the intention to gamble or not to gamble in either transaction. To eliminate gambling it is necessary to eliminate trading, and to eliminate trading is to eliminate commerce. It appears that every bushel of grain bought on the speculative market was accepted whenever it was tendered; therefore, so far as the chief speculator is concerned, gambling could not be proven.

In reviewing the situation, we see that June cash wheat is selling up to May cash wheat prices; that during the month of May wheat delivered on the spot was higher than the sale in which there was time for delivery.

We believe that wheat at $1.50 a bushel, which is 2½ cents a pound, is not higher than farmers ought to get for it. We never agitated for dollar wheat, for the reason that $1.00 a bushel is too low. The farmer cannot afford to produce wheat for less than 2½ cents a pound. With wheat at $1.50 per sixty-pound bushel, bread can be made and eaten by families at a very reasonable price, that will entail no hardship on them. We have only one wish in connection with the Board of Trade, and it is that trading by the bushel be eliminated, and all grain quoted by the 100 pounds.

Wholesale Supply House
511 & 513 N. Main st., St. Louis, Mo.
BOX 301.

Root Quotations at St. Louis.

On June 1st, at St. Louis, commercial roots were selling as follows by the pound: Golden Seal, $1.30 to $1.35; Ginseng—Wild at $5.25 to $5.75; cultivated at $4.75 to $5.00; Lady Slipper, 18c.; Seneca, 30c.; Pink, 18c.; Black, dry, 8c.; May Apple, 4½c.; Snake, 32 to 35c.; Angelica, 5c.; Wahoo—Bark of root, 14 to 16c.; bark of tree, 4c.; Blood, 4½c.; Blueflag, 5c.; Sassafras, bark of root, 5c.; Wild Ginger, 9c.; Spikenard, 3c.

SHIPPERS AND SELLERS
—of—
STOCK AND FEEDING CATTLE
are reminded that the
ST. LOUIS
NATIONAL STOCK YARDS
furnish by far the best market for their stock.

A majority of the stock feeders of Missouri, Illinois, Indiana and Ohio prefer to buy their feeders at St. Louis. They have short runs, favorable rates, quick service, small shrinkage. These people get their cattle home in good shape. There is never a glut of stock cattle at St. Louis. Western shippers can get their stock cattle to the St. Louis market just as easily and as cheaply as they can to any inferior Far West market, and at St. Louis there is quicker sale, better results, and in the shipping in, concentration, sale and outward shipment there is less expense, less shrinkage and less loss to come out of the cattle. The center in which all can be brought together and distributed at the least expense to all concerned is the best market of all.

THE BEST MARKET OF ALL—UNDER ANY AND ALL CIRCUMSTANCES—IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

St. Louis Poultry Quotations.

On June 1st the following were poultry quotations, by the pound: Turkeys—Young and old, 15c.; small, 13c. Chickens—Fowls, 11½c.; old roosters and stags, round, 6½c. Old ducks, 8c. Old geese, 4½c. Spring chickens, 1 and 1¼-pound, 18c.; 1½ and 2-pound, 23c. Spring ducks, 2-pound, 15c. Guinea chickens, per dozen, $2.00.

Dressed Iced Poultry: Turkeys—Young and old, 15½c.; small, 13½c. Chickens—Fowls, 12c.; old roosters and stags, 7c. Ducks, 8½c. Geese, 5c. Spring chickens, 19 to 24c.

Pigeons and Squabs—Live pigeons at 75 to 90c. per dozen. Squabs—Fancy homers, $2.25 per dozen for 9-pound, $2.50 for 10-pound, and $1.25 for small; common, $1.00 to $1.50 per dozen.

FARM AND RANCH LANDS.

CUBA LANDS. THE BEST INVESTMENT. Lot 1.—Cattle Ranch of 1,100 acres. Magnificent location. A Ready-made Home. Lot 2.—2,400 acres, cedar, mahogany and mahuaga timber. Virgin soil. Lot 3.—Cattle Ranch of 5,300 acres, divided into five pastures. A fine house. Rich land. Royal palms. Valuable timber. Lot 4.—1,500 acres richest land in Cuba, near Cuba Central Railway. Fenced and divided. Lot 5.—6,000 acres choice land, in American section; cheap but excellent proposition; fencing; living water; fifty miles from Port of Gibard. Write for full description, Cattle Lands, Coffee Lands, Cane Lands, Tobacco Lands. Will show lands to buyers this summer. Cuba is the country of delightful homes and profitable investments. Address, Andrews Trading Co., Gainesville, Fla.

Michigan.—I sell Farms in Oceana, the best county in the United States; fruit, grain and stock. Write for list. J. D. S. Hanson, Hart, Mich.

Farms For Sale.

800-ACRE FARM.

Note what I say: It is a great bargain, well improved; it adjoins railroad station; it will grow 60 to 80 bushels of corn to the acre; it is underlaid with coal; it is in a fine locality; it is high class; it is about two hours from Kansas City, six hours from St. Louis, and twelve hours from Chicago. Price, $75 per acre, easy terms. Farms immediately adjoining are held at $100 to $125 per acre.

The finest large farm in Missouri, nearly two sections, seven miles from south city limits; R. R. station on farm.

Also 2,500 acres, fenced and cross-fenced; four good houses, eight fine barns; rich corn land. Land and improvements all in fine shape. About 1,500 acres in blue grass. $40 per acre.

Other farms for sale.

J. H. LIPSCOMB,
306 Fidelity Trust Bldg., Kansas City, Mo.

HOMESEEKERS

Come where one crop of tomatoes will pay for the land. 62 canning factories in the county. 360 cars canned tomatoes shipped last year. Fine dairy and stock country. Send for list and circulars describing a county that has been overlooked. No hail storms or hot winds. Grow most everything. Most healthy country. All good water. We can interest you. Write us your wants to-day. One price. We do business only on the square and our reputation is our reference.

WRIGHT & WATERSTRIPE,
Marshfield, Mo.

New Mexico Land for Sale. 1,000 acres on the Pecos river. Two miles on the river will make a fine cattle ranch, or can be irrigated. For particulars, address, J. C. Clancey, Puerto de Luna, New Mexico.

Oklahoma.—Farms for sale. LOOK! BIG OPENING OF LANDS IN OKLAHOMA. 2,000,000 acres of improved school land on forty-years' time. Also 4,000,000 acres Indian land on four-years' time. Send 25 cents for descriptive booklet to M. N. Due, Publisher, Dept. 31, Tecumseh, Oklahoma.

Tennessee.—Send for booklet on farming and full description and price of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, East Tennessee Real Estate Company, Morristown, Tenn.

Texas.—12,000-acre ranch within eight miles of Sabinal, Uvalde county, Texas. A part fine grazing land and the balance richest agricultural soil. Will sell in 2,000-acre tracts or less. Agricultural lands average $11.00 per acre and grazing lands average $4.75. Greatest bargains in the state. For particulars address Albert D. Evans, National Stock Yards, Ill.

CASH FOR YOUR FARM OR BUSINESS.

No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.

Information Wanted

Wish to Hear from Owner

regarding good farm for sale, in any good locality, suitable for dairy purposes or general farming. Not particular about location or size. Wish to hear from owners only who wish to sell direct to buyer without paying any commission. Please give brief description and price. No agents need answer.

Address I. A. LESHER
46 W. Monroe St., Room A. W., Chicago, Ill.

Dairy and Creamery.

During one week recently thirty-four barrels and 141 tubs of factory butter were received in New York that had been exported to England and Scotland. The incident shows the English markets to be in bad shape, and it also shows that not all the butter exported is high-grade goods.

The American Creamery says: "Many crimes are made in the name of pasteurization, but it remained for a German creamery to utilize it for watering the milk sold. He applied direct steam and thus increased the volume of milk with 12 to 13 per cent. water. He got off with a $25 fine."

Inoculation For Alfalfa.

A timely bulletin from the Geneva Experiment Station is No. 313, which shows how important lime and inoculation are for alfalfa. In 103 tests where inoculating soil from the Station field was sent to farmers for use on their own fields, sixty-six crops were successful, while only twenty-five adjoining uninoculated plats gave good crops. In sixty-four tests where lime was used, all but six plats showed improvement, and twenty-seven plats were changed from failure to success by liming. Where both inoculation and lime were used, 77 per cent. of the crops were successful; while less than 25 per cent. of the untreated plats succeeded.

No one should attempt to grow alfalfa without studying this bulletin carefully. It will cost you only a postal card to secure it. Address the Agricultural Experiment Station, Geneva, N. Y.

CREAMERY WANTED.

The Industrial Club of Devall's Bluff, Arkansas,

Invites correspondence from experienced man with capital with view of locating creamery in one of the best towns in Arkansas. Right in the greatest cow and grazing section in the Southwest. High hill country. Good health. Good schools. Churches of all denominations.

Address, **C. W. ADAMS, Secretary, Devall's Bluff, Arkansas.**

Milk Producers' Association.

The officers of the Milk Producers' Association of Missouri and Illinois met on Monday, May 24th, at the office of the Secretary at one o'clock p. m.

None of the Railroad Delegates were present.

The Secretary had received subscriptions and membership fees from T. Jones and Hermann Strothmann, of Robertsville, Mo., who are new members.

Mr. W. S. Prickett, of Sorrento, Ill., who ships from New Douglas, Ill., was a visitor at headquarters during the day.

Hon. D. I. Furbeck, President of the association, acting as Milk Committee, reported an overloaded milk market and that he was unable to report a definite price for uncontracted milk of May delivery. The distributing companies of the city are receiving large quantities of milk and cream under contracts at stated prices, very much of it at 12 cents a gallon, and they were disposed to talk 10 cents a gallon for uncontracted milk; therefore, the range will be from 10 to 12 cents, the same as last year. The President stated that he was at a disadvantage, because he was not in possession of the lists usually furnished by Delegates, showing the shipments of members and price paid.

The next meeting of the association will be held Monday, June 28th, at the office of the Secretary, Mr. Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo. In the meantime, all members who are in arrears will be advised of the fact.

When to Cut Oats.

A Livingston county, Illinois, farmer cuts his oats about four or five days earlier than others in that section. He says he gets much better straw, and his grain is just as heavy as if it were left standing a week longer. Let us see. The value of the oat crop should be measured by the amount of grain secured. The straw serves a good purpose, but its value is only secondary. Even a few days make a marked difference in the composition of the straw. For instance, when oats are cut directly after the flowering stage they make an admirable fodder; but allow them to stand a week longer and most of the valuable matter has passed into the grain and the straw begins to decay next to its roots. It is a very nice thing to know when to cut oats at just the right time. Those who make considerable of the straw, and cut the crop before growth ceases in the stem and leaves, always have many green berries, and these are usually light. Some farmers seem to think that the grain will fill out or ripen in the bundles after it is cut. Of course grain will not do this, to any extent.

Whatever material is left in the straw at harvesting time is at the expense of the grain. When oats are grown as a grain crop, they should be cut when they are thoroughly ripe, and of course before they become dry enough to shatter to any extent.—L. C. Brown.

Weeds in Pastures.

A Whiteside county, Illinois, correspondent writes: "At our Farmers' Institute some one told us that if pastures were treated with manure, that it would kill out the weeds. The weediest part of my pastures this spring is where I spread manure last fall, and it seems there are many weeds which I never noticed before."

Manure will furnish right conditions for weed seeds to germinate and grow, so the thing to do is to rid the pastures of these weeds as fast as they show up. Frequently grass kills out in spots in pastures. These spots are the prolific weed-breeders, and it will require heroic and persistent work to get them back to good pasture grasses. Manure is a good thing for thin pastures. Spread it on thinly and keep reseeding. The only way to handle the weeds is to keep them cut down. Many are annuals, so if they are not allowed to form seed they are easily gotten rid of.—L. C. Brown.

St. Louis Feather Quotations.

At St. Louis, on June 1st, feathers were selling as follows by the pound: Prime white live goose in small sacks at 51c., and in large sacks at 40c.; prime gray do. at 39c. in small and 37c. in large sacks; old white, 36 to 38c.; x, 27 to 32c.; xx, 16 to 20c.; xxx, 10 to 14c.; xxxx, 5c.; tare, 10 per cent. on small sacks and 3 per cent. on large. Duck—White, 38c.; dark, 27 to 30c. Chicken—Prime dry-picked, body, 3c.—wet, damp and quill-mixed, 2c. Turkey—Tail (straight and clean, no shorts), 32c.; wing, 15c.; pointers, 5c.; tail, wing and pointers, mixed, 10c.; dry body, 5c.; green body, 1 to 3c.

$29.75 FOR THIS NEW LOW DOWN AMERICAN $29.75

CREAM SEPARATOR

A SEPARATOR THAT EXCELS ANY SEPARATOR IN THE WORLD

DON'T HESITATE BECAUSE OUR PRICE IS LOW. The quality is high; we guarantee it. It is up to date, well built and well finished. It runs easier, skims closer and has a simpler bowl with fewer parts than any other cream separator. Don't accept our word for it. Judge for yourself. Our offer enables you to do this at our expense. Write us a postal card or a letter and receive by mail, postpaid, our 1909 catalogue. It is handsomely illustrated, showing the machine in detail, and fully explains all about the Low Down AMERICAN. It also describes the surprisingly liberal LONG TIME TRIAL proposition we can make you. Competition is defied by the quality and price we make. Our generous terms of purchase will astonish you. Remember, we are the oldest exclusive manufacturers of hand separators in America, and the first to sell direct to the user. You are not dealing with any agent, middleman or catalogue house when dealing with us. Not one single profit is paid anyone between ourselves and our customer. You save all agents', dealers', even catalogue house profits and get a superior machine by dealing with us. Our New Low Down AMERICAN Waist High Separator is the finest and highest quality machine on the market and our own (the manufacturer's) guarantee protects you on every AMERICAN Separator. We can ship immediately. Western orders filled from Western points. Write us and get our great offer and handsome free catalogue on our New Low Down AMERICAN Separator. Address

Raising the Skim-milk Calves.

The separator which is used in connection with the dairy business contributes very largely to the successful raising of the calves.

This is so because the milk can at all times be fed warm and at the same temperature, and also that it may be fed sweet at practically all times.

Just at this point I wish to say that in calf feeding the uniformity of the condition of the milk contributes probably more than any other one thing to the successful feeding of the calf. Skim milk contains all the elements of the whole milk except the fat. All the elements necessary to produce muscle, bone, hair and promote growth of the young animal still remain in the skim milk.

The separator has taken from the milk only the fat. The fat of the whole milk is not necessarily an element to the growth of the young calf.

Skim milk, as stated, contains all the elements necessary for growth; however, some fat must be fed in connection with milk to produce a certain amount of fat in the calf's body and also for the purpose of keeping the calf warm. It will be seen, in the first place, however, that calves running with their dams are eating more fat than they really need, which results in loss to the owner, because it does the calf very little good.

It is a surplus of fat which the calf does not need, and when butter-fat is selling at an average price of 20 to 25 cents a pound, it can be seen that it will be economy on the part of the farmer to save this fat and sell it.

On the other hand, if a substitute for this fat can be added to the skim milk and this substitute is cheaper than butter-fat, as it is, then the farmer is again practicing a system of economy which he can't afford to overlook.

Now, the farmer cannot afford at the present time to sacrifice his chances for a good calf, and he need not do so. A calf which will sell at one year old at a good figure is just as necessary on the farm as it is for a man to have a cow on his farm. We can't afford, therefore, to start this calf in any other way but to start him right, and by this I mean to feed him well.

Even though the farmer is procuring excellent prices for his butter-fat, he can't afford to mistreat or stunt the calf during the first two or three weeks of its life. I would, therefore, be as liberal as need be in feeding a young calf whole milk. The calf should by all means have the first milk from the cow. This milk is the feed intended for the calf when little. It has certain qualities which are necessary in putting into action the calf's stomach, consequently every calf should have its first two or three feeds of the new milk.

A good cow, however, will usually give much more milk, even from the start, than is needed by the calf, and here is the chance for the farmer who is running things right to get some good hog feed, which feed is worth dollars to him, and by giving it to his hogs he does not in any sense rob the calf.

Most farmers desire that the newly-born calf should take this new milk direct from its mother's udder. I have no fault particularly to find with this method in ordinary farm practice, but for myself in handling a herd of excellent dairy cows, I never permit the calf to suck when it can be avoided. The calf gains nothing and the farmer loses much in the way of future product and annoyance from the mother if the calf is permitted to suck.

In ordinary farm practice it is very well to allow the calf to remain with the mother two or three days, or, if not this long, at least to suck a time or two.

When the calf is taken from the cow he must, of course, be taught to drink.

The longer the calf remains with the cow the more difficult it is to teach him to drink. For this reason principally I do not allow the calf to suck, if I can avoid it.

In giving the calf his first meal artificially, which is from a milk pail, let the calf be hungry before you attempt to feed him. A hungry calf will learn to drink much more quickly than a calf which is not hungry. In fact, it is next to impossible to make a calf drink until he is hungry. It therefore will save wear and tear on the temper and the calf will be treated just as well if he is not allowed to eat until he feels the need of a meal. During the first week of the calf's life I feed no skim milk, even though I have it warm and sweet from the separator.

At the end of the second week I try to have the calf eating a little grain, and have reduced the quantity of the whole milk fed, increasing the skim milk until the calf is on a ration of skim milk and grain and nibbling a little grass. By this plan my calves do as well as though they were sucking the dam, the calf having entered a life of thriftiness, economy and profit.—R. B. Rushing.

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. **Lasts all season.** Made of metal, cannot spill or tip over, will not soil or injure anything. Guaranteed effective. **Of all dealers** or sent prepaid for 20 cents.

Brooklyn, N. Y.

Handling Calves.

A correspondent at Brook, Indiana, writes: "I have lost two calves this spring with scours. Is there any remedy for them?"

Usually scours are the result of poor care. Even when feeding methods are all right, damp and drafty sheds or barns will develop scours within two or three days. I saw this very thing in DuPage county, Illinois, just a few days ago. The calves were kept in the basement under the barn. There was scarcely any bedding, the ground was damp and the calves were kept there sixteen hours out of every twenty-four. The calves were scrawny, had poor appetites and were not doing any good. This is not an unusual case, for the same conditions may be found on many dairy farms.

Put the calves into dry, warm quarters, with plenty of clean straw for bedding. If they are being fed on skim milk, better discontinue this and feed a pint of fresh milk twice a day for two or three days. A little flaxseed meal with a raw egg, fed twice a day, will soon bring the calves around all right.

Sometimes dirty pails are the source of infection. The feed pails of the calves should be thoroughly scalded out every two or three days. Pails left in the pens or yards where the calves are running, day after day, are sure to make trouble. Clean up the pails and keep the youngsters nice and warm, and no one need to worry about scours.—L. C. Brown.

UNITED STATES Cream Separators

U.S.

Everybody knows the name **United States** on a Separator is **an absolute guarantee of Superior Quality, Long Service and Absolute Satisfaction.**

Best To Buy

That is the best sort of economy; it means a saving of money to you. Why then run any risks with "cheap" makes?

See the U. S. Separator Dealer

Let him show you how a **United States Separator** is made, its perfect mechanical construction, strong, solid, one-piece frame, no bolts to shake loose with wear. Scientific construction of the Separator bowl. You can readily see for yourself how the purchase of a **United States Separator** means economy for you. If you do not know a United States dealer let us send you his name.

A request by postal card for United States Separator Catalogue No 125 and mentioning this paper, will bring you a beautiful hanger lithographed in colors.

VERMONT FARM MACHINE CO.
Bellows Falls, Vt.

Frozen Milk in Siberia.

A paper called The Baker says that the people of Siberia buy their milk frozen, and for convenience it is allowed to freeze about a stick, which forms a handle to carry it by. The milkman leaves one chunk or two, as the case may be, at the houses of his customers. The children of Irkutsk, instead of crying for a drink of milk, cry for a bite of milk. The people in winter time do not say: "Be careful not to spill the millk," but "Be careful not to break the milk." Broken milk is better than spilled milk, though, because there is an opportunity to save the pieces. A quart of frozen milk on a stick is a very formidable weapon in the hand of an angry man or boy, as it is possible to knock a person down with it. Irkutsk people hang their milk on hooks instead of putting it in pans,, though, of course, when warm spring weather comes, pans or pails are used, as the milk begins to melt. Siberia has a month or two of warm weather.

Dairy and Creamery Notes.

"Two French scientists, M.M.Heuri and Stodel, have invented a new method of sterilizing milk. It is by means of violet light. The invention was presented to the French Academy of Sciences recently and was received with approval."—London Cowkeepers' Journal.

The Montreal Milk Shippers' Association has fixed the price of milk and cream from May 1st to September 30th next at 15 cents per gallon (10 pounds) for milk delivered in the city; 60 cents per gallon for 20 per cent. cream; 75 cents for 25 per cent. cream, and 90 cents for 30 per cent. cream delivered in the city.

The Minnesota Dairyman says: "The fall cow is the cow that counts. If you have a cow that has worked hard for the past year, carry her over and give her a little rest and then have her come in the fall the next time. You will find that you will have a far better cow and also a much better calf. A cow should not be made a regular milking machine if the best results are to be obtained at all times."

The Milk Reporter of Sussex, N. J., says: "Lots of millionaires, according to the papers, are successful dairymen. They are making dairy farms pay: There is a big farmers' club in New York composed entirely of millionaires. It is very evident, however, that they milked something else besides cows before they went into the dairy business. With it all there is no questioning the fact that they are making the dairies pay, and many a real dealer who knows nothing else but the milk business is aware of the fact."

"Point thy tongue on the anvil of truth."—Pindar.

MORE MILK FROM COWS! WORK FROM HORSES!

Why buy feed and let flies rob your profits

Keep flies off your stock and they'll take on flesh. Cows give ⅓ more & richer milk, and horses do more and better work on less feed. Animals pestered by flies can't digest food. Shoo-Fly keeps off flies & insects in pasture longer than any imitation. Protect your stock by spraying

Shoo Fly The Animals Friend

Kills every fly it strikes! ½c. worth saves 3 qts. milk. 1 gal. protects 3 animals a season. Cures all sores, and prevents infection. Heals from bottom without scab. Prevents itching. **Nothing better for galls.** Used by leading veterinarians and dairymen since 1885. Write for testimonials. Kills lice and mites wherever sprayed.

Accept no substitute. If your dealer hasn't it send his name and $1, and we'll send enough Shoo-Fly to protect 3 animals 30 days and improved 3-tube gravity sprayer. Name Exp. office. **$1 refunded if animals not protected.**

Concerning Animal Tuberculosis.

We think that much of the cry about tuberculosis is not based upon true theories or facts. Half the agitators, professional and otherwise, disagree, and none of them can positively identify the tuberculis germ from the germ of another disease. Furthermore, so far as milk is concerned, there is more tuberculosis in other countries, the Philippines, for instance, where milk cuts but small figure, than there is in the United States. We do not believe in the wholesale condemnation of dairy cattle, neither do we believe that the one horrible picture example of a dirty cow, which has been multiplied again and again, ought to do duty in every state.

Nevertheless the United States Department of Agriculture has discovered that there is more tuberculosis in cattle than there ought to be, and that one per cent. of cows with tuberculosis will cause two per cent. of hogs to be infected. The argument is that if cattle are freed from the disease the hogs will be correspondingly healthy.

The city of Washington, governed directly by Congress, appears to be entitled to a medal for having 17 per cent. of tubercular cows. In various states the diseased cows range from .79 to 19.69 per cent., with an average of 10 per cent. in dairy herds.

Since we have found that agitators against milk below some set-up standard do not say anything about the necessity for diluting milk before giving it to infants, we do not expect those who say that infants die of intestinal tuberculosis caused by cow's milk, to quote those authorities, who say that it is impossible to transmit the disease that way. We are of the decided opinion that the tuberculin campaign is full of mistaken propositions, with just a dash of misrepresentation thrown in.

Nevertheless we agree with the press article from the Bureau of Animal Industry, dated April 30th, that as a business proposition live stock raisers cannot afford to have tuberculosis in their herds. A dairyman don't know his business if he allows a new cow to come into his herd without it is tuberculin tested. A dairyman should have his herd tuberculin tested and get rid of any diseased cows. Once clean, it ought to be kept clean. If they do not protect their own herds, dairymen must expect trouble. This is an age of trouble. It is an age of agitation, an age of reform. The whole world is legislative crazy. We run to the legislatures for laws to be enacted. Every law produces a crop of inspectors—the inspectors must get busy. The dairyman will not escape. He had better avoid trouble if he can. The lesson of the past two years ought not to be disregarded. The big cities are adopting regulations, some sane and some insane. The tendency of the times is to fix the responsibility where it belongs. The only way for a dairyman to clear his road is to clean his herd, so that, no matter where his milk will be sold, his health certificate can go with it, and no matter where his cattle are shipped, a quarantine shall go with them.

The concluding paragraph of the Bureau of Animal Industry circular is as follows:

"It may at some time be necessary for the federal government to quarantine against interstate shipments of cows from certain states where the disease prevails to a considerable extent, and require a strict supervision over all animals removed from such states for interstate shipment, and only remove the quarantine from sections of the state when it has been demonstrated that the disease either has been eradicated or is under strict local quarantine." This is a positive threat that if people will insist on having herds containing diseased animals, the federal government will step in, as it did with the foot-and-mouth disease and stamp it out. It will pay dairymen and dairy associations to sit up and take notice.

Justice to the Hand Separator.

It takes the creamery man who wishes to do his own cream separating to show the good points of the hand cream separator in the hands of the farmer. Mr. H. Western Parry, of Ontario, Canada, did so in an article addressed to the New York Produce Review and American Creamery. He said that one reason which hastened the change from power to hand separators was that the patrons were getting their skim milk back in such an unsatisfactory condition that the idea of sweet skim milk warm from the separator took like wild-fire, and before many of the creamerymen realized the seriousness of the situation sufficiently to install skim-milk pasteurizing apparatus, the irrevocable had happened, the milk routes were weakened and the cream was coming instead of the milk.

He concluded by saying: "I consider the whole-milk system preferable, because I can make better butter from it, because the power necessary for separating is concentrated in one plant, operated by one expert, and the results are therefore uniform and as they are desired. Nor have I dodged the necessity of pasteurizing, for instead of pasteurizing the skim milk, as should have been done in the past, I have now to pasteurize the gathered cream in order to get it into proper shape to make good butter.

"My patrons who have hand separators talk as if they had made no mistake. 'Look at our calves,' they say. 'We get something to feed them now. Our separators pay for themselves in two seasons by the extra value of our young stock and the reduction in the charge for making and drawing. The work is little more than looking after the milk, we have no bother with Saturday night's and Sunday morning's milk, and we can cream our milk without loss and make up our own butter if we have a good private butter trade at any time of the year, whether we are convenient to a creamery or not.'

"After looking at it from both sides, I believe the dairy industry needs both systems, and there seems to be a place for both, and I cannot feel that I can conscientiously uphold one more than another. The whole-milk system is certainly productive of a better quality of butter, but the whole dairy industry is dependent upon the farmer, and what he prefers goes, and he is generally not very far out on his reckoning in the long run."

(Note by the Editor.—The above is about the first item we have ever read from a creamery manager which takes into consideraton that a farm may or may not be near a creamery; if it were not for the hand cream separators, more than 50 per cent. of the creameries would have to go out of business. Hauling milk compared with hauling cream has nothing to recommend it.

REAL AND FAKE CREAM SEPARATOR IMPROVEMENTS

A year ago, in keeping with its policy of ALWAYS HOLDING A POSITION FAR IN ADVANCE OF ALL ATTEMPTED COMPETITION, the DE LAVAL Company put on the market an entire new line of Improved Farm and Dairy sizes of cream separators.

They were brand new in every part, from the supply can at the very top to the shape of the base at the very bottom, and reflected the result of three years of study, experiment and test by the DE LAVAL engineers and experts throughout the world, based on thirty years of experience in cream separator invention, development and use.

Every good feature of previous DE LAVAL machines was bettered and many new and novel ones added, accomplishing greater simplicity of construction, ease of cleaning and replacement of parts; less cost of repairs where necessary; easier hand operation; more complete separation under hard conditions; greater capacity, and a material reduction of prices in proportion to capacity.

A year of practical experience in the actual sale and use of 100,000 of the new machines in 1908 but served to suggest still greater refinement of manufacture and a few finishing touches of perfection in the details of construction of the new line of machines as they are now offered to 1909 buyers.

The 1908-1909 changes in the DE LAVAL machines on the whole have been SO COMPLETE AND REMARKABLE that the man who hasn't seen and used an Improved DE LAVAL really cannot know what the perfect, up-to-date cream separator is TODAY.

The new DE LAVAL machines literally "SWEPT THE FIELD" in 1908 and competition was driven to such desperate extremity that THIS YEAR most of them have come out with all kinds of CLAIMED advertising and catalogue "improvements." Nearly everybody has an "IMPROVED" 1909 machine and is making a PLAY for business on that basis.

But we make the POSITIVE STATEMENT that there is not A SINGLE NEW OR ACTUAL IMPROVEMENT in any of them, and while some features have been bettered it has been merely through the appropriation of DE LAVAL ideas from TWO TO TWENTY YEARS OLD and in most cases long since discarded in DE LAVAL construction.

That's a PLAIN STATEMENT, made in plain words that no one can fail to understand. It has the knowledge, experience, reputation and capital of the DE LAVAL Company behind it. Some people won't heed it; some people won't believe it. That will be their loss. Those who do will profit and benefit by it.

We stand ready to PROVE IT to any one desirous of buying a separator for the first time or of trading in an old and out-of-date machine for a new one.

Address,

J. G. TRUMAN, Manager, BUSHNELL, ILL.

POLAND-CHINA SWINE. Spring Pigs sired by Keep On Spellbinder and Chief Perfection. These Pigs are beauties. Will sell the choice of litters at $10.00 each. Buy now and this fall, when you will have a $25.00 hog.

D. F. BEAUCHAMP, Meredosia, Ill.

REGISTERED SHROPSHIRE SHEEP.

Rams, Ewes and Ram Lambs of the best breeding. Ram at head of flock sired by an imported English Ram out of a Canadian Ewe. Have used Rams from the best flocks in the United States and Canada. These sheep are bred for wool and mutton. Prices reasonable.

C. J. SMITH & SONS, Stubblefield, Ill.

WELLS' PRIZE-WINNERS "Are Better."

Barred Plymouth Rocks, White Wyandottes and Rhode Island Reds. Prizes at Illinois and Indiana (State Fairs), Mattoon, Nashville, DuQuoin, Thompsonville Shows. Premium Matings (15 eggs), $2.00; Standard Matings (15 eggs), $1.00.

FRANK WELLS, : : DuQuoin, Ill.

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Prices reasonable.

WILLARD MILLER, R. F. D. 2, Anita, Iowa.

RED POLLED DAIRY and BEEF CATTLE.

This is the oldest and best combination breed for production of fat cattle and rich milk. I have Bulls and Heifers for sale at reasonable prices.

C. M. CHAMBERS, Bartlett, Iowa.

R. C. JOHNSTON, Lawrence, Kas.,

Breeder of Thoroughbred

REGISTERED ANGORA GOATS.

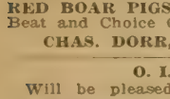
Goats for sale from imported Turkey and South African Bucks. Satisfaction guaranteed. Write for prices on Bucks and Does.

THIRTY HEAD OF PEDIGREED DUROC RED BOAR PIGS, $7.00 a head; Kan't Be Beat and Choice Goods' breeding.

CHAS. DORR, Osage City, Kansas.

O. I. C. SWINE.

Will be pleased to answer any inquiry in regard to our O. I. C. Swine. We have fifty Pigs to sell. Our prices are reasonable. Quality unexcelled. We breed producers.



ALVEY BROS., Meriden, Kansas.

JACKS AND SADDLERS.

The Cook Farms have 175 head of Registered Jacks, Jennets and Saddle Horses. One hundred head of these must be sold by the 15th of June. If you want a bargain in a good Jack or Saddle Horse, write quick or visit the Cook Farms.

J. F. COOK & CO., Lexington, Ky.

NOBODY BREEDS BETTER Fox, Cat, Deer or Wolf Dogs than I do. Send for free list. Closing out other breeds at your own price. Fox Cubs, $4.00 each.

E. F. WILMOTH, Shelbyville, Ky.

Blooded Stock Notes.

Messrs. C. J. Smith & Sons, breeders of Shropshire sheep of good reputation in Bond county, Illinois, on the Vandalia Line, have a card in this issue. We hope it will result in their making good sales. Shropshires are doing well in this country, and as a combination farmer's sheep they are hard to beat. They grow a splendid fleece of light-shrinkage, medium wool that tops the market, and their lambs are also perfection when they arrive on the market.

This is surely the time that pure-bred cattle are selling at beef prices. Choice yearling steers are selling in the beef market from $60.00 to $75.00 per head, and during the present spring many an auction sale has not averaged more. Pure-bred cattle, hogs and sheep are all the more desirable because they are cheap.

At a public sale held in May by H. H. Harshaw, of Butler, Mo., he sold a fine lot of Poland-China hogs. His average for seventeen boars was $31.47, and seventy-six females averaged $65.20. The general average for ninety-three head was $59.03. The top price paid for a boar was $55, sold to T. T. Langsford, of Jamesport, Mo.; and the top-price female was the gilt Queen Wonder, 2d, sired by Long John and in pig to Big Hadley, bought by Chas. Baker, of Butler, Mo., for $275. It was considered a good sale of excellent animals.

At a sale by G. G. Council at Vandalia, Ill., eighty-five imported Jersey cattle brought an average of $285 per head. Five yearling bulls averaged $599; eleven bull calves averaged $162.72; twenty-seven cows and heifers over three years old averaged $354.81; eleven two-year-olds averaged $322.27; seventeen yearlings averaged $247.36; and fourteen heifer calves averaged $150.71. The cattle were bought by thirty-six buyers and went to fifteen different states. The top price at the sale was paid by C. A. Robinson, of Kirksville, Mo., who gave $1,200 for the bull G. F. Grouville Lad; and R. B. Swift, of Libertyville, Ill., paid $800 for the cow Jolly Lady of Beechwood.

We are in receipt of a copy of Volume XIX of the Ayrshire Cattle Record at the hands of Mr. C. M. Winslow, editor, Brandon, Vermont. This volume includes records of bulls 10,460 to 11,012, and cows from 22,501 to 23,579. It also contains a transfer list and index to breeders and owners. The Ayrshire Record also contains an Advanced Register of cows and bulls that reach certain standards in breeding and performance. The Ayrshire breed, which has quietly attended to its business for many years, is now claiming to be the best average dairy herd.

Mr. C. M. Chambers, of Bartlett, Iowa, is advertising Red Polled cattle, beef and milk strains, of the large-boned type. He has a fine herd and will sell some young stock at very reasonable prices. Red Polled cattle are a very old breed and truly represent a good dairy breed without failing to produce a beef calf.

Mr. A. O. Auten, of Jerseyville, Ill., sold at auction seventy-four head of Jerseys at $158.85 per head. Eleven imported cows averaged $259.09, and fifty-seven American-bred Jerseys averaged $144.73. Four bulls over a year old averaged $267.50; eleven bull calves under a year old averaged $60.45; thirty-three cows over three years old, $181.21; five two-year-olds, $330; ten yearlings, $121; and eleven heifer calves averaged $107.27. The top price at the sale was $800, paid by H. D. Rodman, of Shelbyville, Ky., for the cow Stockwell's Wonder.

The Best Way to Feed Salt

Is the Bitter Lick Medicated Salt Brick. It is a great conditioner, tonic and digester as well as worm destroyer for horses, cattle and sheep. The animals like it and it never fails to give beneficial results. See advertisement of F. S. Burch & Co., 177 Illinois street, Chicago, Ill.

Early-sown Oats.

In Northern Illinois the early-sown oat fields are showing decided advantage over later seeding. While this has been a tolerably favorable growing season over large areas of the oat belt, yet the early April-sown fields are forging away ahead of fields sown even two weeks later. Here is an illustration of what early seeding will do with early varieties: A Henry county, Iowa, correspondent writes me that his early "Sixty-day" oats have, up to this date (May 26th), made nearly as long-stem growth as the mature crop made last season. This twenty-acre field is of splendid color, stooling well, and promises a better crop than has been grown in that oat section for many years.

I have been observing two things in growing oats, and I think they are the great factors in making the crop: Early seeding and a well-conditioned seed-bed have, without a single exception, in all the fields that I have inspected, started the crop more vigorously and pushed it along to maturity. A sturdy straw is made during May and June, so that when the crop is ready to head out during the first half of July the whole energy of the plant is directed towards the formation of grain.

Last season, during the first ten days of July, I walked through twenty-six oat fields in Northern Illinois. Everywhere I noticed a lack of sustained growth, with the result that the straw was weak and short, and, as later results showed, the heads did not fill out well. It seemed that the whole energy of the plant was spent during the early growing period and the plants became exhausted before grain was formed.

This oat work is a mighty important one. I am going to see what effect early seeding on fairly strong ground will do. We are trying to force early growth, so that by July 1st the crop will be in condition to stand hot, dry weather. That sort of weather will be ideal for making heavy grain, and the stem and leaf growth should be practically finished by that date.—L. C. Brown.

The Wool Market.

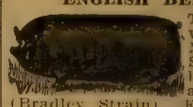
The Globe-Democrat on June 1st said St. Louis is still the highest and best wool market in the country. Domestic wools are quoted from 17½ to 30 cents per pound; medium wools at 25 to 30 cents; and fine wools at 19 to 27 cents. Top grades of Texas wool, 27 to 28 cents; Southern at 24 to 26 cents. On June 1st, one car Missouri wool sold at 29 cents a pound, and 160 sacks sold at 17½ cents for hard burry and 30 cents for clear medium. A. J. Child & Sons, handling wool strictly on commission, will answer any questions by letter, wire or telephone. The address is A. J. Child & Sons, Box 301, St. Louis, Mo.

BROADWAY HERD OF LARGE ENGLISH Berkshires, Shorthorn Cattle, Shropshire Sheep and Fancy B. P. Rock Poultry of the most popular families. A choice lot of Spring Pigs of the Masterpiece breeding now for sale. One extra good three-year-old Shropshire Ram for sale. A fine breeder. Will price him right if sold at once. Eggs from Fancy Barred Plymouth Rocks for sale at $1.00 for 15, $1.75 for 30, and $5.00 for 100. Mail order business a specialty.

E. L. JOHN, Broadway, Mo.

ENGLISH BERKSHIRE HOGS

That are bred right and will be sold right. Also M. B. Turkeys (Walt Strain), S. C. W. Leghorns (Whycoff Strain) and B. P. Rock Chickens (Bradley Strain). Eggs in season. A few pairs of Pea Fowls for sale. Address,



M. W. MAGNUSSON, Safe, Mo.

TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won seven out of nine first prizes at Lexington, Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907.

CHAS. FORD, Mortonsville, Woodford County, Kentucky.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write me for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,

(son and successor to the late H. C. Ezell).

Nashville, Tenn., Sta. B., R. F. D. No. 7.

A NEW HAY PRESS.

That old reliable hay press concern, the Collins Plow Company of Quincy, Ill., have a new press this year. It is a horse-power press, full-circle type, but it takes a distinct step onward. It is both a self-feed and a three-stroke press; that is, there are three strokes of the plunger to every round of the team. This is truly successful because the Collins Plow Company have learned how to make an automatic self-feeder which feeds fast enough to make a three-stroke machine a success. This three-stroke, self-feed, full-circle press is a hummer at its work. It is one of the best of its kind turned out by the Collins Plow Company. They make eighteen styles and several sizes of each. If you are a hay maker you will be interested in it. It is described along with all the other "Eli" presses in the company's new catalog. Better send for a copy and learn all about it. The book is free, but mention this paper when you write. Address, Collins Plow Company, 2010 Hampshire street, Quincy, Ill.

CHESTER WHITE BOAR—EXPORT, as a two-year-old, weighing 700 pounds; was sweepstakes winner at St. Louis Fair. Exhibited by J. W. Dorsey & Sons, of Perry, Ill. The St. Louis Fair referred to is the Great St. Louis Fair, first opened in 1856.

The "Proof of the Pudding."

Extracts from unsolicited letters received by CLAY, ROBINSON & COMPANY, from customers.

H. H. HITCHINGS, Raymond, Ill.: "Am just in receipt of our report of sale of hogs. Will say I am highly pleased with sale. Think you will do to tie to. When I have any stock to St. Louis, you will surely get it."

GUST BORG, Manhattan, Kas.: "I received your letter enclosing account sales for the hogs. Thank you for the good sales you made for me. These hogs did not average 1½ pounds less in Kansas City than they did at home."

LOUIS C. BUTSCHER, Gothenburg, Neb.: "I have your sevral letters of recent date and appreciate most heartily your good work in the disposal of the seven cars of lambs this past week. I expect to send you about eight cars more this coming week."

JACOB WEISS, Crawford county, Iowa: "Hogs, cattle, sheep, and even claims, are in good hands with Clay, Robinson & Co. I tell you it made me feel good when I got that check for $97.75. I thank you very much for what you have done for me."

D. C. HOBBS, breeder of Scotch and Scotch Topped Short Horned cattle and Oxford Down sheep, Hamilton county, Indiana: "I thank you for the information you have given me from time to time, and hope I will be able to send you something in the near future."

COLLINS & SON, Quitman, Mo.: "We were pleased with sale of three loads of cattle made April 26th, considering condition of market."

C. S. WURSTER, Elizabeth, Ill.: "I shipped you a load of cattle, and was well pleased with the result."

P. G. FARNSLEY, owner of the Grandview Stock Farm, Booneville, Ia.: "Received your account of sales with draft enclosed. Think you made a great, big, long sale, and away more than I expected. I know you are top notchers. That is the reason we all like to ship to you. I want to thank you for your interest in handling my stuff and your prompt returns."

T. R. EDWARDS, Stella, Neb.: "Check for $2.95, covering overcharge by the railroad, received, for which accept thanks. I had not noticed there was an overcharge."

JOSEPH M. RAMSEY, Warren county, Illinois: "Received remittance for hogs all right. Was well pleased. Received at least 20c. per cwt. more than I expected."

L. W. THADA, Dallas county, Iowa: "You did much better than I looked for. It was not only the big prices but the big fill on the cattle. The heifers weighed 10 pounds more than at home. Thank you very much for the sale."

A. R. ULRICH, Cerro Gordo county, Iowa: "Received draft for cattle, and think you do quick work, and good work, too. My cattle sold for more than I expected. Your firm is all right, and I will know who to ship to from now on."

JOHN BRIGHT, Hancock county, Ohio: "Two loads of cattle ordered by me arrived all O. K. and in good shape. I find them a very satisfactory lot; in fact, all I could expect. Thanks to you for same."

JAMES H. FLETCHER, Sperryville, Va.: "Cattle came in good shape. They do not look like they had been shipped over fifty miles. The price and quality are O. K., and they weigh up all right. Thank you."

WILLIAM BELAIR, Fort Collins, Colo.: "Your letter with check for $66.41 received. Please accept my sincere thanks. It was just like finding so much. It certainly shows that the firm of Clay, Robinson & Co. is all O. K."

G. R. GARRETT, Macoupin county, Illinois: "I shipped all my cattle and hogs to you. Sales were satisfactory. Thank you for market information and past favors. C., R. & Co. good enough for me."

W. J. McCULLOUGH, Delaware county, Iowa: "In regard to car of hogs, we thank you for what we consider a very satisfactory sale."

J. A. & J. O. FINLEY, Knox county, Illinois: "We are very much pleased with the sale of sheep. It was a much higher price than we expected. Thank you."

L. A. JACOBY, Marshall, Mo.: "I shipped you two loads of hogs, which sold at good round prices."

"Sales That Suit"

"Touching the High Spot"

—That's What You Want
—That's What We Do

Many feeders and shippers have saved their commissions by consigning to Clay, Robinson & Co.

Suppose two men each ship stock, same grade and quality, consigned to different commission firms. Suppose one firm by better salesmanship or harder work, secures a nickel or a dime per 100 lbs. more than the other. Don't you see that the extra amount would more than pay the commission, and add just that much to your check?

Live Stock

We spoke above of one firm getting a nickel or a dime per 100 lbs. more than the other. As a matter of fact we have often beaten competitors fifteen, twenty-five—yes, forty cents, per 100 lbs., on stock of identically same class. It's all in the SALESMEN.

We, of course, do not claim that in every case we get more for consignments than another firm would do. But in EVERY case we do get the FULL STRENGTH of the market. If it were not a fact that some salesmen ARE better sellers, and do habitually get better prices than others, where would be the sense of our hiring the highest-salaried salesmen in the trade? We are not throwing our money away. If all salesmen were alike we could save thousands of dollars annually in salaries.

Reading about what we have done for others, or what we can do for you, will not put a penny into *your* pocket, unless you ACT upon your best judgment and consign to us.

FREE—Get Our Illustrated Weekly Market Paper

If you intend to ship stock to, or buy feeders at, any of the nine markets where we have houses, fill out the coupon, or give us the same information in a letter, and we will send you (free) our "LIVE STOCK REPORT"—a fine twelve-page illustrated weekly market, live stock and farm newspaper. Write us for any special information you want. Address us at whatever market you expect to ship to, or, if undecided, address our Chicago office.

High-priced Shire Stallion.

Tatton Dray King, a five-year-old bay Shire stallion, sold for $18,500 at the dispersal sale of the late Earl of Edgerton at Tatton Park, England. He was purchased by H. & W. Whitley, of Paignton, Devonshire. Tatton Dray King is a horse of great weight and quality. His sire, Drayman, XXIII., was one of the noted prize winners and stock horses of the breed, and his dam was Flower, by Everton Benefactor. He was bred by William Whitehead, of Garstang. At the London Shire Horse Show of 1907 Tatton Dray King won the junior championship, and in 1908 he defeated all comers for the championship at the same show. He went to mill once too often, however, and at the Shire Horse Show of 1909 he was defeated by Lord Rothschild's Halstead Royal Duke. At the same sale twenty-one Shires averaged $2,250.

Drafters and Coachers Wanted.

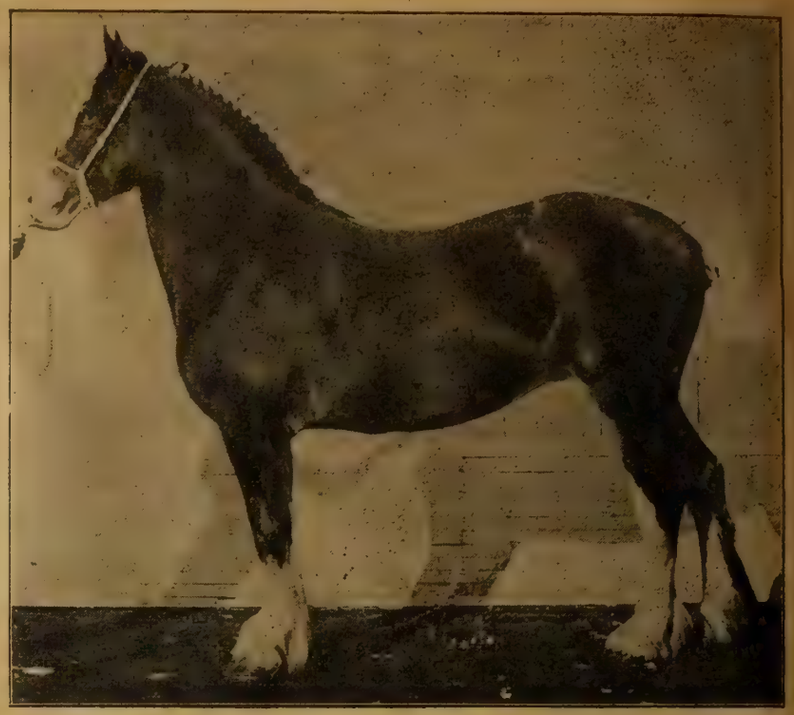
The New York Herald, speaking of a horse-market paper, said on May 16th:

"It is one of the amazing facts of live-stock breeding in the United States that with twenty million horses the American farmer cannot raise enough high-class draught and carriage horses to supply the demand at highest prices current for animals of any market type. The big cities of the country, from the Atlantic to the Pacific, are drawing on the Middle West for both draughters and coachers, the farmers of neither the East nor the Far West cutting any figure in the situation. New York dealers have sold carriage and saddle horses this season to buyers from San Francisco, Seattle, Winnipeg and various other distant sections which ought to be selling carriage horses in New York instead of buying them here."

Death of Sunol, 2:08¼.

Sunol, 2:08¼, by Electioneer, dam Naxana, made her record at five years old, being driven to an old-fashined, high-wheeled sulky, and her performance has not been duplicated. She died Tuesday, May 4th, 1909, at the farm of her owner, Mr. A. B. Coxe, at Newton Square, Pa. She was bred by the late Leland Stanford, of California, foaled in 1886, and died at the age of 23 years. Maud S. made her great record of 2:08¾ in 1885 and reigned as trotting queen for seven years. Sunol made her record of 2:08¼ in 1891. Then followed in 1902 Nancy Hanks, 2:07¼, and again 2:05¼, and once more in 1902 her great record of 2:04. In 1894 came Alix, 2:03¾; in 1900 the Abbot, 2:03¼. In 1901 two records by Cresceus, 2:02¾ and 2:02¼. In 1903 Lou Dillon reduced the record to 2:00 and finally to 1:58½. Speaking of Sunol's temperament, the Horseman says:

"That she was possessed of as great a flight of pure speed as any trotter that has ever lived, is the deliberate opinion of many of the greatest judges. She was hampered by her unfortunate temper. She was possessed of the greatest prejudices and the strongest animosities. She was exceedingly hard to drive, and it was almost impossible to rate her. She would rush away from the wire like a demon and take it all out of herself. Her record mile was one of the best, although not what we would, to-day, call well rated, and was one of the few where she was only talked into some restraint and not touched with the whip for her final spurt to the wire. She wore ten-ounce shoes in front and three-ounce shoes behind and drew a sulky weighing forty-six pounds."



LADYLIKE—Champion Clydesdale mare at the Chicago International Show of 1908. Here we have a filly two years old and under three, sired by Merrimac, dam Lady Elegant. Bred and exhibited by McLay Bros., of Janesville, Wis. With a grand show of big, drafty young mares on exhibit, she had to be exceptionally fine in build, with good action, trotting and walking, to obtain the first prize, and in the championship contest she had to compete with the best on her own farm. LADYLIKE can be examined critically with the understanding that there are no others fully her equal to-day.

Cavalry Horses at St. Louis.

In a recent circular issued by Holland & Nugent Bros., at the St. Louis National Stock Yards, prices of cavalry horses selling at auction are mentioned as follows:

"Cavalry horses are in demand, but they must be fat, from four to seven years old, solid colors and sound, from 15 to 15.3 hands high. They will bring from $125 to $140. A few extra types have sold as high as $150; the bulk of sales, though, is around $135 to $140."

Messrs. Holland & Nugent Bros. hold auction at the St. Louis National Stock Yards every Thursday in the year and sell all classes of horses. Mr. Ed Conway, famous mule salesman, sells the mules. In the circular referred to he said:

"The demand for good, big mules is strong. There are not enough coming to market to supply the trade. They are selling at prices that should make dealers money. Mules of the miner type, all sizes, are selling good. If you have any mules on hand, would advise you shipping them at an early date.

FIRST-PRIZE PERCHERONS.—This picture represents a pair of Percheron stallions as shown on the Fair Circuit of the year 1908 and exhibited by J. Crouch & Son, of Indiana. The Percheron horse has made a great record in the United States.

SIX-HORSE TEAM OF BAY CLYDESDALES—Owned and exhibited by Nelson Morris & Co. at the Chicago International Live Stock Show of 1908. These horses average about 2,100 pounds each. They have won 121 prize ribbons, including English, Scotch, Canadian and American championships. They are wonderful horses. Although representing extreme power of a draft team, they are as showy in action as a team of coachers and maneuver under the reins as though bred and raised for a circus. To see these bays and the two dapple-gray Percheron teams maneuver in the Chicago Pavilion was a sight never to be forgotten. No such team as this was ever brought together in one country. England furnished one horse, Scotland another, Canada two, and Illinois two, and thus the team was made up. This teams goes to England by invitation of King Edward VII.

To Test the Thoroughbred.

On Saturday, May 22d, at 10 o'clock a. m., H. H. Weatherly, a New York horseman, started on the six-year-old thoroughbred horse Esteban to ride from the office of the New York Herald to the office of the Chicago Record-Herald and return The distance of the round-trip is about 2,000 miles. This is a test of endurance to demonstrate the value of the thoroughbred as a saddle horse independent of the race track. Esteban is a son of Locohatchie, dam Flash by Ventilator. He is a light chestnut, 16 hands high, long of leg and light of bone, but the rider selected him because of his good feeding and resting qualities—a horse that can "rest and come again."

Esteban was trained as a two-year-old and as a three-year-old, and lately has had some practice on the New Jersey roads.

No schedule was laid out, but the rider expects to average fifty miles a day for forty days to complete the journey. Mr. Weatherly is mentioned by the New York Herald as an experienced long-distance rider. He was born in England, served in the British army with the Tenth Hussars in 1882, and from 1886 to 1891 was in the Northwest mounted police force of Canada. In relating his experiences with horses he said that in 1893 he rode 1,500 miles in twenty-eight days and sixteen hours on a native Basuto pony in South Africa, that journey having been made over a prairie country with a barefooted horse fed on grass and Indian corn. He intends to feed, water and care for Esteban himself on the present journey. He will ride about eight hours a day and will take advantage of soft earth roads wherever possible in order to keep his horse from becoming footsore. When macadam turnpikes are encountered he will take to the grass at the side of the road to avoid the hard footing. Mr. Weatherly is about forty-five years old. His weight is 132 pounds.

Going Back to the Horse.

All good horses are selling well. This applies particularly to city work horses. Although automobiles are being used for delivery purposes by large department stores, there appears to be an awakening in the horse demand, and some well-known firms have started to enlarge their stables again. Three distinct classes of work horses are now in as great or greater demand than ever before in the commercial market, and they are chunks, expressers and drafters. Weight and style command the money, but both are essential. There is no hard and fast range of prices. With published quotations for inferior draft horses at $125 to $200, and good draft horses at $225 to $300, a pair of registered Percheron mares sold at the St. Louis National Stock Yards for $750 in the Monday (May 24th) auction of the McFarlane Commission Company. This shows that quality is no respecter of average prices.

MARTIN DE CAPPELLE—Champion Belgian stallion at the Chicago International Show. Exhibited by Crouch & Son, Lafayette, Ind. This is a chestnut horse and shown in splendid bloom, representing the massive Belgian draft type.

WESTERN RANGE HORSES.

First Sale For 1909 at the St. Louis National Stock Yards to Take Place Tuesday, June 15th.

All who are interested in horses should take notice of and attend the Western range horse sales conducted by Messrs. Campbell & Reid and the Western Sales Stables Company at the St. Louis National Stock Yards. These sales bring the Western horse right into the circle of the domestic horse market. Two-thirds of the domestic horses now being marketed at the Monday, Tuesday, Wednesday and Thursday auctions were originally Western rangers, and if it were not so there would be very few horses for sale because the horse raising in the principal domestic states is not sufficient to meet the demands of the trade. The horses sold by Campbell & Reid and the Western Sale Stables Company are not wild horses. They are all of the very best ranch breeding, and they average equal to a like number of colts bred and raised in the farming states. It is safe to assert that when these horses are worked, improved and put in condition for the domestic sale ring that they sell for equal money with anything in horseflesh of their sex, class, quality, height and weight. Range breeding is a recommendation of uniformity. If the brand is a particularly good one, it becomes known as such; there are more matched animals to a car-load, and ten to one more prospects for future development than can be found by picking up odd colts or fillies here and there. The thirty-five to forty-five-dollar two-year-old sold in the range horse sale may be the hundred-and-seventy-five-dollar horse a year or two later, and they are sound in wind and limb at any time in their career.

The season of 1909 begins Tuesday, June 15th, and will continue every other Tuesday during the season. The horses are all sold at auction in the range horse pavilion of the St. Louis National Stock Yards.

Further particulars can be had by addressing J. J. Searcy, Secretary, Postoffice address National Stock Yards, Ill.

Restrictive Legislation.

Thirty-two different business associations, representing a majority of the people who pay wages to workingmen, have written to The National Farmer and Stock Grower, asking us to beg and pray to the National and State Legislatures for a let-up in restrictive legislation, especially as it concerns railroads. It is an absolute fact that the Legislatures are working overtime in restricting and regulating all kinds of business, and although many of the acts were well intended, most of them put a number of men out of work. Whenever restrictive legislation is presented before the National and State Legislatures it should not be considered without the bill states on the face of it the number of American citizens and their families it will send to the poor house.

GREAT GRASS CATTLE MARKET.

The Market at St. Louis Made the Fortunes of Stock Raisers and Will Continue To Do So.

Cattle raisers who have twenty-five to thirty-five years' experience will remember that grass cattle used to sell very low, even at times when choice fat cattle were selling very well. The original market for grass cattle of the Southwest was Chicago. It is recorded in history that Chicago once sold seven to eight hundred thousand head of quarantine cattle in a year. Nearly all of them were grassers. We well remember the old familiar prices. Cows at $1.75 to $2.25, and tops at $2.50 to $2.75; steers, $2.50 to $2.90, with tops at $3.00 to $3.25. Hundreds of thousands of grass cattle sold at these prices. Grassers such as now sell at St. Louis at $5.00 to $5.40 have sold in the past at all markets for $2.50 to $2.90 per 100 pounds. Not always at Chicago, but when Chicago was the jumping-off place.

Good prices for grass cattle are coincident with eliminating Chicago and substituting St. Louis. St. Louis gradually absorbed them. St. Louis discovered the opening. In 1880 St. Louis sales created the boom in Texas cattle. In 1890 St. Louis began the movement to sell the bulk of the quarantine cattle. In 1900 St. Louis was selling the bulk of the quarantine cattle, and in 1909 the Texan still looks to St. Louis for the best net results. St. Louis is the great grass-cattle market, and will yet remain as such. There is more clean-cut competition for grass cattle at St. Louis than at all other markets combined.

Bucks Selling at High Prices.

On the last day of May, at the St. Louis National Stock Yards, about sixty sheep bucks, averaging 120 to 150 pounds, were sold at $4.25 to $4.75 per 100 pounds, and these sales, by the way, indicate a good, strong market for bucks.

Sheep Sales on May 31st.

On the last day of May, 1909, at the St. Louis National Stock Yards, Kelly & Norris, of Val Verde county, Texas, marketed 1,130 head of sheep, averaging 98 pounds, that sold for $6.25 per 100 pounds. E. L. Moseley, of Calloway county, Missouri, marketed seventy-four head of clipped lambs that averaged 80 pounds and sold at $7.75 per 100 pounds, and 114 head of sheep, averaging 103 pounds, that sold at $6.50 per 100 pounds. J. W. Thomas, of Kentucky, marketed 103 head of spring lambs, 60 pounds average, that topped the market for the day at $9.35 per 100 pounds. These sales indicate a splendid market.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,

Veteran Commission Salesman, General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Do not forget us when you wish to know anything about either the Sheep, Hog or Cattle Market or future prospect.

Don't hesitate to write or ship to

James H. Campbell,
National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK — SHIP US YOUR CATTLE, HOGS AND SHEEP.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign horses, cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Tennessee Lambs at St. Louis.

During the last week in May, at the St. Louis National Stock Yards, large numbers of Tennessee lambs arrived and were sold at very good prices. The fair to medium grades closed at $8.25 to $8.75 per 100 pounds, and the best sold from $9.00 to $9.40 per 100 pounds. The market advanced during the week. Early in the week a few inferior lots sold at $6.25 to $7.50 per 100 pounds, but 80 per cent. of all that came in sold at $8.50 or better. The lambs selling at $9.00 and upward averaged 58 to 69 pounds. This Tennessee lamb industry has been greatly encouraged by the activity and reliability of the St. Louis market.

First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Try us once. We have a great and expanding Market at St. Louis.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL., FORT WORTH, TEX., and at KANSAS CITY.

One Feed From Southern Texas.

The inauguration of a system of running cattle from Southern Texas to St. Louis on one feed was during the Cattle Convention at San Antonio, in 1908, by Col. J. L. Harris, General Live Stock Agent of the Missouri Pacific System, and the programme was faithfully carried out last year until floods and rains caused washouts, when it was not possible to make the time. A shipment from Gonzales, Texas, 890 miles to St. Louis, in 56½ hours in running time, reminds us that not once has the Missouri Pacific failed during the present season. It is magnificent service, bringing Southern Texas cattle to the best market in the shortest possible time and on one feed.

EXTRAORDINARY PRICES

For Handy, Fat Butcher Heifers at the St. Louis Market.

During the last week in May, at the St. Louis National Stock Yards, extraordinary prices were paid for light, handy, native butcher heifers. Some that were only fair, averaging 668 to 874 pounds, sold at $5.10 to $5.85 per 100 pounds; several hundred that were good, 637 to 900 pounds, sold at $6.00 to $6.40 per 100 pounds; and about 200 that were choice to fancy, 710 to 764 pounds, sold at $6.80 to $6.85 per 100 pounds. B. M. Hagenbeck, of Henry county, Missouri, sold twenty-eight, 700 pounds, at $6.85; J. L. Reading, of Pike county, Missouri, sold a load, 764 pounds, at $6.85; Bailey & Cole sold a mixed load, 667 pounds, at $6.85; and R. M. Brown, of Boone county, Missouri, sold a few, 705 pounds, at $6.85. These are the cattle that can be raised in Missouri, Illinois, Arkansas, Oklahoma, Alabama, Louisiana and Mississippi. The prices are not always the same, but the demand at St. Louis, for St. Louis trade, and for Eastern trade, and for packers' trade, is practically unlimited. They are highly bred, strictly fat, long calves and short yearlings, clean-cutting baby beef. Any farmer can raise them, but not with scrub bulls or by starving them on short grass.

Native Cattle Sales, June 1st.

At the St. Louis market, June 1st, the native cattle sales included for A. D. Long, Shelby county, Missouri, twenty-nine steers, 1,689 pounds, at $7.00; J. D. Tully, Monroe county, Missouri, seventeen steers, 1,539 pounds average, at $6.80; F. Morrison, Fayette county, Illinois, forty steers, averaging 1,279 pounds, at $6.65; Griggs & Green, Boone county, Missouri, sixteen steers, 1,231 pounds, at $6.55; F. M. McRoberts, Saline county, Missouri, twenty-two steers, 997 pounds, at $6.75; M. P. Hunter, Carroll county, Missouri, twenty steers, 1,106 pounds, at $6.20; H. A. Barbour, Henry county, Missouri, fifteen steers, 1,568 pounds average, at $6.85.

THE GREATEST HOG MARKET

For Hogs of All Ages and Weights and Affording the Keenest Kind of Competition.

The record of the St. Louis market for hogs is surprisingly good for all weights and qualities. For the sale of pigs, 50 pounds average and up to fat sows, 300 pounds or heavier, there never was a better market. When all the hog markets are well supplied and oversupplied and prices are declining, that is when the market of St. Louis looms up above all others. On May 31st the top of the market was $7.40 per 100 pounds for a load of Iowa hogs, averaging 290 pounds, and a half dozen loads weighing 230 to 265 pounds average, sold at $7.35. The bulk of the good hogs sold at $7.30 to $7.35. Light hogs, 186 pounds average, sold up to $7.30, and large numbers of 160 to 180-pound hogs sold at $7.10 to $7.25. Pigs weighing 100 to 145 pounds sold at $5.50 to $6.95, largely at $6.50 to $6.85; and pigs less than 100 pounds sold largely at $5.25 to $5.75, with a 6-cent top. The St. Louis market has 100 per cent. more competition than all the Missouri river markets combined.

The Monday Horse Auction.

Mr. John A. Campbell has assumed the management of the business of the McFarlane Commission Company and will always preside at the Monday horse auction at the St. Louis National Stock Yards, assisted in the horse department by Messrs. John K. and Frank Maxwell, and Col. I. H. Howard, Auctioneer. Mr. Lan B. Morris continues to sell the mules to the very best advantage, and Frank Mulholland has charge of the office. Monday is a splendid auction day and this firm does an excellent business. Mr. Campbell, as one of the pioneers of the St. Louis horse and mule market, considers that the market is stronger and better in every way than in previous years, and is able to sell all kinds and classes of mules better than they can be sold elsewhere. In addition to the members of the firm there are active and competent assistants in each department. This is a first-commission house at the best market in the world. Address, McFarlane Commission Company, National Stock Yards, Ill.

McFARLANE COMMISSION COMPANY.

And every two weeks thereafter until the close of the season. We will hold our regular auctions throughout the summer on Tuesdays and Wednesdays. Write us for further information.

Campbell & Reid and Western Sale Stables Co.,
NATIONAL STOCK YARDS, ILL.

Native Beef Steers at St. Louis.

On the last day of May the highest quoted price for fancy native steers on the St. Louis market was $7.15 per 100 pounds, and the top of the market for the day was paid to A. B. Long, of Shelby county, Missouri, for thirty steers, averaging 1,600 pounds, that sold straight at $7.00 per 100 pounds. During the previous week he sold a load of 1,804-pound steers at the same price. On May 31st, J. H. Beach, of Randolph county, Missouri, marketed thirty-four head 1,357-pound steers at $6.75; and Campbell & Lake, of Johnson county, Missouri, sold thirty-two steers, 1,501 pounds average, at $6.75 per 100 pounds. These sales indicate the condition of trade at the St. Louis National Stock Yards for the good to choice native cattle.

Clipped Western Lambs at $8.40.

On June 1st, at the St. Louis National Stock Yards, Mr. M. F. Franabarger, of Adair county, Missouri, marketed 175 head of 83-pound Western lambs at $8.40 per 100 pounds. These lambs were clipped before shipment, and the sale represents the high record for clipped lambs at the market.

Southwest Lambs at $8.90.

On the last day of May, at the St. Louis National Stock Yards, Davis & Erni, of Crawford county, Missouri, shipping on the Frisco Route, marketed 169 head of 69-pound spring lambs at $8.90 per 100 pounds. They were as good lambs as ever came from Southwest Missouri and represent the capacity of that great country for raising lambs for the spring market. These were the first of the season from Southwest Missouri.

Thursday Horse Auction.

Since arriving on the St. Louis market Mr. T. H. Holland has made his mark as an experienced horseman and business organizer. The Thursday horse auction at the St. Louis National Stock Yards under his management is life and activity from the opening to the close. Mr. Holland does business with many horse and mule dealers who formerly shipped to Kansas City and they now come to the St. Louis National Stock Yards because they find a better market organization. Mr. Holland established the Holland & Nugent Bros. Commission Company, including Nugent Bros, well-known horsemen. The famous mule salesman, Ed Conway, sells the mules. At auction on Thursday, buyers have a chance at an average of 500 horses with class to them. St. Louis is now the buying center of the Eastern trade. Eastern buyers never pass St. Louis unless the supplies are small. It pays horse shippers and mule raisers to concentrate their stock at St.Louis.

The Range Horse Sales.

Our readers should remember that the first sale of Western range horses will take place at the St. Louis National Stock Yards for the season of 1909 on Tuesday, June 15th. These sales are well supplied with the better class of range horses. See article on page 14.

St. Louis Mule Quotations.

In a general way, at the St. Louis National Stock Yards, the mule trade is strong for the better class and all special class mules except cotton mules. Fine, large mules, with weight and bone and attractive color, never sold any better. If the mule is up to grade the price is. In a general way, 14-hand mules are quoted at $80 to $150; 14½-hand mules, $100 to $165; 15 hands, $125 to $205; 15½ hands, $135 to $225; and 16 hands, $150 to $275. At the St. Louis market there are always on sale several thousand mules ready for immediate service.

NATIONAL STOCK YARDS, ILL.

Pioneer Mule Dealers.

The Joseph A. Maxwell Mule Company at the St. Louis National Stock Yards buy, feed, fatten, train, classify and sell mules, enter into contracts for the delivery of mules of all kinds and principally of the better class. Buyers of mules are specially invited to correspond with this firm. With large barns, unexcelled facilities and always buying and keeping a stock on hand the firm is in a position to give satisfaction under any and all circumstances. Mr. Joseph A. Maxwell, President of the company, is the pioneer of the St. Louis market, and his reputation is world-renowned. Address the firm Joseph A. Maxwell Mule Company, National Stock Yards, Ill.

St. Louis Horse Quotations.

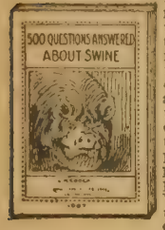
It is easy to make up a list of prices of horses, and then the first horse at auction often proves that a change has taken place. There are a few plug horses that continue to sell at $15 to $35 per head; and strictly common Southern horses are selling at $45 to $60; a little better average class at $70 to $110. Strictly good to choice Southern horses were selling at $120 to $160. Driving horses are variously quoted at $175 to $275. Common to medium chunks were selling at $125 to $150, and good chunks at $160 to $190. Strictly choice chunks for stylish delivery horses sell at times considerably higher. Drafters of the fair class sell at $125 to $160, and good at $175 to $250. Strictly choice heavy drafters are quotable up to $325. This is on the basis of the closing market, May 31st, at the St. Louis National Stock Yards.

POULTRY HOUSES, COOPS, ETC.

This is an up-to-date poultry book, written by H. A. Nourse, editor of the Poultry Herald. It was prepared during the past year and is the result of many years' study and experience. It is a book of newest plans for building poultry houses, with description of coops, fixtures and poultry utensils for the farm, village or suburban poultry keeper. It is a book of 100 pages, and is finely illustrated. It is worth its weight in gold. We are sending The National Farmer and Stock Grower for one year and the book Poultry Houses for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St.Louis, Mo.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Couch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



Don't Sell Your Eggs

When they are cheap; pack them with my new method—will keep two years—will be as fresh as new laid eggs. No special place required to store them. Cost only ½c. per dozen to pack them. Write me for circular.

MRS. B. F. WILCOXON,
Ft. Des Moines, Ia. Box 50.

Webster's NEW STANDARD Dictionary

Home and Office Edition. A splendid book for readers of The National Farmer and Stock Grower. There are 756 pages, 5x7 inches, 1½ inches thick, and the book weighs 22 ounces. It is splendidly bound in flexible cloth, with patent thumb index, with front and back title in gold. There are 840 illustrations and 19 full-page plates. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Starting in Poultry.

In answer to many inquiries, asking me what I consider to be the best way of starting in the poultry business, whether with fowls or eggs, will say: A great deal depends on the beginner's financial condition. The purchasing of stock is desirable under certain conditions where the saving of money is not the object, but for the man in moderate circumstances, I would strongly advise the purchasing of eggs from a reliable breeder; first, because it is more economical; secondly, because the novice will be able to start at the very beginning and grow up with the business, and by so doing he will learn many lessons in A, B, C poultry culture that will prove of the greatest possible benefit to him later on. I have been in the poultry business many years and think I know some of the ups and downs of the business.

I have never persuaded anyone to go into the poultry business without also giving him some idea of how to take care of the little fellows when they are hatched. Do you realize this is the greatest "pitfall" a new beginner has? In fact, many of the older breeders are in the "pit" yet. I think it safe to say that 75 per cent. of the chicks hatched die with bowel trouble, balling up about the vent, cholera, etc. Many a man has given up the poultry business in disgust because of this most aggravating of all poultry troubles. Some years ago, I, myself, felt prompted to throw the business up in despair, having tried and experimented with every known remedy, all to no avail.

I want to give that new beginner the benefit of my experience. I have lost little chicks by the thousands from bowel trouble, but about five years ago I commenced feeding them what is known as medicated charcoal, and since that time we seldom lose a chick. When we hatch out a certain number of chicks, we have reasonable assurance of bringing through to maturity.

I know positively that 90 per cent. of the people who fail to make a success of the poultry business will admit it to be on account of either roup or bowel trouble in chickens, such as balling up about the vent, white diarrhoea, cholera or dysentery. These troubles can be guarded against and cured if gone about right. Medicated charcoal is the one thing to have on hand, and it can be gotten from the Des Moines Incubator Company at Des Moines, Iowa. I don't recall just what the present price is, but if interested you can write a line to this concern and get all particulars.

In conclusion I will say, I have found the poultry business pleasant, agreeable and profitable, and would not change for any other business I know of.—F. J. Tishenbanner, Manager Iowa Poultry Yards.

Pushing the Growth of Fowls.

More can be gained by pushing the growth of fowls than most people realize. This is especially true of the chicks that are hatched in the spring and early summer and which must be depended on for most of the eggs that are to be produced next winter.

The ordinary farm chick is not pushed, in the ordinary acceptation of the term. It is allowed to take its chances with the rest of the flock and battle for food to keep it from getting hungry. It gets enough for all ordinary requirements, but not of the kind that will cause it to make extraordinary growth.

The writer has found that the first element in the making of rapid growth with chicks is to keep them by themselves and not permit them to run with the rest of the flock. The first great advantage in this is that the food given the growing chicks can be different from the food given the main flock. Such a food is naturally more expensive than that given the rest of the flock. It will be noticed that when the growing chicks are allowed to run with the rest of the flock the whole flock fails to get the extraordinary food, and thus the chicks do not get it. In fact, such food would be profitable for the growing chicks but not for the whole flock, which must be made to earn much of its living by foraging.
